To our classic associations, indeed, Rome was still great, under Trajan and the Antonines, the city of the Cesars, the metropolis of pagan idolatry—in the pages of her poets and historians we still ponder among the triumphs of the Capitol, the games of the Coliseum—or if we read of a Christian being dragged before the tribunal or exposed to the beasts, we think of him as one of a scattered community, few in number, spiritless in action and politically insignificant. But all this while there was living beneath the visible, an invisible one—a population unheeded, unreckoned—thought of vaguely, vaguely spoken of, and with the familiarity and indifference, that men feel who live on a volcano; yet a population strong-hearted, quick impulses, nerved alike to suffer or to die, not in numbers, resolution and physical force, sufficient to have hurled their oppressors from the throne of the world, had they not deemed it their duty to kiss the rod, to love their enemies, to bless those that cursed them, and to submit for their Redeemer's sake to the 'powers that be.' Here, in these 'dens and caves of the earth' they lived; here they died—a spectacle in their life-time to men and angels, and on their death a triumph to mankind—a triumph of which the echoes still float around the walls of Rome, and over the desolate Campagna, while those that once thrilled the Capitol are silenced, and the walls that reigned them have long since crumbled into dust." Thus three centuries passed by, and Christianity emerging from these recesses, walked boldly on the soil beneath which she had so long sought concealment. Then, for a time the Catacombs were places which the Christians, now living in security, visited with reverence, as the scene of their brethren's sufferings. St. Jerome thus talks of them in the middle of the fourth century: "When I was at Rome, still a youth, and employed in literary pursuits, I was accustomed in company with others of my own age, to visit the sepulchres of the apostles and martyrs, and often to go down into the crypts dug in the heart of the earth, where the walls on either side are filled with the dead." But these crypts became more than places to be visited by the curious with melancholy interest. When "the calamities were overpast," and the true-hearted needed no longer the safety to "wander in dens and caves of the earth," reverence for these dark abodes which had been the scenes of the sufferings and constancy of those from whom they had inherited their faith, was witnessed in their still continuing to be selected as places of sepulture. Compelled, no longer, by the rage of the adversary, to spend their lives in these gloomy retreats, they turned to them in the hour of death, and enjoined that their last resting-place should be with the martyrs in this terra-sancta. Popes and prelates, kings and queens, emperors and empresses, the highest in rank, and the most devout in life, or most penitent in death, were for some centuries interred in these crypts, in the neighbourhood of the tombs of Roman slaves and criminals, Christian labourers and hewers of stone, and the early martyrs. Even from the remote parts of Europe, the bodies of illustrious persons were carried thither for sepulture, as, a few centuries later, princes and nobles commanded in their wills, that their bodies, or, at least, their hearts should be carried to Palestine, and buried in the Holy Land. But it was not long after the firm establishment of Christianity as the religion of the state, that the flood of barbarian invasion rolled over Italy, when neither works of art, or holy places, or consecrated churches, were respected by their rude northern conquerors. When the army of the Huns under Attila, and then that of the Goths under Totila, were gathered about the walls of Rome, pressing its siege, they ransacked the Catacombs, and tore open the graves, in the hope of finding buried treasures. And these were followed by the Lombards and Saracens and other devastators. Each added to the desecrations, until the Catacombs were necessarily deserted by the Christian population of Rome. Burials ceased in the crypts, and services in the chapels, until the neglected caverns were left to bats and obscene birds and beasts, or became the hiding-places of runaway debtors, thieves and banditti. The Roman peasants avoided them in dread, or when, on their way to and from the market-places of the city, they were obliged to pass the mouths of the caverns under the Esquiline mount, they did so in companies, hurrying by with trembling steps, as they muttered a prayer, or chanted a psalm or hymn.

Then came the tumultuous times of the Middle Ages, when the country was surrendered up to the warfare of factious nobles and an unruly populace, when often, for long seasons, all was utter anarchy, and in the language of Dante—

"Never was Romagna without war
In her proud tyrants' bosoms."

Every tomb and monument was turned into a fortress, and the visitor to Rome can still see about them the remains of these mediæval battlements. It was not to be expected, therefore, that the Catacombs should escape the same desecration. The contests of the feudal retainers of these warlike nobles penetrated even to these secluded caverns, conspiracies were arranged in their dark recesses, and armed insurgents assembled there, to wait for reinforcements from the neighboring towns and villages, and for the fierce banditti from the mountains. Nor was the case different when in the next age the papal court was removed to Avignon, during the seventy years, which Petrarch calls "the Babylonian captivity." Then a darker ruin gathered about the Imperial city. The country around was inundated, and the stagnant waters, mixed with decomposed vegetable matter, evaporated under the intense summer sun, until the whole neighbourhood of the city, where the openings of the Catacombs were situated, became a prey to the most deadly malaria. At certain seasons these passages were occupied by shepherds and their flocks, while spending the winter months in grazing on the wide-spread Campagna, but ordinarily they seem to have been the resorts of robbers and felons.

It is evident that during these ages, these sanctuaries of the ancient church were gradually forgotten. The mouths of most of the Catacombs were blocked up by the accumulation of rubbish, by the falling in of the tufa and earth over the arches, or by the rapid growth of gigantic weeds, dense bushes, and trees. It required constant use to preserve a knowledge of their intricate windings, and therefore a few only of the principal entrances were kept open. Even these gradually became neglected, until the church scarcely remembered her ancient home. It was not until the sixteenth century that, through the labours of Bosio, the entire range of the Catacombs was reopened, after being untouched for more than a thousand years. They were found to be a vast treasury, rich in memorials of saints and martyrs—an enduring testimony, every page of which bore witness to the truth of Christian history, and recorded in letters "graven in the rock," the trials and persecutions of the early church.

Epistle of George Fox.

"Dear Friends,—Who are called, chosen, and faithful, in this day of trial, temptation, and suffering, whom the Lord by his right hand hath upholden in all your sufferings, (and some to death,) for the Lord and his truth's sake. Christ saith, 'Be of good cheer, I have overcome the world; in me ye have peace; but in the world ye have trouble.' The children of the Seed, who are heirs of the kingdom, know this is true. And though ye have trials by false brethren, Judases and sons of perdition that are got into the temple of God, and exalted above all that is called God, whom the Lord will destroy with the breath of his mouth, and the brightness of his coming; and though ye be tried by powers or principalities, yet there is nothing able to separate you from the love of God which ye have in Christ Jesus. In that love dwell which bears all things, and fulfils the law; in which edify one another, and be courteous, kind, and humble; for to such God giveth his grace plentifully, and such he teacheth. And pray in the Holy Ghost, which proceeds from the Father and the Son; in it keep your holy communion, and unity in the Spirit, the bond of peace, which is the King of king's heavenly peace. In that you are all bound to good behaviour; to keep peace among yourselves; to seek the peace of all men; and to show forth the heavenly, gentle, and peaceable wisdom to all, in righteousness and truth, answering the good in all people, in your lives and conversations, (for the Lord is glorified in your bringing forth spiritual fruit,) that ye may eye and behold the Lord in all

your actions; that his blessings ye may all feel to rest upon you. Whether ye be the Lord's prisoners for his name and truth's sake, or at liberty in all things, labour to be content, for that is a continual feast; and let no trouble move you, then ye will be as Mount Sion, that cannot be removed. In all things exercise the word of patience, which word will sanctify all things to you. Study to be quiet, and do the Lord's business, that he requires of you, and your own, in truth and righteousness; and whatsoever ye do, let it be done to the praise and glory of God, in the name of Jesus Christ. All they that make God's people suffer, make the Seed suffer, in their own particulars, and imprison the Just there. Such will not visit the Seed in themselves, but cast it into prison in others, and not visit it in prison. You may read that Christ saith, such must go into everlasting punishment. That is a sad punishment and prison. All such as become apostates and backsliders, that crucify to themselves Christ afresh, put him to open shame, and trample under foot the blood of the Son of God, by which they were cleansed, and come to be unclean; such grieve, vex, quench and rebel against, the Spirit of God in themselves; and then rebel against them that walk in it. Such are unfaithful to God, and man, and are enemies to every good work and service of God: but their end will be according to their works; who are like unto the earth that hath often received rain, but brings forth briars and thorns, which are to be rejected, and are for the fire. Therefore, dear Friends, in all your sufferings feel the Lord's eternal arm and power, which hath supported you to this day, and will to the end, as your faith stands in it, and as you are settled upon the Rock and foundation, Christ Jesus, that cannot be removed; in whom ye have life and peace with God. The Lord God Almighty in Him give you dominion, and preserve you all to his glory; that in all your sufferings, ye may feel his presence; and that, when ye have finished your testimony, ye may receive the crown of glory, which God hath laid up for them that fear and serve him. Amen. G. F."

The 15th of the Seventh month, 1685.

Hugh Miller on Monumental Egypt.

THE BONDAGE.

Strange that we should know Egypt better than those who lived so much nearer to it! Many things respecting that ancient kingdom which were obscure to the Greek writers of two thousand years ago are clear to us. Though we stand twice the distance from it which they did, we could write a fuller and more truthful history of the age of the Pharaohs than any which the Greeks have left us. It is common to say, that as the ages pass, the darkness increases, and doubts multiply. Time removes contemporary witnesses from the stage, effaces the memorials of past transactions, and slowly converts history into myth and fable. Such is its effect in ordinary cases, but such has not been its effect in this. As if it had strangely changed its functions, the touch of Time's finger on the Coptic tables has vivified, not effaced, the writing inscribed upon them; and now, across a gulph of forty centuries that writing can be read, and the truth of the inspired records tested thereby. It is sufficiently remarkable, and indicates strikingly enough the prescience that presided over the creation of these stone-written records, that the monumental evidence of Egypt begins about the time that that land comes first into contact with the chosen race, and ends when the Israelites take their departure from it. There are few monuments of any importance belonging to times prior to the first visit of Abraham to Egypt, and there are few relating to the times subsequent to the exodus. The calamities of the latter epoch appear to have weakened the power of the kingdom to an extraordinary degree, and led to a discontinuance of those expensive and magnificent monuments in which the former monarchs of Egypt had indulged. We owe it to a singular peculiarity of the customs and religion of that land, that we possess such minute and numerous memorials of its early history. Its royal tombs were just so many historical volumes. Each king was obliged to become the historiographer of his reign. It was a point of their religion that the monarch should prepare his own tomb. The work began on the day of his accession, and ended on the day of his death. If the reign was long, the tomb was proportionally large and sumptuous. Every year new corridors were opened, new chambers were hewn out and decorated. If the king was devoted to the arts of peace, or gave himself to the internal improvement of his kingdom, the hieroglyphics on its walls were of a correspondingly pacific import. If his reign had been passed in war, the representations on his tomb were all of battles, and of the subjugation of foreign provinces, depicted by long trains of the natives of these provinces led as captives into the royal presence. So sacred was the duty of superintending the preparation of the royal tomb, that even Pharaoh could not perform it in proxy. He must direct the excavation of the chambers, and their adornment with pictures and hieroglyphics, otherwise the work stood still. At the instant of his death it ceased altogether; no stroke of chisel, no trace of pencil, was permitted to supply what might be lacking when the monarch had breathed his last. Finished or unfinished, the mummy of Pharaoh was laid in it, and the vault was closed. In these circumstances the monarch would take care to have his tomb in a forward state, and to record year by year those actions of his which he wished posterity to know, well knowing that if not written now, they would remain forever unrecorded. To these considerations were added the sanctions of religion, which made it an impiety to neglect this duty. In these arrangements the hand of Providence is seen providing abundant materials, destined, in the first place, to a long entombment in the sands of Egypt, and, as soon as the world was able to decipher them, to come forth, and to remain to all time the irrefragable witnesses of the historic truth of the Bible.

Two facts of considerable moment appear to be placed beyond a doubt by the more recent monumental discoveries. The first is the name of the Pharaoh to whom Joseph acted as Prime Minister; the second is that of the "king who knew not Joseph." It is the character and transactions of the latter, so far as the monuments have revealed them, that we are now to bring under notice. Phiops, or Aphophis, the patron of Joseph, was a most munificent sovereign, the patron of the arts, the ruler of a prosperous kingdom; and he was succeeded in the throne by a Pharaoh equally munificent and prosperous. So much the monuments declare, and the evidence of these facts is likely to be vastly strengthened so soon as the ruins of Heliopolis and Memphis, the residence of these powerful and prosperous Pharaohs, shall have been exhumed from the sands which have so long covered them. But by and by, symptoms begin to appear on the monuments, of the decline of their kingdom. We find Memphis, their southern capital, captured by Amosis, one of the kings of Upper Egypt, though the event appears to have been attended with no adverse influence to Israel. They still were possessed of much consideration, enjoyed all the immunities of native Egyptians, and were rapidly growing into a numerous and powerful nati... Matters continued much in this state for seve... reigns. The kings of the line of Phiops seem... have resumed the policy of that great soverei... which was to encourage intercourse and allian... with the Canaanite tribes on the east of Egypt, ... even to give them settlements in the Delta. T... tribes, those of Heth and Arvad, immigrated i... Egypt, and became located in its cities, yet livi... apart from each other, and maintaining their ... tional peculiarities and distinctions. War br... out betwixt them; the tribe of Heth was worste... and expelled from Egypt. They crossed the dese... and the story of their wrongs roused the vindict... feelings of their brethren in Canaan, who not o... attacked the Canaanite possessions of their Ar... dite enemies, but invaded Lower Egypt, where t... Arvadites held possessions in suzereignty. In t... emergency the king of the Delta, where the Isra... ites were located, besought the aid of the Theb... Pharaoh, Sethos I. The Pharaoh of the Del... according to the monuments, purchased the assi... ance of his Theban brother at a costly price, ev... that of the cession of six cities or strongholds ... Lower Egypt, and among these was Heliopolis, ... On, the city in which Joseph had lived—a fa... which is unequivocally attested by the obelisk ... the Piazza del Popolo at Rome, which bears ... have been erected at Heliopolis by this very Ph... raoh, even Sethos I. Now comes the "king w... knew not Joseph." The reign of Sethos, whi... appears to have been long and prosperous, dr... to a close, and he associated with himself in t... government, his son, who was for five years ... regent with his father. This king is named by t... Greeks Sesostris, and in the lists on the mon... ments he is styled Ramses. In the first year ... his *sole* reign, war broke out on the north-easte... frontier of Egypt, the details of which are amp... chronicled on three of the greatest temples no... remaining in Egypt. A new invasion of Low... Egypt by the Hittites and their confederate C... naanite tribes took place; the aid of Ramses w... again invoked, and by his help the invaders wer... driven back. But the victory was short-lived ... for only four years afterwards we find a new an... more successful invasion executed; and whe... Ramses arrived for the third time to rescue t... throne of his brother of Lower Egypt, he foun... the Delta in possession of the Moabites. Thes... facts are recorded on a papyrus (the Salier papyru... in the British Museum. It is probable that t... Israelites, now powerful in Egypt, took no part i... the war against their kindred the children of Lot... hence the success of the invasion. There can b... no doubt that we see in this that condition of ma... ters which dictated the policy of reducing th... numbers of the Israelites. They "increased abur... dantly," we are told, "and multiplied, and waxe... exceeding mighty; and the land was filled wit... them." They had only to combine with the Moab... ites to overthrow the throne of Lower Egypt, an... seize on the Delta as their own. Ramses I., o... his arrival, saw, doubtless, the extent of the danger... His first care was to meditate betwixt the Egyp... tians and their Moabite invaders, and bring abou... peace by a compromise. This got rid of one of th... dangerous parties, and left him at liberty to dea... with the other, even the Israelites. The treat... by which all this was accomplished was ratified ... as we learn from the monuments, in the twenty... first year of Ramses; and the price which Si Phth... paid for it was, that he married Thouoris, th... daughter of Ramses, and consented to govern Lowe... Egypt as the viceroy of his father-in-law, on th... understanding that, on the death of the latter, Si... Phtha should succeed him as king of all Egypt... Thus the kingdom of Phiops was finally merged i...

of Upper Egypt, and the whole of Egypt came
er the sway of the Theban dynasty. This, be-
d doubt, is the rise of the "king who knew not
eph."

his, then, was the date of the captivity—the
nty-first year of the reign of Ramses. When
monarch annexed the Delta to his kingdom,
found the Hebrew race rapidly extinguishing
Egyptian, and the Delta in danger of being
altogether, from the frequent invasions of the
saanite tribes on its eastern border, with whom
Israelites must have been strongly tempted to
bine. Nothing was so likely, then, in these
umstances, as the very policy which Ramses
pted. "He said unto his people, Behold, the
ple of the children of Israel *are* more and
ghtier than we: come on, let us deal wisely
h them; lest they multiply, and it come to
s that, when there falleth out any war, they
o also unto our enemies, and fight against us,
d so get them up out of the land. Therefore
y did set over them task-masters to afflict
m with their burdens. And they built for
araoh treasure-cities, Pithom and Raamses."
at is, they were deprived of all the immunities
ich Phiops had granted them in consideration
the services of Joseph—they were reduced to
position of strangers, and liable to the forced
vices which the practice of the ancient world
acted of persons so situated. They were com-
lled to build fortified camps for Pharaoh, which,
en completed, would be manned with a strong
litary force, and employed as the means of per-
tuating the slavery of those by whose labour
y had been raised. The great works of Egypt
that age were chiefly of a monumental charac-
, and on these would the Israelites be employed.
e quarries whence the stones were obtained
re in the Sinaitic wilderness. Thither would
Israelites be marched in gangs, and the blocks
granite which were hewn in these quarries they
uld afterwards have to transport across the
sert. Others of the oppressed race were em-
yed, doubtless, in making bricks of Nile mud,
extensively employed in the walls of the huge
adrangular precincts of the temples, and the
isters and cells attached to them. And as at
nt epoch the mechanical arts were extremely
nple, the amount of work done depended mainly
on the amount of human force which the Sove-
gn of Egypt could bring to bear in the construc-
on of his works. If, then, there be truth in the
ble narrative, and if Ramses be the "king who
ew not Joseph," we should expect to find that
e monuments erected during his reign surpassed
ose of any other of the Pharaohs, seeing none
them had such an amount of forced labour at
eir command. Now, we do not shrink from the
st. There is a Pharaoh who is distinguished
om all his predecessors, and from all who came
ter him, by the enormous number of the monu-
ental memorials of his reign. There is a Pha-
oh whose name is stamped on every crumbling
ound in Egypt and Nubia, and on almost every
ptic monument in the museums of Europe.
ere is a Pharaoh whose existing monuments
tually surpass those of all the other sovereigns
Egypt put together. That Pharaoh is Ramses.
very crumbling heap that dots the valley of the
ile—every ruined temple, almost every statue
d sphinx in that land of wonders, proclaims
at there was an epoch of fearful bondage in
gypt—an epoch when millions of slaves were
rged by the lash to their daily tasks—and that
ere was a king in that land who reduced the
ll half of his subjects into slavery, and set them
work in the construction of cities, and strong-
olds, and gigantic monuments, which, after four thousand years, excite the spectator's astonishment. Over and over the soil is written, in ineradicable characters, the great fact of the oppression. The whole land cries aloud that once it was a "house of bondage." What a convincing and overwhelming proof of the truth of the Bible!—*Edinburgh Witness.*

Selected.

"John Newton says, 'Many Christians, who bear the loss of a child, or the destruction of all their property with the most heroic christian fortitude, are entirely vanquished and overcome by the breaking of a dish, or the blunders of a servant, and show so unchristian a spirit, that we cannot but wonder at them.'

So, when the breath of slander, or the pressure of human injustice, comes so heavily on a man as really to threaten loss of character and destruction of his temporal interests, he seems forced to recognise the hand and voice of God through the veil of human agencies, and in time-honoured words to say—

> When men of spite against me join,
> They are the sword, the hand is thine.

The smaller injustice and fault-finding, which meets every one more or less in the daily intercourse of life—the over-heard remark—the implied censure—too petty perhaps to be even spoken of—those daily recurring sources of disquietude and unhappiness—those thousand vexations which come upon us through the unreasonableness of others, form a large item of the disquietudes of life; and yet how few look beyond the human agent, and feel that these are trials coming from God. Yet it is true, in many cases, that these so-called minor troubles form the greater part, and in some cases the only discipline of life; and to those who do not view them as ordered, or permitted by God, their affliction really cometh of the dust, and their trouble springs out of the ground, and is not sanctified or relieved by Divine presence and aid, but borne in a mere human spirit; and thus loses the intended effect, and is a hindrance instead of a heavenly discipline. Not a sparrow falleth to the ground without our heavenly Father's notice; not one of them is forgotten by Him; and we are of more value than many sparrows—yea, even the hairs of our head are all numbered! Not till belief in these declarations becomes the calm and settled habit of the soul, is life redeemed from drudgery and dreary emptiness; and made full of interest, meaning, and Divine significance."

From "The Leisure Hour."

The Life-time of a Bee.

Familiar as man has been with the hive-bee from the earliest ages, it is somewhat strange that its duration of existence should have so long remained a vague and unsettled point, or rather, perhaps, that the results of recent observation should differ so widely from those which the ancients deduced from their observations. For example: Virgil states that the working bees do not protract their existence beyond the seventh year; but in general, as it would appear, the length of life allotted by the ancients to the working bees extended from seven to ten years. On the contrary, in later times, writers on bees have regarded it as not much exceeding a year. But then the notions both of ancients and moderns upon this subject have been either purely conjectural, or founded on intermediate premises. Indeed, as Dr. Bevan observes, with respect to the ancients, we are not sure as to whether their estimate applies to an individual bee or to a community of these insects. If it applies to the extinction of a bee community, they were, perhaps, not far wrong. Dr. Bevan, the gentleman whom we have just quoted, and who conducted a series of experiments, is of opinion, however, that the life of the working bee, so far from extending over a period of seven or ten years, does not exceed six, or at most seven months; that a drone's existence terminates in about four months; while the queen bee sees many generations pass away, and may enjoy a protracted life of four or even five years. A good family of bees, he observes, being known to consist of from 12,000 to 20,000, and a fertile queen to breed that number at least every year, which under favourable circumstances is usually thrown off by swarming, it appeared to me to follow as a matter of course, that if swarming were prevented by affording hive-room to the bees, the number during the breeding season would be often more than doubled, and that if their lives were extended even to the shortest period hitherto assigned them, they would remain in a crowded state till the following spring. But repeated experience has clearly shown that the population of families which have been accommodated with room, if examined the following winter, does not consist of more than 2000 or 3000. After receiving a great increase in the ensuing spring, they again suffer a similar reduction before the succeeding winter; and this regular alternation of increase and decrease will go on for years, keeping a family that has been duly supplied with hive-room at about the same average amount at each respective period of the year. This reduction to the smaller number above stated, every successive winter, can only be produced by the old bees dying and leaving the business of the family to be conducted by the young ones, and it affords, I think, conclusive evidence that the working bee's life is regularly cut off in less than a year.

This probability was converted by experiments into certainty, and the following *résumé*, though not minutely precise, is a close approximation to the truth:—

Bees constituting a family in February . .	3,000
Spring-bred bees	17,000
Summer and autumn ditto	6,000
	26,000
Removed by death bet'n February and December	23,000
Thus bringing the family down to the February number	3,000

Great indeed is the annual mortality in a hive of bees, but yet sufficient provision for the perpetuation of the colony is made.

> "The race and realm from age to age remain,
> Time still renewing with his links the chain."

The ancients had many fabulous notions about bees. They supposed that they were not produced in the ordinary mode, but by an extraordinary process. Aristotle and Pliny were both of this opinion, and Virgil, who was, we suspect, more of a theorist than a practical man, inculcates the same ideas. The queen bee he calls a *king*, and says that they, the bees, do not bring forth young, but with their mouth cull their progeny from leaves and fragrant herbs, and thus raise up a new king and little subjects, building for them new palaces and waxen realms. This is sufficiently fanciful; but, in addition, Virgil teaches us a marvellous mode of managing the generation of bees, which, as he asserts, will spring spontaneously from the tainted gore of a young bullock, half strangled and beaten to death, and then laid upon a bed of aromatic herbs; and with this receipt, and a history of its discovery, he closes his Georgics!

We have heard much of the powers of music, and the hum of bees has figured in the pages of

poetry; but bees, if they have ears at all, must have them attuned for anything but the concord of sweet sounds; that is, if the popular prejudice of their being delighted with an uproar of horrid noises has any foundation. The practice of making a noise, by beating iron or sounding intruments, while bees are swarming, in order to induce the swarm to settle, is of great antiquity.

That the hive-bee is a social insect, and necessarily so, is a point on which we need not insist. In a state of nature, the hive-bee is not an inhabitant of dense forests or woods, but gives preference to the open country, to hills covered with thyme and fragrant shrubs, to meadows and pasture lands; the colony tenant the hollow of a tree, or the holes of rocks and caverns; and at the present day, the caves of Salsette and Elephanta are as much frequented by bees as were formerly the clefts of rocks in Palestine. In Europe generally the hive-bee can scarcely be said to exist in a truly wild state; for although swarms often escape, and occupy cavaties in buildings, vacant spaces under roofs, and the like, they are still partial to the precincts of the garden, and never extend their offsets into remote and solitary places among the recesses and fissures of rocks. On the other hand, the hive-bee cannot be called a domesticated animal; it is happily, however, a manageable insect, and ever has been so, which is a wise arrangement when we consider the utility of its productions.

It is not generally known that the bee is held in a certain degree of veneration by the Moslems. A strange superstition, too, was once prevalent in our island respecting bees, which is not yet quite extinct, namely, that if the master of the family is taken seriously ill, or dies, and the bees are not duly informed of the fact, they will be greatly offended and desert the hive.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

NICHOLAS WALLN.

(Continued from page 364.)

After the Yearly Meeting, in the Seventh month, 1702, Nicholas Walln, in company with John Lea, visited Friends in East and West Jersey and Long Island. Their visit was satisfactory, "especially in Long Island where they met with great openness, large meetings, and some lately convinced." We find no further traces of Nicholas Walln's travelling with certificates, but his labours for the good of others near home, both in the ministry, and in the most important appointments of religious society, were abundant.

In the Monthly Meeting of Philadelphia, held Twelfth month 22d, 1705, the subject of burials being brought before the meeting, various conclusions were come to. The minute made on the occasion, ends with this direction, "That Friends forbear for the future putting any monuments or palings in the burying-ground, for the keeping up the memory of the dead, believing that the righteous shall be had in everlasting remembrance with the Lord."

At the Quarterly Meeting, held Seventh month 2d, 1706, the representatives from Philadelphia Monthly Meeting, brought the subject before the consideration of those assembled, stating that Friends in the city were "generally against making any monuments or grave stones over graves in Friends' burying-ground." The subject being thus before the Quarterly Meeting, it recorded its sense, that it was "very needless, and of evil tendency." It moreover recommended the matter to the Yearly Meeting, that a rule of discipline might be made on the subject. Nicholas Walln was one of the representatives to the Yearly Meeting, who had charge of bringing this before that body.

The Friends at the Yearly Meeting made a minute on the subject in which they say, they "give it as their sense and judgment that it is altogether wrong, and of evil tendency to have any grave stones or any other sort of monuments over or about the graves, in any of Friends' burying-grounds; and further that those monuments that are already in the burying-grounds, either of wood or stone, shall be taken away, and no new put up; but to be as sparing as well as Friends can for those who were not Friends, and put up before the burying-ground was solely confirmed to Friends." This advice was sent down for the observance of the subordinate meetings. The next year the same advice was given, with the additional direction to Monthly Meetings to take care that the stones or monuments should be removed, and that if any one should oppose the carrying out the direction of the Yearly Meeting, he should be dealt with as a disorderly person. The reports of the Quarterly Meetings to the Yearly Meeting, in 1708, show that the concern of the Yearly Meeting in this matter had been in good measure, carried out.

At the aforesaid Yearly Meeting, in 1706, Nicholas Walln was one of a committee appointed to prepare an epistle to send down to the members and subordinate meetings.

"For the respective Quarterly and Monthly Meetings within the Provinces of Pennsylvania and the Jerseys.

"Dear Friends and Brethren,—It having pleased the Lord to bless this meeting with a renewed sense of his holy and comfortable presence, to our great and mutual consolation, we are engaged in his love, so largely extended, to desire the welfare of all, and do embrace you therein as partakers of the same virtue of life, and members of the same body, of which the one Lord and Saviour Christ Jesus is the Holy Head. And as the Lord hath been bountiful unto us, in his inward comforts and refreshments, it hath engaged us in a renewed concern and zeal for the honour of his great name, the prosperity of his blessed Truth, and the welfare of his people, that in all things we may be complete, and grow up into that blessed testimony we have received in this present dispensation of God unto the generation that now is. That as we have believed in the light of his Son Christ Jesus our Lord, we may walk as children of light and of the day of God which hath dawned upon us, in all virtue and holiness. Avoiding every appearance of evil or work of darkness in our whole conversation; that so our lives and ways in all things may evidence to the world that we are of, and upheld and preserved by him. And therefore, dear Friends, as conducing to that blessed end, we hereby remind you in a few words of those many and wholesome particulars comprehended in those papers entitled 'A General Testimony, &c.,' recommended from this meeting in the year 1704, which we again recommend unto you and exhort to the strict observation of them, and in especial manner these few things following:—

"First, That Friends keep constantly both to First-day and week-day Meetings, and therein diligently wait upon the Lord, with fervent desires and cries in spirit after the enjoyment of his blessed presence. That so all heaviness of soul may vanish, and drowsiness be done away, which is a growing evil in some, greatly to the dishonour of God, and the hurt of their own souls, that can so far play the hypocrite before the Lord and his sensible people, as while pretending to worsh God in the quickening spirit of his Son Ch Jesus, give way to unnatural sleep, which is so contrary, as light and darkness.

"Secondly, That Friends be careful not to their children apprentices to such as are Friends, whereby they are often led astray throu evil example. But, as much as in them lies, br up their children, and all that are under th care in the fear and nurture of the Lord. T none may be blameworthy in a thing so grea necessary.

"Fourthly, That none accustom themselves vain and idle company, sipping and tippling drams and strong drink in inns or elsewhere, though such as use that evil practice may not s denly be so far prevailed upon as to be drunk the greatest degree, yet they often inflame the selves thereby so as to become like ground fit for the seeds of the greatest transgressions. So that have had the example of virtuous paren have, from such beginnings in corners, arrived a shameless excess, to the ruin of themselv their wives and families, and the scandal of th holy name by which they have been called.

"And for the more effectual putting in pract these things now, and formerly recommended u you, we think it may be expedient, that the ov seers, both men and women in each meeting, ta care to report the state of the meeting to t Monthly Meeting, and each Monthly Meeting t state of affairs to the Quarterly Meeting, and th to this meeting, that so where any defect or sho ness is found in particular or general, a time and apt remedy may be applied as in the wisdo and counsel of God shall be found needful. Th so honour and glory may be given unto the gre name of the Lord our God in all things, who worthy forever!

"And now, dear Friends, as we write to you pure love, we recommend unto you fervent a inward charity one towards another, and to men. Beside the commendations given un charity by the apostle in his day, we also say experience, that charity preventeth many evil It keeps the peace, preserves unity, and as it wer teacheth all duty. Where charity is, there love to God, and love to man; but where it wanting, zeal towards God fails, and neighbou and friends are also disregarded, and instead acts and expressions of love and good will to a the contrary is brought forth. It is for want charity, men speak evil of dignities, detract a lessen the name of their neighbours, and evil entreat in secret the reputations of those th think them no harm. This is a crying evil, fro which the God of Truth purge and preserve h people everywhere, we heartily desire.

"This meeting as it was large and edifying some of you may well remember, so our satisfa tion was heightened by the mention of sever travelling Friends, of the increase and prosperit of Truth in divers places, which we know will b matter of comfort to you. So, in the love of ou heavenly Father, we recommend you to his pow erful protection and counsel in all things, and a your loving Friends and Brethren,

"From our Yearly Meeting, held at Burlin ton, for the Provinces of East and West Jerse and Pennsylvania, begun on the 15th day of th Seventh month; and held by adjournment till th 18th of the same Anno, 1706.

"Sam. Jennings, Antho. Morris,
Nicholas Walln, Sam. Carpenter,
Tho. Story, Caleb Pusey."

Nicholas Walln continued to be much employe in visiting neighbouring meetings, and in fulfillin the various appointments laid in him by h

friends. Respected for his devotion to the Truth; honoured for his faithfulness in the discharge of his duty as a minister of the gospel, he passed long comfortably to a green old age. He was useful in the church, and in the world, almost to a very end of his days, taking an active share in the business of his Monthly Meeting, only nine days before his death. He died on the 4th day of the Twelfth month, 1721. His friends thus briefly characterize him. "He was a zealous minister of the gospel, sound in word and doctrine, useful in the maintenance of the discipline of the church, and his labours were acceptable."

(To be continued.)

Selected.

THE BEST ESTATE.

The heart, it hath its own estate,
The mind it hath its wealth untold;
It needs not fortune to be great,
While there's a coin surpassing gold.

No matter which way fortune leans,
Wealth makes not happiness secure;
A little mind hath little means,
A narrow heart is always poor.

Stern fate the greatest still inthrals,
And misery hath its high compeers;
For sorrow enters palace halls,
And queens are not exempt from tears.

The princely robe and beggar's coat,
The scythe and sword, the plume and plow
Are in the grave of equal note,
Men live but in the eternal "Now!"

Still disappointment tracks the proud,
The bravest 'neath defeat may fall;
The high, the rich, the courtly crowd
Find there's calamity for all.

'Tis not the house that honour makes,—
True honour is a thing divine;
It is the mind precedence takes,—
It is the spirit makes the shrine!

So keep thou yet a generous heart,
A steadfast and contented mind,
And not till death consent to part,
With that, which friend to friend doth bind.

What's uttered from the life within,
Is heard not by the life without;
There's always something to begin
'Twixt life in faith and life in doubt!

But grasp the truth,—though bleak appears
The rugged paths her steps have trod:
She'll be thy friend in other spheres,—
Companion in the world of God.

Thus dwelling with the wise and good,—
The rich in thought, the great in soul,—
Man's mission may be understood,
And part prove equal to the whole!

We know not half we may possess,
Nor what awaits, nor what attends,—
We're richer far than we may guess,
Rich as eternity extends!

The heart it hath its own estate,
The mind it hath its wealth untold;
It needs not fortune to be great,
While there's a coin surpassing gold!

Charles Swain.

STANZAS.

The following stanzas contain a volume of that sense which is often wanting in home education:

"He who checks a child with terror,
Stops its play and stills its song,
Not alone commits an error,
But a grievous moral wrong.

Give it play and never fear it,
Active life is no defect;
Never, never break its spirit,
Curb it—only to direct.

Would you stop the flowing river,
Thinking it would cease to flow?
Onward must it flow for ever:
Better teach it where to go."

For "The Friend."

The Indians.

Walla-Wallas.

No systematic attempt has, it is believed, been made to convert the Klikatats to Christianity, although many individuals have come into contact with missionaries.

The old chief, Towetoks, preserved a paper on which some one had made a sort of calendar, or record of the days of the week. He expressed great anxiety, lest, as it was nearly worn out, he should be unable to distinguish "the Sundays." He added that he was in great fear of death, and constantly "talked to Chief above."

As will readily be imagined, the remarkable features of this mountain scenery, and the neighbourhood of the Great Snow Peaks, Mount St. Helens, and Mount Adams, give a colour to the legends of the Klikatats. They, in common, with other Oregon tribes, seem to have had no distinct religious ideas previous to those introduced by the whites. Their mythology consists of vague and incoherent tales, in most of which Talapus, or the prairie-wolf, figures as a supernatural power. Besides him, there are other agents, among whom, a race denominated the "Eliss Tilicum," from two jargon words signifying "First People," or, "People before," figure prominently. Though trifling in themselves, yet, as a specimen of what may be considered the unwritten literature of the Indians, they may not be uninteresting, the more especially as the belief in the existence of those giants seems to be of universal currency throughout Oregon.

In descending the valley from Chequoss, there occurs beneath a field of lava a vaulted passage, some miles in length, through which a stream flows in the rainy season, and the roof of which has fallen in here and there. Concerning this, they relate, that a very long time ago, before there were any Indians, there lived in this country a man and wife of gigantic stature. The man became tired of his partner, and took to himself a *mouse*, which thereupon became a woman. They hid themselves. The first woman, suspecting they were hidden under ground, commenced digging, and tore up this passage. At last she came beneath them, and succeeded finally in killing them, since when she had lived alone in another mountain.

This story seems to be interwöven with their nomenclature; for, besides the name of this place, Hool-hool-ilse, (from hool-hool, a mouse,) one of the names of their country, is Hoolhoolpam, or the mouse-land.

Concerning the Talapus, this story is related by the Klikatats in connexion with a favourite valley —the Tahk prairie. This was formerly the bed of a lake, the remains of which now appear in a marshy pond of some extent. The Wolf, when the prairie was made, promised that it should be rich in their favourite roots—the Kamaäs and the Wappatoo—and likewise that the salmon should come there in abundance. But the Indians, forgetful of their obligations to him, showed no gratitude, and when they came there, spent their time in horse-racing and gambling, instead of fishing and the business of life. Wherefore the Wolf took away the salmon, and placed two stones upon the prairie, beyond which they should not pass.

There is also a story of a race of diminutive size, but a span high, near the foot of St. Helens. Since the eruption of 1842, it may be mentioned, the Indians have not ventured to ascend Mount St. Helens. They have also tales connected with certain of the constellations, many of which are named.

Most of what has been said of the Klikatats is applicable also to the Yakamas, though, from the nature of their country, some difference in their modes of life is of course observable. They live in rude huts covered with mats, the distance of their winter habitations from timber, rendering the construction of houses inconvenient. They raise potatoes, a few melons and squashes, together with a little barley and Indian corn. The ears of what was seen of the latter were not over five inches long. The potatoes were generally very fine, and of several varieties, of which were noticed the lady-finger, mercer and bluenose.

Their gardens were for the most part situated in the little valleys running up towards the mountains, and near enough to the streams to receive moisture during the early summer. They were rudely fenced around to exclude animals. This invaluable addition to their means of subsistence, they, in common with many other tribes, owe to the Hudson's Bay Company. They obtain from the streams salmon, red and black spotted trout and the unio or muscle, of which there are several varieties. Deer are very scarce; sage-fowl and sharp-tailed grouse, abundant. The chiefs possess a considerable number of cattle, which in the summer find good bunch-grass on the hills. In winter they are driven to great straits, for they are compelled, when the snow lies in the valleys, to browse upon the tops of the wild sage or artemisia. In horses they are well off. Some join the Flat-heads in hunting buffalo. With the tribes on Puget's Sound, they communicate continually during the summer, taking horses for sale to Nesqually, and purchasing "*hai-qua*"—dried clams, and other savage merchandise.

The small-pox has destroyed great numbers of these tribes, and their population is much diminished. The whole course of the Yakama is lined with the vestiges of former villages. On the Lower Yakama there exist the remains of a structure consisting of two concentric circles of earth, within which, are about 20 cellars, placed without apparent design, except economy of room. They are some thirty feet across and three feet deep. The guide, who was a great authority on such matters, declared that it was made very long ago. It is well posted for defence, being on the edge of a terrace, 15 feet high, a short distance from the river, and flanked on either side by a gulley. Outside of the circle, quite near it, are other cellars, in no way differing from the remains of villages frequently met with there.

Proceeding farther west, beyond the cascades, and to the shores of the Pacific, Governor Stevens notices briefly a considerable number of tribes not differing greatly in habits and condition from those just noticed, with the exception of the nautical skill displayed by some of the residents upon the sea-board. The canoes of the Clallams are of different models, the common ones being that known as the Chimoole, the most graceful of all; some are of large size and great beauty. They have, besides, one called the Queen Charlotte's Island canoe, which in a heavy sea is preferable to the first, as less liable to be boarded astern. The canoe used for duck-shooting is very pretty, and exceedingly well adapted to the purpose. It sits low on the water, and an Indian seated in it, and gliding noiselessly along beneath the shadows of the trees, or lying beside some projecting rock, would need sharp eyes to detect him. Another and very large canoe of ruder shape and workmanship, being wide and shovel-nosed, is in use among all these tribes for the transportation of their property and baggage.

Among their characteristic manufactures are blankets or robes made of dog's hair. They have a kind of cur with soft and long white hair, which they shear and mix with a little wool, or the

ravellings of old blankets. This is twisted by rolling on the knees into a cord of coarse yarn, and is then woven on a frame. They use the down of water-fowl in the same way, mixing it with hair, and forming a very thick and warm fabric.

The Governor gives a very unfavourable account of the moral and physical condition of the various tribes of the sea-board. They are all wasting away under the destructive influences brought to bear upon them by the proximity and encroachments of evil-disposed white men. But to argue, that because they are perishing under the hand of injustice, that such is the will of Divine Providence, and to suffer such a consideration to reconcile us to, and even to acquiesce in, if not to promote the extinction of these people, is not christian; it is in no wise conformable to the great rule of doing to others as we would be done by.

For "The Friend."

I think there is much instruction to be derived from the following letter from Lydia Lancaster to Samuel Fothergill, both of whom were deeply experienced ministers in our religious Society.

How beautiful is the manner and spirit in which the handmaiden of the Lord speaks to her beloved fellow servant, whom she had reason to think had admitted into his heart, some doubts respecting the stability and integrity of herself and some others, because they "could not all see and think alike about some new proposals." If the Editor thinks well of it, I would be glad to see it published in "The Friend," and would hope that some among us, who have attained to but very little religious experience, might take a hint from it, how we undertake to judge of, or pass sentence upon others, perhaps far more advanced in the christian journey than ourselves, because they may not see things precisely as they appear to our immature eyesight; but let us strive as did L. Lancaster, to make "a narrow search and close examination of (our) inward condition, with as much singleness and impartiality as (we) are capable of," and then I believe we will be enabled to show forth in greater clearness the meek, patient, and long-suffering spirit of our Holy Redeemer. H.

LYDIA LANCASTER TO SAMUEL FOTHERGILL.

"Lancaster, First mo., 23d, 1757.

..... "That pure love which I often feel bubbling up towards thee in the spring of Divine life, engages me to send a few lines beseeching thy acceptance, as I know we have an endeared affection for each other, grounded in and upon that ancient Root, which hath hitherto borne up and been the support of us and of all the faithful, through the various tribulations of our march. And lest our grand adversary, under any disguise, should get one step in upon any of us, to deprive us of that free partaking of the sap, and virtue, and nourishment which this heavenly root affords, I have made a narrow search and close examination of myself and inward condition, with as much singleness and impartiality as I was capable of. For I was ready to think thou had not such full unity with me, nor indeed with few of us, as used to be; and I could tell no reason for it, except that we could not all see and think alike about some new proposals, and in this we did not play the hypocrite, but spoke freely, and I believe in much love and friendship. I am sure I did, for it is the way Truth leads me, whether I may be the better or worse thought of for so doing; and after I have spoken my mind, do think myself clear, not bearing any grudge, or harbouring any ill opinion respecting those who may not at that time see as I do. But I search my belief over again, whether they or I was in the right; for we none of us plead infallibility, or desire any should pin their faith upon us, but desire all may see for themselves, and see right; so leave such things as cannot at that time be accomplished by love, nor strive too much, nor over drive any of the flock, lest thereupon they should sicken and die; for all are not of one strength, and yet with care, time, and patience, may so run as to accomplish their journey. We read, the Apostle Paul was not only strong, but skilful also, in spreading the Gospel net, becoming weak with the weak, taking their pace in a gentle manner, whereby he caught many.

"I hope it is far remote from my heart's intention to daub any stone in God's Zion with untempered mortar, or to heal any wound of sin deceitfully; but I find as it was love ever raised and made any of us instruments of service in the house, so it is by our abiding under the same influence that the body comes to be edified, and to grow from one degree of strength to another, to be changed from one measure of clearness in understanding, brightness and glory, to another; and though thou may think our meeting worse than it was a few years since, I own myself to be of another judgment, both respecting aged and young; but I may be mistaken, so shall leave it for time and truth to determine, and with a heart fruitful in love to thee, my beloved and valuable friend, and thy dear wife, I now conclude, and remain thy real, true, and constant friend, LYDIA LANCASTER."

For "The Friend."

We think there is an honest simplicity and naivete about the following extract, which confirms the truthfulness of the narrative. The doubt of the Governor implied by his tolerating Quakers and Baptists, is characteristic of the old Puritan, while the "carefulness and solemnity" with which poor Pomp Shorter was reproved, evinces the zeal with which outside decorum was enforced in those days. The manner in which "the council and other dignitaries" concluded to silence their scruples and gratify their taste for good venison, at the expense of the "sinful heathen" who killed it, is very suggestive.

Relic of Olden Times.—The Springfield Gazette, publishes a copy of a letter, written one hundred and thirty-four years ago, by Lawrence Conant, giving an account of the ordination of the first minister ever settled over the Old South Parish, in Danvers. We extract the following section:

"Ye Governor was in ye house and her Majesty's commissioner of ye customs, and they set together in a high seat by the pulpit stairs. Ye Governor appears very devout and attentive, although he favours Episcopacy, and tolerates ye Quakers and Baptists, but is a strong opposer of ye Papists. He was dressed in a black Velvet coat, bordered with gold lace; and buff breeches, with gold buckles at ye knees, and white silk stockings. There was a disturbance in ye galleries, where it was filled with divers negroes, mulattoes, and Indians, and a negro called Pomp Shorter, belonging to Mr. Gardener, was called forth and put in ye broad aisle, where he was reproved with great carefulness and solemnity. He was then put in ye Deacon's seat, between two Deacons, in view of ye whole congregation, but ye sexton was ordered by Mr. Prescott to take him out, because of his levity and strange contortion of countenance, (giving grave scandal to ye Deacons,) and put him in ye lobby under ye stairs; some children and a mulatto woman were reprimanded for laughing at Pomp Shorter. When ye services at ye house were ended, ye council and other dignitaries were entertained at ye house of Mr. Epes, on the hill near by, and we had a bountiful table, with bear's meat and Venison, ye last of which was a buck, shot in the woods near by. Ye bear is killed in Lynn Woods, near Reading. After the blessing was craved by Mr. Garrish, of Wrenth[am], word came that the buck was shot on Lord's [day] by Pequot, an Indian, who came to Mr. Epes's [and] a lie in his mouth, like Annanias of old; ye co[un]cil thereupon refused to eat ye Venison, but it afterwards agreed that Pequot should rec[eive] forty stripes save one, for lying and profaning the Lord's day, restore Mr. Epes ye cost of ye de[er] and considering this a just and righteous senter[ce] ye sinful heathen, and that a blessing had b[een] craved on ye meat, ye council all partook o[f] but Mr. Shepherd, whose conscience was ten[der] on ye point of ye Venison."

To Prevent Metals Rusting.—Melt toget[her] three parts of lard and one of rosin. A v[ery] thin coating will preserve Russia iron stoves [or] grates from rusting during the summer, even [in] damp situations. The effect is equally good [on] brass, copper, steel, &c. The same compo[und] forms an excellent water-proof paste for leath[er]. Boots, when treated with it, will soon after t[he] the usual polish when blacked, and the soles n[ot] be saturated with it.

Why there is no Rain in Peru.—In Pe[ru] South America, rain is unknown. The coast [of] Peru is within the region of perpetual southe[rly] trade winds. Though the Peruvian shores are [on] the verge of the great South Sea boiler, yet [it] never rains there. The reason is plain. T[he] southeast trade winds, in the Atlantic ocean, fi[rst] strike the water on the coast of Africa. Trav[el]ling to the northwest, they blow obliquely acr[oss] the ocean until they reach the coast of Bra[zil]. By this time they are heavily ladened with vapou[r] which they continue to bear along across the co[n]tinent, depositing it as they go, and supplyi[ng] with it the sources of the Rio de la Plata, and t[he] southern tributaries of the Amazon. Finall[y] they reach the snow-capped Andes, and here [are] wrung from them the last particle of moistu[re] that the very low temperature can extract. Reac[h]ing the summit of that range, they now tumb[le] down as cool and dry winds on the Pacific slop[e] beyond. Meeting with no evaporating surfac[e] and with no temperature colder than that to whi[ch] they were subjected to on the mountain tops, th[ey] reach the ocean before they become charged wi[th] fresh vapour, and before, therefore, they ha[ve] any which the Peruvian climate can extrac[t]. Thus we see how the top of the Andes become[s] the reservoir from which are supplied the rive[rs] of Chili and Peru.—*Maury's Geography of t[he] Sea.*

Selected.

"Study to be quiet, and mind thine own bus[i]ness, is one useful, necessary direction, to a[ny] who would thrive at home. There is an activ[e] enemy, who seeks to draw out the mind after othe[r] people's business, to the neglect of our own [affairs] whereby hurt and loss attend, and the feet of th[e] mind are gadding from house to house, and abid[e] not within our own doors. The domestic affair[s] of the soul are neglected, the house gets unclea[n] and confused; and when the holy Head of th[e] family and Husband of the soul, comes, he find[s] things unmeet for his reception, and refuses to tak[e] up his residence. Here some bemoan his absenc[e] which is chiefly or wholly owing to their want o[f] care in having all things clean and in order, an[d] being at home to receive him when he comes.

It is a common consequence of wandering muc[h] from home, to hear many reports, whereby th[e]

mil feeds on wind; this is also ruinous and de-
structive. It was not upon the mountains, or far
off that manna descended for Israel, but even about
their tents; and the celestial bread, which hath
been the staff of life to the living of all genera-
tions, is in our own houses; the vein of fine gold
runs in our hearts, there let us dig, and patiently
bear the refiner's hand. Blessed is that servant
who is found thus abiding and waiting at home;
when his Master comes he will accept him and
make him ruler in his stead. Here stands the
power and ability of being rightly useful in the
cause of truth, whether in the church, or in our
own families. In this authority, the tender con-
nections of nature, improved by grace and con-
firmed by prudence, become a threefold cord, that
cannot easily be broken; and if we instantly see
not the desire of our souls, we shall not assume
the Divine prerogative in fixing judgment, or de-
cide our patient waiting until the Lord comes,
who can do all for us, yea, more abundantly than
we dare expect or ask."—*S. Fothergill.*

Agricultural Division of Patent Office.—The Carob Tree, or St. John's Bread.—Of all the seeds imported by this office for the purpose of distribution, there is not one more interesting or more valuable than those of the Carob Tree. The pods, when matured, contain a few drops of a substance resembling honey. The tree is unquestionably of Eastern origin, and it is supposed to be identical with that upon which St. John fed, while in the wilderness. The seeds were procured for the office from Alicante, in Spain. In Murcia Valentia, Catalonia, and other provinces in that country, it abounds and frequently forms, with the Olive and other valuable trees, large forests. It was without doubt, introduced there by the Moors, who knew its nutritive qualities as a food for their horses, mules, and cattle. They probably brought it from Palestine and Egypt, whence it appears to have originated. In these Spanish provinces it now grows naturally in every kind of ground, not excepting the driest and most barren spots, where the underlying rock shows itself more frequently than earth. Its roots, twisting in every direction, accommodate themselves to the lightness or depth of the soil; while the trunk, remarkable for its smooth and flat coloured bark, attains in sheltered positions a colossal size. The branches, furnished with grey-ish coloured leaves, spread majestically around the trunk, and when loaded with fruit, hang down quite to the ground in the form of a tent. The fruit ripens rapidly, and such is its abundance and weight, that it is necessary at once to gather it. The pods are sweet and rich in sugar, and animals feed on them with avidity, and become quite fat and in good condition for work. There are several varieties of the tree. The produce is necessarily in proportion to the attention given. It blooms twice a year—about the first of February and the middle of September—and when well watered, arrives at a considerable height, and sometimes covers a space of one hundred feet in diameter, bearing upwards of a ton of pods. It will doubtless succeed in the Southern and perhaps in the Middle States.

THE FRIEND.

EIGHTH MONTH 4, 1855.

There are few things that make a more vivid impression on us, than extremes of heat or cold, or sudden variations in the temperature of the atmosphere; and yet the impression is sufficiently evanescent to allow of our soon forgetting the precise facts of the case. Hence it is not an unusual thing, to hear persons express an opinion, that they do not remember its having ever been so hot, or so cold for the same length of time before; that the season is a very unusual one for its temperature, &c., &c.; and were it not for the registers kept of the thermometrical indications, we should often be led into error on this subject. Various causes are, no doubt, operating to produce perceptible changes in the climate of our country, but they act so slowly, that but little continuous alteration is effected during the life-time of "the oldest inhabitant;" the statistics of the weather, showing nearly the same number of very cold or very hot seasons in the eighteenth, as have occurred, so far, in the nineteenth century.

But, certainly, those who have been confined within the densely built parts of our city during the past month, have felt, that whether exceeded by former years or not, the heat has been quite as great as could be borne with any comfort; and that, with the moist atmosphere, that has frequently accompanied it, there has been a great diminution in the strength and energy required for the ordinary duties of life. And yet the general health of the inhabitants has not suffered materially; there being no epidemic present, and the ordinary affections of the season, being mild in their type, and easily managed. The increase in the bills of mortality, is chiefly attributable to the diseases among young children, brought on, or rendered fatal, in very many cases, by the impure air with which they are surrounded, and the improper diet on which they are fed.

The continued heat has induced a larger portion of our citizens than is usual, to leave the city, in the hope of renewing health, and obtaining the benefits of relaxation from business, and the stimulus of recreation. This is a natural, and, where we are careful to indulge only in that which is innocent, a justifiable course for those whose circumstances will allow them to pursue it. Large cities are, on many accounts, very undesirable places for constant residence during the prevalence of the heat that attends our summer months. The crowding together, within extended piles of brick and mortar, of so many thousands of human beings, shut out from a sight of the green fields, the waving forests, and the purling streams, that diversify and make glad the face of nature, is, altogether, an artificial arrangement, and but little calculated, one would suppose, to promote either physical comfort or mental ability.

"God made the country, and man made the town.
What wonder then that health and virtue, gifts
That can alone make sweet the bitter draught
That life holds out to all, should most abound
And least be threatened in the fields and groves?"

Such was Cowper's opinion; but much might be said relative to the advantages and disadvantages of both country and city life, none of which, however, need be introduced here, as it cannot interfere with the propriety of gratifying the desire, amounting almost to an instinct, in the citizen to escape from heated pavements and noisy streets, into the shade and quiet of the country.

The going and coming of so many, of course produces more or less unsettlement, disturbing for the time being, the accustomed social intercourse among home friends, but from this very cause, rendering the return to domestic comforts and old associations the more welcome. It is right for us all, whether we go abroad for a shorter or longer time, to bear in mind that the obligations of religion are not removed or lessened by change of situation, and Friends should be especially on their guard that their conduct and conversation should adorn the doctrines and principles they are known to profess. There is no time when a more scrutinizing, and perhaps we may say, a more censorious watch is kept upon Friends by those who surround them, than at places of public resort, in the country or on the sea-side, and there is a corresponding need for watchfulness.

As Friends of the city adopt the custom, which is becoming more general every year, of removing with their families into the country during the summer season, not only are our religious meetings in the city greatly reduced in numbers, and a greater responsibility thus thrown on those who are left to support them, but there is also cause for watchfulness and care on the part of those removing, lest they become loosened from where they have been rightly planted, and taken root, and allow their interest in the right conduct of their proper meetings to dwindle or die out.

SUMMARY OF EVENTS.

EUROPE.—News from England to Seventh mo. 14th. Lord John Russell had resigned his seat in the British Cabinet. His attempted explanation in Parliament of his conduct at Vienna, was unsatisfactory, and Sir Edward Bulwer Lytton was about to move that a ministry containing Lord John Russell, was unworthy of confidence. It now appears that both he and the French Envoy were willing to accede to the mediatory propositions made by Austria; but after his return, Lord John had resorted to shuffling and evasion, instead of a candid statement of the ground taken by him. Parliament was to be prorogued on the 10th. The bullion in the Bank of England had decreased £439,000. Consols were 91. The parliamentary returns show that the national expenditures for the year ending Sixth month 30th, amounted to £73,055,000, and the income to £61,-153,000, leaving a deficiency of nearly twelve millions of pounds. The balance in the exchequer was £3,882,-000. About half the expenditure was for warlike purposes. The Liverpool cotton market was ⅛*d.* lower. Wheat and flour were firm, owing to the small stock on hand; but Indian corn was 4*s.* to 5*s.* per quarter lower.

The War.—There was nothing new from the Crimea. Sebastopol had been again subjected to two days' heavy fire, without effect. The besiegers were erecting immense works against the Malakoff and Redan towers, and the besieged were erecting equally formidable earthworks behind the defences. The allies had about 30,000 men employed on their new fortifications. There is a report of the death of the celebrated Circassian chief, Schamyl. A Russian army of 30,000 men was before Kars, but it was reported that Colonels Schwarzenler and Colman had repulsed the Russian advanced guard on the 16th of Sixth mo. The Russians were manœuvring to cut off the communication between Kars and Erzeround. Notwithstanding the lateness of the season, there are indications of the war being renewed on the Danube. Lalande, a French engineer, had been sent to inspect the roads in Eastern Moldavia, and make a new one from Galatz to Jassy. Orders had been forwarded to the local authorities to place the roads in their respective districts, in the best possible condition, and French agents were making purchases along the Danube for the supply of an army.

ITALY.—The Austrian Marshal, Radetskay, has demanded large and immediate reinforcements to the garrisons of Milan, Verona and Venice, and 40,000 men are to be distributed among the Italian garrisons.

NICARAGUA.—The adventurer, Walker, who invaded this country with an armed force from California, has met with a disastrous defeat. He fled with the survivors of the party towards Costa Rica. Col. Kinney, who was to co-operate with him, has been shipwrecked on his voyage, from New York.

CHILI.—The Congress of Chili met on the 1st of Sixth month, when the President congratulated members on the silent but sure material advancement of their country, in the path of civilization and commerce, the building of railroads and telegraph lines and the promotion of popular education.

AUSTRALIA dates to Fifth mo. 10th have been received. The excessive importations of breadstuffs and other food into the colony, is commented on by the newspapers. It was deemed impolitic in view of the immense agricultural resources of the country.

SANDWICH ISLAND dates to Sixth mo. 5th. The new wine bill had passed the Legislature. A Maine

law bill was advocated. The last whale ship had left Lahaina.

BRITISH PROVINCES.—The St. John papers state that Admiral Fanshaw has advertised for tenders for the conveyance of 500 troops, from Halifax to England. The crops throughout Nova Scotia and New Brunswick, were highly promising.

UNITED STATES.—*Export of Grain.*—The N. York Tribune says, "The export movement in new wheat has commenced, several freight engagements having been made within a day or two. As the receipts increase, the outward movement will be large. We learn from the parties connected with the foreign trade, that very large preparations have been made by means of credits upon European banking houses for the purchase of breadstuffs and provisions during the coming season. If our markets do not maintain too high a figure, England and the continent will take all our surplus of breadstuffs at fair prices. The arrangements made for purchasing, we are told, are larger than ever before. The shipments of flour and wheat to Great Britain and Ireland thus far this season, (since Ninth mo. 1, 1854,) are very inconsiderable, compared with the previous year, having been only 140,000 bbls. flour against 1,800,000, and 303,000 bush. wheat against 5,846,000. Corn shows an increase of about 300,000 bush. during the same period."

Utah.—It is stated that E. J. Steptoe did not absolutely decline the office of Governor of Utah. He informed the Administration at Washington, that he will act as Governor, provided that when his term is out, or he is displaced, he shall be reinstated in the army. He had not yet received the President's answer to his communication.

Kansas.—Gov. Reeder, it is said, will not be removed unless other charges are brought against him than those contained in Secretary Marcy's letter. The affairs of the Territory appear to be in great confusion. The Legislature having organized and excluded all the free State members chosen at the supplementary election, adjourned to the Shawnee Mission, where they have passed a variety of laws which Governor Reeder refuses to sanction on the ground that he does not consider the Legislature in legal session. Woodson, Secretary of the Territory, is reported to have said he would assume the reins of government, in case Gov. Reeder refuses to recognize the Legislature.

New Mexico.—Advices from Santa Fe state that Col. Fontleroy returned on the 28th of Sixth mo., from the pursuit of the Utah Indians. His force overtook a party of them on the head waters of the Kansas; they killed forty of the Indians, and took five prisoners.

Pennsylvania.—On the 24th ult., an effort was made to sell the main line of the Public Works at the Philadelphia Exchange, in pursuance of the Act of Assembly. The act provided that no bid less than $7,500,000, should be received. There being no bidders, after a short delay the sale was adjourned *sine die*, and the act for the sale of the line has again proved futile.

Philadelphia.—Mortality last week, 313.

New York.—The assessed value of real estate in the city of New York, the present year, is $336,975,866; of personal property, $150,022,412—total, $486,998,278. The amount of taxes to be raised during the present year, is $5,843,822.

California.—The steamship Star of the West from San Juan brought California dates to Seventh mo. 1st, and $955,000 in gold. A number of families had arrived in Sacramento Valley, from Salt Lake. They report extensive preparations among the Mormons to emigrate to California. The grain crop throughout the State has been considerably injured by the smut and rust. In some districts the wheat is almost destroyed; in others it is quite good. It is yet doubtful whether the supply will be equal to the demand. Grasshoppers have been destructive in the Sacramento Valley. Great flights of them have consumed the grass and green leaves over extensive tracts. The damage on Sutter's farm alone is estimated at $10,000. The fine new steamer America had been destroyed by fire in Crescent City bay. No lives were lost, and the cargo was saved. The vessel was valued at $140,000. The shipment of gold from San Francisco, for the Sixth month, was $3,891,945.

New Orleans.—At last dates the yellow fever appeared to be on the increase, but was considered to be of a mild type. The deaths at the hospital in one week numbered 63.

Miscellaneous.—Children in Boston.—By the census just completed under the laws of the State, it appears that the whole number of children in Boston, between the ages of four and fifteen years, is 28,528. Last year the number returned by the census was 24,289, showing an increase in one year of 4289 children between the ages named.

A Large Yield.—George B. Dickson, of Dover, Del., has threshed a crop of wheat raised upon a five acre lot, near the town. This crop averaged forty bushels per acre, or two hundred bushels in the lot. The stock was white Mediterranean.

The Sound Dues.—A letter, dated Copenhagen, June 30, published in the late English papers, states that the Danish which the United States Government has made on that of Denmark, to abolish the Sound Dues, as far as concerns ships sailing under the American flag, will not be conceded. The same letter states that, of 2009 vessels which passed the Sound during the last month, only seven belonged to the United States.

A Great Sale.—The Illinois Central Railroad Company sold the other day a piece of land fronting on the line of their railroad, near the foot of Lake street, for $600 per foot front, or $24,000 for forty feet.

Decision against a Steamboat Company.—In the Louisville (Ky.) Chancery Court, Wm. B. Bracked, of Madison, Mo., has obtained $1000 damages from the owners of the steamer Gulnare, for carrying his slave beyond the jurisdiction of the State of Missouri. It was proven on the trial that the officers of the boat were not aware of the presence of the slave on the boat. The jury also gave the plaintiff the damages incurred in attempting to reclaim the slave, amounting to $100.

Vermont Slate.—The Rutland county slate quarries in this State give employment to four hundred men; and slate enough is quarried and finished every day to cover 20,000 square feet of roof. The slate sells, on an average, at $3.75 for each one hundred square feet; and the Herald says that county can furnish all the roofing slate wanted in the United States for fifty years.

An Incident of Slavery.—A late number of the St. Francisville, La., Chronicle, says, "Two or three days since, a gentleman of the parish, in hunting runaway negroes, came upon a camp of them in the swamp on Cat Island. He succeeded in arresting two of them, but the third made fight, and upon *being shot in the shoulders*, fled to a sluice, where the *dogs* succeeded in drowning him before assistance could arrive."

Enormous Land Sales.—The sales of public lands at the Fort des Moines (Iowa) land district this season, have been very large. Exclusive of the lands taken there with bounty land warrants, they amounted, in the Fifth month, to $300,723, and in the Sixth month, to $244,703.

The Great Storm.—The Germantown Telegraph says, the rain which fell on Sixth-day afternoon, the 20th ult., at that place, exceeded in amount any rain previously marked in the same space of time for the last twenty years. The gauge showed *two inches and forty hundredths* of an inch, or nearly two inches and a half, in one hour and a quarter.

Migration from Britain.—The number of persons who migrated in 1854 were as follows:

To United States	192,993
Australia	83,162
Canada, &c.	43,621
Other places	3,336
Total	332,112

The number who have emigrated since 1840, is 3,133,414 persons. The figures to Australia are very large, and rank next to those sent to the United States.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in this Institution.

Application may be made to either of the undersigned, members of the Committee.

SAMUEL BILLES, Wilmington, Del.
THOMAS EVANS, SAMUEL BETTLE, Jr. } Philads.

Evening Schools for Adult Coloured Persons.

Wanted, A Principal and three Assistant Teachers for the Men's School, and a Principal and four Assistants for the Women's School.

Application may be made to either of the undersigned.

JOHN C. ALLEN, No. 179 S. Fifth St.
SAMUEL ALLEN, No. 134 S. Front St.
WILLIAM L. EDWARDS, No. 37 Arch St.

DIED, on the 22d of the Tenth month last, in the 79th year of his age, AARON ROBERTS; a member of Plainfield Monthly and Particular Meeting, in Belmont Co., Ohio. This dear Friend was much attached to the doctrines and testimonies of our religious Society as held and maintained by our worthy predecessors; being concerned himself to walk answerably thereto, was exemplary in seeking opportunities for retirem in spirit before the Lord, that he might witness strength renewed, and know the work of sanctifica to go on in his heart. He was favoured to bear a pa ful illness with becoming patience and resignation, gave evidence that through redeeming mercy he prepared for his change, and, we humbly trust, he been permitted to enter into one of the many mansi prepared for the righteous.

——, at his residence, Westfield, Burlington coun N. J., on the 1st of the Seventh month last, in the year of his age, SAMUEL LEEDS; a minister and me ber of Westfield Particular and Chester Monthly Me ings. He was born at Leeds Point, where he resi the greater part of his life. In early life he gave up the visitations and requirings of Divine grace, thereby experienced the work of regeneration; and ing prepared by the sanctifying power of the Spirit Christ, he received a gift in the ministry of the gos and was recommended a minister by Great Egg Harbo Monthly Meeting, about the 23d year of his age; with the unity of his brethren, performed several jou neys in the exercise of this gift. For several years, wards the latter part of his life, owing to physical d ease, his mind lost its original energy, and he sunk i great depression; during which he was mostly co fined at home, and his service in the work of the min try was suspended. In an account which he wrote 1847, after coming out of this depressed condition, says, "In the latter part of the past year, my mind t came increasingly concerned for my future happine and eternal felicity. I kept mostly pretty much in quiet, and enjoyed, at times, a comfortable composu of mind; but when I looked towards an endless et nity, it did not look as clear as desirable. I was favou ed to feel a strong desire raised in my mind, that might witness a preparation of heart for such a chang and that when the time did come that I must lay dow my natural life, there might be an evidence that it w well with my soul. I applied to the reading of t Scriptures, and the religious writings of Friends, which commendable practice, I felt a little glow of heavenly love, to warm my heart, and tend my spirit, which afforded some encouragement to m poor soul. As I continued daily in the reading, I fel an increase of love and of faith to persevere on in th good way, by which I felt an increase of unity in spir with the holy penmen of the Holy Scriptures, and r newedly to believe that holy men of old were enable to write the Scriptures of Truth, by the aid of the Ho Spirit, and that they had been preserved by the pow and goodness of God, and through his adorable goo ness and mercy handed down to us for our instructio and improvement. I also saw, that it was by this D vine power, love and goodness, that our Society w gathered to be a people; hence, I had near and de unity with the writings of our Friends, who were calle upon to bear testimony to the glorious cause of Tru and righteousness in the earth, and of the gracio dealings of the Almighty with them. Having been th brought into the unity of the one Spirit, and renewed to feel and know that as the Apostle says, 'There is on Lord, one faith and one baptism,' I endeavoured to for those things that are behind, and to press forward t ward the mark of the prize of the high calling of Go in Christ Jesus; constantly attending meetings with m Friends; in which I believe we are favoured at times feel Him, the Holy Head of the Church, to be near, ac cording to his gracious promise, 'where two or thre are gathered together in my name, there am I in th midst of them,' having a consoling evidence as th Psalmist says, that 'in his presence there is fulness joy and at his right hand there are pleasures foreve more.'" Thus it pleased his Divine Master to raise hi up again, and to restore him to the work of the minis try, which to him was as the opening of a new day, which a new song was put into his mouth; and th baptizing power of Truth, attending his labours, times reached and tendered the hearts of his hearer Having laboured diligently, whilst in health, in th work to which he was called by the Great Head of th Church, he was permitted to enjoy great peace an serenity of mind, and when laid upon a bed of sickness there appeared but little left for him to do; and as shock of corn fully ripe, he was gathered, we trust, an inheritance, incorruptible, among those who ha come out of great tribulation, into the mansions of eve lasting rest, prepared for them by their blessed R deemer.

REFLECTIONS ON WAR.

ROBERT HALL.

War may be considered in two views, as it affects the happiness, and as it affects the virtue of nkind; as a source of misery, and as a source crimes.

Though we must all die, as the woman of Tekoa id, *and are as water spilt upon the ground which annot be gathered up*, yet it is impossible for a manc mind to contemplate the rapid extinction innumerable lives without concern. To perish a moment, to be hurried instantaneously with- preparation and without warning, into the pre- nc of the Supreme Judge, has something in it xpressibly awful and affecting. Since the com- ncement of these hostilities, it may be reason- y conjectured, that not less than half a million our fellow-creatures have fallen a sacrifice. lf a million of beings, sharers of the same ture, warmed with the same hopes, and as fondly ached to life as ourselves, have been prema- rely swept into the grave; each of whose deaths s pierced the heart of a wife, a parent, a brother, a sister. How many of these scenes of com- cated distress have occurred since the com- ncement of hostilities is known only to Om- science: that they are innumerable cannot admit a doubt. In some parts of Europe, perhaps, ere is scarcely a family exempt.

Though the whole race of man is doomed to ssolution, and we are all hastening to our long me; yet, at each successive moment, life and ath seem to divide betwixt them the dominion mankind, and life to have the largest share. is otherwise in war: death reigns there with- t a rival, and without control. War is the work, e element, or rather the sport and triumph, of ath, who glories not only in the extent of his nquest, but in the richness of his spoil. In the her methods of attack, in the other forms which ath assumes, the feeble and the aged, who at e best can live but a short time, are usually the ctims; here it is the vigorous and the strong. is remarked by an ancient historian, that in ace children bury their parents, in war parents ury their children: nor is the difference small. hildren lament their parents, sincerely indeed, t with that moderate and tranquil sorrow, which is natural for those to feel who are conscious of taining many tender ties, many animating pros- cts. Parents mourn for their children with the tterness of despair; the aged parent, the widow- l mother, loses, when she is deprived of her ildren, every thing but the capacity of suffering; e heart, withered and desolate, admits no other object, cherishes no other hope. *It is Rachel weeping for her children, and refusing to be comforted, because they are not.*

But to confine our attention to the number of the slain would give us a very inadequate idea of the ravages of the sword. The lot of those who perish instantaneously, may be considered, apart from religious prospects, comparatively happy, since they are exempt from those lingering diseases and slow torments to which others are liable. We cannot see an individual expire, though a stranger or an enemy, without being sensibly moved, and prompted by compassion to lend him every assistance in our power. Every trace of resentment vanishes in a moment: every other emotion gives way to pity and terror. In these last extremities, we remember nothing but the respect and tenderness due to our common nature. What a scene, then, must a field of battle present, where thousands are left without assistance, and without pity, with their wounds exposed to the piercing air, while the blood freezing as it flows, binds them to the earth, amidst the trampling of horses, and the insults of an enraged foe! If they are spared by the humanity of the enemy, and carried from the field, it is but a prolongation of the torment. Conveyed in uneasy vehicles, often to a remote distance, through roads almost impassable, they are lodged in ill-prepared receptacles for the wounded and the sick, where the variety of the distress baffles all the efforts of humanity and skill, and renders it impossible to give to each the attention he demands. Far from their native home, no tender assiduities of friendship, no well-known voice, no wife, or mother, or sister, is near, to sooth their sorrows, relieve their thirst, or close their eyes in death. Unhappy men! and must you be swept into the grave unnoticed and unnumbered, and no friendly tear be shed for your sufferings, or mingled with your dust?

We must remember, however, that as a very small proportion of a military life is spent in actual combat, so it is a very small part of its miseries which must be ascribed to this source. More are consumed by the rust of inactivity than by the edge of the sword; confined to a scanty or unwholesome diet, exposed in sickly climates, harassed with tiresome marches and perpetual alarms, their life is a continual scene of hardships and dangers. They grow familiar with hunger, cold, and watchfulness. Crowded into hospitals and prisons, contagion spreads among their ranks, till the ravages of disease exceed those of the enemy.

We have hitherto only adverted to the sufferings of those who are engaged in the profession of arms, without taking into our account the situation of the countries which are the scene of hostilities. How dreadful to hold every thing at the mercy of an enemy, and to receive life itself as a boon dependent on the sword. How boundless the fears which such a situation must inspire, where the issues of life and death are determined by no known laws, principles, or customs, and no conception can be formed of our destiny except as far as it is dimly deciphered in characters of blood, in the dictates of revenge, and the caprices of power. Conceive, but for a moment, the consternation which the approach of an invading army would impress on the peaceful villages in this neighborhood. When you have placed yourself for an instant in that situation, you will learn to sympathize with those unhappy countries which have sustained the ravages of arms. But how is it possible to give you an idea of these horrors? Here you behold rich harvests, the bounty of heaven and the reward of industry, consumed in a moment, or trampled under foot, while famine and pestilence follow the steps of desolation. There the cottages of peasants given up to the flames, mothers expiring through fear, not for themselves but their infants; the inhabitants flying with their helpless babes in all directions, miserable fugitives on their native soil. In another part you witness opulent cities taken by storm; the streets where no sounds were heard but those of peaceful industry, filled on a sudden with slaughter and blood, resounding with the cries of the pursuing and the pursued; the palaces of nobles demolished, the houses of the rich pillaged, the chastity of virgins and of matrons violated, and every age, sex, and rank, mingled in promiscuous massacre and ruin.

If we consider the maxims of war which prevailed in the ancient world, and which still prevail in many barbarous nations, we perceive that those who survive the fury of battle and the insolence of victory, were only reserved for more durable calamities; swept into hopeless captivity, exposed in markets, or plunged in mines, with the melancholy distinction bestowed on princes and warriors, after appearing in the triumphal procession of the conquerer, of being conducted to instant death. The contemplation of such scenes as these forces on us this awful reflection, that neither the fury of wild beasts, the concussions of the earth, nor the violence of tempests, are to be compared to the ravages of arms; and that nature in her utmost extent, or, more properly, divine justice in its utmost severity, has supplied no enemy to man so terrible as man.

Still, however, it would be happy for mankind if the effects of national hostility terminated here; but the fact is, that they who are farthest removed from its immediate desolations share largely in the calamity. They are drained of the most precious part of their population, their youth, to repair the waste made by the sword. They are drained of their wealth, by the prodigious expense incurred in the equipment of fleets, and the subsistence of armies in remote parts. The accumulation of debt and taxes diminishes the public strength, and depresses private industry. An augmentation in the price of the necessaries of life, inconvenient to all classes, falls with peculiar weight on the labouring poor, who must carry their industry to market every day, and therefore cannot wait for that advance of price which gradually attaches to every other article. Of all people, the poor are, on this account, the greatest sufferers by war, and have the most reason to rejoice in the restoration of peace.

(To be concluded.)

A great trust requireth great care.

The Leper in the Middle Ages.

There are but few of the passages in our Lord's ministry which present, in a more striking light, the compassionate spirit with which he laboured for the alleviation of man's bodily and spiritual aliments, than his cure of the leper, as recorded in the eighth chapter of Matthew's Gospel. When he descended from the mount, on which he had been delivering the longest, and perhaps the most important of all the discourses addressed to his followers, a multitude, we are informed, followed him. Amidst the gathering throng, one form, of more than usual ghastliness, is seen approaching. His face is covered with scales, his body is wasted and decayed. As he advances, we may almost imagine that we see the crowding spectators retire, afraid of contagion. The Saviour, however, does not withdraw. Scarcely has the unhappy sufferer cast himself on the ground in supplication, and the words, "Lord, if thou wilt, thou canst make me clean," escaped his lips, than the gracious reply goes forth—"I will; be thou clean," and immediately health blooms on the cheek and mantles in the veins of the leper.

In England, and indeed throughout Europe, the associations connected with the above and other displays of Christ's power in cleansing leprosy, are of a vague and general character, the disease being one with which we have now no familiar acquaintance. In the pages of a French periodical, however, which lies before us, we are reminded that this was not always the case. During the middle ages, and more particularly at the time of the crusades, this fearful disorder was imported from the east, and proved in France a fertile source of terror to the inhabitants. Selecting its victims from all classes of the population, it spared neither peer nor peasant:—monarchs themselves even fell victims to it. Establishments had to be opened for the reception of leprous members of royal families; and one existed in Dauphiny expressly for the use of persons of noble birth. An institution of somewhat the same kind was erected at one time in London, on the site, it is believed, or nearly so, of the modern palace of St. James.

According to Matthew Paris, a chronicler of the middle ages, there existed in Europe, during the thirteenth century, nearly twenty thousand leper-houses and lazarettos, for the reception of those who were afflicted with this dreadful disorder. In France alone, according to a statement in the will of King Louis the Young, the number of these receptacles reached at one time to two thousand. On the dominions of a feudal lord at Aisne, there were ten establishments of this nature, supported by the contributions of families, each of whom had some members immured within their walls. These calculations give us an affecting picture of the desolations which this dire malady must have inflicted on many a household.

The superstition of the period, added by its gloomy ceremonies, to the terror which the approach of this dreaded disorder inspired. When an individual had been pronounced in a state of contagion, he was led to a neighbouring church, where the service for the dead was performed over him. He was than conducted to the leper-house, to be consigned to a living tomb. Arrived at the gates of this gloomy mansion, he was stripped of the dress which he had hitherto worn, and arrayed in a funeral garb. He was warned to bid farewell to the world, and exhorted to look beyond its chequered scenes, to the bliss which awaited the faithful in heaven, where no leprosy, no impurity, no tears, no pain, no separation could find access. The exhortation ended by a staff being placed in his hands, with which he was to ward off any from coming in contact with his person. The gates then received their inmate, and another victim was consigned to a living sepulchre.

Sometimes it happened that natural affection gained the mastery over the fear of contagion, and the sweets of social life. Dreadful as was the prospect of perpetual immurement within the precincts of a lazaretto, surrounded by all that was loathsome, such a fate was occasionally preferred by a fond wife to separation from a beloved husband. An instance of this kind is recorded as having once occurred at the town of Tours. In the month of May 1329, a young man, afflicted by the leprosy, had had the ceremonies we have referred to performed over him. The priest had recited the accustomed formulary, prohibiting him from walking about, unless attired in the lazar's garment—forbidding him to place his naked foot on the ground, to mix in the assembly of men, to enter crowded streets or churches, or to wash himself in the waters of any fountain or river. In another moment the gates of the lazar-house were about to close upon an exile from the sweets of social life. At that instant, however, the wife of the leper stepped forward, and refused to leave her husband. "If I quit him," she said, "who will love him? who will help to console him? Do you say I will myself become a leper? God, if it be his will, can preserve me. Did he not cure Job and Naaman?—and may he not, in answer to my prayers, restore my husband to health? Be the issue what it may, however, I will not abandon him, without whom the world would be to me a desert." Many such scenes, doubtless, occurred. They will bring, perhaps, to the reader's recollection the touching incident of the self-denying Moravian missionaries, who, under circumstances of a somewhat analogous character, entered the lazar-houses in Africa, and devoted themselves, out of love to the souls of its unhappy inmates, to a perpetual estrangement from all the comforts of social existence.

The lepers in France, however, did not always inspire sympathy. It is a characteristic of the natural heart, that while unsoftened by the gospel, it is apt, in seasons of wide-spread calamity, to become steeled to the miseries of others from selfish anxiety for its own safety. The alarming spread of leprosy in France awoke at one time the superstitious fears of the multitude, and led to excesses of a deplorable character. In the reign of Philip V., a rumor spread among the lower orders, that the lepers had entered into a conspiracy to infect others with their dreaded disorder, by polluting the public wells and fountains. These reports were greedily believed; and the credulous monarch countenanced them, by issuing an ordinance to the judges to exercise summary vengeance on all lepers whom they suspected of such practices. Several of these unhappy objects, although persons of distinction, were put to the torture, and burned over a slow fire at Parthenay. In other parts of the country a large multitude perished in the flames, kindled by the groundless alarms of an ignorant populace.

After the fourteenth century the number of lepers in France grdually diminished. The massacres to which we have adverted greatly thinned their ranks. As the intercourse with the East, occasioned by the crusades, ceased, fresh sources of contagion were avoided. The advancing civilization of the times also, greater attention to food, and above all, the more extended use of linen as an article of clothing, arrested, and under the good providence of God, finally extirpated the disorder. The gloomy remains of old lazar-houses, in several parts of the country, still, however, recall to memory the existence of this once formidable disease, and serve as a tide-post to mark the advances in social comfort with which our own age has been favoured, and the corresponding obligations imposed upon us, of gratitude to God for his distinguishing and undeserved mercies: "Bless the Lord, O my soul; and all that is within me, bless his holy name. Bless the Lord, O my soul, and forget not all his benefits." Psalm ciii. 1, 2.

Epistle of George Fox.

"Dear Friends and Brethren,—Whom the Lord hath called and chosen in Christ Jesus, unto life and salvation, in whom ye have all rest and peace with God; the Lord God by his mighty power, which is over all, hath preserved and supported you to this day, to be a peculiar, holy people to himself, so that by his eternal spirit and power, ye might be all kept out of the world; but in the world is trouble. And now, in this great day of the Lord God Almighty, he is shaking the heavens and the earth of outward profession; their elements are in a heat, their sun and the moon are darkened, the stars falling, and the mountains and hills shaking and tottering, as was among the Jews in the day of Christ's appearing. Therefore, dear Friends and brethren, dwell in the Seed, Christ Jesus, the Rock and foundation that cannot be shaken; that ye may see with the light and Spirit of Christ, that ye are as fixed stars in the firmament of God's power; and in this his power and light, you will see over all the wandering stars, the clouds without water, and trees without fruit. That which may be shaken will be shaken; as will all they that are wandering from the firmament of God's power.

"Dear Friends and Brethren, you that are redeemed from the death and fall of Adam, in Christ the second Adam, in Him ye have life, rest and peace; for Christ saith, 'In me ye shall have peace; but in the world trouble.' And the apostle saith, 'They that believe, are entered into their rest,' namely Christ, who hath overcome the world, who bruiseth the serpent's head, destroyeth the devil and his works, and fulfils the types figures and shadows of the Old Testament and the prophets; in whom the promises are yea and amen; who is the first and the last, the beginning and the ending—the Eternal Rest. So keep and walk in Christ, your rest, every one that have received him.

"And now, dear Friends and Brethren, whatever bustlings and trouble, tumults and outrage quarrels and strife, arise in the world, keep out of them all; concern not yourselves with them but keep in the Lord's power and peaceable truth that is over all such things; in which power seek the peace and good of all men. Live in the love which God hath shed abroad in your hearts through Christ Jesus; in which nothing is able to separate you from God and Christ, neither outward sufferings, persecutions, nor any outward thing, that is below and without; nor to hinder or break your heavenly fellowship in the light gospel, and Spirit of Christ, nor your holy communion in the Holy Ghost, that proceeds from the Father and the Son, and which leads you into all truth. In this Holy Ghost, in which is your holy communion, that proceeds from the Father and the Son, you have fellowship with the Father and the Son, and one with another. This is which links and joins Christ's church or body together, to Him the heavenly and spiritual head and in unity in his Spirit, which is the bond of peace, to all his church, and living members, in whom they have eternal rest and peace in Christ and with God everlasting, who is to be blessed and praised forever. Amen.

"Dear Friends, forsake not the assembling of yourselves together, who are gathered in the name

of Jesus, who is your Prophet, whom God hath raised up in the New Testament, to be heard in all things; who opens to you, and no man can shut; and shuts, and no man can open; who is your Priest, made higher than the heavens by the power of an endless life, by whom you are made a royal priesthood to offer up to God spiritual sacrifice; who is the Bishop of your souls to oversee you, that ye do not go astray from God; who is the good Shepherd, that hath laid down his life for his sheep; and they hear his voice, and follow him, and he gives them eternal life.

And now, dear Friends and Brethren, abide in Christ, the vine, that ye may bring forth fruit to the glory of God. And as every one hath received Christ, walk in Him, who is not of the world, that lies in wickedness; so that ye may be preserved out of the vain fashions and customs of the world, which satisfy the lust of the eye, the lust of the flesh, and the pride of life, which are not of the Father, but of the world that passes away. Whoever joins to that, which is not of the Father, doth encourages it, draws the mind from God the Father, and the Lord Jesus Christ. Therefore, let Christ rule in your hearts that your minds, souls and spirits may be kept out of the vanities of the world, in their words, ways, and actions, that ye may be a peculiar people, zealous of good works, serving the Lord through Jesus Christ, to the praise and glory of God; that by the Word of his grace, your words may be gracious, and in your lives and conversations ye may show forth righteousness, holiness, and godliness; that so, God Almighty may be glorified in you all, and through you all, who is above all, blessed and praised forever. Amen. G. F."

London, the 11th of the Fourth month, 1685.

French Gelatine.—How to get a pennyworth of beauty out of old bones and bits of skin, says Dickens, in his Household Words, is a problem which the French gelatine makers have solved very prettily. Does the reader remember some gorgeous sheets of coloured gelatine in the French department of the great exhibition? We owe them to the slaughter-houses of Paris. Those establishments, are so well organized and conducted, that all the refuse is carefully preserved, to be applied to any purpose for which it may be deemed fitting. Very pure gelatine is made from the waste fragments of skin, bone, tendon, ligament, and gelatine tissue of the animals slaughtered in the Parisian abattoirs; and thin sheets of this gelatine are made to receive very rich and beautiful colours. As a gelatinous liquid, when melted, it is used in the dressing of woven stuffs and for the clarification of wine, and as a solid it is cut into threads for the ornamental uses of the confectioner, or made into thin, white, and transparent sheets of papier glace for copying drawings, is applied in the making of artificial flowers, or used as a substitute for paper on which gold printing may be executed. In good sooth, when an ox is given us our beef, and our leather, and our tallow, his career of usefulness is by no means ended; we can get a penny out of him as long as there is a scrap of his substance above ground.

Selected for "The Friend."

"Religion, it is acknowledged, brings its pains; but because it comes from heaven to maintain a deadly conflict in the soul, with principles and dispositions which are rebellious against heaven, and destructive to the soul itself. Nothing can be more thoughtless or unknowing than the strain in which some have indulged in the recommendation of it, as if it were all felicity and enjoyment. "It is better that you should see the whole truth, and clearly understand that the agent which, in a capacity like that of a tutelary priest, takes in charge a perverted, sinful, tempted being, to be humbled and reclaimed, taught many mortifying lessons, disciplined through a series of many corrections, reproved, restrained, and incited, and thus conducted onward, in advancing preparation for the happiness of another world, *must* be the inflicter of many pains during the progress of this beneficent guardianship."—*Foster's Address to the Young.*

From "The Leisure Hour"

The Wonders of the Deep.

Very few persons, even amongst those who delight in studying other branches of natural history, are at all acquainted with the wonders of the deep; and yet the various phenomena and the inhabitants of the watery world are not only quite as well worthy our investigation as those of the dry land, but being less familiar, from coming under our personal observation less frequently, they present far greater novelty, and their variety is inexhaustible.

A sea voyage affords an excellent opportunity for the prosecution of this interesting but neglected study; we need not be afraid of exhausting it. More than three-fifths of the surface of our globe are covered by the ocean, and day after day we may turn over a fresh page of nature's open volume, and find our interest in the subject "never-ending, still beginning."

Fishes, or, as they have been fancifully called, "the birds of the sea," occupy an important place in the animal kingdom. Their classification is simple; they are distinguished from other vertebrated animals by their mode of respiration; they have gills instead of lungs, and they are distinguished from the crustacea by having no back-bone.

I have heard a story of a person, who, studying the natural history of fishes, wrote to a friend, asking him to collect specimens for him. "I shall be delighted to do so," was the reply, "and will send you all I can catch, from a whale to a shrimp." A very slight acquaintance with the subject would have shown him that neither of these are fish; and a little knowledge would not, in this case, have been so "dangerous a thing" as it is sometimes supposed by the idle and ignorant.

The contrast and analogy between fishes and the aërial tribes are very curious and interesting. Both are fitted to move in a fluid medium, in an ocean of their own; the bird swims in the air, as the fish may be said to fly in the water, by the aid of similar, though not the same means. The feathers of one are analogous to the scales of the other; the wings to the pectoral fins, and the tail of both acts the part of a rudder. Many persons have thought that the movements of the aquatic animal are more graceful and elegant than those of the aërial, in consequence of the greater flexibility of its form and the number of its motive organs. Perhaps our own predilections may be in favour of the feathered race, because we almost regard *them* as the friends of our childhood; but undoubtedly there is considerable grace and beauty in the agile movements of fishes, especially in their own pure element, which they rarely, though occasionally forsake. The proverbial expression, "a fish out of water," gives a lively idea of a "false position." The instances in which it actually occurs are well worth our notice. Let us select some of the most remarkable.

Dr. Hancock mentions a fish (the loricari) which creeps upon all-fours in the beds of rivers. This little finny quadruped has a very singular appearance, moving upon its four stilts, which are produced by a bony ray in front of its pectoral fins and of the next pair to them. The callicthys, a Brazilian fish, walks, in this way, for miles, in search of water, when, as often happens, the pool in which it lives is dried up. The climbing perch (*perca scandens*) not only creeps along the shore, but ascends trees, in search of the crustacea upon which it feeds. It is found in Tranquebar. It must have some difficulty in ascending the fan-palms, if it were not provided with numerous little spines or thorns upon its fins, by means of which it suspends itself while climbing, using them like hands. In addition to these peculiarities, it has the power of folding up both dorsal and anal fins when not using them, and thus it literally puts its hands in its pockets; for it deposits them in a cavity in its body, provided by nature, on purpose to receive them when they are not needed for progression. Nor are these pockets, or troughs, peculiar to the climbing perch: the land crabs also possess them. With respect to the latter, anatomists were formerly puzzled to account for the fact of animals whose mode of respiration is by gills, being able to exist so long as they do out of the water without injury to those organs; but a French naturalist first, and afterwards Milne Edwards, discovered a cavity, or trough, in which a small quantity of water is kept in order to moisten their gills occasionally. The gecarcinus uca, one species of this tribe, has more than one pocket or vesicle for that purpose; another species the orypode, has a different, but equally curious apparatus, a small spongy substance, by means of which the animal is supplied with the moisture required. The reason of this remarkable adaptation is fraught with interest and instruction; and it is a beautiful example of the unbroken order and exquisite harmony which pervade all the works of the divine Author of the universe. Kirby remarks that God, when he created these tribes, "would not separate them from their kind by giving them a different mode of respiration, but provided this compensating contrivance to fit them for the circumstances in which he decreed to place them."

The perca scandens is not the only kind of fish which ascends trees in search of food. Several species are found in the Polynesian Islands, climbing the cocoa-palms; the most remarkable of them is a kind of lobster of gigantic size, and of strength sufficient to open the cocoa nuts, upon which it chiefly subsists.

Nor are these the only instances of the inhabitants of the waters forsaking their native element. Several varieties of fish in the Indian Ocean, and in the Mediterranean, are adapted for a short flight, and these peculiarities of habit and movement are highly interesting, even were they devoid of gracefulness; for they are examples of a contrivance which displays the goodness of the Creator, in furnishing them with the means of providing for themselves amid the accidents and difficulties that may fall to their lot.

It has been asserted that fish are quite deaf; but though they have no external organ of hearing, they are by no means deficient in this sense; and their faculty of *smelling* is so wonderful, that they are guided by it through storm and darkness and directed to their prey, or warned to escape from their enemies, at an immense distance. Lacepede considers this so much the most acute of their senses, that he calls it their "most valuable eye." The olfactory membrane, in the shark, occupies several square feet.

Fishes have the character of being remarkably stupid, and yet they are not wholly incapable of instruction. In many parts of Germany, the trout, carp, and tench, are summoned to their food by the sound of a bell; and in the gardens of the Tuileries some fish were kept for more than a cen-

tury, which would come when they were called by their names. Neither are they as wholly deficient in parental instinct as has generally been supposed. Two species of fish in Brazil, one the callichthys before mentioned, the other called doras, construct actual nests, the former of grass, the latter of leaves, in which they deposit their eggs, covering them very carefully. They live in pairs, and, like birds, watch and defend their nests by turns, till their young are hatched and able to take care of themselves.

A similar instinct is exhibited by a fish resembling the turbot, osphromenus olfax, which is kept for food in ponds in the Mauritius. After making their nest, and laying their eggs, the male and female hatch and watch their infant offspring by turns.

The quiet and seclusion of a pond, or some such retreat, are indispensable to the development of this parental instinct, and accordingly the inhabitants of the great world of waters exhibit no traces of it.

The longevity of fish is another remarkable circumstance, considered with regard to their con stant exposure to injury, and the soft, defenceless nature of their conformation.

In the year 1754, an old pike was taken in a pond belonging to the castle of Kaiserslantern, which had a ring in its gill, with an inscription stating that it had been put there in 1487, 267 years before, by order of the emperor Frederick II. It weighed 350lbs. Knowing the predaceous and remorseless habits of this fresh-water shark, we may feel assured it was a monster of rapacity, and no doubt the scourge and terror of the pond in which it reigned as tyrant. The existence of such relentless destroyers is, however, of absolute necessity, to check the redundant increase of the finny tribes; for the cod alone produces more than nine millions of eggs in the year; and if neither man nor shark made it their food, the sea would in a short time contain nothing but cod-fish. It has, therefore, been wisely ordained that the larger species should swallow the small fry by hundreds at a time; they, in turn, feed upon their minuter brethren, and even the herbivorous ones usually breakfast upon the eggs of fishes.

The adaptation of fishes to the circumstances in which they are placed, affords a most interesting subject of inquiry; their varieties of form appear inexhaustible, and it is thought that the sea contains the analogues of almost every aërial or terrestrial race. The monsters of the deep are undoubtedly more gigantic and grotesque than any of their representatives on the land. Amongst the former, the whale, though not a fish, claims pre-eminence as regards magnitude. Its value and usefulness, in a commercial point of view, are so well known, that we are apt to forget how wonderful it is, that even the huge leviathan should be subservient to man, ministering in various ways to his comfort and luxury.

Amongst marine giants, we must not overlook the sun-fish, or mola, with its enormous phosphorescent carcass, shining with a brightness like the reflection of the moon in the water, and measuring twenty-five feet in leangth. Imagine a party of them (they generally travel five or six together) on a dark, moonless night, frightening the rest of the fish, scaring the superstitious sailor, and astonishing even the veteran naturalist who has left off being surprised at anything,

Next in bulk comes the "requin," which is thought to be identical with the carcharias of the Greeks, mistranslated the "whale" in the history of Jonah. It is stated to exceed thirty feet in length; and Cuvier thinks, from its configuration, it would have no difficulty in gulping down a man, without subjecting him to the process of mastication.

The next in size is the "squalus maximus," sometimes more than forty feet in length, to say nothing of the enormous ray-fish, one of which, taken at Barbadoes, required seven pairs of oxen to draw it on shore.

The sailors call it the sea-devil, and naturalists describe it as frightful. But all these are "gentle monsters," compared with the horrible and terrific octopods, the hideousness of which far surpasses anything that imagination could have pictured, and which one would be sorry to meet by moonlight, or in a dark night, in the Mediterranean.

But if we are tired of considering mere bulk and deformity, let us turn for variety to the "treasures of the deep," to the beautiful tribe of shells, to the pearl oysters, the corallines, the sea-flowers, and the ocean-beds of weeds on which the gregarious fishes graze like land animals in their pastures. Let us contemplate the connecting links between animal and vegetable life; let us consider the electric fishes, from the torpedo and gymnotus down to the aquatic stars which beautify the nights of tropical climates; let us admire the migratory instinct, which, at their appointed seasons, collects such vast numbers of edible fish, and brings them within the reach of man, for his food or convenience; we shall then begin to have some idea how inexhaustible is the interest of the subject; and, when we consider how wonderful are the works of the Almighty Creator, shall be constrained to exclaim, "In wisdom hast thou made them all: the earth is full of thy riches;" to which we well may add, "So is the great and wide sea also!"

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 373.)

ELIZABETH DURBOROUGH.

Of the native place of Elizabeth Taylor, afterwards Durborough, we have no particular account, but we have reason to believe it to have been somewhere in Somersetshire, England. Her birth took place about 1660; it may be a year or two afterwards. She came to Pennsylvania with some members of her family, and, in 1685, resided at Tinicum in Chester county, being a member of Chester Monthly Meeting, which was then held at the dwellings of various Friends.

On the 11th day of the First month, 1686, Elizabeth Taylor was married to Hugh Durborough, a clothier, who resided at Thornby, in the said county of Chester. He was a religious young man, who had suffered persecution in support of the Truth, in his native county of Somersetshire, from whence in the year 1684 he had removed to Pennsylvania. The meeting at which the marriage was solemnized, was held at the house of John Simcock at Ridly, in Providence township, Chester county.

About the time of the difficulties with George Keith or soon after, Hugh Durborough, who was at that time an approved minister, removed with his wife and family to Philadelphia to reside. Elizabeth herself, a few years afterward, received a gift in the ministry, and appears to have been faithful to her calling in her allotted sphere of usefulness, which was much confined to the meetings of her own Yearly Meeting. She was a useful woman in meetings for discipline, and her labour in the gospel appears to have been well esteemed. She died on the 1st day of the Fourth month, 1722; aged about sixty years. Her Friends say, she "was endued with a gift in the ministry, and her life and conversation being innocent and exemplary, her labour therein approved."

CHRISTOPHER BLACKBURN.

This Friend appears to have been a nativ the North Riding of Yorkshire, and was about the year 1663. The family suffered m for support of the testimony of Truth, and e cially Anne Blackburn, who was fined for all ing meetings in her house in the nine mon from the Sixth month, 1670, to the Third mo 1671, one hundred pounds. Her residence at Ellington, in the parish of Massam. In year 1701, Christopher Blackburn being al removing to Pennsylvania, obtained a certifi of removal from a meeting at Richmond, in same county, dated Twelfth mo. 13th. He probably had resided part of his time, previously his removal to America, in Northumberland, he had also a certificate of unity from a meetin North Shields, in that county. He was a ta by profession, and followed this business in city of Philadelphia, where he settled.

In the Sixth month, 1702, he was marriec Rachel Cumberlidge, a Friend, from London. seems to have been a solid, sedate man, and soon engaged in exhorting others to seek first kingdom of heaven and the righteousness ther His public appearances in the ministry were in many words, and he was probably not blessed w great talents. Yet he appears to have been fai ful and useful in his day. He first appears attendance at the Meetings of Ministers in 17 and although frequently found at neighbour meetings, yet he does not appear to have asked liberty of his Friends to visit any meeting abro until in 1709, when he was permitted by the Me ing of Ministers to accompany Vincent Caldw into the three lower counties, now the State Delaware.

In the Third month of the year 1712, he b liberty of his Monthly Meeting to visit Frier in Maryland, Virginia, and North Carolina, company with Thomas Chalkley. He was abs from home on this journey about three mont In the Twelfth month, 1715, he received a cer ficate of unity of his Friends to visit "Long land, Rhode Island and New England." T appears to have been the longest journey he e took in religious service, occupying some mont On his return he brought to the Monthly Me ing and to the General Meeting of Ministers, c tificates of the unity of Friends where he had t velled with his ministry amongst them. Th account was read in the Monthly Meeting " satisfaction," and in both meetings was "w received."

After this, except attending Shrewsbury Yea Meeting, his labours seem to have been abo home, but he was gradually growing in useft ness, judging from the appointments put up him. Yet it is evident from the language of Friends, that his labours in the ministry were n frequent.

He attended the Monthly Meeting of Philad phia, held Sixth month 31, 1722, partook in concerns, and was appointed on its business. returned home therefrom, and, in one short wee had passed through sickness, suffering, and deat yielding up his spirit on the 7th of the Seven month, into the hands of him, whom he had e deavoured in godly simplicity to serve and ob on earth. He was 59 years old.

DANIEL WALTON.

Among the stout, honest, hard-working yeom of England, who were led in hope of betteri their condition to remove to the colony just foun

by William Penn, were four brothers, of the name of Walton. They came over from the mother country in 1681 or 1682, being all members of the religious Society of Friends. At that time William, the youngest brother, had just reached maturity, and Nathaniel, the eldest, was probably not far from thirty. We suppose that the brothers had sufficient to transport them to this country except the boy William, for whose passage Nathaniel paid five pounds.

The place of their nativity was in the parish of Byerry, which is in the south-east corner of Gloucestershire. On arriving in Pennsylvania, they selected land, fifteen miles north of the settlement at Shackamaxon, and in memory of home and their early associations, they called the place Byerry. Hard work, frugal habits, and sound religious principle made them prosperous.

Daniel, of whom we propose now to give a brief account, was married, in 1688, to Mary Lamb. At what time he came forth in the ministry, we know not, but have cause to believe it was shortly after the defection of George Keith. Nathaniel, the eldest of the family, through want of faithful watching in the light of Christ, became entangled in the sophistries of Keith, lost his spiritual perception, and slid back again into outward observances, from whence his parents and himself had risen; but the younger brothers stood firm, and all three signed the testimony of the Yearly Meeting against Keith. The Keithites kept possession of the meeting-house, where the Friends of Byberry had been wont to assemble, yet they found their meeting small, and decreasing, whilst those who kept to the faith and practice of their forefathers and the Truth, increased in numbers, and felt the presence of their Divine Master with them in their new place of worship. Nathaniel Walton was too little at ease in himself to be willing to let his brothers alone in the firm and consistent course they maintained. It is narrated that on a certain occasion he came to Friends' meeting, and one of his brothers being led to labour in the gospel of Christ Jesus,—the spiritual views proclaimed by him, so different from the changeable and outward tendency of the Keithite profession, stirred up angry feelings in the man, who, probably feeling himself wrong, took every defence of the Truth as a personal attack, so in the heat of the moment he interrupted the speaker, with the coarse language, "Brother, thou lyest."

Of the ministerial labours of Daniel Walton, we have little account. He was often a representative to the Quarterly Meeting of Ministers, and was appointed to various services, both in the general meetings for business, and in those of ministers. We can frequently trace him attending the meetings for worship in Philadelphia, and some neighbouring places, and in the year 1711, he, with his brother William, had liberty from their Friends to visit in gospel love "the newer parts of this province and territories, and attending the general meeting."

His services in the various meetings of ministers continued unabated until the year 1714, after which, probably from his bodily infirmities, we find little trace of him. In 1719 he finished his course, being about sixty years of age.

(To be continued.)

Agricultural Division of the Patent Office.—The Catawissa Raspberry.—The Catawissa raspberry originated in the grave-yard of a meeting-house, in the village of Catawissa, Columbia county, Pennsylvania, situated near the confluence of the Catawissa and Susquehanna rivers. The fruit is of medium size, inferior to many of the new popular varieties, but is sufficiently large for all economical purposes. Its colour is dark reddish purple when ripe, and is of a very high flavour. It bears most abundantly after the young wood, on which it produces its best fruit, attains a height of four or five feet, usually begins to ripen early in the Eighth month, and even sooner. The fruit is produced on branches continually pushing out from all parts, successively appearing in the various stages of growth, from the blossom to perfect maturity; and often there may be counted more than fifty berries on a branch. As the fruit of each branch successively ripens, the later ones gradually diminish in size; but there is no suspension of blooming or fruiting before the plant is checked by frost. If protected in-doors, it undoubtedly would produce fruit during the winter months. One great advantage of this over other varieties of the raspberry is, that if the stocks should be accidentally broken or cut off, or should be killed by winter frost, it is all the better for the crop.

Extensive Cyphering.—An English mathematician, named Bailey, has calculated the weight of the earth to be 1,256,195,675,000,000,000,000,000, or, in words, one quadrillion, two hundred and fifty-six thousand one hundred and ninety-five trillions, six hundred and seventy-five billions of tons avoirdupois.

Selected.

ON THE DEATH OF A YOUNG FRIEND.

O, stay thy tears! for they are blest,
Whose days are past; whose toil is done.
Here midnight care disturbs our rest;
Here sorrow dims the noonday sun.

For labouring Virtue's anxious toil,
For patient Sorrow's stifled sigh,
For Faith that marks the conqueror's spoil,
Heaven grants the recompense, to die.

How blest are they whose transient years
Pass like an evening meteor's flight;
Not dark with guilt, nor dim with tears;
Whose course is short, unclouded, bright.

How cheerless were our lengthened way,
Did heaven's own light not break the gloom;
Stream downward from eternal day,
And cast a glory round the tomb!

Then stay thy tears; the blest above
Have hailed a spirit's heavenly birth;
Sung a new song of joy and love,
And why should anguish reign on earth?

Selected.

MIDNIGHT HYMN.

MS. found in a chest, in a poor woman's cottage.

In the mid silence of the voiceless night,
When, chased by airy dreams, the slumbers flee,
Whom in the darkness doth my spirit seek,
O God, but Thee?

And if there be a weight upon my breast,
Some vague impression of the day foregone;
Scarce knowing what it is, I fly to Thee,
And lay it down.

Or if it be the heaviness that comes
In token of anticipated ill—
My bosom takes no heed of what it is,
Since 'tis Thy will.

For O, in spite of past or present care,
Or anything beside—how joyfully
Passes that silent solitary hour,
My God, with Thee!

More tranquil than the stillness of the night,
More peaceful than the silence of that hour,
More blest than anything,—my bosom lies
Beneath thy power.

For what is there on earth that I desire,
Of all that it can give, or take from me?
Or whom in heaven doth my spirit seek,
O God, but Thee?

The writer of the following communication says, in a note accompanying it, it was sent in the hope that "it may be the means of stirring up some on the important subject alluded to therein, even of loving the Lord with all the heart, and mind and strength: a situation wherein we cannot fail to worship Him in spirit and in truth. And while we dwell under the precious cementing influence thereof, will it not lead us to love our neighbour as ourselves?"—Ed.

For "The Friend."

Having been made in years that are past, by the merciful kindness of a long suffering God, to feel his terror on account of the state of lukewarmness in which I had been in the habit of attending religious meetings, and the language that was uttered against the Laodiceans being then brought home to the view of my mind in an instructive manner, "Because thou art lukewarm, and neither cold nor hot, I will spue thee out of my mouth," I have felt, and of latter time in an especial manner, longings of soul, that every member of our religious Society may strive to know for themselves what precious enjoyment there is, in worshipping the Father in spirit and in truth, confiding in the blessed assurance that the Father seeketh such to worship Him.

I know of no way to impress my own views more forcibly on the minds of any of the readers of "The Friend," who may be remiss in this very important duty, than by the following extract from pages 106 and 107 of the life of Thomas Shillitoe.

"A company of poor persons at West Houghton, about ten miles from Warrington, were in the practice of meeting together for religious worship after the manner of Friends, towards whom my attention was turned, with an apprehension of duty to sit with them on First-day in their usual meeting. I had not heard that Friends had yet taken so much cognizance of them as this, and how this would be approved of by Friends of the Quarterly Meeting, was a subject that tried me not a little, lest it should be considered like laying hands suddenly upon them.

"I came down to breakfast next morning in a very poor plight to walk to Macclesfield, as I had given my kind Friend to expect I intended. On my informing him how it had fared with me through the night, and that looking towards home, my way was shut up, he encouraged me to pursue my prospect, offering to procure a conveyance, and bear me company. I believed it best to proceed on foot, and as he would not be equal to such a task, another Friend offered to accompany me. On Seventh-day we walked to Wigan, where some of those who met at West Houghton, we understood, resided, to obtain information where their place of meeting was, and one whom we met with, engaged to conduct us to it next morning. I cautioned them against informing any, of our intention of sitting with them, except those who were their usual attenders. From the feelings which accompanied our minds in this family, we thought it might be said, peace was within their walls. The next morning the man conducted us to their meeting-place, in a very secluded spot, remote from the public road. At the hour appointed, the meeting gathered very punctually, in all about thirty-four, many of whom, to my feelings, seemed to bring good along with them into the house. In a short time, *a profound silence* spread over us, and not a few of our company, *under the influence thereof,* were humbled and bathed in tears. Such were my feelings on the occasion, I could but secretly acknowledge, *these are worshipping God in spirit, and have no con-*

fidence in the flesh. This silence was of long continuance, and feelings of tenderness towards this contrite company were so excited in my breast, that it was difficult for me to express amongst them what was on my mind, without manifesting such a degree of abasement as rendered my words, I feared at times, unintelligible. The Friend, who accompanied me, after speaking a very few words, sat down, telling me, after the meeting, his mind was so wrought upon through the contrition generally apparent in the meeting, that after uttering a few words he was obliged to desist. When the meeting broke up, the floor in every direction was strewed with their tears. As there was a cottage adjoining their meeting-place occupied by one of the families, we concluded to ourselves to dine with them, in order to have more of the company of such as inclined to give it to us. We found those who lived remote from the meeting-place, had brought their dinners with them to eat in the cottage, which was both clean and comfortable: hearing of our intention to come and sit with them, they had made provision for us at the cottage. Although our fare was homely, our minds having been previously refreshed, and still continuing to feel the precious effects of it, we were abundantly satisfied with our repast, uniting in the acknowledgment we never enjoyed a meal more.

"On inquiry, they informed us this was the first visit they had received from Friends: at times some of them attended Friends' meeting, which they would prefer, rather than meeting as they now do, but the nearest Friends' meeting some of them would be able to get to, was eight miles distant. We were as much refreshed by some of the remarks made by our company, as by the comfortable meal we made. I felt the need of cautioning them to be on the watch, lest they should be weary of sitting in silence, and that should set some of them to preaching. Desirous of information respecting their rise and progress so far removed as they are from any meeting of Friends, the following relation was given us. 'An old man, who lived at West Houghton, much attached to the principles of Friends, on Seventh-day evening went to a barber's shop to be shaved, at which shop some of those who now meet at West Houghton, attended also. The old man at times introduced conversation on religious subjects, and especially on the principles professed by Friends, whereby a desire was excited in them to become further acquainted with our religious principles, in which he took great pains to satisfy them, furnishing them with such Friends' books as were in his possession. He died before they met as they now do, and his removal was like the loss of a father, from the veneration they still manifest for his memory. It was evident he had been an instrument in the Divine hand of great good to them. Since the visit we made them, several of this company have been received into membership with the society, and a meeting of Friends is now settled there.'"

We cannot doubt that these poor people were true worshippers; such as were desirous to cease from man, and to be gathered to the gift of grace within themselves, as testified of by the Apostle Paul, "For God who commanded the light to shine out of darkness, hath shined in our hearts, to give the light of the knowledge of the glory of God, in the face of Jesus Christ. But we have this treasure in earthen vessels, that the excellency of the power may be of God, and not of us." Was it not by waiting for, and giving heed to the inward manifestations of grace and truth, that our worthy predecessors were raised up to be a people, fearing and serving the Lord? If we will be their faithful followers, "Let us walk by the same rule, let us mind the same thing."

New Jersey, Seventh mo., 1855.

The Sulphur Mines in Iceland.—Some sharp climbing up the mountain, nearly a thousand feet, brought me to the sulphur mines, a scene I shall never forget—a literal pool of fire and brimstone. Had Milton ever visited the sulphur mountains of Iceland, I could have forgiven him his description of the infernal regions. Here was a little hollow scooped out of the side of the mountain; and all over and through it yellow sulphur, burning hillocks of stone and clay, and stifling sulphurous smoke. The surface, too, was semi-liquid—in fact, as nearly a literal lake of fire and brimstone as this world probably shows. The earth itself here was principally a fine pink or flesh-coloured clay; and all over this I could see holes communicating with the mighty laboratory of nature below; and as the steam and smoke came out of these holes, the fine particles of sulphur seemed to be brought up to the surface. The clayey ground where the sulphur lay was in most places soft, and could not be walked over without the greatest danger of sinking down through it, perhaps into the very depths in the bowels of the mountain. Indeed, it possesses a kind of horrible and fascinating interest. Around the edges and in certain places the soil is hard, and some stones are seen where one can walk in safety. By having a couple of boards, a man might walk all over the ground. In some places the sulphur was a foot thick, and as it gathered it seemed to consolidate, and I found I could break up large pieces beautifully crystallized. This sulphur appeared about as pure as the sulphur sold in the shops, but not so dense. It had not half that strong odour that sulphur and brimstone have in a prepared state. These mines showed signs that they have been worked, as some bits of boards and planks lay about, and there were some paths to be seen. The sulphur is taken off the surface, and then the ground is left for two or three years for it to collect again. Sulphur is so cheap, and these mines are so far from a seaport, (Havneford, some twenty miles north, being the nearest,) and roads and means of transport are so scanty, that gathering it is not very profitable, nor carried on to any great extent. There are sulphur mines in the north; some productive ones near Kravla mountain, on the shores of Mount Lake Myvatn.—*Rambles in Iceland.*

For "The Friend."

Hearing much said in reference to our approaching Yearly Meeting—planning and advising what should be done or left undone in it; and believing this activity to be out of the Truth, and opposed to the profession we make, of deciding the important concerns that come before our Yearly Meetings, according to the dictates, and in the authority of the Spirit of Truth as manifested therein, I have felt very desirous the members might cease from these things, and endeavour to have their minds gathered into quietness, and trust in the strength and power of the great Head of the Church—the only true source of hope and help for his people. Surely we have abundantly proved that vain is the help of man. The following extract, from a pamphlet, published in Philadelphia, in 1846, I think is applicable to our state at the present time.

"We would that it was in our power effectually to impress upon the minds of all our fellow-members, the great safety there is in not attempting to anticipate the course which the meeting may feel itself called upon to pursue, and in not allowing themselves to be betrayed into a premature decision upon the particular part which they will take in relation to it. With a sincere desire to do nothing but what will redound to the honour of truth, we go up to the solemn assembly, humbly relying upon the blessed Head of the Church for wisdom and strength, still remembering that as the work is the Lord's, it must be done in his fear, we need not doubt but He, who is for a crown of glory and diadem of beauty to the residue of his people, will pour out the spirit of judgment to them who sit in judgment, and give strength to them who turn the battle to the gate." If we should be favoured to convene in the spirit here recommended, we would no doubt be enabled to labour effectually for the promotion of that cause we profess to serve, and our labours would tend to gather all who desire to abide by first principles and walk by the same rule, and mind the same thing, into a feeling of harmony and love towards each other: all jealousy and alienation of feeling would be done away, and we enabled to labour harmoniously, for the building up the waste places of our Zion.

"The present is a day of deep trial and sifting within our borders. The enemy of Truth, and of the soul's salvation has succeeded, by various stratagems, in marring the beauty and peace of Zion, and it behooves all who are desirous of seeing the waste places built up, and the former paths restored, to put shoulder to shoulder, and walking by the same rule, and minding the same thing, rally to first principles, and labour harmoniously in the great work of our day."

Ohio, Seventh month, 31st, 1855.

For "The Friend."

Some writers, of late years, have been endeavouring to make it appear, that as the christian church is divided into sections, it matters little if it is a thing of small moment—to which of the sections any are united, if they are only sincere. This doctrine, the enemy of the Truth has been active in disseminating, both by preaching and writing. If this be true, then the labours, cruel sufferings and martyrdom of our early valiants for the Truth, and their testimony therefor, is labour waste. Were not the churches and ministers of that day denounced by those worthies as "*made?*" Did not their very presence trouble such? Was not their chief object to turn from men, systems, or ordinances, to Christ, as "the Light within?"

In pages 72-74 of George Fox's Journal, is the following: "Moreover, the Lord God let me see when I was brought up into His image, in righteousness and holiness, and into the paradise of God, the state, how Adam was made a living soul, and also, the stature of Christ, the mystery that had been hid from ages and generations; which things are hard to be borne by many. For of all the sects of christendom (so called) that I discoursed withal, I found none who could bear to be told that any should come to Adam's perfection, in that image of God, that righteousness and holiness that Adam was in before he fell to be clear and pure without sin as he was. Therefore, how should they be able to bear being told, that any should grow up to the measure of the stature of the fulness of Christ, when they cannot bear to hear that any shall come, whilst upon earth, into the same power and spirit that the apostles and prophets were in? Though it be a certain truth that none can understand their writings aright without the same spirit by which they were written."

"When the Lord God and his Son, Jesus Christ, sent me forth into the world, to preach the everlasting gospel and kingdom, I was glad that

commanded to turn people to that inward
t, spirit, and grace by which all might know
ir salvation and their way to God; even that
ne Spirit which would lead them into all truth,
h I infallibly knew would never deceive any.
with, and by the Divine power and spirit of
, and the light of Jesus, I was to bring people
rom all their own ways, to Christ the new and
ng way: from their churches which men had
e and gathered, to the church in God, the
eral assembly written in heaven, which Christ
he head of; and off from the world's teachers
e by man, to learn of Christ the way, the
h, and the life—of whom the Father said,
his is my beloved Son, hear ye him," and off
n all the world's worships, to know the Spirit
truth in the inward parts, and to be led there-
that in it they might worship the Father of
rits, who seeks such to worship him, which
rit, they that worshipped not in, knew not what
worshipped. I was to bring people off from
the *world's religions, which are in vain*, that
might know the pure religion, might visit
fatherless, the widows and the strangers, and
o themselves from the sports of the world: then
e would not be so many beggars; the sight of
m often grieved my heart, as it denoted so
h hard-heartedness among those that professed
name of Christ. I was to bring them off from
he world's *fellowships, prayings, and singings*,
ch stood in form without power; that their
owship might be in the Holy Ghost, the eter-
spirit of God: that they might pray in the
y Ghost, sing in the Spirit, and with the grace
comes by Jesus; making melody in their
rts to the Lord." Alas! how is it? hath not
God of this world blinded the eyes of the
erstanding of many; nevertheless, the foun-
ion of God standeth sure, and if Esau sold his
h-right, did not Jacob obtain the blessing.—
oso hath an ear to hear, let him hear.

anada, Seventh month, 1855.

For "The Friend."

Christian Unity and Strength.

The unity of the Spirit in the bond of peace,
its foundation in the love of God, by which
are led in the path of self-denial, having fel-
ship with Christ, and one with another, and
ng called to fill up our measure of suffering, to
glory of God the Father, and our own un-
akable peace. No outward profession or sem-
nce of this heavenly bond, can be availingly
stituted for the real enjoyment of it, whereby
church is knit together and nourished from
ist as by joints and bands.

This secret union and communion of spirit, can-
be comprehended or enjoyed by the wisdom
power of the flesh, but must be known by un-
erved obedience to the revelation of the Spirit
Christ, who is our only safe Teacher and Guide,
ur only Advocate and Intercessor, through
om we have access to the throne of grace, and
whom we obtain redemption and remission of
. The exercise of humble, fervent, effectual
yer, through the help of the Spirit, graciously
chsafed to the righteous, is more availing
n God—though it be but in secret before Him
han all the high sounding words and works of
e human wisdom, however specious they may
ear.

No outward combination, however numerous or
ng, will ever be able to prevail against the
teous, for the invincible Captain of their sal-
on was never foiled in battle, and his secret
covenant are with those that fear and follow
n, through evil as well as good report, bearing
the cross, and despising the shame. The Lamb and his followers shall have the victory, however much to the outward eye the wicked may at times seem to prevail, in perverting the right way, wherein we are called to walk. "Who ever trusted in the Lord, and was confounded?"

The hidden path of the humble, wrestling soul—of the poor in spirit, who has a sense of the need in which he stands of the continual aid of Divine help—has ever been despised and shunned by those whose attention is turned outward, trusting to the help of man, so that they do not know a being built upon that foundation which cannot be moved, even that spiritual Rock on which the prophets and apostles were built, whose union was with Christ, and one with another in Him, and who maintained an unfeigned love of the Truth, and of those who dwelt therein, fearing God, keeping his commandments, and waiting upon Him for counsel and direction, in all their engagements.

Now, how is it with us of the present day? Have not very many among us forsaken this simple, humble way, wherein all dependence for direction and support is on the great Head of the church? whose voice is heard, and his mighty arm of power felt to guide and strengthen his true disciples in the work of reformation, unto which we are called. Have we walked worthy of our high vocation, forsaking all human dependence, and placing our confidence solely in the secret, but mighty power of the everlasting arm of Truth? Or, have we, as a people, through the subtilty of the serpent, been beguiled into a fleshly confidence, trusting in an empty profession—in a name to live while we were yet dead?

Is there not danger of our resting upon a mere confession of faith, without its living experience? while many are saying, I am of Paul, and I am of Apollos, the unity of the Spirit in the bond of peace not being known, but instead thereof a mere outward show of love, and a profession of the Truth, while the practice is very far from its leadings? Observation has confirmed this view, and it is believed that the Truth is made to suffer by its professed friends, more than by its open enemies, making good the declaration, as it respects our Society, that our greatest enemies are those of our own household.

Since the withholding of outward persecution, the enemies of our prosperity and peace have risen up in our midst, so that the perplexity and suffering of the present day are causing many to faint, their first love waxing cold, and they forsaking their allegiance to God, to follow the leadings of men, whose snare is hid from their eyes; in which being taken unawares, they are without the desire for deliverance, and so are kept in bondage to the spirit of this world, even while professing faith in Christ, and unity with Him and his church.

The sorrowful evidence of our degeneracy as a people, is too plainly manifested by separation and indulgence in the spirit of party, by which the general good of society is sacrificed to selfish ends, producing discord and confusion, and blinding the eyes to the simple, sure, and harmonious leadings of the unerring Spirit of Truth, by the light and direction of which our worthy forefathers were enabled to see eye to eye, to walk by the same rule, and to mind the same thing. By keeping their eye single to the secret discoveries of the true light, which lighteth every man that cometh into the world, the clouds of darkness were dispelled, the path of true wisdom made plain before them, and they, through patient endurance, and the exercise of humble prayer, were enabled to walk therein without jarring or discord, being united by the one Spirit and the one true baptism in the one and only saving faith, on which they sought to build each other up.

For "The Friend."

"We are, perhaps, too prone to consider life as a dull round of care, and secretly to complain that it yields so little unalloyed happiness. Now it seems to me, that this happens in a great measure, from a neglect, which is far too frequent, of the proper cultivation of the social and benevolent affections. How delightful are those little efforts to add to the enjoyment of those around us, which have the double effect of soothing the spirits, and cheering the heart of him who bestows, and of him who receives the kindness. They are the genuine offspring of a tender heart and a philosophic mind, and should be largely conspicuous in the refinements of the present day. The opportunity ought not to be given to posterity to say, on reverting to the advances which our age is making in real and important knowledge, that we have neglected the cultivation and exercise of the benevolent affections; and that no corresponding progress has been made in those studies which teach the art of happiness. An old writer says, "There are two things which add much to the merit of courtesies, viz., *cheerfulness* and *speed*; and the contraries of these lessen the value of them;—that which is done with difficulty and a sullen look, makes the obligation of the receivers not so strong, nor the memory of the kindness half so grateful. A clear unclouded countenance makes a cottage appear like a castle in point of hospitality; but a beetle-browed, sullen face, makes a palace as smoky as an Irish hut. There is a mode in entertaining our friends, and doing any kindness else, which trebly binds the receiver to an acknowledgement, and makes the remembrance of it far more acceptable."

Now no one will deny the truth of the foregoing, and yet how often do we see men act as if they believed not a word of it. But there is a *mode*, a proper mode in doing almost every thing which has reference to our intercourse with our fellow creatures.

Advice, instruction, persuasion, and even argument itself, depend very much for their force and value upon the grace and humour with which they are administered. I have seen men argue for hours, without approaching at all to a conclusion, or becoming a jot the wiser; who, I make no question, were lovers of the truth more than the argument, and in whom there was little disposition to strive for the mastery. An apparent disregard of one another's feelings and prejudices, and a blunt and unceremonious way of asserting our opinions are apt to produce the idea of an affront, though none was intended; and thus the time was spent in repelling supposed indignities, when probably by the adoption of a different course, one party or the other would speedily have found himself in possession of his object. So much, too, depends upon the very tone of our voice, as well as the style of our discourse, that some persons may say almost any thing without the danger of offending; and by carefully preparing the auditor to listen calmly and examine with candor, hardly ever fail to produce conviction in an unprejudiced mind, if reason and truth be on their side. The due regulation and control of the temper is of course a necessary part of the system of action of which I have been speaking: and as our happiness in life likewise very materially depends upon it, I would call the attention to some remarks of Dugold Stewart, who says, "Another expedient of very powerful effect, is to suppress as far as possible, the external signs of peevishness or of violence. So intimate is the connection between

mind and body, that the mere imitation of any strong expression has a tendency to excite the corresponding passion which it indicates. It is said of Socrates, that whenever he felt the passion of resentment rising in his mind, he became instantly silent, and I have no doubt, that, by observing this rule, he not only avoided many an occasion of giving offence to others, but added much to the comfort of his own life, by killing the seeds of those malignant affections which are the great bane of human happiness."

Novel Kind of Fabric.—In Bocalen, a town of Silesia, there is an establishment for manufacturing fabrics from the leaves of the fir and pine. The resinous matter is first dissolved by a chemical process, and the fibres are then spun and woven into fabrics. Blankets of this material find a ready market in Germany.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 21st ult. Roebuck's resolutions of censure had been defeated, and the Palmerston Ministry sustained by a majority of more than one hundred in the House of Commons. Sir William Molesworth was to succeed Lord John Russell. The London money market continued easy, and consols were without change from the previous week. The Liverpool cotton market had undergone no change of consequence; the sales of the week amounted to 46,000 bales. Wheat and flour were steady at former quotations. In Indian corn, a further decline of 3*s.* per quarter had taken place. *The War.*—No events of moment are reported during the week. The Russians have received reinforcements at Sebastopol. Some small sorties made by them, were repulsed by the French. The body of Lord Raglan had been sent to England. The embarkation of it was made an occasion of much pomp and ceremony. Gen. Eyre has had a leg amputated. General Sir John Campbell died within Sebastopol. Another sea expedition was fitting out, the destination of which was unknown. It was surmised that Odessa might be the point attacked. In Asia, the Russian army had invested Kars. The Turks in that quarter were hard pressed, and the situation of their forces under Vasset Pacha and General Williams, was considered critical. The Russians held the roads to Erzeroum.

The Baltic.—The achievements of the allied fleet continue to be limited to the destruction of private property. On the nights of the 23d and 24th of Sixth mo., the British ship Harrier destroyed 47 Russian ships, comprising the whole of the Trystad shipping, probably amounting to upwards of 20,000 tons. The vessels were scuttled or burnt, by means of the Harrier's boats.

SPAIN.—Don Escalante has been appointed Minister to Washington, in room of M. Cueto. The Roman Charge demanded his passport on the 16th ult., on account of the passage of the Church Property bill. The dispute with the United States on account of the Black Warrior, has been finally settled by the indemnity of a million of reals.

ITALY.—The Turin papers speak of an attempted insurrection in the Duchy of Modena, and arrests had been made at Spezzia, Carrara and other places. Owing to the troubled state of Italy, the French garrison at Rome had been reinforced by a thousand more men.

FRANCE.—The sum set apart for the expense of the *fete* Napoleon on the 18th inst., is to be distributed among the widows and orphans of the war. Five hundred Russians, now at Toulon, are to be exchanged at Odessa for French prisoners taken in the battle of Sixth month 18th.

RUSSIA.—Accounts from St. Petersburg say, there is no truth in the reports circulated by foreign papers that the Czar is in a decline, and not likely to live long.

HAVANA.—Dates to the 25th ult. The cholera was raging, and numerous deaths had occurred among the military. Several citizens had also died, and great alarm prevailed. Offarel, an extensive planter, is reported to have failed for near two millions. Another cargo of Chinese had arrived at the Island.

MEXICO.—The Pacific coast of Mexico was visited by a most destructive gale on the 1st of Sixth mo. At San Blas and Mazatlan, six ships were driven ashore, and totally lost. About thirty lives were lost at Mazatlan, and property to the amount of a million and a half of dollars, was destroyed. Copious rains had fallen in many parts of Mexico. In the north the revolution was progressing. A force of 2000 men under Gen. Vidalez, had marched from Monterey against Metamoras, where Gen. Woll and the Government troops had made a stand. Santa Anna, as a measure of compromise or conciliation has proposed to grant a constitution or organic law to the people.

UNITED STATES.—*Kansas.*—The explanations furnished by Gov. Reeder, respecting his purchases of Indian lands, not being satisfactory to the President, he has been removed, and John L. Dawson, of Pennsylvania, appointed to succeed him.

Public Lands.—The sales of public lands for the last fiscal year were 13,825,730 acres, for which there was received, in cash and scrip, the sum of $10,570,-386 66. This is exclusive of the land located with military bounty land warrants in the same period. The aggregate of public lands, the title in which has thus been transferred from the Government to individuals, was never before so large in a single year.

The Coinage.—In the last month, the coinage at the U. S. Mint in Philadelphia, amounted to only $436,380. At the Assay Office in New York, gold bars were stamped to the value of $1,736,512.

Immigration.—Last week 4169 immigrants landed at N. York, making a total this year of 82,000 against 169,598, for the corresponding portion of 1854.

Yellow Fever in the South.—This fatal disease continues to spread at New Orleans. In the week ending the 30th ult., there were 275 deaths, including 173 from the epidemic. Great numbers of the inhabitants have left the city, and business was nearly at a stand. The authorities of Natchez and Vicksburg have adopted quarantine restrictions upon all ascending and descending boats. The yellow fever has also appeared at Norfolk, Portsmouth and Gosport, Va. A considerable number of deaths have occurred in all these towns.

The Public Forest.—The amount, subject to draft in the United States Treasury on the 23d ult., was eighteen million six hundred thousand dollars.

Anthracite.—The coal brought to tide water last week, from the Schuylkill and Lehigh regions, amounted to 130,563 tons; the largest quantity yet sent down in one week.

Philadelphia.—Mortality last week, 352, of which 85 were from cholera infantum. Of the whole number 199 were under two years of age.

New York.—Mortality of the week, 576, being 93 less than in the previous week.

California.—The steamship Northern Light arrived at N. York on the 5th, with 413 passengers and $940,085 in gold. The San Francisco dates were to Seventh mo. 16th. The passage from San Francisco to N. York was made in 19 days and 20 hours. The news from the mines reports a better yield of gold than for several years. Gold is said to have been discovered in large quantities near Puget Sound. The weather had been unusually wet. A. A. Cohen, late Receiver of Adams & Co.'s assets, and J. C. Woods, a member of that firm, are charged with fraud to the amount of $400,000 by Judge Chambers, late of the firm of Page, Bacon & Co. The Judge charges that Adams & Co. have been engaged for four years in palming off inferior dust upon Page, Bacon & Co., and that a regularly organized band of disguised accomplices has been maintained in the various mining districts.

Miscellaneous.—Crops in France.—Accounts from the French departments state that the corn crops promise well, and also the beet root, potatoes and colza. The hay is abundant, and has been got in well. The vines are in bloom, with a most favourable appearance. The olive trees and mulberry trees, for silk-worms, also promise well.

A Fearful Accident, occurred recently at Fair Haven, while launching the ship Siconset. The underpinning on one side gave way, causing the vessel to keel over, throwing the visitors on board to the ground. Six were killed, and from twenty to thirty wounded, some probably fatally.

Cuban Trade in Coolies.—The Havana correspondent of the New York Herald states that 762 Chinese labourers have been landed there in two days, and sold at a rate of $170 for each full grown healthy one. The Asiatics were downcast, many sick, and all half naked. A great many Yucatan women and children were also in the market, sent by Santa Anna's agents.

Ocean Steamers.—A line of monthly steamers, from Canada to Europe, has been in operation about two years, and is said to be well supported. A new company has been organized at Montreal, to ply between there and England. The line to consist of five vessels of 1700 tons each. The Canadian Government is to aid the enterprise by a yearly bonus of $84,900 for five years.

Lightning.—On the 23d ult., the Court-house in Taylor county, Va., was struck by lightning, while the court was in session. One man, a lawyer, was instantly killed, and about fifty persons were prostrated, some of whom were seriously injured.

The Artesian Well, in Charleston, (S. C.) has reached a depth of 1250 feet, and yields 64,800 gallons in two four hours. From seventeen to twenty wells dug, yield from 50,000 to 64,000 gallons, would be ample for the supply of Charleston, which requires 1,000,000 of gallons for every twenty-four hours.

Buffalo in Kansas.—The Kansas Herald, of Seventh mo. 14, says that buffalo in numbers are ranging on the prairies, only fifteen miles west of Fort Riley. A spyglass, from a hill, they can be seen grazing as far as the eye can reach. Settlers who had located in the vicinity with herds of cattle, have been compelled to remove, for want of grass, which has been consumed by those animals.

Loans for the War.—The extraordinary loans already made by France, England and Turkey, since the commencement of the war, amount to about $400,000,000. This immense sum has been required in addition to that obtained by increased taxation.

A Pension of £50 a year has just been granted by the British Government, from the civil list, to the well known and popular author of many works of Christian philosophy and literature, Dr. Dick.

Snow still remains on the north-eastern slopes of the White Mountains. On Mount Jefferson there is a solid bank, four feet deep.

Powder Mill Explosion.—The drying-house at Hiresche's powder works near Wilmington, Del., blew up about 8 o'clock, on the morning of the 3d inst. It contained about one and a half tons of powder. Four persons were killed by the explosion. The explosion of the drying-house caused a mill, situated about 300 yards distant, to explode. In this mill there were four persons, none of whom were killed, but all were injured, two probably fatally. This mill contained about 1½ pounds of powder.

RECEIPTS.

Received from Amos Hibbs, O., $2, to 42, vol. 28; from Jas. T. Frame, agt., Io., for S. Todd, $2, to 17, vol. 29; from Robt. Hall, O., $4, vols. 27 and 28; from Alex. P. Rudolph, N. J., $4, vols. 28 and 29.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in the Institution.

Application may be made to either of the undersigned members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS, } Philada.
SAMUEL BETTLE, Jr. }

Evening Schools for Adult Coloured Persons.

Wanted, A Principal and three Assistant Teachers for the Men's School, and a Principal and four Assistants for the Women's School.

Application may be made to either of the undersigned.

JOHN C. ALLEN, No. 179 S. Fifth St.
SAMUEL ALLEN, No. 134 S. Front St.
WILLIAM L. EDWARDS, No. 37 Arch St.

DIED, on the 6th of Fifth month last, HANNAH L., widow of the late Thomas Lee, of Maiden Creek, in the 69th year of her age. Her residence was at Fallowfield, Chester county, but being at Exeter on a visit among her relatives whose company she seemed to enjoy more than was usual for her, she was taken with paralysis, and died there. She bore her sufferings during the short period allotted her after the attack, with patience and resignation, and her friends have the consoling belief that her end was peace.

——, suddenly, in this city, on the morning of the 18th ult., in the 59th year of his age, GEORGE SMEDLEY, of Middletown, Delaware county, Pa.; a much esteemed overseer and elder of Chester Monthly Meeting. Possessing strong natural abilities, by early submission to the power of Divine grace, he became qualified for service in the militant church. Affable, tender, and sympathizing in his disposition, and of discriminating judgment, his advice and counsel were frequently sought in seasons of trial and perplexity; and while his unexpected removal is a great loss to his family and neighbourhood, we thankfully believe the language applicable —"For to me to live is Christ, and to die is gain."

REFLECTIONS ON WAR.

(Concluded from page 377.)

n commercial states, (of which Europe princi- y consists,) whatever interrupts their inter- rse is a fatal blow to national prosperity. ith states having a mutual dependence on each er, the effects of their hostility extend far ond the parties engaged in the contest. If re be a country highly commercial which has ecided superiority in wealth and industry, ther with a fleet which enables it to protect its rde, the commerce of such a country may survive shock, but it is at the expense of the commerce ll other nations; a painful reflection to a gene- s mind. Even there, the usual channels of trade g closed, it is some time before it can force a passage for itself: previous to which an almost l stagnation takes place, by which multitudes impoverished, and thousands of the industri- s poor, being thrown out of employment, are nged into wretchedness and beggary. Who calculate the number of industrious families different parts of the world, to say nothing of own country, who have been reduced to poverty n this cause since the peace of Europe was errupted?

The plague of a widely extended war possesses, fact, a sort of omnipresence, by which it makes lf everywhere felt; for, while it gives up riads to slaughter in one part of the globe, it busily employed in scattering over countries mpt from its immediate desolations the seeds famine, pestilence, and death.

f statesmen, if Christian statesmen at least, had roper feeling on this subject, and would open ir hearts to the reflections which such scenes st inspire, instead of rushing eagerly to arms n the thirst of conquest or the thirst of gain, uld they not hesitate long, would they not try ry expedient, every lenient art consistent with ional honour, before they ventured on this perate remedy, or rather before they plunged o this gulf of horror?

It is time to proceed to another view of the ject, which is the influence of national warfare the morals of mankind.

The contests of nations are both the offspring l the parent of injustice. The word of God as- bes the existence of war to the disorderly passions men. *Whence come wars and fightings among u?* saith the Apostle James; *come they not hence, n of your lusts that war in your members?* is certain two nations cannot engage in hostili- s but one party must be guilty of injustice; and he magnitude of crimes is to be estimated by a regard to their consequences, it is difficult to conceive an action of equal guilt with the wanton violation of peace. Though something must generally be allowed for the complexness and intricacy of national claims, and the consequent liability to deception, yet where the guilt of an unjust war is clear and manifest, it sinks every other crime into insignificance. If the existence of war always *implies* injustice in one at least of the parties concerned, it is also the fruitful parent of crimes. It reverses, with respect to its objects, all the rules of morality. It is nothing less than a temporary repeal of the principles of virtue. It is a system out of which almost all the virtues are excluded, and in which nearly all the vices are incorporated. Whatever renders human nature amiable or respectable, whatever engages love or confidence, is sacrificed at its shrine. In instructing us to consider a portion of our fellow-creatures as the proper objects of enmity, it removes, as far as they are concerned, the basis of all society, of all civilization and virtue; for the basis of these is the good will due to every individual of the species, as being a part of ourselves. From this principle all the rules of social virtue emanate. Justice and humanity in their utmost extent are nothing more than the practical application of this great law. The sword, and that alone, cuts asunder the bond of consanguinity which unites man to man. As it immediately aims at the extinction of life, it is next to impossible, upon the principle that everything may be lawfully done to him whom we have a right to kill, to set limits to military license; for when men pass from the dominion of reason to that of force, whatever restraints are attempted to be laid on the passions will be feeble and fluctuating. Though we must applaud, therefore, the attempts of the humane Grotius to blend maxims of humanity with military operations, it is to be feared they will never coalesce, since the former imply the subsistence of those ties which the latter supposed to be dissolved. Hence the morality of peaceful times is directly opposite to the maxims of war. The fundamental rule of the first is to do good; of the latter to inflict injuries. The former commands us to succour the oppressed; the latter to overwhelm the defenceless. The former teaches men to love their enemies; the latter to make themselves terrible even to strangers. The rules of morality will not suffer us to promote the dearest interest by falsehood; the maxims of war applaud it when employed in the destruction of others. That a familiarity with such maxims must tend to harden the heart as well as to pervert the moral sentiments, is too obvious to need illustration. The natural consequence of their prevalence is an unfeeling and unprincipled ambition, with an idolatry of talents and a contempt of virtue; whence the esteem of mankind is turned from the humble, the beneficent, and the good, to men who are qualified by a genius fertile in expedients, a courage that is never appalled, and a heart that never pities, to become the destroyers of the earth. While the philanthropist is devising means to mitigate the evils and augment the happiness of the world, a fellow-worker together with God, in exploring and giving effect to the benevolent tendencies of nature, the warrior is revolving, in the gloomy recesses of his capacious mind, plans of future devastation and ruin. Prisons crowded with captives, cities emptied of their inhabitants, fields desolate and waste, are among his proudest trophies. The fabric of his fame is cemented with tears and blood; and if his name is wafted to the ends of the earth, it is in the shrill cry of suffering humanity; in the curses and imprecations of those whom his sword has reduced to despair.

Detesting war, considered as a trade or profession, and conceiving conquerors to be the enemies of their species, it appears to me that nothing is more suitable to the office of a Christian minister than an attempt, however feeble, to take off the colours from false greatness, and to show the deformity which its delusive splendor too often conceals. This is perhaps one of the best services religion can do to society. Nor is there any more necessary. For, dominion affording a plain and palpable distinction, and every man feeling the effects of power, however incompetent he may be to judge of wisdom and goodness, the character of a hero there is reason to fear will always be too dazzling. The sense of his injustice will be too often lost in the admiration of his success.

In contemplating the influence of war on public morals, it would be unpardonable not to remark the effects it never fails to produce in those parts of the world which are its immediate seat. The injury which the morals of a people sustain from an invading enemy is prodigious. The agitation and suspense universally prevalent, are incompatible with everything which requires calm thought or serious reflection. In such a situation is it any wonder the duties of piety fall into neglect, the sanctuary of God is forsaken, and the gates of Zion mourn and are desolate? Familiarized to the sight of rapine and slaughter, the people must acquire a hard and unfeeling character. The precarious tenure by which everything is held during the absence of laws must impair confidence; the sudden revolutions of fortune must be infinitely favourable to fraud and injustice. He who reflects on these consequences will not think it too much to affirm, that the injury the virtue of a people sustains from invasion, is greater than that which affects their property or their lives. He will perceive that by such a calamity the seeds of order, virtue, and piety, which it is the first care of education to implant and mature, are swept away as by a hurricane.—*Robert Hall.*

A heart right before God, thinks how it may use the world, and not abuse it; enjoy it, and not rest in it; how it may turn all its business into religion, by making it obedient to God, and all its pleasures into religion, by *enjoying them in His fear;* how it may best improve its acquirements, whether of wealth or knowledge, to His glory, and gain for itself the fullest opportunities to worship at His feet, and prepare for His kingdom.

How deeply soever men are involved in difficulties, sincerity of heart, and upright walking before God, freely submitting to his providence, is the most sure remedy. He only is able to relieve, not only persons but nations in their greatest calamities.

The Isthmus of Suez.—The question o cutting a canal through the Isthmus of Suez, to connect the Red Sea with the Mediterranean, orms, at this moment, a subject of agitation in Constantinople. The project has always been looked upon by France as one of incalculable importance. She exerted her power successfully to gain the Porte over to her views, which, under the influence of England, had hitherto resisted the scheme. Lord Stratford de Redcliffe made strong opposition, in which he was supported by Reshid Pasha. A Vienna despatch from Constantinople, says that the position which the latter took in this matter, contributed mainly to his deposition, which is looked upon as the signal of the fall of English influence in Constantinople, and of the ascendancy and triumph of that of France.

A glance at the map shows at once the immense advantages which would accrue to France from the completion of this important canal. Formerly the trade between Europe and East India was carried on, partly overland, by way of Suez. At that time the ports of the Mediterranean formed the staple places for the oriental commerce, from whence the whole of Europe was provided with the luxuries of the East. Since the route round the Cape of Good Hope was found more profitable, the Mediterranean has gradually lost its commercial supremacy. And England, in consequence of the advantages which accrue to her from the possession of Hindostan, and the occupation of the most important commercial and strategical points in the Indian Archipelago, acquired a kind of monopoly of the oriental commerce. She forms now the great centre from whose warehouses and ports Europe and America are supplied. Goods are carried to England, a profit charged upon them, and they are then distributed through the various channels of trade to the world, which thus has become tributary, as it were, to her fortunate geographical situation. A simple cut with the spade through the narrow strip of level land between Suez and Alexandria, would, if not wholly, at least to a great, and as yet incalculable extent, obliterate these immense advantages.

A canal between the Red Sea and the Mediterranean would restore to the latter its glorious commercial eminence of times gone by. From its ports the locomotive would take the merchandise, arrived in ships, that left the East simultaneously with those of England, to the interior and north of Europe, before the latter could reach their moorings. At all events, the advantages which the Mediterranean ports would acquire by such a slight change of the surface of the globe, are so important, and the portentous question is so correctly understood, too, by Great Britain, that she has ever watched with the most anxious vigilance its minutest movements and signs of life. The value of this canal to France was fully appreciated by Napoleon I. While he contemplated, in 1799, the colonization of Egypt, he conceived, also, the great plan of mingling, at Suez, the waters of the two hemispheres. A corps of engineers was despatched to examine the ground, and ascertain the relative level of the two seas. The difference was stated to be 9 metres, or about 30 feet. This result, however, was afterwards found to be erroneous. In 1847, a corps of engineers was again commissioned to examine this subject. They were headed on the part of France by —— Talabot, on the part of Austria, by M. Nagrelli, and on that of England by —— Stephenson. The difference of level was then ascertained to be only 0.80 metres, or about three feet. —— Stephenson raised various objections against the practicability of the plan, and the government of Great Britain opposed it firmly. It failed in consequence. Louis Napoleon, in selecting the present moment, while his ascendancy over England is established, for the prosecution of this subject, has again evinced the boldness and correctness of his calculations. Whenever he aims at England, he is sure to strike at the right time and at the right spot. His blows fall upon his victim as unexpectedly as a lightning-flash from a serene sky, but with deadly precision.

—— Talabot, the same who investigated the Isthmus in 1847, has published, in a late number of the "Revue des Deux Mondes," a memorial, in which he proves, in a scientific way, that all the plans to cut in a direct line through the Isthmus, would fail of the success which ought to be expected in consideration of the magnitude of the work; and that the canal must be carried from Suez, over Cairo to Alexandria. According to his plans, the canal is to have a depth of 8 metres. The estimate of cost amounts to 300 millions of francs, or about 60 millions of dollars. —— T. estimates the commerce between Europe and India at two millions of tons annually, and considers that it is constantly increasing, and that the enterprise would pay a good interest.

We find in the Cologne Gazette that M. Lesseps, Consul General at Alexandria, has obtained from Said Pasha the right to form a joint stock company for the construction of the canal; and that the Pasha is highly favourable to the project, and is fully convinced of the immense commercial advantages which Egypt would derive from it. A programme, composed by —— L., will be published in Paris, inviting all European countries to participate in the undertaking, which he expects will be completed in six years.

The idea of a water communication between the Red Sea and the Mediterranean is, however, by no means new. The ancients made efforts to accomplish the object. A canal was commenced under Necho, 615 before Christ, and partly completed under Darius Histaspis. Under the Ptolemies, however, it was first sunk deep enough to carry large vessels. The Emperor Trajan repaired and improved the work, as also the Khalif Omar, 640 after Christ. It is supposed to have been in use till the 14th century. Traces of it still exist.

England has carried the East Indian overland mail over Suez since 1834. Though much opposed to the canal, she has been in favour of a railroad since 1844. In 1851 the work was commenced. It runs from Alexandria over Cairo to Suez, and in 1854 some portions of it were completed.

The canal of Suez will be undoubtedly the greatest work of the century, and its consequences must be momentous and incalculable; they cannot but produce an enormous revolution in the commercial relations of the world. Not only would England lose the monopoly of the trade with the East, and the Mediterranean ports become—to say the least—most powerful competitors; but also in a strategical point of view the change would jeopardise the English rule in India. The greater proximity of the steamers of the French navy to the coasts of Hindostan would be a portentous danger. Moreover, the ascendancy gained by France at present over Great Britain will result in her preponderance before long in the Mediterranean at the expense and danger of England. Even the failure of the Russian campaign would hardly avert this event.

The possibility of such an occurrence has been foreseen and guarded against by Great Britain. She has secured the narrow strait between the Red Sea and the Indian Sea, by seizing Aden on one shore and Tadjurrah on the other, and by occupying the Island of Sohotra, right in front of the Gulf of Aden. The canal of Suez would shorten the route between London and Bon to about one-third of the distance round the of Good Hope. The distance from the Med ranean ports of France, however, would be ne one-half shorter than round the Cape; from York to Bombay would be one-fifth shorter. the question with France is not one of distar it is one of commercial rivalry and of a strife power.—*Late Paper.*

Of the Vanities of Trying to Please Every Body

ABRIDGED FROM SAMPSON.

Thers is a happy medium betwixt the heart disposition to please nobody, and the absurd to please everybody; and fortunate are they find this middle line, and keep to it so steadil seldom to run into the extreme on either side.

It is no good sign to be indifferent with resp to what the world thinks or says of us, sinc would argue either a fulness of pride, or a t lack of sensibility.

Social qualities and feelings are among the mitive ingredients of our nature, and to div ourselves of them would be to divest ourselve humanity itself. They are rather to be cherish and cultivated, by all lawful means. It is only right, but laudable, to wish to be gener esteemed and beloved—to cultivate friendship to avoid giving unnecessary offence—and to confo to the feelings and habits of those about us, so fa may be done with a good conscience, and cons ently with one's personal circumstances. It not only right, but laudable, to make it a part our pleasure to please others; and, when we compelled to differ from them, to do it, if possib without rancour or bitterness.

There is such a thing as a union of condesce sion and firmness, and a happy thing it is. condescend in things indifferent, in things trivi in things that touch not the conscience, nor se ously damage or endanger one's earthly inter and welfare; and meanwhile to go not a step f ther for any persuasion whatever—no, not to ples one's nearest friends—*that* is the golden mea As some pretend to care for none, there are tho who, on the other hand, try to please all by coming—not in the best sense—"all things to men." Some do it from selfish designs altogethe and others from a too great persuadableness of te per and yieldingness of heart. The last ca bear, in any case, to be opposed or to oppose; a so they readily fall in with the sentiments a views of their present company, and side wi every man they meet. Often this pliability mind or temper is owing to a sort of amiable wea ness, but it is destructive of all respectability character.

I know not how to illustrate this point bett than by the following story, which as to substan and pith, may be regarded as undoubtedly true

Some very long time since, Parson M——, Massachusetts, (then a British colony,) happe ing at Boston, bought him a wig there, and retur ing home, wore it to his place of worship. As wig of such size and shape was quite a novel in that obscure place, it gave offence to almost t whole congregation, who, both male and femal repaired the next day to their minister's hous and stated their complaint, the burden of whic was, that the wig was one of the Boston *notion* and had the look of fashion and pride. The goo natured minister, thereupon, brought it forth, a bade them fashion it to their own liking. Th task they set about in good earnest, and with t help of scissors cropped off lock after lock, till, last, they all declared themselves satisfied, sa one—who alleged, that wearing any wig at all wa in his opinion, a breach of the commandmen

ch saith, "Thou shalt not make unto thee any
ven image, or any likeness of any thing that is
heaven above, or that is in the earth beneath."
s last objector the parson silenced, by convinc-
him that the wig, in the condition in which
hen was, did not resemble any thing either above
below.

Even so fares it with the characters that make
their aim to please every body. Slashed on
s side and on that, and twisted into every shape
t out of all shape, they finally come to the con-
ion of the parson's wig.

The Bene Plant.—We make the following ex-
ct of a letter from a correspondent of the Patent
ice, dated Monroe, Washita Parish, Louisiana,
hich is held for publication in the forthcoming
icultural report. It speaks of the "bene"
nt, from which oil of a pure quality is pro-
ced in great abundance.— *Wash. Union.*

"In 1813 I sent sixteen bushels of seeds of the
e plant (*sesamum orientate*) to a mill in Cin-
nati, to be manufactured into oil. It yielded
rty-nine gallons of clear oil, and about five
arts of refuse oil, or about two and a half gal-
ns to the bushel.

"In consequence of the mill imparting the fla-
ur of flaxseed, I could not use it as a salad oil,
f which purpose I am confident it would be su-
rior, when pure, to the adulterated imported
ive oil. I used it, however, as a substitute for
astor oil, and gave a considerable quantity of it
ray for that purpose. All who used it praised it
ghly, both for its gently purgative effect and
m being free from the nauseous taste peculiar
castor oil.

"I cannot state with certainty how much seed
is plant will produce to the acre, but believe
at twenty bushels is a moderate estimate.

"The leaf of the plant is an excellent remedy
r bowel complaints in children, and also in adults.
r this purpose, two or three leaves are put in a
mbler of water, which they immediately render
ucilaginous, but impart no disagreeable taste.
he negroes cultivate it for food, using the parched
eds with their meats.

"I consider it so useful that a few stalks at least
ould be raised in every garden. And I believe
will soon be extensively cultivated for manu-
cturing oil, yielding, as it does, about a gallon
a bushel more than flaxseed oil.

"I doubt whether it will mature well north of
titude 36 degrees. It should be planted as soon
the frost is out of the ground. Poor land is
st suited to its production, as it branches too
uch in rich soil, because the pods are more
kely to shatter from the branches than from a
ngle upright stem. The seeds should be planted
drills three feet apart and six inches distance
long the drills."

Self-denial.

Selected.

Religious self-denial is no hard and painful
uty, as is generally thought. The happiest men
the world, are the self-denying, and they are
appy in proportion to their self-denial, and *be-*
use of it. The purest, most unmingled happi-
ess tasted on earth, is by those who most nearly
pproach the example of Him, who though He
as rich became poor, that we through His poverty
ight be rich.

There never was a more obvious, practical mis-
ake, than to attempt to find happiness in avoiding,
r *going round* the path of self-denial. They are
he exact antipodes of truth, who suppose happi-
ess depends upon shunning the cross.—It de-
ends upon taking it up and bearing it.—True
lessedness is *in* self-denial, not avoiding it.

He who shuns an obvious call to deny himself for Christ's sake, shuns an opportunity of tasting the most exquisite joy permitted to man this side of Heaven. Oh! the infinite number of *turn-outs* and by-paths, from the path of self-denial resorted to, in the belief that they are *pain-saving* paths, when in truth, they only turn the traveller off from the highways of joys unspeakable and full of glory.

Tea.

A correspondent of the Rochester Union, writing from Macao, under date of Fourth mo. 15th, 1855, gives the following account of the growth and manufacture of this article:

"I have been astonished at the enormous quantities of tea drank in those parts of China I have visited. The Chinaman drinks his tea incessantly; but as the Persians, Arabs, and Turks take their coffee, without any admixture whatever. When you enter a Chinaman's house, he offers you a cup of tea which is always brewed on the spot before your eyes. The tea is placed in the cup, and pure boiling water poured upon it, when it is covered for a minute or two, and then drank from the lees. In this way the very essence of the herb is drawn out, and you get none of the bitter flavour produced by long steeping. Sugar and milk are never used, and although it is a somewhat extravagant method of making tea, I much prefer it to our home process. As everything relating to

"The cup that cheers but not inebriates,"

may prove interesting, I give you such items as I have gathered. The best teas are grown on the high moist lands, with moderately rich soils, especially in those localities where the soil is well mixed with debris of rocks. The plant when growing is very pretty and fragrant, resembling somewhat, the myrtle, with a white flower, not unlike the hedge rose.

The difference in quality depends partly on the district where grown, and partly on the season when they are gathered, as the young leaves of spring are of much finer flavour than the full grown leaves of summer, or the coarser ones of autumn. The teagrowers are small proprietors, and their lands are divided by footpaths, as I have heretofore described the divisions of wheat districts.

After the farmer has gathered his crop he partially dries it in the sun, when it is sold to the agent of the Hong merchants. The teas thus purchased are taken to the merchant's house, in one of the large towns in the vicinity of the tea district, and mixed together; care, however, being taken to keep the various qualities separate as much as possible, and this forms a "chop" of perhaps six hundred chests.

Leaves from which green tea is to be made are brought from the plantations, and spread out thinly on bamboo trays, in order to get rid of their moisture. In two or three hours the leaves dry, and they are then thrown into the roasting pans, and rapidly moved about and shaken up. They make a crackling noise, become moist and flaccid, and give off considerable vapour. In this state they remain a very short time, when they are drawn quickly from over the fire, and placed on rolling tables. The quantity is divided among the workmen at the rolling table—each takes as much as he can manage to press with his hands into the form of a ball. The ball is rolled on the table and compressed to force out the remaining moisture, and give the leaves the necessary twist. The leaves are then shaken out upon flat trays, and carried once more to the roasting pan, where they are kept in rapid motion by the hands of the workmen, and in an hour and a half the leaves are well dried, and their colour is fixed. The difference in the colour between black and green tea (when not artificially coloured) depends wholly upon the process of manipulation.

After the tea is dry, it is passed through sieves of various sizes, in order to get rid of impurities, and divide it into the well known kinds of hyson, hyson skin, and young hyson. Black tea undergoes a similar treatment, but the method of manipulation is not the same, and colouring matter is never added. Some kinds of black tea are very expensive, and never exported, being used by the Emperor and some of the high mandarins. The kinds denominated "coral dew," "white dew," and "rivulet garden tea," are said to be worth thirty dollars a pound in China. Some idea of the great number of persons employed in the tea culture may be formed, when it is estimated that fifty-five millions of pounds are annually exported, and that it is the universal beverage of three hundred millions of people at home.

Were we acquainted with the way of intermixing holy thoughts, ejaculatory eyeings of God, in our ordinary ways, it would keep the heart in a sweeter temper all the day long, and have an excellent influence, in all our ordinary actions and performances. This were to "walk with God" indeed, to go all the day long in our Heavenly father's hand; whereas, without *this*, all our praying morning and evening, is but as a formal visit, not delighting in that constant converse, which yet is our happiness and honour, and makes all estates sweet. This would refresh us in the hardest labour; as they who carry spices from Arabia, are refreshed with the smell of them in their journey; and as some observe, that it keeps their strength, and frees them from fainting.

Yankee Silk.—The great silk factory at South Manchester, Connecticut, which, with its branch in Hartford, gives employment to about 500 operators, and brings into use the best machinery which French or Yankee genius can supply. Italy produces no silk of finer texture or greater strength than that of the Manchester mill; while in point of elegant finish, beauty of colour, and brightness of lustre, the Connecticut establishment bears off the palm in a comparison with any or all the silk which can be met with.

Wishes.

Selected.

Christians are too little aware what religion requires from them, with regard to their *wishes*. When we wish things to be otherwise than they are, we lose sight of the great practical parts of the life of godliness. We wish, and wish—when if *we have done all that lies* on *us*, we should fall quietly into the hands of God.

Such wishing cuts the very sinews of our privileges and consolations.

The Importation of Guano into Great Britain.—The imports into Great Britain of guano, as far as known, since the commencement of the trade, are as follows:

	Tons.		Tons.
1841 . .	2,881	1848 . . .	71,451
1842 . .	20,398	1849 . . .	83,438

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 381.)

RICHARD LIPPINCOTT.

Richard Lippincott, originally of Devonshire, England, was one of the early settlers in Massachusetts, and we find him in the Second month, 1640, residing in Dorchester, near Boston. He was then a Puritan, and in full communion, with that harsh, freedom-loving, toleration-hating people,—a race earnest for their personal rights, industrious in worldly business, frugal and temperate in their habits,—matter of fact in perception, with whom the world was in a great degree stript of its poetry, and life of its kindly sensibilities. Religion was in their eyes, and in their living exemplification of its power, a compound of stern duties; wherein meekness, gentleness, forgiveness of injuries, however in word acknowledged, could not be found.

In 1644, Richard Lippincott removed to Boston, where, about the beginning of the year 1651, he fell under censure from his fellow professors, because he desisted from partaking with them of the "communion," or the bread and wine, which they called the Lord's supper. It appears that his mind had been enlightened to see the emptiness of forms and ceremonies, and the inability of any earthly priest or elder to grant to any one a real participation of the body and blood of Christ. To the admonitions of his brethren, it appears that he returned little answer, alleging that he felt no commission to speak on the subject; so in the Fifth month, 1651, he was publicly excommunicated. Soon after this, Nicholas Upshall, who had been a fellow-member with him, in the congregation at Dorchester, and afterwards in Boston, was excommunicated on the same charge. These two men, and probably there were many others similarly circumstanced in the Bay Colony at that time, were gradually growing in the knowledge and understanding of Divine things. They saw the futility of many of the forms with which the church had been encumbered, during its long night of apostacy, and they were enabled to behold something of the pure spirituality of the Christian religion. They were too enlightened for the narrow-minded bigotry of the community around them, and of course they became the objects, first, of vexatious suspicion, and afterwards of persecuting zeal.

Nicholas Upshall was a man of good standing in the community, and was, in 1638 and 1642, one of the select men in Dorchester. In the Fifth month, 1644, having removed to Boston, he was, with his wife Dorothy, admitted into connection with what was called the "First Church" in that place. In a few years, as he did not feel easy to commune any longer with the body, by partaking of outward bread and wine with it, he was admonished, and excommunicated.

In 1656, when Mary Fisher and Anne Austin, having been led in the love of the everlasting gospel to visit Boston, were taken from on board the ship on which they came and committed to prison, he compassionated the strangers, and furnished them with food at his own cost.

His kindness to these harmless women, increased the indignation of the rulers against Nicholas Upshall, and he soon felt the further extension of bigotry towards his own person and effects. A law was made against the people called Quakers, which prohibited masters of vessels from bringing them into the colony, and making every one coming among them, subject to the penalty of imprisonment. Nicholas Upshall could not be easy without protesting against this law, which was an infringement of the constitutional rights of free-born Englishmen. He had been imprisoned for not attending the meetings of these persecutors of the Truth, and now for his boldness in condemning the new made law, and those who enforced it, he was fined £20, and banished from Massachusetts. One month was allowed him to settle up his concerns, and remove, which was all the indulgence he could obtain, being obliged to take his departure in the winter. Having made what arrangement he could in the brief time allowed, he removed to Rhode Island, where he became more intimately acquainted with Friends and their principles, and soon made profession with them. An Indian prince, hearing of the persecution he had endured from his white brethren at Boston, because of his religious opinions, and of the kindness he had manifested to such as they deemed heretics, exclaimed, "What a God have the English who deal so with one another about their God." Another chief, understanding that he had been driven from his possessions, was touched with compassion, and offered him a home, saying, "If he would come and live with him, he would make him a good warm house."

Nicholas Upshall returning to Boston, was imprisoned there, where he was to remain until he should give satisfaction for having spoken against the law, as stated. The design of those who imprisoned him, was not answered. He was not daunted; his brethren visited him, and the sympathy of the people being aroused in his behalf, it was soon evident that he was doing far more towards making Quakers by his patient endurance of sufferings, than by his open advocacy. The records of the court, held Third month, 1661, inform us, as they understand, that Nicholas Upshall "is an occasion of drawing many Quakers and others affected to that sect thither, for prevention thereof it is ordered that the said Nicholas Upshall be forthwith sent to the Castle Island there to remain upon his own charge, and that none be suffered to come unto him to speak or confer with him, except such of his own family, which may come to bring his necessary supplies."

The next month, on receiving a petition from his wife, the court ordered that he be taken from the prison at Castle Rock, and conveyed to the house of John Capen in Dorchester, and there be confined a prisoner until the latter end of the Eighth month next, "provided the said Upshall do not corrupt any with his pernicious opinions, or admit Quakers or other heretical persons to have communion with him, or recourse to him, in which case any magistrate may by his warrant commit him to imprisonment in the Castle Island, according to former order."

Nicholas was released; but as he could neither give up his religious views at the will of the magistrates, nor withhold the rites of hospitality from his brethren in religious communion, he soon gave occasion for a new minute on the records of the court. The minute directs his imprisonment at the house of John Capen, and authorizes any magistrate, if he does not voluntarily go thither, to assist his recollection by a warrant. Nicholas withdrew to Plymouth, where he resided until the year 1666, when he returned to Boston, and immediately prepared a room in his house there for the use of Friends. He made his will, which bears date Ninth mo. 6th of that year, in which he says, "I do give for the use of such servants of the Lord as are commonly called Quakers, my new feather bed," &c., &c., "in that little room within my house," &c. "If my daughter see meet to set up a house in any part of my land for the use of Quakers, it shall be built, four twenty feet in length, and eighteen feet wide with a chimney, and the said bed, bedstead and t in it shall be for their company." This was al the last act of kindness he was able to manife his Friends, being before the close of the year leased by the kind hand of death, from any fea further imprisonment at Castle Rock, or with old friend, John Capen.

To return to Richard Lippincott. Early in year 1653, he went back to England to res taking with him his wife, whose name was Abi and two children. Their first child he had nam after the practice of the Puritans, Remembra in the recollection of the liberty he had enjo on his first arrival in the western world. His cond son was John, which means the "gift" "grace of the Lord." His third son, born a after his arrival in England, he called Rest being once more restored to the land of his f fathers. He settled near Plymouth, and was s convinced of the truth of the doctrines, wh George Fox was sent forth to proclaim afresh formal, priest-ridden people.

In the year 1655, he was imprisoned for faithfulness to the testimony of Truth, and be soon released, he named his fourth son, born af Freedom. His next child was a daughter, and token of the enlargement of his family, he cal her Increase. His sixth child was born in 16 and was named Jacob. Towards the close of t year, he was imprisoned in Exeter, for having tended a meeting of Friends in that city.

A year or two after this, he returned to A rica with his family, and settled in Rhode Isla where, in 1663, another daughter being adde the family circle, he, in commemoration of saving protecting mercy which had watched o him in his varied trials and persecutions, cal her Preserved.

The English having taken possession of "N Amsterdam" and the territories thereunto belo ing, Charles the Second granted by charter all lands from the Delaware river to the Connecti to his brother, the Duke of York. In 166 number of Friends of Long Island, having f bought of the Indian Sachems a large portion land in what is now called New Jersey, lying tween the Raritan river and the ocean, applied and obtained a patent therefor, of Nichols, vernor under the Duke. When a settlem began to be made on this tract, Richard Lipp cott was induced to remove thither, where he s became one of the largest proprietors."

Here Richard Lippincott lived an active, f ful life, surrounded by a family of children, w bid fair to follow his example, performing th religious, as well as social duties with alacr He was a useful member of the religious Soci of Friends, and so were several of his children we shall have occasion hereafter to show.

His death took place on the 25th of the Nin month, 1683.

(To be continued.)

A Curious Penny.—We find the following an English paper: — A person belonging Grangemouth, in getting change for a shilli was struck with something uncommon in one the pence. On examination, it was found t the obverse and reverse were divided, but uni with a fine screw. Being opened, a half per was enclosed, which was divided; being open a farthing was enclosed, and also divided: this being opened, a half farthing was enclos This elaborate penny is the same as the old he penny of George III., dated 1799.

MORNING HYMN.

"Let there be light!" The Eternal spoke,
And from the abyss where darkness rode
The earliest dawn of nature broke,
And light around creation flow'd.
The glad earth smiled to see the day,
The first born day, come blushing in;
The young day smiled to shed its ray
Upon a world untouch'd by sin.

"Let there be light!" O'er heaven and earth,
The God who first the day-beam pour'd,
Uttered again his fiat forth,
And shed the gospel's light abroad;
And, like the dawn, its cheering rays
On rich and poor were meant to fall,
Inspiring their Redeemer's praise,
In lowly cot and lordly hall.

Then come, when in the orient first
Flushes the signal light for prayer;
Come with the earliest beams that burst
From God's bright throne of glory there.
Come, wait on Him who through the night
Hath watch'd above thy sleeping soul,
To Him whose mercies, like his light,
Are shed abroad from pole to pole.

C. F. Hoffman.

Selected for "The Friend."

, do not mourn o'er failing health,—'tis in decaying
trees,
e richly laden honey-comb is stored by labouring
bees,
d those whose outward energy and earthly bloom is
o'er,
ve oft of inward comforting, a richly growing store.

The wayward prodigal in search of pleasure
Abroad may roam;
There, heartfelt happiness in fullest measure
Can never come.
It flies from costly halls, and rich rare dresses,
From wasteful feasts, and riotous excesses;
The truest sweets of life, pure love's caresses,
Are found at home!

For "The Friend."

We are always glad to find any evidence of the
read of correct views among the people of our
outhern States, upon the subject of slavery, and
ubt not the readers of "The Friend" have simi-
r feelings; we therefore present them with the
llowing extracts, the first of which not only
inces a correct appreciating of the evils result-
g from the "peculiar institution," but a proper
irit in avowing them:—

As one Increases, the other Decreases.

—— Wise says truly that our hills are full of
wer in coal, and that the water from our moun-
in ranges runs waste to the ocean. No busy
um of mills are heard; no men, women, and
ildren, are engaged in product. Our valleys
d ravines are not the arenas of busy life, but
lence and death pervade all except where here
d there the power of nature has compelled, and
compelling, a predominance over the institution,
nd bringing in men from the North to manufac-
ire. Compare the census of 1840 with that of
850, and you find the decrease of slavery in cer-
in counties bears just a proportion to the in-
rease of the products of agriculture, manufac-
ures, mining, commerce, churches, schools, intel-
gence, and happiness. It is as plain as that the
bsence of the sun produces night. Manufactures,
ining, and commerce, rise as slavery sinks. It
s necessarily so, for the negroes have little capa-
ity; and the fact that their existence as a class
akes from labour its dignity and honour, instils
dleness for want of practical application on the
art of whites who have them, and prevents those
oming in who have them not.

In agriculture, —— Wise justly declared the great power that Virginia possessed was abused. The soil and climate of Virginia are among the richest and finest in the world; and is there any other reason why it should not be the most productive, than that it is mainly farmed by slaves who have no interest in the soil, and wear it out without remunerative product? Hancock, Brooke, and Ohio counties are not of better soil than other counties in the State, nor have they any other advantages over them, except in having comparatively no slaves; and yet they produce on the same amount of land more than any other counties in the State, as will be seen by an examination of the census. They are better farmed, for they are farmed with white labour. They would be still better farmed, could they have an entire population who regarded labour as honourable, healthy, and wise.

Take the four counties of Brooke, Hancock, Ohio, and Marshall, and if the State would allow them to purchase and pay from the county treasury a fair price for every slave in them, and enact that no more should be brought in, in five years the actual wealth of these counties would be increased $50,000,000, or $1,340 for every present white inhabitant in 1850. Besides doing this, it would produce a republicanism and universal education that can never exist in a sparse population, and where one portion are slaveholders and another not.

Not one of these facts can be gainsayed; yet shall the mouths of men be sealed, who view the subject thus, candidly, honestly, and practically, by the senseless cry of "abolitionism," the most puerile of all folly, and the most contemptible of all tinkling cymbals and baubles that ever idiots played with? We have never approached with the idea of violating or opposing a law of Virginia, we have never discussed and never expect to discuss slavery in its moral sense. We leave that to the owners of them. It is a matter for them to settle between themselves and their God. We do not interfere with their opinions upon the effect to themselves. We discuss only its bearing upon those sections of the State and those people in the State who have none, and the progress and development of the State and its capacities for improvement; and yet that public slanderer, the Richmond Enquirer, accuses us of abolitionism, or a more bitter hatred of slavery than that manifested by the New York Tribune. We leave the reader to judge from the facts who are the truest citizens of Virginia—they who see its glory crumbling day by day under the pressure of an imbecile misnamed Democracy, complaining of its degeneracy, but giving no reason for it, and furnishing no prescription—or they who, like ourselves, frankly state the reason for decay that is manifest to all, and propose the practical mode of colonization on State account, or the provision for prospective emancipation.—*Wheeling (Va.) Gaz.*

—

Amelioration of Slavery.

The Port Gibson (Mississippi) Reveille says:—

"The project now being agitated by the people of North Carolina, and soon to be carried before the Legislature of that State, is one which, we think, to say the least of it, will create a sensation. It is, 1st, to render legal the institution of marriage among slaves; 2d, to preserve sacred the relations between parents and their young children; and, 3d, to repeal the laws prohibiting the education of slaves. If this modification in the laws is made in North Carolina, as we are informed it probably will, other States will no doubt take the matter into consideration. The main features of the movement have been adopted in practice, or at least improved in theory, by nearly all our planters, so far as circumstances would allow; and we cannot but think the modification is well worth the serious consideration of every Southern man. Should the Southern people think proper, after due investigation, to adopt the regulation in each of the slave States, slavery will then be regarded in an entire new light, and the enemies of the institution will be robbed of their most fruitful and plausible excuse for agitation and complaint. There may be, however, evils to contend with and objections to be answered in the adoption of such a modification. We therefore leave the subject open for future consideration, and, in the mean time, invite a free examination of the subject by our readers."

For "The Friend."

Want of Standard Bearers.

The removal of faithful labourers and bright examples in the church of Christ, has always brought feelings of sadness over survivors who loved the cause of Truth, and desired the preservation of the flock. In a preface to the works of Charles Marshall, William Penn says, "It is with some sadness that I remember the departure of so many of the Lord's worthies, as a little time hath deprived us of; but I have sometimes comforted myself in this, that the Lord intends to take his church more immediately under the care and ministry of his own blessed Spirit, whereby that loss would be more than repaired. And also to raise up more servants, and bestow upon them such measures of the Holy Ghost, and power from on high, as to be thereby amply qualified to gather home the residue of the dispersed of Judah and scattered of Israel, to the hill and city of God; and though they should not attain to the first rank of the Lord's worthies, yet that they may deservedly be reckoned among those who served God and their king valiantly."

We have great occasion at this day to look at the stripped state of our Society, in having removed from it within the last half century, a large number of men and women who had been taught in the school of Christ, and were made quick of understanding and spiritual discernment in the fear of the Lord, by the light and power of the Holy Spirit revealed in their hearts. They did not get their religion by mere human effort or study, but by submitting to the will of God inwardly revealed, and acting in obedience thereto under the humbling power of the cross of Christ. When prepared for it, gifts of various kinds were given them by their Lord and Master, and they exercised them as they were bidden by him, and received the anointing from Him; and then the divine life from the Holy Head flowed, and circulated from member to member, and the church edified itself in love. But a very active spirit, whose time seems always ready, has taken possession of many, who appear to be little acquainted with dying daily, that Christ only may live and rule in them; and in the midst of much doing and saying, the life that is more than meat, we may fear, is greatly wanting. Should the trials which the Society is now enduring, lead us back universally to the teachings of the Holy Spirit, and humble us under a lively sense of our inability to conduct the affairs of the church, and to keep ourselves from falling away, the Lord in mercy, we might hope, would hear our prayers put up in sincerity to Him, and in his ancient goodness, put it into the hearts of many to arise and anoint the shield, and stand firm for the defence of his precious cause, as our forefathers stood for it, in the integrity of their hearts.

W. Penn concludes with saying, "His works

will demonstrate from what fountain they sprang, even heavenly love and zeal, for the stirring up of those that read them, to the fear, love and service of the everlasting God, and that truth, unity, peace and concord may increase and be multiplied among the Lord's people, where they come. And I would add what I earnestly desire, viz., that the friends of God would be diligent in stirring up their children and family frequently to read the Holy Scriptures, and the writings of our ancient departed Friends, which are an eminent vindication of the Divine authority of that blessed book, upon the experience of those faithful ministers and servants of Christ. And that all who make profession of the holy and blessed Truth in the inward parts, would make the lives and labours of those worthies of the Lord, their lively and constant examples in their known seriousness, retirement, silence, self-denial, temperance, humility, meekness, tenderness, brotherly kindness, and sincerity to God and his people; that so there may be a succession in sobriety, righteousness and godliness, which is the very sum and substance of religion; and that one generation may become heirs in holiness to another, till days be no more, and time be swallowed up in eternity."

The Submarine Telegraph.—At a late meeting of the British Association, at Liverpool, J. W. Brett read a paper on "The Origin of the Submarine Telegraph, and its Extension to India and America." The author gave an account of the difficulties encountered in establishing the first marine telegraph, which has now been successfully working for three years between France and England; and stated that he had established the submarine telegraph between England and Belgium with equal success, which had been in operation since the first of May, 1853. He then explained some of the difficulties he had encountered in laying down the two submarine lines in the Mediterranean in July last—especially in passing a depth exceeding, by 100 fathoms, what had previously been ascertained to exist on the route between Piedmont and Corsica. The depths encountered between England and France, and England and Belgium, did not exceed at their maximum 30 fathoms; whereas, the submarine cable was laid down in the Mediterranean at a depth of 350 fathoms, exceeding about eight times that of the English Channel. It was the general impression that the submarine cable would part by the great strain it would encounter in passing these great depths; for which reason he was strongly advised, and more particularly by one of the most able and experienced officers of the Sardinian Government, who accompanied, and aided the undertaking, to make a detour of about eight miles by the islands of Gorgona and Caprija, where the soundings were known not to exceed 100 fathoms; but the great point to be considered was, whether he would not incur the risk of the total loss of the cable by not doing so. The prudence of these arrangements, — Brett said he fully admitted; but that it was a question he was determined to solve at once—for as this telegraph was not a telegraph to Corsica, but part of a line to India, to be shortly completed to Africa, where still greater depths must be encountered, it was necessary to test the fact. He then explained the difficulties they encountered in paying it out, when, after the lines had been paid out, as he believes, along the top of a submarine mountain for some miles, at a depth varying from 180 to 200 fathoms, it suddenly, as he believes, came to the edge of a precipice, making a total of 350 fathoms (exceeding by about 100 fathoms any depth marked in the various charts on this route,) where it ran out with frightful velocity; and had the cable been less strong, the whole must of necessity, have been lost; and they were compelled, nevertheless, to anchor by the electric cable all night, to restore the injury that had occurred; but he felicitated himself upon the experience thus gained from his determination in taking the deepest route, as it had led to many valuable suggestions necessary to successful operations in great depths; and the able Commander, the Marquis Ricci, who up to this time had been in doubt of its success, then admitted that this kind of cable contained such remarkable elements of strength in its form and combination, that he believed only certain improvements to be necessary (on which we had been consulting,) to successfully lay it down even in the greater depths of the Atlantic. — Brett, in conclusion, explained his reasons for selecting this line to India *via* Egypt, in preference to the line by the Italian peninsula, which would ever be impeded by the jealousies and restrictions of the petty States; whereas, to the shores of Africa, the Mediterranean telegraph passed through only the States of France and Sardinia, who had encouraged it by liberal guarantees, and admitted that all communications, in whatever language, should pass unrestricted through their States. From Africa he stated he had two plans in contemplation for its extension to Egypt—one, a line dropped in the Mediterranean in the shallow line near the coast, and another buried in the sand along the shore—both of which he was satisfied might be laid secure from derangement of any kind. He then referred to the proposed telegraph to America, and of the depth on the proposed line, as recently ascertained by Lieut. Maury, of the United States, with some estimates of the weight and cost; and stated that a return of £100 to £150 per day would give a fair interest on the necessary capital; that his plan comprised several lines of communication; and that he entirely deprecated the idea of a single line of communication, which he believed could not be done.—*The Plough the Loom and the Anvil.*

Of Independence.

ABRIDGED FROM SAMPSON.

Independence in regard to worldly condition, is an object of rational desire and laudable pursuit. But the word, *Independence*, must here be understood in a qualified and very limited sense. Strictly speaking, no man is independent. For not to mention, that all depend alike on Him in whom we live and have our being; there is amongst mankind a mutual dependence, from the lowest even up to the highest point in the scale of society: so that the rich man needs his poor but industrious neighbours well nigh as much as they need him. Should they refuse to sell him their labour, he would be fain to drudge for himself, notwithstanding the vastness of his wealth. This mutual dependence is a salutary restraint both upon the rich and the poor; it curbs the pride of the one, and the envy of the other; and even tends to link them together in mutual amity.

Moreover, that independence of circumstances, which should be made the object of general desire and pursuit, does in no wise imply large possessions. So far otherwise, one possessed of but barely competent means of support, provided he lives within his means, is hardly less independent than if he were in the enjoyment of a fortune. Does the possessor of an ample fortune enjoy personal independence? So also does the possessor of a small farm, which furnishes him with only the necessaries of life: and so also does the useful labourer, whose labour affords a supply to his real wants. But if the small farmer must needs be a man of fashion or pleasure, he loses his farm, and withal his independence. Or if the labourer neglects his calling, or spends faster than he ea his independence is quickly gone. Nay, e though the labourer should support himself ir pendently throughout all the days of his he and vigour, yet, assuredly, he must fall into a c dition of dependence at last, unless he have foresight and prudence to lay up some part of earnings against the seasons of sickness and old

"Our views in life," says the celebrated J tish Junius, "should be directed to a solid, h ever moderate independence; for without it man can be happy, nor even honest."

This sentiment has in it, however, as I conce some mixture of error. Virtuousness of disp tion depends not upon exterior circumstances. the deepest shades of poverty, and even in sit tions of abject dependence, there are persons only very honest but very pious, and who happy in the daily enjoyment of the banquet contentment.

Nevertheless, *our views in life should be dir ed to a solid, however moderate independence.* is as much our duty as our interest, to emp diligent and prudent endeavours to escape pove and want; to provide "things honest" for c selves and our families; to lay up against seas of sickness and the decay of age; and even strive hard to put ourselves in a condition, which we can be rather the dispensers than receivers of charity. Utter negligence in th matters, so far from evincing nobleness of spi is, for the most part, dishonourable and mean, commonly terminates in abjectness both of circu stances and of mind. The loss or destitution of p sonal independence or the condition of begga want, has no little aptness and likelihood to oc sion the loss of integrity and of all moral prin ple. It was when Esau came from the field, the point to die of famishment, that he sold birthright.

It would be impossible to tell what prec quantity of worldly estate is just sufficient, and more than sufficient; since it would depend up a variety of circumstances growing out of the p ticular state of society, and on a number of oth items which could not be calculated with pre sion. The best rule is, to rest satisfied with t appointment which Providence makes, and, hav food and raiment, therewith to be content.

Salt Manufacture at Syracuse, N. Y.—T manufacture of salt at the salt springs in Onond county, is carried on but seven months in the ye The average annual product of solar and fine s is about five and a half millions of bushels, thou the Syracuse Journal thinks the amount manuf tured the present year will reach six million bush Any one who owns a "block" or "vats," as t works are called, can get the salt water from t State for one cent a bushel of salt made, wh includes cost of inspection. Certain rules are served among those engaged in manufacture of sa so as to prevent competition, dull prices, &c. manufacturer is allowed to make more than 20,0 bushels per annum, and the minimum price is fix at $1.25 per barrel of five bushels. The pres price is $1.39 per barrel. A committee, chosen the manufacturers, act as selling agents; ea party's salt is sold by turn, and the whole deta are equitably and eminently for self-interest. Th is more salt manufactured at these springs than t aggregate manufacture of all other parts of t country. Some of the salt wells are sunk direc through the fresh waters of Onondaga Lake, l most of the springs are on its borders. The s is of a superior quality, and generally finds a g market; if, however, sales are small, the p never falls below $1.25 per barrel.—*Ledger.*

Horse-shoeing.

f to write anything worth reading, requires that
should be practically acquainted with the sub-
t, and understand what the conditions of the
e demand, then, what we write under this title
y be passed over as worthless. We do not know
at is the proper treatment of the case under our
ice; and, what is still worse, is, we do not know of
who are much above us in this respect. Never-
less, what we do know, we are inclined to state.
We know that horse-shoeing is a very important
vice, on which not only the value of the horse
often dependent, but even the life of his rider.
know, also, that skill in all the arts does not
ne by nature; that apprenticeship in all its es-
tials is indispensable in them. We also know
t our town and village blacksmiths, to a very con-
erable extent, are practitioners in this depart-
nt, without any especial training for it. They
rned what they know of some *boss*, who was
y popular in his own community, perhaps, for
general proficiency in the art which he prac-
d, but who acquired his theories, if nothing
re, from some master, who, perhaps, commenced
s work when he was ignorant of it as his ap-
ntice; because he failed in some other employ-
nt, and had a *natural tact* for it; and so the
goes on—"an unbroken succession"—from
who never spent an hour in the proper investi-
ion of the subject. Hence, we are not surprised
read that "American horses fail in the feet
ener than those of other countries."

In some of our cities, our pavements are dis-
gceful in the eyes of all sensible horses. Broad-
y might very accurately be defined, "a street
anged so as to require of all horses the greatest
sible effort to preserve their standing." We
dom walk to our place of business, less than a
le and a half, without seeing one or more instan-
of slipping; and often, when a complete fall
avoided, we notice many horses whose cramped
tions resemble those of a smoothly-shod boy, who
taking his first lessons in walking on ice.

But as we pretend to no especial skill here, we
e place to a writer in the *N. Y. Courier*, who
ms to understand at least something on this
ject:

"Of winter or summer states of roadways, and
e slipping, stumbling, and falling of horses, the
iter cannot here more than observe that it is
se which dictate how the hoofs should be pre-
red and the shoes adapted. The business of the
rier, as well of the hostler, should all be managed
direct reference to them. An animal requires,
all states of the streets and roads, foot-freedom
d foothold; and, in slippery states, extra care
ast be taken that a good foothold is secured.
l shoes and shoeing, however—and this fun-
mental rule should never be lost sight of—
ast be subject to the natural and elastic con-
tions of the foot, so as not in any manner
impede or injure these. In states of nature,
d when galloping at liberty over all kinds
ground, soft and hard, rough and smooth, the
rse has three sources of good and sufficient foot-
ld. The first is the concave form of the under
rface of the hoof; the second is the expansibility
the hoof, which opens at the heels and quarters,
d spreads at the base, under the super-weight
d momentum of motion; and the third is the
nsequent and very effective stay derived from
e action of the wedge-like frog on the surface or
ound.

Let any mechanic examine the structure of the
rse's foot, and he would at once discover and
onounce it to be an organ whose construction
d processes were admirable, and well adapted it
be at once an expansive as well as a protective
covering for the motive and sensitive joints and tissues contained within. He would further see and add that, if in circumstances of an altered or domesticated state, an additional or artificial protection against tear or wear should be required, that this—whether of iron or aught else—must be so applied and adjusted as not to interfere with, or limit, the expansive properties of the hoof, on the penalty of fatal mischief.

Let us now inquire into facts. How are the shoes of horses—this additional protection—applied? Are their forms and adjustments well and rightly suited to their end and purpose? No; for, first, the hoofs grow deep, dry, hard, and inelastic; second, the shoes promote this state, and further bind and debar expansion; third, instead of being concave to the ground, so as to correspond to the concave form of the under surface of the hoof, the form of the shoes are the reverse, and may be therefore, likened to a skate, nailed on in a manner to fix the parts; fourth, the frog is squeezed and diminished, and is altogether disabled from usefully exercising its truly valuable functions.

In order to remedy one part of the evil,—slipping and falling—arising from such shoes and shoeing, recourse is had to toe-pieces and caulkings. These aggravate the general mischief; for already ill-adjusted bearings of the hoofs and shoes are straining the joints and ligaments, and this effect of high caulking greatly tends to increase, as will be visible, if we observe the manner in which one caulking first takes the ground, and then how the animal's weight twists toward one on the other. Concussions and injuries to the foot, pasterns, and fetlocks, and wrenches of the hocks, are continual results. One kind of evil, substituted as the remedy for another, does not abate the first. It is only a superadded evil. From all these causes flow the almost universal prevalence of contracted, impaired, and unsound conditions of the feet of horses; the fore-feet in particular, which are more under the centre of weight and motion.

Toe-pieces should never be used. Properly formed shoes never require them. As a general rule, caulkings on the fore-shoes should seldom be resorted to. When icy states of the streets or roads seem to exact them, a low caulk on the outer heel of each shoe, only, should be used, and the web of the inner heel should be drawn narrow and thick, in proportion to the height of the caulk, so as to give an even and true bearing under the centre of the animal's weight. The same rule should apply to the under heel of the hind-shoes; but a low caulk on the outer heel of each shoe, behind, is always recommendable. The main and true defence, however, against toeing, tripping, and stumbling, is ever to be sought in shoes and shoeing, mechanically and physiologically adapted to preserve natural and healthy forms and conditions of the hoofs and feet."

Selected.

The Greatest Deceivers.

Sewel, writes of G. Fox. "He saw that the greatest deceivers, were such who as Cain, had heard the voice of God, and as Corah, Dathan, and Abiram, and their company, were come out of Egypt, and through the Red Sea, and had praised God on the banks of the sea-shore; and who being come as far as Balaam, could speak the word of the Lord, as having heard His voice, and known His Spirit, so that they could see the Star of Jacob, and the goodliness of Israel's tents, which no enchantment could prevail against: these that could speak so much of their divine experience, and yet turned from the Spirit of God, and went into the gainsaying, there he saw would be the great deceivers—far beyond the priests."—*Sewel's Hist., p.* 46, v. 1.

The Preservation of Potatoes for Seed.—J. N. Chandler, a correspondent of the Patent Office, speaking of the preservation of potatoes for seed, says the potato, when first obtained from its native mountains, was a small, watery, and even bitter tuber, but by cultivation it has been brought into so high and refined a state, that most of the countries of the civilized globe look at it as one of the most important articles of food. In answer to the question by what means has it been made a chief article of food, he says *by violating the laws of Nature.*

Every one who has ever noticed the difference between the flavour of a potato in the fall, when first dug, and one in spring which has been kept in a large dry cellar, has observed that the flavour becomes much impaired—much more so than those which are buried in holes in the earth, where they retain nearly all of their freshness and vitality. It has also been observed that farmers who have small and inconvenient cellars keep their potatoes in better condition than those who keep them in large, cool ones. Hence, by storing them in the latter, and letting them wilt before planting, they become weakened in their nature, and are subject to degeneracy, and finally to disease.

"In order to obtain good potatoes for seed, make choice of a small spot of arable land on which water will not stand—an eastern slope and new ground are the best—ploughed early in the spring, and furrowed 4 or 5 inches deep, 2½ feet apart. Select middling-sized potatoes which have touched the ground during the winter previous, but do not cut them. Drop one every 8 inches along the furrows, and cover them by filling the furrows with earth. Then cover them with a top dressing of forest leaves or straw 2 inches deep. As soon as the tops of the young plants are 2 inches high, pass between them with a shovei-plough, follow with a hoe, destroying the weeds and levelling the ground; do not hill. This is all you have to do until fall. When the ground begins to freeze, cover with straw, chaff, or forest leaves, 6 inches deep, to keep them from frost. Your potatoes will now have a chance to ripen and rest during the winter. In this way, you will have the greatest yield and best quality. Continue this course from year to year and the rot will not only disappear, but your crop will increase from 25 to 100 per cent. The third year you may increase your field crop by ploughing in fine manure. You will now have had nature's course."—*Agricultural Division of the Patent Office.*

A Curiosity.—At the corner of Calaboose alley and Chesnut street, by the *Republican* office, may be seen a solid mass of iron, weighing 1700 pounds taken from Pilot-knob mountain, and which was intended to be forwarded to the World's Fair, held in London in 1852. It is of the purest ore, and although it has remained exposed to the elements for three years past it exhibits not a spot of rust upon its surface. It has, we suppose, been forgotten by its owners, and yesterday we saw it pointed out as a large rock! It is a curiosity to all who would know something of the mineral resources of Missouri, and tells a tale of what may be accomplished in iron by our enterprising men when the iron mountain Railroad shall be completed.—*St Louis Democrat.*

Time table for the United States.—Table exhibiting the time of day at different places in the United States, when it is 12 at noon at Eastport, Maine:—Eastport, 12; Boston, 11.39; Washington, 11.20; Buffalo, 11.12; Cincinnati, 10.58; Chicago, 10.39; St. Louis, 10.27; Charleston, 10.09; New Orleans, 10.29; St. Paul's, 10.11; Salt Lake, 8; San Francisco, 8.17; Astoria, 8.08.

For "The Friend."

Work while it is Day.

"He that planted the ear, shall he not hear? He that formed the eye, shall he not see? He that teacheth man knowledge, shall he not know?" Yes, truly, every thought and every motive is known to the Omniscient One, who is of purer eyes than to behold iniquity with any degree of approbation. Let us bring all our deeds to the light that it may be manifest whether they are wrought in Christ, yea or nay; for if they are *not*, the day is approaching to all of us, when we shall have to take up this lamentation; "The harvest is past, the summer is ended, and I am not saved."

How needful then that we work while the day of merciful visitation is lengthened out to us, while we continue to hear a voice behind us, saying, "This is the way, walk thou in it."

"Therefore, whatsoever thy hand findeth to do," in order to make thy calling and election sure, in order to give thee an inheritance among all them that are sanctified, "do it with all thy might, for there is no work, nor device, nor knowledge, nor wisdom in the grave, whither thou and I goest."

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to the 28th ult.—The intelligence from the Crimea does not report any events of much moment. On the night of the 13th, the Russian fire demolished the new French battery between the Mamelon and Malakoff towers. The allies are said to be preparing for another assault, in which both the land and naval forces will participate. The approaches are now so near, that the firing tells on both sides with terrible effect. The dispatches speak of the immense efforts of the Russians in strengthening their defences, and erecting stronger fortifications. Cholera had nearly disappeared from the French camp. During the Sixth month, 3000 French soldiers died from that disease. The attitude of Austria caused much disquietude in the cabinets of the Western Powers. The Dutch authorities at the Hague have forbidden enlistments for the British service, and some of the recruits have been arrested. Accounts from Warsaw state that the prohibition to export grain had been rescinded by Russia. A part of the Turkish troops at Constantinople had mutinied and committed great excesses. A formidable insurrection of the Arabs had broken out near Tripoli, occasioned by an attempt to levy increased taxes. The Turkish army sent against them, had been defeated with a loss of 1700 to 2000 men.

FRANCE.—The French loan has been all taken. The visit of the Queen of England is fixed for the 18th inst. The municipal elections were going on in France, but excited little interest, and few votes were polled.

SPAIN.—Cholera prevailed extensively in some of the Provinces. Further disturbances from the Carlists were apprehended in Catalonia.

AUSTRIA.—Provisions were advancing in price, although the harvest promised to be an average one. The effective force of the Austrian army had been reduced to about 400,000 men. There was unusual mortality among the troops, from cholera and other diseases.

RUSSIA.—In the apprehension of an attack from the vessels in the Sea of Azoff, the Russians were actively fortifying Roston, at the mouth of the Don. The channel has been obstructed by large stones thrown in to prevent the river from being navigable. An Imperial Ukase forbids the Jews to settle as agriculturists, or purchase lands in the governments of Tchernigeff and Poltawa. The loss of the garrison of Sebastopol in repelling the assault of the allies, Sixth mo. 17th and 18th, is officially stated at 5775 men.

ITALY.—The cholera was extremely severe at Ancona, and most of the coast towns on the Adriatic, as well as throughout the provinces of Bologna, Romagna and La Marca, with the exception of the loftiest situations. The Austrian garrisons especially were suffering severely.

GREAT BRITAIN.—Sir William Molesworth has been appointed Colonial Secretary, in place of Lord John Russell. In the House of Parliament, on the 27th ult., Lord Palmerston said, "that Omar Pacha had returned to Constantinople to hold consultation with his government on military affairs. It was not true that he had any intention of resigning." It was rumored that General Simpson had resigned his command. The bark Annamorka arrived in the Birkenhead docks after a long voyage, having rescued 96 persons from the large ship Polar Star, which was destroyed by fire on the 4th of Tenth month last, in the South Seas. The iron trade is recovering from the late depression, though it is not yet by any means brisk. The late reduction of ten per cent. in the wages of the workmen, was still in force. Welsh rails command £7 15s. and £8 on shipboard, in Wales. Scotch pig iron is quoted at 73s. 6d. on the Clyde. The cotton market was dull, and prices slightly declining, the range was from 6 1-16d. to 7d. Breadstuffs were nearly unchanged. Flour was quoted from 40s. to 43s. per bbl. Consols remained at 91.

UNITED STATES. — *The Western Rivers.* — The Chicago Times states that the St. Croix, Chippewa, and Black rivers are very high, and are pouring a flood into the Mississippi, that is rising all the way from St. Paul to Galena. It is reported to have risen six feet at La Crosse. The Wisconsin is very high—booms breaking, and logs escaping down stream with a rush. Immense quantities of lumber which were awaiting this rise, will now come down, and be obtainable in large quantities, and at reasonable prices.

Kansas.—Late advices state that great excitement prevails concerning the appointment of the new Governor. The Legislature discusses the soundness on the slavery question, and the members were about sending an application to the President, asking the appointment of Woodson, the present Acting Secretary, in case J. L. Dawson declines. A still later dispatch states that Dawson has declined the post, and that it has been offered to Wilson Shannon, of Ohio. There seems to be no doubt, that a majority of the actual settlers are opposed to slavery, but it has been determined by the Missourians that Kansas shall not be a free State. Cholera has broken out at Leavenworth City, Kansas, and Major Armstead, his wife, and forty-eight others have died of it. It is also at Fort Riley, where it has caused the death of Capt. Ogden, the wife of Major Woods, and four of her children. The garrison had deserted, and the chaplain was the only officer left in the fort.

New York.—The census returns of 18 wards show an aggregate population of 551,998. The four wards remaining to be heard from in 1850, had 77,332 inhabitants. The specie in the various city banks, on the 14th inst., is reported at $15,298,358.

Philadelphia.—Mortality last week, 305.

Louisville.—The election in the city, on the 6th inst., was accompanied by a savage and disgraceful riot in which from 15 to 20 persons lost their lives, and many more were wounded. The contending parties were the "Know Nothings," and the Germans and Irish. The parties reciprocally blame each other for the outrages. A number of buildings were burned by the mob, and some men perished in the flames.

An Indian Battle.—The Omaha Indians attacked the combined forces of the Sioux, Chanos and Apache Indians, on the 16th of Seventh month, and defeated them, after a serious conflict, in which many on both sides were killed and wounded. Among the killed was Logan, the chief of the Omahas. Advices received from Fort Union state that the Indians show signs of hostility to the government. The reinforcements for the U. S. troops had reached Fort Pierre.

Texas.—Galveston papers to the 28th ult., state that heavy rains have prevailed in Western Texas, and the whole of that part of the State has been literally flooded. The continued storms have occasioned serious apprehensions for the cotton crop, which is very backward this season.

New Orleans.—The deaths in this city, for the week ending the 6th inst., numbered 336, including 222 from yellow fever.

Wisconsin.—Emigrants continue to pour into this State, and among them are said to be many persons of wealth and enterprise, from Ohio and Kentucky. The Kentucky emigrants go to Wisconsin to engage in the business of stock raising.

The Yellow Fever, is increasing at Portsmouth, Va. Seven thousand of the inhabitants have fled from the town.

Cincinnati.—During the week ending the 7th instant, there were 224 deaths, eight of the number being from cholera.

Pennsylvania Railroad.—The receipts of this road for the Seventh month, were $307,516, being $98,216 more than in the corresponding month of last year.

Miscellaneous.—Methodist Episcopal Church, South.—From the general minutes of the Methodist Episcopal Church, South, we gather the following facts: The number of travelling preachers is 1912; superannuated, 150; local, 4359; white members, 428,511; colour 164,584; Indians, 3757; grand total, 603,303. The crease during the year was 23,992.

American Iron.—A recent statement, emanating fr the Iron Dealers' Association, gives a cheering accou of the flourishing condition of the iron trade in t country. American pig and bloom iron have advanc in price, under the stimulus of reviving trade, wh the manufacturers of domestic hardware, and of t and railway iron, are largely extending their ope tions.

Successful Navigation.—The steamship Iberia, of t Peninsular and Oriental Company's line, left Sout ampton last month, on her 100th trip. It is a thi weeks' voyage, and upwards of 2000 miles in leng The Iberia has taken ten years to perform these 1 voyages, and has done so without an accident wort of note, and traversed a distance of nearly 250,0 miles.

New York Canal Tolls.—The statement of tolls r ceived on the New York canals, from the commenc ment of navigation up to the Eighth month 1st, sho a falling off, in comparison with the receipts of last ye for the same period, of $156,041, and in comparis with those of 1847, amounting to $884,781.

Dead Letters in Great Britain.—The British Post-off Department, it is stated, has adopted the regulation returning unopened all letters which miscarry on whic the writer's address has been written or printed. Great Britain there is only one dead letter out of 20 in the United States the proportion is 1 in 36 of all t letters mailed.

Rice in Connecticut.—George W. Payne, of Farmin ton, Conn., has a lot of Minnesota rice growing upo his farm "full eight feet high and promising an abu dant yield." He thinks it equal to the Southern ric and is confident that it can be profitably raised in the meridian. It is sown on swampy land unfit for othe cultivation.

Population of Canada.—The new census of Upper an Lower Canada shows a large increase in populatio since 1851. At that time the population of Upper Ca nada was 952,000; that of Lower Canada 890,261; in round numbers, 60,000 less than the numbers of th Upper Province. The population of Upper Canada i now, in round numbers, 1,332,000; the Lower Provinc has 1,050,000, showing a numerical majority in favou of the Upper Province of 282,000. The ratio of increas for the last four years has been 10.54 per cent.

The Mormons.—The emigration of this singular peo ple from Great Britain to Utah, has been very large th present year. Between Eleventh mo. 27th, 1854, an Fourth mo. 26th, 1855, according to the published state ments, 3626 emigrants left England in eleven ships. O these, 874 were landed in New York; 1450 in Philad delphia, and 1302 in New Orleans, from which place they were forwarded to Salt Lake City. The latest ac counts from their settlement in Salt Lake Valley speal of the devastations of the grasshoppers and crickets a being so serious as to cause fears that a large propor tion of the crops of all kinds would be cut off, and no enough left for the support of the inhabitants.

Postage with France.—The French Government ha submitted a proposition to that of the U. States, tha the postage on letters between the two countries shal be greatly reduced, and the direct communication more frequent.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in this Institution.

Application may be made to either of the undersigned members of the Committee.

From the Edinburgh Review.

The Land of Silence.

On the 18th of November, 1852, the day when great Captain, (Wellington,) was laid in solemn np beneath the dome of St. Paul's, a train which ched London at four in the morning brought passenger who during the journey had attracted little attention. He had entered the carriage the Blenkinsop Station some ninety miles from rn, and spent upwards of three hours with his low-passengers in profound silence. He was a ll-dressed, handsome fellow, bright-eyed, and elligent in look; but throughout the entire tance not even once did he open his mouth but give his front teeth a tap with a paper-knife. Six o'clock found our traveller one of the vast ltitude who on that memorable morning eagerly wded every damp inlet to the thronged and ddy Strand. After some three hours' wander- through this densely-packed thoroughfare, he last paused at the corner of Bridge Street, Black- rs, and there became firmly wedged into a com- ct mass of spectators near the obelisk. From s post of observation he never stirred again until e whole pageant, with all 'its boast of heraldry l pomp of power,' had with solemn tramp swept him and was gone. Then the huge living wave led back and onward through the mighty oroughfare, spreading silently away through the ntless veins and arteries of the City. But of the thousand mourners near him, probably not e shares in such feelings as now fill the heart of r traveller. He has been present with them roughout the whole spectacle, but of many of grandest features has been utterly unconscious. ny a time throughout the day solemn silence wly rippled over the waves of that vast and ex- tant multitude; the silence awoke up again into busy hum—anon died away, and yet again wned into sound. Then far away in the distance ere rises on the wind to ten thousand listening s the shrill cry of trumpets, and the low moan distant and muffled drums; the solemn wail of e dead march, and the heavy tread of armed n: but to this one spectator the gale brings no mpet-cry, no sound of the military pageant,— word of wonder, delight, surprise, or sorrow m speaking lips on every side. To him the ole scene is one of deep unbroken silence—he ither hears nor utters word or sound of even the st emotion. He is deaf and dumb. His neigh- urs on either side are half inclined to suspect m to be crazy, and now and then hint their be- f; but the unconscious object of their charity, ither hears nor answers their sarcasm. So con- centrated, keen, and fixed is his gaze, that with his eyes he seems to hear and speak as well as see, as if the one organ embraced the life and power of three. The face of the blind man—mentioned by Coleridge—was all *one* eye, while in the face of the deaf and dumb the very absent senses seem most present.

We have called our readers' attention to this sketch of life, because it aptly enough introduces us to one important feature in the isolation of the deaf and dumb when compared with their fellow-sufferers the blind, or with the rest of mankind. That point is, the eternal, unchanging, desolate *silence* of their whole existence. An hour's silence may be at times a very pleasant thing; but a whole existence, unbroken by even the faintest sound or murmur, is a totally different question,—so different, indeed, that it is doubtful if hearing men can at all form a true idea of it. What would the busy Strand be like without the din of carriages? a stroll into the country without the song of birds, 'the cock's shrill clarion, or the echoing horn?' —streams babbling by without murmur, the ocean without a voice, the whirlwind without its crash? —lightning without even the faintest echo of thunder?—the thousand melodies of earth, air, sea, and sky, unheard and unknown! The full conception of existence in such a world as this is, we repeat, to hearing men most difficult, if at all possible. And as it is thus difficult for us to imagine what the full loss of the deaf-mute is, so conversely is it a thousand-fold more difficult for him to imagine even remotely the nature of our gain. The blind man by dint of practice at last realises by *touch* the *visible* form and substance of many objects, and among them, perhaps, some of the least plainly visible; but no kindred agency can convey to the ear of the deaf-mute the remotest conception even of what *sound* is. His eye may beam with intelligence, his touch vie with that of the keenest of blind readers, his store of information be already great, and every faculty of mind be vigorous; but not the wisest discipline of the most skilful teacher will ever impart to him an idea of any given sound. For, be it remembered, the deaf-mute is in most cases unconscious even of the sound of his own attempts at speech; and hence, as we shall hereafter see, the dreary and forlorn moanings in which these attempts so often result.

Deafness at birth, or the loss of hearing at an early age, before the habit of speaking is so confirmed, or the stock of articulate language so copious, as very powerfully to impress the memory, is invariably followed by dumbness; though not, certainly, on account of any sympathy between the organs of hearing and of speech, by which disease or defect of the former might be transferred to the latter. Were this the case dumb people could not be taught to speak. Total dumbness seldom proceeds from any other cause than want of hearing or want of intellect. Want of hearing from birth, or from an early age, is followed by dumbness (if the intellect is perfect) merely because it precludes the opportunity of learning or being confirmed in the use of speech in the ordinary way. Dumbness, where the hearing is perfect and the intellect defective (no uncommon case) proceeds from want of ideas, and of judgment to direct the organs of speech in the formation of articulation.

Of the causes of birth-deafness, whether arising from actual defect in the organ of hearing or not, we know little; and even in cases of total deafness, to all appearance the ear is wanting neither in external or internal apparatus, presenting in this respect a striking contrast to blindness, the mediate or immediate cause of which—as well as the diseased part of the organ—may be generally discovered without much difficulty. In comparing the organs of sight and hearing, and judging of their respective degrees of structural complication, exposure to accident, and liability to injury, we should be apt to consider the eye as more frequently the seat of disease than the ear, and the decision is on the whole just. 'Yet the ear is no less artificially and mechanically adapted to its office than the eye, though we do not so well understand the action, the use, or the mutual dependency of its internal parts.' While, on the other hand, of the wisdom and beauty of all the several parts of the aural structure the investigations of modern science have given us abundant proof;—a point not only of interest in itself, but immediately connected with our subject, and demanding a few words of description.

(To be continued.)

For "The Friend."

Alton, 15th of Twelfth month, 1827.

To ———: Be assured thou hast my very tender sympathy under the important circumstances thy letter unfolds: and that my best, though feeble, desires are, and will be, for thy best welfare. I cannot doubt but preservation and sufficient help will be extended, while a simple, upright, unreserved surrender of the will is sought after and abode in. I have thought, in a case of this kind, there is always abundant condescension, gentleness, forbearance and long-suffering, manifested towards us, poor fallible creatures. He that putteth forth and goeth before us, knoweth our frame, and himself took our infirmities; when we take a step a little awkwardly, or with too much forwardness, or mistakingly, mercy is near to hold us up and restore us; so long as we are not wilful, but singly desire to be right in our movements. We may be, and some of us know we have been, long borne with, in much that borders on, and indeed proves to be, little better than thorough unbelief and disobedience.

We read that "rebellion is as the sin of witchcraft;" we may have held back on different grounds, very reasonably as we have thought; but we have been chastised for this,—leanness and feebleness have come over us, so that when we would afterwards have given up, the Divine sense, strength, and blessing has receded; neither have we enjoyed the answer of, "Well done." Our situation perhaps has somewhat resembled that of the Israelites, who, after refusing, attempted to enter the promised land; there is, nevertheless, forgiveness with Him, that he may be rightly feared, and also plenteous redemption. I believe we are safe in resting under a holy, simple fear and caution, as to so awful a proceeding as the first exercise of the ministry; but how far this

should be carried, cannot well be defined for another; vessels are variously moulded, and variously dealt with or used; there may be too much of this as well as too little, for our snares and our tendencies differ. Even though we wait for what we may suppose only adequate strength and clearness for the occasion, this may stand in the way of our having that degree of it, which was intended for us, had we used more self-renunciation, or been more disinterested in our service. It is plain, we are not to expect to have just what evidence would please or satisfy our own feelings, which may have become somewhat morbid, by dwelling on things too much.

Ah! the simplicity of a true babe in Christ is what we want most, far more than that kind of assurance we covet thus greatly; a little of this goes a great way; it is the faith which pleases God, and removes the mountains; and by which we are to walk, rather than by sight; it leads to look not at self with anxiety, how we shall be provided either with discernment, courage, or what else is needed; but to rest in the Lord, and cast our burden on him, knowing he is ready to sustain such, so that they shall lack nothing; nor are they much moved by what arises to perplex, discourage or prove them,—trusting over all in never-failing goodness.

I hope if what is now handed, should feel to thee to be as a word in season, and in anywise coming from the right source, thou wilt not hesitate to accept it through the fear of leaning on man. I consider that when instruments are rightly engaged for the help of others, they act not in their own name; such are ordained and needful in the church; and if our eye be single to the great Head, the giver of every good and perfect gift, and to his inward appearing and sense as to what comes through others, we shall not be in danger of hurt,—bearing always in mind his injunction, "Take heed *how* ye hear."

J. Barclay.

The Hessian fly.—According to the account of Edward Tilghman, of Queen Ann County, Maryland, says — Glover, the eggs of the Hessian fly, (*cecidomyia destructor,*) very destructive to wheat, are deposited in October, in the longitudinal cavities between the little ridges of the blade, from which, in about fifteen days, very small worms or maggots appear. It is properly a small two-winged gnat, which lays its eggs in winter or fall, when the grain has sprouted and begins to show leaves. They make way down the blades with considerable activity, until hidden between them and the stems of the plant. The number on a single leaf is often twenty or thirty, and sometimes greater. The eggs are extremely minute, and of a pale-red colour; and, if the weather prove favourable, they will hatch in four days. The maggots, when they first come out of their shells, are also of a pale-red colour. Forthwith they crawl down the leaves and work their way between them and the main stalk, passing downwards till they come to a joint, just above which they remain, a little below the surface of the ground, with the head towards the root of the plant. Having thus fixed themselves upon the stalk, they become stationary, and never move from the place before their transformations are completed. They do not eat the stalk, nor do they penetrate within it, but lie lengthwise on its surface, and are wholly nourished by the sap. As they increase in size, and grow plump and firm, they become imbedded in the side of the stem by the pressure of their bodies upon the growing plant. One maggot thus placed seldom destroys the plant; but when two or three are fixed in this manner around the stem, they weaken and impoverish it, and cause it to fall down or wither and die. They usually come to their full size in five or six weeks, and then measure about three twentieths of an inch in length. After escaping from the pupa state, the body of the Hessian fly measures about the tenth of an inch in length, the head, antennæ and thorax are black, the hind body tawny, more or less widely marked with black on each wing, and clothed with fine grayish hairs. The legs are pale-red or brownish, and the feet black. The maggots are generally transformed to flies in autumn. The Hessian fly is subject to the attacks of several parasitic insects, which serve more or less to lessen their numbers, the chief of which is the *ceraphron destructor,* of (say) a shining black four-winged fly, about one-tenth of an inch in length. — Herrick recommends that the stouter varieties of wheat should be chosen, and the ground kept in good condition. If fall wheat is sown late, some of the eggs will be avoided; but the risk of winter killing will be incurred. Burning the stubble immediately after harvest, and then ploughing and harrowing the land is also highly recommended. Steeping the grain, and rolling it in air slaked lime or plaster, as promoting a rapid and vigorous growth, would also be beneficial.—*Agricultural Division of the Patent office.*

The Spider.—Why hate and shudder at spiders? Because they entangle flies and kill them? That should entitle them to our gratitude, for flies, being troublesome and injurious to man, any other insect that destroys them ought to be considered our ally, and taken into friendship. Are they not beautiful? The other day we observed one in the field. He was larger than a double-eagle and as bright and yellow, having colours more striking, indeed, because harmoniously variegated.

Now, as he had been at immense expense in building his capacious house, like the Crystal Palace proprietors of New York, and out of his own bowels too, which they did not—for speculators and brokers are not supposed to have any, purses being a complete substitute—having been at so much cost, he did not like to go away and leave his domicil behind him. For his stock of materials for such structures is limited, as well as the funds of the operators in the Faneils. Nature, it is said, only supplies the spider family with a certain quantity at first, which, if they are extravagant in spending, they will have afterwards to make up by *knitting,* Schuylerizing or stealing—the difference between which methods, we can not tarry to record, and might not be able to do so, was ever so much time allowed us. In short, our spider resolved, as the palace proprietors, who may have taken the hint from him, are said to have determined on—he resolved to take his splendid dwelling down.

So one morning he began in earnest to pull down, and, as far as we could judge, at the point where he had ended in putting it up; that is, the last timbers he had placed in the building were the first to be removed. Patiently and carefully he worked, taking off filament by filament of those long beams and braces, which seemed single to the naked eye, but yet were doubled and trebled and quadrupled to afford sufficient strength for so large a work. For this creature, it must be observed, has discovered no iron or other new material to weave into his productions, but is obliged to labour with just the same raw material as when he spun his web upon the grape vines of Eve. So if he wants augmented strength in any portion of his work, he can only attain it by putting several timbers together.

By degrees, we could see, as he wrought, the main pillars and string-pieces lessening in size, and at length disappearing one by one, till finally, the whole habitation was invisible. What had be[come] of it? We kept a sharp look-out at this junc[ture] for it was evidently the crisis of the enterprise. [At] last we saw the spider hoist a pack upon his [back] in the shape of a ball, and commence his jour[ney] It was his house, which he was thus transpo[sing] to erect in a more favourable locality. Li[ke a] snail, he was thus carrying it upon his back, tho[ugh] unlike that animal, he had the rough stock of [lum]ber in his belly, should this tenement of hi[s be] dissolved by the hurricane, flood, or fire. [So] beautiful, industrious, and provident creature [was] along as nimble as Æneas, with his father, An[chi]ses, on his shoulders, though under the burde[n of] all his worldly goods. He made for a large [tree] where, notwithstanding all our vigilance, he [soon] appeared. We sent after him a sincere w[ish] that he might obtain an eligible lot *up-to-*[*date*] whither he was going, on easy terms.—*New [York] Advertiser.*

A Good Conscience.—That conscience alone [is a] good which is much busied in self-examinati[on,] which speaks much with itself, and much [with] God. This is both the sign that it is good, [and] the means to make it better. That soul [is] doubtless be very wary in its walk, which t[akes] daily account of itself, and renders up that [ac]count unto God. It will not live by guess, [but] naturally examine each step beforehand, beca[use] it is resolved to examine all after; will cons[ider] well what it should do, because it means to [do] over again what it hath done.

On Fretting.

"Fret not thyself," says the Psalmist. [Such] kind have a great proneness to fret themsel[ves.] Their business does not prosper according to t[heir] expectations; customers do not pay promptl[y;] competition is sharp; those in whom they l[ook] confided prove treacherous; malice and envy l[aunch] their envenomed shafts; domestic affairs go con[tra]rwise; the wicked seem to prosper, while [the] righteous are abased. In every lot there is an [ex]material to make a goad of, which may pierce [and] rankle in our souls, if we are only so disposed.

Fretting is of the nature of certain diseases, [as]suming various types. Disease is sometimes ac[ute] —coming on suddenly in the midst of health, [and] with but little premonition, raging violently thro[ugh] the system, causing fever and racking pains; s[oon] reaching its crisis and rapidly running its cou[rse] either to kill or to be cured. So with frett[ing.] At times it overtakes the constitutionally and [hab]itually patient and gentle. Strong provocat[ion] assails them unawares, throws them off their gua[rd,] upsets their equanimity, and causes an overflow [of] of spleen that they did not know was in them [at] that degree. Even the gentle may thus have [oc]casion for taking heed to the injunction, "Fr[et] not."

Diseases, however, often assume a chronic ty[pe,] becoming embedded in the system, deranging [the] organs, interfering with the performance of [the] natural and healthful functions, and lingering y[ears] after year, like a vampire, to extract the vital jui[ces.] In like manner, fretting becomes chronic. Pe[evi]ishness, irritability, censoriousness, complaini[ng] indulged in, assume a habit; gaining ther[eby] strength and power, until the prevailing tempe[r is] fretfulness. It argues a sadly diseased conditi[on] of the soul, when this distemper becomes one [of] its fixtures. To such an one every thing g[oes] wrong. The whole mechanism of society is thro[wn] out of gear; instead of moving smoothly, as wh[en] lubricated by the oil of kindness and charity, [the] cogs clash, and its pivots all grate harshly.

For "The Friend."

Providential and Maternal Care.

The protecting power of the great Creator is ...en manifest towards those who are cast out on ...e world, without any one to guard them from ...nptation, and lead them in the paths of righte...sness. However destitute such may feel, they ...ould not despair of his divine regard and no...ce, and abandon themselves to evil habits and ...il company, as though the salvation of their ...uls was of little moment, and none cared for ...em. Eminently good men and women have ...rung from what the world esteems a low origin, ...d by the power of Divine grace, have been made ...strumental in turning many sinners from the ...il of their way.

Benjamin Bangs was born in the county of ...orfolk, in the year 1652, of reputable parents. ...he death of his father occurred in his infancy. ...hen of suitable age, he was placed from home to ...arn a trade, in which he was subjected to serious ...fficulties and dangers. His mother was a sor...wful widow, with nine children at home, and a ...nsiderable farm to manage, which the unsettled ...ate of the government rendered it perplexing to ...t along with. She was the daughter of a clergy...an, of good repute among his parishioners, of ...hom, when Benjamin Bangs visited the place of ...s residence many years after, the ancient inha...tants said to him, he was a very pious man, and ...ver extorted anything from his hearers, but ...cepted what they would freely give him. His ...other was a religious woman, well educated, and ...culcated the principles of her profession in her ...ildren, as well as teaching them to read and ...rite.

About his twelfth year he was much given to ...yish sports, diverting himself in running, ...restling, and foot-ball playing, which was much ...ractised in that part of the country, and his com...any was sought by those who were fond of such ...stime. His good mother, who felt a godly care ...r her children, would often impart counsel that ...ew their minds to a more serious way of life, ...hich tended to preserve them from profanity, ...nd the evil courses that many fell into, to the ...reat dishonour of God, and true religion. "Be...ng one day," he says, "by myself, not far from ...ur habitation, I met with such a visitation, as I ...ad been altogether ignorant of before, in which a ...weet calmness came over my mind, and it arose ...n my heart, that if I could but keep to this, what ...ight I grow up to in time. It affected me much, ...nd resting with me some time, I acquainted my ...nother therewith. She greatly rejoiced, and en...ouraged me to retire to it, and then I had a full ...ntention so to do. When my companions got ...bout me, pressing me to do as I used to do, ...lthough I had some inclination to answer their ...esire, I found something in me that laid a re...traint upon me, and prevented me from comply...ng with their solicitations. But through con...nued importunities, and a natural inclination to ...spirit of liberty, I came by degrees to lose much ...f the sense of that visitation, which now and ...hen, upon serious reflection, caused me greatly ...o mourn for the loss I had sustained. Through ...ften gratifying my youthful desires, and going ...rom the instruction of my inward guide, I found ...gradual decay as to religion to attend, even un...l at length I came to be left to myself." How ...ften have young persons, through disobedience, ...st sight of the pearl of great price, and being ...eprived of all sense of heavenly good, they have ...een left to temptation, and found themselves ...tterly unable to recover those sensations of peace ...nd delight which the Truth gives.

Between twelve and thirteen years old, he inclined to learn some trade, and his mother's means not permitting her to furnish him with a capital when he should be of age, it was concluded to place him with a shoemaker, which would require but a small stock to begin with, should he live to need it, and he was accordingly apprenticed to one in the neighbourhood, for five years. It turned out that they were mistaken in his master's circumstances, for in less than a year, he informed Benjamin Bangs that he was unable to pay his debts, and fearing imprisonment, he thought he had no other way to escape but to leave the place; and desiring him to keep secret his situation, told him if he would go with him, he would take as much care of him as of himself; and if he inclined to go, he advised him to take leave of his mother, but not to disclose the master's situation to her. This proved a severe trial to him; but considering that the fee given at his apprenticeship would be lost, he concluded it was better to embrace the offer; and the man having a brother, they concluded to go together. Taking leave of his mother under such a prospect, and not being more than fourteen years old, the parting was with great reluctance, and she said to him, doubtless yearning over her son, "Child, it will not be long before I shall see thee again," and with a heart very full, he returned to his master.

About twelve o'clock the next night, they set out, and got within a mile of Edmundsbury in Suffolk, the night following. Next day they went into the town, and having little money, they sat down there to work. Here they staid but a short time, before they left for London, which they reached in three days. The city lay as a heap of rubbish, it being soon after the great fire in the year 1666. Labourers being wanted there, they flocked in from all parts of the country, and his master and brother joined in the work, but he was able to do but little, and to live in idleness he could not be satisfied. They lived together under the character of brothers. His master fearing he should discover him, though he had no disposition to do it, it appeared to Benjamin Bangs necessary they should separate, and proposing if they could find a good workman of his own trade that he should work with him, it was not long before one was found, and he staid with him three years, and in the time became pretty well acquainted with shoemaking. After leaving this person, he took up with a company of the best workmen, which caused him to spend what he got among them, though he earned considerable.

While he lived in Stepney parish, not far from Ratcliff meeting-house belonging to Friends, a hot persecution began against dissenters. Sir John Robinson, lieutenant of the tower, who was maliciously bent against Friends, sent one day a company of his soldiers, with orders to break into the meeting-house, take out what seats they found, and burn them. Soon after this, he and another justice concluded to break up their meeting on a First-day. On this occasion the militia was raised, and some companies of foot also came from the tower, and many wardsmen were ordered to appear armed with halberts, amongst whom Benjamin was one, not from inclination but by order of his master, although he says, "I had a secret desire to see what would be done." Besides those forces, there came a multitude of spectators. Some came in good will, to see if they could in any way be serviceable to the sufferers, and others were evilly inclined to get what they could from them. The armed men had orders to let all the Quakers come into the meeting-house that would, but to suffer none to go out until the justices came. They treated Friends with very rough language, calling them rogues and rebels, for meeting there contrary to law, and began to take their names. Then they were suffered to go out; but not pulling off their hats to the justices, the rude people plucked them off, and threw them over the wall. Those who were friends to them, secured what they could, and returned them to the owners; others who wanted prey, took a good hat, and left a worthless one in its place.

Sir John, taking a particular dislike to three of the Friends, who had probably spoken to him by way of rebuke, ordered a mittimus to be made to send them to prison. The warrants and prisoners being committed to the care of the constable to convey thither, he ran about to find wardsmen to assist him, when all had gone, but Benjamin Bangs and one more. In their way, the prisoners with the constable's leave, stopped in Whitechapel to get some refreshment, and take a copy of the mittimus. While there, one of the Friends went to B. Bangs, and said, "Thou hast an innocent countenance, and dost not look like a persecutor." "No," he replied, "it is much contrary to my inclination." They answered, "We believe thee, and freely forgive thee." This had an effect upon him, and produced tenderness in his heart towards them. It was late before they delivered their prisoners to the keeper, and as they returned through Ratcliff highway, the watchmen seized them, and threatened to put them in the round-house, for being out at that time of the night, but let them pass, on being told the cause. A few days after this, soldiers were sent from the tower to pull down the meeting-house, of which they made a ruin.

Respecting himself, B. Bangs says, "Although I was now in a loose way of living, yet I had some secret touches of that which was good, which raised a desire in me to go to some religious meetings, but cannot say that I got much benefit thereby, for liberty was still most grateful to me. But *the good example I had in my childhood, did all along rest with me*, by which I was preserved from the profane way of life, that was too much practised in those times as well as now." The blessing of a godly mother, who not only set before him a proper example, but pleaded with and counselled him to shun evil, and walk in the way of righteousness, was signally manifest, brought into remembrance as it was by the Holy Spirit, when Satan and evil advisers were striving to entice him into the broad way of destruction. The responsibility of older persons is great. Their character, their principles, and their actions may lead young people, either into the way of holiness, or down to the chambers of spiritual death. It is also important for young people to remember, that their accountability is great. Christ died for them, and has furnished them with a measure of his Holy Spirit, which shows them what it is wrong for them to do, and offers them strength to forsake every evil thing, and to enable them to work righteousness in his fear. He is merciful and kind, and all-powerful to save them under whatever circumstances they may be placed in this life if they obey Him; but where they are blessed with religious parents, their obligations to their Almighty Creator are increased. Where much has been given, much will be required.

(To be continued.)

Slag and Scorrie.—The production of iron by the smelting furnaces of Great Britain has reached 3,000,000 tons annually; and by a moderate calculation, it may be assumed, that for every ton of iron two tons of slag are formed, making an aggregate of at least 6,000,000 tons of this hitherto useless material; at the present time it costs the smelters no less than £150,000 to cart it away. ...ery-

Celebrated English Oaks.—An English publication gives the following account of the most celebrated oaks in England:—The oldest oak in England is supposed to be the Parliament Oak (from the tradition of Edward I. holding a parliament under its branches) in Climpstone Park, belonging to the Duke of Portland, the park being also the most ancient on the island; it was a park before the Conquest, and was seized as such by the conqueror. The tree is supposed to be 1500 years old. The tallest oak in England was believed to be the property of the same nobleman; it was called the "Duke's walking stick," was higher than Westminster Abbey, and stood till of late years. The largest oak in England is called Calthrop Oak, Yorkshire; it measures 78 feet in circumference where the trunk meets the ground. The Three Shire Oak, at Worksop, is so called from its covering part of the counties of York, Nottingham, and Derby. It had the greatest expanse of any recorded in this island, droping over 767 square yards. The most productive oak was that of Gelonos, in Monmouthshire, felled in 1810. Its bark brought $1000, and its timber $8350. In the mansion of Tredegar Park, Monmouthshire, there is said to be a room 42 feet broad and 227 feet long, the floor and wainscots of which were the production of a single oak tree grown on the estate.

Mines and Miners.—The following enumeration shows the number of men employed in British mines and their annual average produce:

Coal miners,	216,366	52,000,000	tons of ore.
Iron miners,	27,098	2,260,000	"
Lead miners,	21,617	65,000	"
Copper miners,	18,468	11,000	"
Tin miners,	12,912	9,000	"

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 388.)

REMEMBRANCE LIPPINCOTT.

Remembrance Lippincott, the son of Richard and Abigail Lippincott, was born at Dorchester, New England, on the 15th of the Ninth month, 1650. His parents being convinced, soon after his birth, of the truth of the principles held by the people called Quakers, he was brought under the restraints which the faithful members of that society endeavour to exercise on their children. When George Keith endeavoured to lead astray the society, of which he had long been an advocate, his sophistries were plied with the most success in East Jersey, where John Barclay, brother of his old Friend, Robert, lent his influence to sustain him. It seemed for a time as if the meetings of Friends there would be broken up. Amid the general shaking, the children of old Richard Lippincott stood firm for the truth. The testimony of the Yearly Meeting against George Keith, was signed by four sons of that sufferer for the Truth, all indeed who were then living,—Remembrance, John, Restore and Freedom. Jacob had died in 1689.

It appears that Remembrance received a gift in the ministry in the exercise of which he was useful. His Friends sum up his life in a few words, "Remembrance Lippincott departed this life the 11th day of the Twelfth month, 1722. He was clerk of our Monthly and Quarterly Meetings [illegible]ny years; a diligent attender of our meeting [illegible]ship; his labour was acceptable to [illegible]."

JOSEPH PARKER.

Joseph Parker was born in Shrewsbury, the 28th of the Sixth month, 1673. He was a worthy elder, his life and conversation being exemplary. He duly attended our religious meetings for worship and discipline. He was zealous for the good order of the church, and careful to promote the discipline thereof. He departed this life the Third month, 1723.

JOHN BLUNSTONE.

This Friend with many others from Derbyshire, in England, came to Pennsylvania, in 1682, and settled west of the river Schuylkill, at a place they named after their native county and county town, Derby, but which soon became known as Darby. The certificate of membership he brought with him, was issued by a Monthly Meeting, held at Breach-house, on the 13th day of the Fifth month, 1682. Towards the close of the year he arrived, he was chosen one of the council of the New Province, indicating that he possessed the confidence and respect of his fellow citizens. This office he at different times held, but he evidently was dissatisfied that so much of his time was absorbed in public business, and he at last was released from it at his own request. He did for a time submit to be one of the justices for the county of Chester.

He was one of those who bore testimony against George Keith, signing the testimony of the Meeting of Ministers against him. He had received a gift in the ministry, and often laboured with life and power for the everlasting good of his fellow-creatures. He was also much employed in society matters, in Yearly Meeting appointments and otherwise. As he was often employed in committees to prepare epistles, and to examine books, it is to be supposed that he had received a competent education, especially as he wrote a pretty fair hand. Every thing indicates that he possessed the unity and confidence of his Friends.

I have found no trace of his services as a gospel minister, except the attendance of some meetings in Philadelphia. He probably travelled but little with certificates or minutes. His Friends say, "he had a lively gift in the ministry, [was] exemplary in his family and in the church; zealous for good order; a kind and hospitable man, both to Friends and others." He was one of the honest-hearted opposers of negro slavery, and did his utmost to prepare Friends for an extension of their testimony against that iniquitous practice. Yet he lived in love with his brethren, who had not seen so far as he had. He died the 22d of the Sixth month, 1723, being advanced in years.

JOHN SOMERS.

This Friend was born in the city of Worcester, in England, about the year 1640. He was convinced of the Truth in England, and was one of the early settlers in Pennsylvania, where we find him, in 1688, a resident of Philadelphia county, and belonging to what was then called Dublin Meeting.* He probably married, whilst residing there, Hannah ——, a Friend, born in his native town. She was much his junior; but being a religious woman, she proved a valuable companion to him through the remainder of his life. Of her we shall have something further to say.

In a few years after 1700, John Somers removed with his family to Great Egg Harbour. His Friends of that meeting say of him, "He was very serviceable in several respects amongst his neighbours; of an orderly life and conversation agreeable to the profession he made." After a time a gift in the ministry was conferred on hi[illegible] to which his memorialists state they "believe [illegible] was faithful. He lived in unity with his Frien[illegible] and died in the year 1723, being upwards of [illegible] years of age, and was buried at a burying-grou[illegible] at Somerset Plantation."

* In 1692, John Somers signed the testimony of Philadelphia Quarterly Meeting against George Keith.

ZACHARY JESS.

This valuable minister of the gospel resided [illegible] Springfield, Burlington Co., New Jersey. Of t[illegible] time of his birth, convincement and entrance in[illegible] the ministry, we have no information. At the ti[illegible] of the General Meeting of Ministers, in the S[illegible] venth month, 1713, he received a certificate [illegible] unity in visiting Friends on Long Island, in co[illegible] pany with Edward Andrews. This visit was pa[illegible] and by a returning certificate from a Quarter[illegible] Meeting on that island, his labour there was [illegible] their satisfaction. They testify that they "h[illegible] unity with his service for Truth, both in conve[illegible] sation and doctrine."

In the Seventh month, 1721, he had a cer[illegible] ficate from the same meeting to pay a gene[illegible] visit throughout New England. On returning t[illegible] certificate in the next year, he gave an account [illegible] his travels and labours of love on this journe[illegible] which was to the satisfaction of his Friends, a[illegible] is noticed as being "well received."

The testimony issued by his Quarterly Meeti[illegible] concerning him many years after his death, ru[illegible] thus,—"He travelled in the service of Tru[illegible] through the Eastern Provinces, to good satisfa[illegible] tion, and was respected at home; and died [illegible] unity with Friends, in the Sixth month, 1724."

THOMAS RIDGWAY.

This Friend was a member of Little Egg Ha[illegible] bour Monthly Meeting at the time of his deat[illegible] which took place on the 20th of Sixth mont[illegible] 1724. He stood in the station of elder, and w[illegible] an honest, upright supporter of the Truth. H[illegible] Friends say of him, His "conversation was a[illegible] swerable to our profession; [he] was zealous f[illegible] putting the discipline in practice. [He] departe[illegible] this life in unity with Friends."

SAMUEL BUNTING.

Samuel Bunting was one of the early settlers [illegible] West Jersey, being there about 1678. He w[illegible] at that time ranked among the useful and valu[illegible] ble Friends. A gift in the ministry was commi[illegible] ted to him, which he exercised to the comfort an[illegible] edification of the church. He was very diligen[illegible] in the attendance of religious meetings, and w[illegible] frequently employed by the General Meeting [illegible] Ministers on important appointments, which m[illegible] nifested their unity with him, and confidence i[illegible] his judgment.

His residence was at Chesterfield, and excep[illegible] at the time of his attendance at this Quarterly an[illegible] Yearly Meetings, we find little mention of his b[illegible] ing from home. In 1722 he was with John Oxle[illegible] at Shrewsbury Yearly Meeting. His Friends hav[illegible] given forth this short memorial concerning him.

"Samuel Bunting departed this life the 20t[illegible] of Second month, 1725, in an advanced age. H[illegible] was one of the first settlers in Chesterfield, befor[illegible] any meeting-house was built. [He] had a publi[illegible] testimony, and was very serviceable to that mee[illegible] ing in the discipline of the church. At [that] place his service lay chiefly, he not having travel[illegible] led much abroad. He was a liberal entertainer [illegible] travelling Friends, but a discourager of forwar[illegible] spirits."

There was a Rachel Bunting in 1702, a minis[illegible] ter among Friends, who was probably the wife o[illegible] Samuel. Of the time of her death, I have foun[illegible] no record.

(To be continued.)

Selected for "The Friend."

He who in wisdom planned this beauteous earth,
Who called from chaos all creation forth,
Through the void waste, who bade vast system's run
Kindling in varying brightness one by one,
Yet taketh note with his All-seeing eye,
Of every human soul beneath the sky,
And taketh thought in his All-knowing mind
Of all the joys and cares which each may find.
'Twas love for each that brought his Son below,
To have our temptings, and to bear our woe,
His life was mercy wheresoe'er he went,
His death was *pardon* to the penitent.
And now in glory by the throne above
He stands our advocate supreme in love;
And in our hearts descending by his grace,
He seeks to fit us for a heavenly place.
His spirit points us duties to fulfil,
And as we seek his aid, to work his will,
We shall on earth oft taste his perfect peace,
And rest at last where joys shall never cease.

Selected.

THE WATERS OF MARAH.

"And Moses cried unto the Lord, and the Lord showed him a tree, which, when he had cast into the waters, the waters were made sweet."

By Marah's stream of bitterness
When Moses stood and cried,
Jehovah heard his fervent prayer,
And instant help supplied:
The prophet sought the precious tree
With prompt, obedient feet;
'Twas cast into the fount, and made
The bitter waters sweet.

Whene'er affliction o'er thee sheds
Its influence maligu,
Then, sufferer, be the prophet's prayer
And prompt obedience, thine:
'Tis but a Marah's fount, ordain'd
Thy faith in God to prove,
And prayer and resignation shall
Its bitterness remove.

Selected.

"ABIDE WITH US."

Tarry with me, O my Saviour!
For the day is passing by;
See! the shades of evening gather,
And the night is drawing nigh;
Tarry with me! tarry with me!
Pass me not unheeded by.

Many friends were gathered round me,
In the bright days of the past;
But the grave has closed above them,
And I linger here the last;
I am lonely; tarry with me,
Till the dreary night is past.

Dimmed for me is earthly beauty,
And the spirit's eye would fain
Rest upon Thy lovely features:
Shall I seek, dear Lord, in vain?
Tarry with me, O my Saviour!
Let me see thy smile again.

Dull my ear to earth-born music,
Speak Thou, Lord, in words of cheer:
Feeble, tottering my footstep,
Sinks my heart with sudden fear;
Cast Thine arms, dear Lord! around me,
Let me feel Thy presence near.

Faithful memory paints before me
Every deed and thought of sin;
Open thou the blood filled fountain,
Cleanse my guilty soul within:
Tarry, thou forgiving Saviour,
Wash me wholly from my sin.

Deeper, deeper grow the shadows,
Paler now the glowing west;
Swift the night of death advances—
Shall it be the night of rest?
Tarry with me, O my Saviour!
Lay my head upon Thy breast.

Feeble, trembling, fainting, dying,
Lord, I cast myself on Thee;
Tarry with me through the darkness,
While I sleep; still watch by me
Till the morning, then awake me,
Dearest Lord, to dwell with Thee!

Knickerbocker.

From the Edinburgh Review.

On the Fibrous Plants of India.

Though the fibres imported from India include neither any real hemp nor any true flax, yet they include materials which may be usefully substituted for both, while for many of the purposes to which hemp and flax are severally applied they are superior to either. It will be sufficient for our present purpose if we briefly describe the most important of the fibres we already receive from India, and of the other fibrous materials which India *might* send us, and state the circumstances which render a large importation of all of them either possible or desirable.

But first it may interest the reader to be informed why hemp fibre should be comparatively little grown, and should not be at all imported from India, although the true hemp plant is described as a native of that country. There appear to be two reasons for this apparent anomaly. The first is, that the low country of India is so rich in other fibres which are either more rapid in their growth, more easily prepared, more beautiful to the eye, or more durable, that the natives for home use prefer them to hemp. The second is, that hemp is cultivated largely and widely for the sake of the *churrus* and *bhang* which it yields. The churrus is the well-known resin of hemp, or the inspissated juice of the leaves obtained from the plant by rubbing between the hands, and bhang is the name usually given to the dried leaves and twigs. Both of these are extensively used as soothing and exhilarating narcotics. The former is swallowed in the form of pills or boluses, the latter is smoked either alone or mixed with a certain proportion of tobacco. It will give an idea of the extent to which the hemp plant is cultivated for this luxurious purpose if we add from another authority that the use of it, as a narcotic, prevails in Asia and Africa among not less than two or three hundred millions of men!

But what becomes of the fibre, it will naturally be asked? The resin and the leaves and twigs being removed, why should the hemp fibre not be made use of also? The reason of this is, that the mode of culture best suited for the production of bhang, and usually followed in Lower India, is not adapted to the growth of a valuable fibre. All plants when grown thickly together, shoot up in height, branch little, and if the soil be rich and moist, are of a looser and more spongy texture. If fibrous plants be so raised, they yield finer, softer, stronger, and more flexible threads. Hence, both hemp and flax when cultivated for their fibres are sown more or less thickly, and are pulled up about the season of flowering, and usually before the seeds are permitted to ripen. But in India, when cultivated as a narcotic, the seed of the hemp plant is not sown thick as it ought to be when intended for cordage. The natives first sow it thin, and afterwards transplant the young plants, placing them at distances of nine or ten feet from each other.

"The effect of this is to expose them more freely to the light, heat, and air, by the agency of which the plant is enabled to perfect its secretions in a more complete manner, and the bhang will consequently be of a more intoxicating nature. The fibrous and woody parts at the same time attain a greater degree of stiffness and solidity, as is found to be the case with timber trees similarly exposed. The hemp plant, thus grown, will branch much. It may be small in dry situations, and large in rich and moist ones, but in either case its fibres are found, both in Europe and India, to be rougher, stiffer, and more difficult to separate from the woody part than is desirable, but seed is produced in larger quantity and of better quality."

The consequence of this is, that other plants are cultivated specially for their fibres, while the seeds, leaves, twigs, and resin being removed, the hemp-stalk and fibre are burned. But if the mode of growth be the main reason why the hemp fibre is usually neglected in Lower India, a change in the system of culture seems the only thing necessary to produce an article which will work more kindly and be fitted for the European market. This is the opinion of Dr. Royle, and of other persons, both naturalists and civil servants of the company, who have resided long in the East. Sown thick, they believe the hemp plant will yield a long and flexible fibre more valuable for cordage than the fibres usually cultivated in India, and that a demand for the article from this country would encourage and promote this mode of culture.

Past experience seems to render it doubtful whether hemp thus grown in Lower India would equal in strength the Russian, Polish, and Italian hemps, which bring the highest price in the European markets. But towards the foot, and on the lower slopes of the Himalayas, where the climate is colder, there is reason to believe that hemp of the strongest and most valuable kind might be extensively cultivated.

"In the Himalayas the hemp grows wild, and is, moreover, carefully cultivated, both on account of its exhilarating secretions and its strong and flexible fibre. With the properties of this the Hillmen are well acquainted, as they make with it both twine and rope, and a coarse cloth (*bhangela*), with which they clothe themselves, as well as make sacks and bags. Their hempen wrappers they wear much as a Highlander does his plaid, fixing it in front with a wooden skewer, instead of a brooch. A traveller in the Himalayas, some years since, described the natives as applying hemp 'extensively to purposes of a domestic nature, such as hanging their supernumerary female children, administering ropes'-end to their wives, penning up cattle, and making a sort of netted, or knitted, or knotted shoes, to which a sole of untanned leather is sometimes, but by no means generally, affixed.'"

They prepare from it, also, a coarse kind of cloth, which they send into the plains for making very durable grain sacks, and they twine it into very strong ropes, which they employ for crossing their rivers. Grown among the hills, at a height of three to seven thousand feet, it is described as remarkable for strength, and for the divisibility, fineness, and softness of its fibres. It is not impossible, therefore, that Himalayan hemp may by-and-by occupy an important place in our European markets, and it is to be hoped that besides encouraging the growth of the plant in these localities as an important article of export, our Indian Government may be able also, by means of railroads and otherwise, to provide those easy and economical means of transit without which it cannot be conveyed with a profit to the British islands.

To flax-fibre as an Indian product the same remarks apply as to the growth of hemp. That the flax-plant is extensively cultivated in India is shown by the fact that linseed forms an important article of Indian export. We import at present annually about 600,000 cwts. of this seed, two-thirds of which come from Russia, while our Indian possessions export annually about an equal quantity, one-half of which goes to North America. If to this large export of seed we add the vast quantity which is used in India itself for the manufacture of linseed oil and oil-cake for the feeding of cattle, we shall form an idea of the comparative extent to which the flax-plant is cultivated in India for its seed. Yet, almost every-

where the stalks and husks are burned as a useless refuse. In a few places only—and those, as with the hemp-plant, towards the north, where the cotton and other common fibres cease to be produced,—is the fibre of the flax-plant separated and used for the manufacture of twines and coarser cloths.

(To be continued.)

Railways in Russia.—The carriage allotted for my special use was about ten feet square; it was furnished with two sofas and chairs, a small card table, and two side tables. On the sofas I could have reclined at full length—a convenience very desirable, and generally denied us on English railways—both sofas and chairs had air cushions, and were very comfortable. I looked into several first and second class carriages, and they all appeared nicely fitted up, although not like the one assigned to me; the second class carriages had cushions superior to those of the first class on English railways, and afforded plenty of room to each individual, allowing of his sitting without cramping his knees upon those of the person opposite to him. We left Moscow at eleven o'clock precisely—M. Sherman, my servant, and myself, occupying this little room to ourselves; our baggage was stowed away in another carriage. I was pleased to perceive that there was no unnecessary hurry in the railway movements such as those which annoy the English traveller; plenty of time was allowed at every station to the passengers to take their meals, and in each there was all that could be required in the way of refreshments. The time allowed for the train to pass from one station to another is carefully fixed for the driver, who dare not arrive a minute sooner or later; so that, in some cases, we had to go very slowly, in order not to arrive before the time. This, however, is not unpleasant, as people on the continent do not give way to that nervous hurry which fidgets us and shortens our lives. Who in England has time to look around him? Rich and poor seem to be urged along by an impetus which prevents their thinking of anything except their next appointment, and as soon as that is kept, their thoughts fly to the next.—*English Prisoners in Russia.*

Barclay's Brief Contrast.

"Your religion (sayest thou) will be welcome to the worst and wickedest of men; for you will please them exceedingly, in crying down of ordinances, the observation of the sabbath, and private and family prayers, &c. Answ. We cry down no ordinance of God, but your hypocritical ways; and we know no worse men, than those hypocrites, whom we are so far from pleasing, in crying down their hypocritical prayers and performances, that they fret and gnash at us with their teeth: and if they could get their will, would tear us in pieces, for witnessing against those things. And they are very blind who see not, that the denying of those things in shadow and bare formality, and establishing them in the power and substance, can no ways be acceptable to the wicked, but most unpleasing to hypocrites, who can perform the one, but not the other. But now let us examine, whether your principles, or ours, be most acceptable to the wicked and hypocrites. 1. Wicked men and hypocrites love well to hear that they can never be free from their sins in this life, and that they must always sin. 2. They love well to hear, to be justified by Christ without them, and his righteousness without, but not by him and his righteousness within them. 3. They love well to hear, that the words without them are the only rule, which they can wrest according to their own corrupt inclinations; but they love not to hear, that the word and light of God within, is to be their rule, which they cannot wrest nor bend. 4. They love well to hear, that they may use the fashions and customs of this world, bow and cringe, and give and receive the honour of this world. 5. They love to hear they may use sports, and games, and plays. 6. To wear laces, and ribbons, and gold rings, and other superfluity. 7. They love well to hear, that men must not expect to hear God immediately, being such as those who said, let not God speak unto us. 8. They love well to hear, that water-baptism and giving of bread and wine, are the ordinances of God, and the true baptism and supper; for then they think they are Christians, if they partake of these outward things; and they are mad against us, who call them shadows. And as for their observation of that called the Sabbath, we find none more plead for it, than profane light men and women; for they can easily dispense to hear a man talk for an hour or two, and then have all the rest of the day to spend in idleness, vain communication, and frequenting the ale-house, and decking themselves with vain apparel. 10. They love to hear, that they may be members of the church, though they have no infallible evidence of holiness. 11. They love to hear of your doctrine of election and reprobation. 12. And of your doctrine, once in grace, and ever in grace, whereby they feed themselves in presumption and carelessness. Many other particulars could be mentioned, but these may serve enough to show, that your principles are pleasing to the wicked and hypocrites, and ours displeasing."

Sagacity of the Northern Bears.—On one occarion, a bear was seen to swim cautiously to a rough piece of ice, on which two female walruses were lying asleeep with their cubs. The wily animal crept up some hummocks behind the party, and with its fore-feet loosencd a large block of ice; this, with the help of his nose and paws, he rolled and carried until immediately over the heads of the sleepers, when he let it fall on one of the old animals, which was instantly killed. The other walrus, with its cubs, rolled into the water; but the younger one of the stricken female remained by its dam; upon this helpless creature the bear now leaped down, and thus completed the destruction of two animals which it would not have ventured to attack openly. * * * The stratagems practised in taking large seals are not much less to be admired. These creatures are remarkably timid, and for that reason always lie to bask or sleep on the very edge of the pieces of floating ice, so that on the slightest alarm they can by one roll tumble themselves into their favourite element. They are exceedingly restless, constantly moving their head from side to side, and sleeping by very short naps. As with all wild creatures, they turn their attention to the direction of the wind, as if expecting danger from that quarter. The bear, on seeing his intended prey, gets quietly into the water, and swims until he is leeward of him, from whence, by frequent short dives, he silently makes his approaches, and so arranges his distance that at the last dive he comes up to the spot where the seal is lying. If the poor animal attempts to escape by rolling into the water, he falls into the bear's clutches; if, on the contrary, he lies still, his destroyer makes a powerful spring, kills him on the ice, and devours him at his leisure.—*King's Narrative.*

How to Cook Potatoes.—Potatoes at this season are very poor eating, unless rightly cooked, and not one in a hundred knows how to do that. Treated as in the fall and winter, they come upon the table watery, solid, and every way disagreeable. A Vermont woman, who has surprised us by makin old potatoes as good as new, dry, mealy, and fres has disclosed to us the process she puts them throug to effect so desirable a result. The potatoes ar pared and put to soak in cold water from four t six hours; then dropped into water which is alread boiling—an essential point; and a little salt added t the water improves them. Take them from the fir the moment they are done; pour off all the wate and let them stand uncovered in the kettle ove the fire till the water evaporates from the surface and they are ready for the table. The result wi astonish those who try it for the first time, and the will never return to the old method of boiling them with the skins on.—*Springfield Republican.*

For "The Friend."

"The ear trieth words, as the mouth tasteth meat," Job xxxiv. 3. On reading in the presen number of "The Friend," "Wm. Penn's words it a preface to the works of Charles Marshall," also the accompanying remarks:—I can say my spiri did rejoice, and, a little prayer something similar to this was raised:—"Lord, evermore give us this bread."

"This is the bread that cometh down from heaven and giveth life unto the world." "This is my beloved Son, hear ye him." Surely every true born child can say, "it is good for us to be here." Well, as we keep here, I verily believe "our bread will be given us," either immediately or instrumentally, and "our water will be sure."

It is our heavenly Father's good pleasure to give to all his humble, depending children, the kingdom; therefore, may our eye and expectation be on the Lord, and him alone. He "is able to do exceeding abundantly above all that we can ask or think," and make a way where no way can be seen: Ah! me thinks there are those who if faithful in their allegiance to their dear Lord and master, will yet have to praise him as on the banks of deliverance. A new song will be put into their mouths: even "the song of Moses the servant of God, and the song of the Lamb, saying: Great and marvellous are thy works, Lord God Almighty, just and true are all thy ways, thou King of Saints." Rev. xv. 3.

Eighth mo. 18th, 1855.

A Western Prairie in Summer.—I shall never forget the sensations with which I looked abroad for the first time upon one of these wide-extended champaigns. The morning was one of the brightest and most beautiful of midsummer. The prairie was then decked in its richest attire of wild verdure and bright flowers. As I entered upon it, descending from a gently sloping bluff, there was spread out before me one vast, unbroken, level plain; to which my eye could discover no boundary, except in the distance on the north. I was struck with the novelty and grandeur of the scene—the prairie resembling a vast sea of living green, its tall grass waving majestically in the breeze, as the waters of old ocean roll and undulate before the winds. As I rode out upon this prairie, the bluffs behind me and the distant skirting woods on the north gradually faded from view, until they entirely disappeared, and I was, as the dwellers on these plains say, *out of sight of land.*

The New Metal Alumnium is now said to be an unquestioned conquest of science, and may be produced in any quantity for $3 a pound. Further improvements are expected to reduce its cost to fifty cents, when it will naturally replace iron in many household and familiar utensils. This discovery is one of the positive scientific achievements of the day.

A Testimony from Thirsk Monthly meeting in Yorkshire, concerning MABEL BARKER.

"About the year 1741, it pleased the Lord, in he riches of his love, to raise up our well-beloved friend *Mabel Barker* to bear testimony to his blessed Truth; in which service she manifested her love and zeal for the prosperity thereof, by her frequent exercise and labour amongst us. Her concern was great *for the welfare of our immortal souls*, and that *we might demean ourselves so as to give no just occasion for the Truth to be evil spoken of*; advising us *to be very careful in all our deportment among men*; sometimes expressing *the great need there was for her to be careful, upon her own account, lest she should offend in thought, word, or deed*; and that she believed *all had the like need, but was afraid all did not see their need to be so great as it really was*; and so would tenderly advise, to the comfort and consolation of her friends; for the Lord blessed her in her labour, and often eminently attended her in her ministry with his divine power, whereby the hearts of many were reached, and the heritage of God watered by the divine showers, that, through her, as an instrument in the hand of the Lord, fell upon them. Oh! the bedewing seasons and comfortable opportunities, which we have had with this our Friend, the impressions whereof at times still revive upon our spirits, and makes us sensible our loss of her is great; but as we are well satisfied it is her eternal gain, we dare not murmur, but say, as one of old, *The Lord gave, and the Lord hath taken away, blessed be the name of the Lord:* desiring that others may be raised up, and made willing to labour faithfully in the Lord's vineyard, as we believe this our friend hath done; for it was her great concern, that his work might be done to his own praise: and she was willing to lend a helping hand to the weak, that so all might be encouraged therein.

"She laboured much, and was very serviceable to our women Friends, for the promoting of good order amongst them, that the church might be kept clean from the defilements of the world, and that it might be so, she spared no pains or advice, which she thought would tend to the glory of God, or the good of her Friends, being willing to spend and be spent, according to her ability, for his cause, as she sometimes would declare. She travelled not much abroad in the service of Truth, save in our own county and the county of Durham, or meetings adjacent, for her labour was much about home.

"She visited the families of Friends in our own Monthly Meeting, in which service we have cause to believe, she was an instrument of good to those whom she so visited, being one who, we doubt not, was rightly qualified for such a work, and did advise from her own experience.

"She was exemplary in the course and conduct of her life, meek, gentle and courteous to all, a great lover of peace, concord and unity, which she laboured much to promote amongst us, being an example of good to those she was conversant with; a loving wife, an affectionate mother, a good neighbour and kind friend: and as she lived, so she died, a pattern of meekness and innocency, and no doubt is at rest from her labours, and her works follow her. And that it may be so with us and all the Lord's people, is the fervent desire and breathing of our souls to the Lord; that we, like her, may be concerned to work the work of our day, fight the good fight of faith, and hold out to the end, as she has done; that we may be entitled to that immortal crown that will never fade away.

"She departed this life the 14th of the Third month, 1751, aged fifty-four years, a minister upwards of nine years. Her corpse was interred in Friends' burying-ground at *Thirsk* the 16th of said month, being accompanied by a great many Friends and others."

A Puzzled Pig.—One of our western farmers, being very much annoyed last summer by his best sow breaking into the corn-field, search was instituted in vain for a hole in the rail fence. Failing to find any, an attempt was next made to drive out the animal by the same way of her entrance; but of course without success. The owner then resolved to watch her proceedings; and posting himself at night in a fence-corner, he saw her enter at one end of a hollow log, outside the field, and emerge at the other end, within the enclosure. "*Eureka*," cried he, "I have you now, old lady!" Accordingly, he proceeded, after turning her out once more, to so arrange the log (it being very crooked) that both ends opened on the outside of the field. The next day the animal was observed to enter at her accustomed place, and shortly emerge again. "Her astonishment," says our informant, "at finding herself in the same field whence she had started, is too ludicrous to be described! She looked this way and then that, grunted her dissatisfaction, and finally returned to the original starting place; and, after a deliberate survey of matters, to satisfy herself that it was all right, she again entered the log. On emerging once more on the wrong side, she evinced even more surprise than before, and, turning about, retraced the log in an opposite direction. Finding this effort likewise in vain, after looking long and attentively at the position of things, with a short, angry grunt of disappointment, and perhaps fear, she turned short round, and started off on a brisk run; nor could either coaxing or driving ever after induce her to visit that part of the field." She seemed to have a "superstition" concerning the spot.—*Knickerbocker.*

From "The Leisure Hour."

WONDERS OF VISION.

One of the wonders of vision has been well presented to the mind by Dr. Dick. "Let us," he says, "suppose ourselves stationed on Arthur's seat, or on the top of Salisbury Crags, in the vicinity of Edinburgh. Turning our face to the north-west, the city, with its castles, spires, and stately edifices, presents itself to our view. Beyond it, on the north and west, a beautiful country, adorned with villas, plantations, and fertile fields, stretches as far as the eye can reach, till the view is bounded by the castle of Stirling, at the distance of more than thirty miles. On the right hand we behold the port of Leith, the shipping in the roads, the coast of Fife, the isles of Inchkeith and of May, and the Frith of Forth, gradually losing itself in the German Ocean. If we suppose the length of this landscape to be forty miles, and its breadth twenty-five, it will, of course, comprehend an area of a thousand square miles." After adverting to the immense multitude of rays of reflecting light which flow in all directions from the myriads of objects which compose the surrounding scene, Dr. Dick continues: —"Let me now attend to another circumstance, no less admirable than the preceding, and that is the distinct impression which I have of the shape, colours, and motion of the multiplicity of objects I am now contemplating, and the small space within which their images are depicted at the bottom of my eye. Could a painter, after a long series of ingenious efforts, delineate the extensive landscape now before me on a piece of paper not exceeding the size of a silver sixpence, so that every object might be as distinctly seen, in its proper state and colour, as it now appears when I survey the scene around me, he would be incomparably superior to all the masters of his art that ever went before him. This effect, which far transcends the utmost efforts of human genius, is accomplished in a moment, in millions of instances, by the hand of nature, or, in other words, by 'the finger of God.'

"All the objects I am now surveying, comprehending an extent of a thousand square miles, are accurately delineated at the bottom of my eye, on a space less than half an inch in diameter. How delicate then must be the strokes of that Divine pencil which has formed such a picture! I turn my eyes to the castle of Edinburgh, which appears one of the most conspicuous objects in my field of view. Supposing that portion of it which strikes my eye to be 500 feet long, and 90 feet in height, I find, by calculation, that it occupies only the six hundred thousandth part of an inch. I next direct my eye towards the Frith of Forth, and perceive a steamboat sailing between Queensferry and Newhaven. I distinctly trace its motion for the space of forty minutes, at the end of which it reaches the chain-pier at Newhaven, having passed over a space of five miles in length, which is but the eighth part of lineal extent of the landscape in that direction; and consequently occupies in the picture formed on my retina, a lineal space of only one-sixteenth of an inch in extent. And, if the boat be reckoned about 88 feet in length, its image is only the three hundredth part of this extent, and fills a space in the eye of only the four thousand eight-hundredth part of a lineal inch."

Discovery of the body of Balmat, the Swiss Guide.—Jaques Balmat, the celebrated guide of Chamouni, who was lost in the ascent of Mont Blanc, about twenty-one years ago, while acting as guide to some travellers, was found a few days ago, according to the *Gazette de Lausanne*, in the broken up ice which forms the arch (*voute*) of Aveyron. To the astonishment of persons passing that way, the body of a man was discovered, the upper portion being still buried in its frozen tomb. A number of persons were promptly summoned to the spot, and after cautious efforts with pickaxes and other instruments, they succeeded in disengaging the remains of the old and popular guide, Jaques Balmat, in a state of the most perfect preservation. The body was immediately conveyed to Chamouni where it received every mark of honour and respect. Jaques Balmat acquired some celebrity by being one of the guides to M. Saussure, the naturalist, in the year 1786.

The Horizontal Posture in Fainting.—The Medical Times gives an analysis of Richardson's theory, of the manner in which the recumbent or horizontal posture produces recovery from fainting. It is well known that the arterial blood sent from the heart first ascends and the venous blood descends from the upper and ascends from the lower parts. When the blood is withdrawn from the upper part of the erect body, the heart loses its power of sending the blood along the aorta; hence the blood, losing the *vis a tergo*, gravitates in the veins of the lower half of the body. The heart ceases to pulsate and the blood coagulates in the veins, and death would ensue, but the body falls, or is laid down, and then the blood contained in the veins of the lower part of the body is poured into the heart, exciting it to contraction, and thus the circulation is restored.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 4th inst.—*The War.*—A French despatch from Sebastopol says, "Our approaches on the side of the Malakoff advance considerably. We now touch the place. Everything is prepared for a general action in about fifteen days." General Simpson telegraphs, "Cholera has nearly dis-

appeared. The Russians continue to hold their strong position on the Mackenzie, and the strong range of heights overhanging Urkusta and the valley of Baidar. The French have pushed forward the whole of their cavalry into the valley of Baidar." The Times correspondent writes: "Stagnation seems to reign in the camp and trenches; even the heavy firing has died away, yet the approaches advance, and every day sees the allies nearer the crest of the Malakoff, which it will now require all the tenacity of the Russians to hold." In the Baltic no alteration had taken place in the position of the squadrons. The inactivity in that quarter, as well as in the Crimea, appears to be caused by the Russians acting wholly on the defensive, and being so well prepared, at all important points, that their enemies cannot venture an attack with much prospect of success. Where there are no Russian soldiers, the defenceless towns and villages in Finland are plundered and burnt by the allied marine, and according to the Russian statements, the English have in places penetrated to the retreats of the peasantry, and carried off all their property, even to the smallest articles of clothing, acting with less humanity than might have been expected from a band of pirates.

FRANCE.—Great preparations were making in Paris for the reception of Queen Victoria. The shipment of troops to the Crimea continued from the ports of Marseilles and Toulon. The provincial journal speak moderately well of the approaching harvest.

SPAIN.—A government messenger had been despatched to Rome with a document adopted by the cabinet council, the object of which is to justify the conduct of Spain in regard to the sequestration of the church property and other matters in which offence has been given to the Holy See. Continued respect and submission to the Catholic religion is professed in the paper. The official Gazette announces that the Government would receive tenders for the construction of electric telegraph lines all over Spain.

RUSSIA.—The movements of the Russian forces in Asiatic Turkey appear to have perplexed the allies. After having partially invested Kars for a week, the Russian general broke up his encampment, and by a flank march advanced past that town on the road to Erzeroum. Whilst the main body of the Russian army is advancing towards Erzeroum, a strong division blockades the Turkish force in Kars, with the view of cutting off reinforcements and supplies.

SWITZERLAND.—An earthquake has destroyed the village of Viege.

ITALY.—An outbreak was apprehended throughout the Peninsula. The rumour was current, that France had notified its readiness to suppress insurrectionary movements.

ENGLAND.—The Queen had sent a message to Parliament asking for additional provisions for the prosecution of the war, which resulted in the Chancellor of the Exchequer proposing the issue of seven millions of Exchequer Bills. Lord Palmerston, in reply to a question in Parliament touching the British enlistments in the United States, states that in order to prevent all possibility of a difficulty with the American Government, the British Government had stopped enlisting men at Halifax.

Liverpool Cotton Market.—Sales of the week, 35,000 bales at slightly declining prices. *Breadstuffs*, nearly unchanged, and market very heavy. The accounts from the crops were favourable, though some rain had fallen. *London Money Market.*—The bullion in the Bank of England has decreased £250,000. Consols, 91¾.

PORTUGAL.—The corn crop of Portugal is abundant. The cholera is prevailing in Oporto.

CUBA.—Advices from Havana to the 8th inst. All the Creoles in Cuba, who have become citizens of the United States, have been ordered to leave the island forthwith. The yellow fever was raging among the troops at Porto Rico, and fifteen hundred had died.

MEXICO.—Letters of late date from the city of Mexico contain a sorrowful account of the condition of affairs at the capital. The police are said to have discovered a great conspiracy, and were making arrests of suspected persons. Zapatlan el Grande is reported to have fallen into the hands of the insurgents, and the garrison of 400 men deserted and joined Alvarez. It was rumored that Guanjuato had been taken by the rebels; also, that the conducta which left the city of Mexico on the 18th ult., with $1,500,000, had been captured by the insurgents. Forty of the troops escorting it, were killed, and 300 others joined the rebels.

CHILI.—Valparaiso dates to Sixth mo. 30th. The Chilian Congress was in session. Among the bills before it, were the following:—To establish a Bank of Deposits and Discounts at Valparaiso; to form a Loan Office, to facilitate the raising of money on lands in order to their improvement; to reform judicial proceedings and military pensions. About one million dollars private subscriptions had been made for the construction of a railroad from Santiago to Talca. Government was expected to subscribe as much more. Its whole cost was estimated at three millions.

UNITED STATES.—*Texas.*—The corn crop of the State is said to be secure and unusually large. Cotton was opening finely, and sugar promised well. Large numbers of slaves continued to escape into Mexico. Cholera was raging in Austin county.

Kansas.—Wilson Shannon accepted the appointment of Governor of Kansas.

Utah.—Abundant supplies of excellent coal have been discovered in the mountain range between Sanpeta and Jueb counties. Mining was to commence immediately so as to have fuel for the coming winter.

The Yellow Fever in the South.—The deaths in New Orleans for the week ending the 13th inst., numbered 419, including 291 from the fever. A despatch, dated the 18th, says, "The number of deaths in the Charity Hospital for last week, was 138, and 132 persons were discharged cured. The ravages of this fell disease were unabated at Norfolk, Portsmouth and Gosport. Collections for the relief of the sufferers have been made in New York, Philadelphia, and other places.

New York.—Mortality last week, 633, of which a large portion was young children. There were 289 deaths of children under one year of age.

Philadelphia.—Mortality last week, 280; under one year of age, 109.

Cincinnati.—In the week ending the Eighth mo. 7th, there were 224 deaths, 80 of which were by cholera. In that ending the 14th inst., there were 185 deaths, of which 45 were by cholera.

Chicago.—The census of Chicago has just been taken. The present population is 87,900. The number of new buildings erected during the last year is 2000, many of them of the first class. There are now 138 vessels belonging to that port.

Boston Ice Trade.—The whole amount of ice shipped from Boston, Mass., last year, was 156,540 tons. The railroads received $90,000 annually for transporting ice, and the amount shipped over the sea received from four to five hundred thousand dollars. Last season 520 vessels were employed.

State of the Ohio.—At Pittsburg, on the 18th instant, there was eight feet of water in the channel, 55 steamboats were lying at the wharves, freights were low, and goods arriving from the eastward in large quantities.

Miscellaneous.—Slavery in Kansas.—Among the bills said to have passed the Kansas Legislature, is one affixing the penalty of death to all attempts to interfere with or entice away slaves. Also, the importing or introduction into the Territory of any abolition document, tending to incite slaves to rebellion against authority, is made punishable with death.

Telegraphic Extension.—The Boston Traveller states, that from its office, telegraphic lines extend in various directions, connecting with 1300 stations, in all parts of the United States and British Provinces, from Halifax in the east to Kansas City in the west, and from Quebec to New Orleans.

Wealth of Brooklyn, N. Y.—According to the returns of the assessors, the aggregate amount of real estate in the city of Brooklyn this year is $85,545,698, and of personal estate $17,702,839, making a total of $103,248,537.

Ice on the Isthmus.—The Aspinwall and Panama Ice Company have made arrangements by which these two ports are to be constantly furnished with New England ice. Their ice-house in Panama has heretofore been supplied by shipments via Cape Horn, the average passages being four to five months. Recently they have shipped a cargo to Aspinwall, a part of which is to be sent over the railroad, and thence to Panama, where it is expected to arrive in 25 or 30 days from Boston.

The Decrease of the Brandy Trade, is strikingly illustrated in the absence of all American vessels from the port of La Rochelle for the last six months, a fact which it is said never occurred before. The French papers ascribe it to the failure of the grape crops, and the temperance movements in the United States.

A Liberal Policy.—It is said that Paraguay has not only opened her internal rivers to the Brazilian flag, but to the flags of all foreign nations.

Vintage in Italy.—The vine, it is said, will fail again in Italy this year. The leaves are curling up and becoming crisp, and the grapes are covered with white mould. All sanitary experiments have hitherto failed—such as dipping the clusters in a solution of glue—blowing sulphur over the vines, laying them in the ground, &c.

Accident at Niagara Falls.—On the afternoon of the 12th inst., a small boat containing five men, was swe over the falls. The men were all drowned.

Maritime Disasters.—A list has been prepared of di asters in the water during 1854, which shows that th number of vessels lost or injured is 5382, which, wit the steamers and boats on our lakes and rivers, wil probably make fully 6000 in all. The loss of life wil exceed 9000, and that of property may be set down a forty millions of dollars.

The Crops in the Sandwich Islands.—The Sandwich Islands this year will raise wheat enough to supply th Islands, and of a very superior kind. They have go an agricultural society there.

A Just Award.—The Arctic Committee, appointed b the House of Commons to investigate the claims of th commanders of the recent Arctic Expedition for a re ward for the discovery of a north-west passage, hav come to a determination to recommend that £500 should be given to Capt. McClure.

Shipwreck and Loss of life.—The ship Griminesia, o Callao, Capt. Penney, was wrecked on the Seventh mo 3d, 1854, on a reef to the westward of New Caledonia in lat. 19° 45′ S., lon. 161° 45′ E., not laid down on th charts. The captain, with the mate, doctor and fou seamen, left her in a boat. She had on board 65 coolies from China, and a crew of 50 men, and all must have perished, with the exception of the seven in the boat.

A Long Drive.—A paper in Indiana county, Pa. chronicles the passage through the town of Indiana, o a drove of several hundred head of cattle for the eastern markets, which had been bought in Texas, and driven overland, a distance of fifteen hundred miles. They looked remarkably well, considering they had been more than four months on the road.

Appropriate News.—Gloversville, Fulton Co., N. Y., is well named. There were made there last year 1,800,000 pairs of gloves, worth about $1,000,000.

The Jesuits.—A return, just published at Rome, shows that the Order of Jesuits at present consist of 5510 members, 1515 of whom are in Italy, 1697 in France, 463 in Belgium, 364 in Spain, 177 in Germany, and 1294 in England, America and other countries.

RECEIPTS.

Received from Sl. Pritchard, Ind., $5, to 52, vol. 29; from J. Fawcett, agt., O., for L. Cobb, John Crew, Sl. Enloes, Wm. Thomas, and John Allman, $2 each, vol. 28, Jos. Taylor, Stacy Cook, and Jos. Whinery, $2 each, vol. 29, F. Mearkt, $2, to 44, vol. 28, John Lipsey, $4, vols. 26 and 27; from Thos. Bowerman, N. Y., $4, vols. 27 and 28; from Geo. F. Wood, N. Y., $2, vol. 28; from H. D. Medcalf, Md., $2, vol. 27.

The Moral Almanac for 1856 is received, and for sale at Friends' Bookstore, 84 Arch street.
Philad., Eighth mo. 20, 1855.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in this Institution.

Application may be made to either of the undersigned, members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS, } Philada.
SAMUEL BETTLE, Jr. }

Evening Schools for Adult Coloured Persons.

Wanted, A Principal and three Assistant Teachers for the Men's School, and a Principal and four Assistants for the Women's School.

Application may be made to either of the undersigned.

JOHN C. ALLEN, No. 179 S. Fifth St.
SAMUEL ALLEN, No. 134 S. Front St.
WILLIAM L. EDWARDS, No. 37 Arch St.

MARRIED, on the 15th inst., in Friends' Meeting, Rancocas, N. J., JOHN BORTON, to SARAH A. WARNER.

DIED, on the 13th inst., at her residence in this city, SARAH RICHARDSON, in the 68th year of her age; a member of the Western District Meeting of Friends. We believe it may be said of this dear Friend, that she was of a meek and quiet spirit, and was concerned to be found doing her day's work in the day-time, and it is consoling to believe, that her end was peace.

No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXVIII. SEVENTH-DAY, NINTH MONTH 1, 1855. NO. 51.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Edinburgh Review.

The Land of Silence.

(Continued from page 393.)

Sound may be said to consist of pulsations of the air. The office of the ear is to receive, and assist in conveying to the brain impressions from these pulses or waves of air which are collected by the *concha*, or external shell. Thence they are transmitted into a narrow winding passage, closed at its furthest extremity by a thin membrane like the pelt of a drum, stretched obliquely across the passage on a bony rim. This membrane is semi-transparent, and vibrates at every breath of air. Beyond the membrane or drum is a hollow chamber of air, curiously fitted with a chain of moveable bones, which are put in motion by the vibration of the external air, and serve to convey sounds to the internal ear, and to the interior channels and recesses of the skull. These recesses or cavities have been likened to wind instruments of music, on account of their spiral or circular form, and they contain lodged in them the nerves communicating with the brain. That the air may pass freely into and out of the barrel of the ear, and the covering vibrates or the temperature chances be altered, there is a passage called the Eustachian tube, which leads from the throat to the cavity of the tympanum, answering the purpose of the aperture in the side of an ordinary drum. The whole labyrinth with its perfect apparatus is as it were hewn out of a rock; that is, wrought into the substance of the hardest bone in the body.

The small bones behind the membrane are three in number; so arranged and, as it were, hinged upon one another, that when the drum of the ear vibrates, all the three are put in motion together. The last bone of the three plays upon an aperture, which it closes, and which opens into the winding canals leading to the brain. It bears the name of *stapes*, and its especial office is to repeat the vibrations of the aural membrane, like a repeating frigate moored within the line. But this sensation of sound may be excited without any affection of the drum of the ear, by any thing which communicates motion to this *stapes;* as when a solid body in a state of vibration is applied to the bones of the skull, *e. g.*, when a metal bar held at one end between the teeth touches a tremulous body at the other. Of this, also, a common tuning fork supplies at once a ready and complete proof, by being held between the teeth whilst the fork is vibrating in the usual way.

Fine and delicate as every part of the aural structure is, and exquisitely adapted to discharge peculiar functions, even a slight disarrangement of so elaborate a machine at once interferes with its working power. But though slight or occasional deafness is easily induced, total deafness rarely supervenes. The drum membrane of the ear may possibly become slightly thickened,—inflammation or cold may attack any one of the interior parts; sore throat may partially close the Eustachian tube, and so deaden and destroy all sound in the air chamber; the organs of secretion which line the auditory passage may diminish or suppress the necessary supply of wax, or, on the other hand, unduly increase or thicken it; and thus deafness to a greater or less degree may supervene. But deafness of a severe kind is on the whole rare; and the proportion of mutes in the whole population of Great Britain is about one in sixteen hundred, making a total of seventeen thousand three hundred; being considerably less in number than the blind. If we take the population of Great Britain to be in round numbers 27 millions, the proportion of deaf-mutes will amount to about one-sixteen-thousandth part of the whole population; whereas the number of blind persons in the United Kingdom is estimated at about *one* in every thousand.

Let us now proceed to inquire what has been really done by the different systems for the intellectual education of the deaf and dumb. We shall not attempt to give our readers a detailed account of all past labourers in the cause,—their toils or successes,—but be content with a glance at the most notable and successful since the time of Rodolphus Agricola (ob. 1485,) whom the Abbé de L'Epée mentions in his chapter entitled *L'origine de l'Art d'instruire les Sourds-muets*, as one of the earliest believers in the capacity of the deaf and dumb to receive an intelligent education. The sight of a deaf-mute who had learned to understand writing, and to write down his own thoughts, he regarded 'comme un témoignage du pouvoir immense et presque incroyable de l'intelligence humaine.' Even he is a reluctant witness, and evidently inclines towards a miraculous cause for the wonder which his own eyes beheld. Of him who taught that deaf-mute we have no record; and perhaps many another solitary labourer besides himself,—in other countries besides his own,—toiled on with greater or less success. But we hear of no systematic attempt to educate the deaf and dumb until the middle of the 16th century, when Petrus Pontius the Benedictine instructed the sister of the high and mighty the Constable of Castile. An account of his method was published at Madrid in the year 1620, about thirty-five years after the death of Petrus; from which it is clear that the education of deaf-mutes was no longer regarded as impracticable or fruitless, but was attracting at least European attention. In the register of the Benedictine monastery recording his death, we read, 'in the month of August, 1585, died Pedro Ponce, distinguished for his eminent virtues, but chiefly excelling in the art of instructing deaf and dumb, for which he has obtained *a world-wide* fame (*dansi out l'univers*).' . . . . . .

In the year 1623, Sir Kenelm Digby returned from Spain, with Charles, then Prince of Wales; and in a work entitled 'Treatise of Bodies,' gives a full account of the younger brother of the Constable of Castile, who had been taught 'to *hears* the sounds of words with his *eyes*.' This doubtless attracted attention in England, and we are therefore not surprised to find that in the year 1648, '*J. B.* (John Bulwer,) *surnamed the Chirosopher*,' published a curious treatise, entitled '*Philocophus*, or the Deafe and Dumbe Man's Friend.' He seems, also, to have been the first Englishman who recommended the institution of a college for deaf-mutes, and mentions their capacity of enjoying music by means of their teeth. But within thirty years of this date, George Dalgarno, the Scot (whose name was some years since most justly rescued from oblivion by Dugald Stewart,) published a still more valuable treatise, entitled 'Ars Signorum,' not only introducing a *finger alphabet*, but containing at least the germ of many future pretended discoveries from the time of Bishop Wilkins, 1661, to the, 'immortal Abbé de L'Epée,' of the 18th century. 'He first attempted the education of deaf-mutes in the general principles of grammar, and in the association of thought with *written* instead of *spoken* language.' And this alone constitutes sufficient ground for claiming Dalgarno not only as one of the earliest educators of the deaf and dumb in England, but as having achieved for them more than had been individually achieved by any one before him.

(To be continued.)

For "The Friend."

The following resolutions written in 1722, in the diary of a young man, in the nineteenth year of his age, and which he appears to have adhered strictly to, until his death, which occurred in 1758, I have thought, might have a useful effect upon some of the youthful readers of "The Friend."

"Resolved, not to waste one minute of time; but improve it the most profitable way I can.

Not to do anything that I should be afraid to do, if it were the last moment of my life.

To think much on all occasions of my own dying, and of the common circumstances that attend death.

To be endeavouring to find out fit objects for charity and liberality.

Never to do anything out of revenge.

Never to suffer the least emotions of anger to irrational beings.

To live at all times as I think is best in my devout frames, and when I have the clearest views of the gospel, and another world.

Never to speak anything in narration but simple truth.

To inquire every night as I am retiring to bed wherein I have been negligent; what sin I have committed, and wherein I have denied myself; also at the end of every week, month, and year.

To maintain the strictest temperance in diet.

Never to speak anything that is ridiculous.

Not to allow the least measure of fretting uneasiness at my father or mother. Resolved, to suffer no effects of it, so much as in the least alteration of speech, or motion of the eye; and to be especially careful, with respect to any of the family.

To endeavour to my utmost to deny whatever

is not agreeable to a good and universally sweet, and benevolent, quiet, peaceable, contented, compassionate, generous, humble, meek, modest, submissive, obliging, diligent, industrious, charitable, patient, moderate, forgiving, sincere temper; and to examine frequently and strictly whether I have done so.

And, all my life long, with the greatest openness of which I am capable, to acknowledge my ways to God, and lay open my soul to him; all my sins, temptations, difficulties, sorrows, fears, hopes, desires, everything and every circumstance."

His biographer says of him, "He did not entangle himself with the affairs of this life, and had no desire to lay up for himself or his children perishable riches. He observed the strictest integrity in all his dealings, and manifested the most sacred regard to truth, not only in promises, but in the simplest narration; was cautious in the choice of his acquaintance, and faithful in friendship. His conversation was profitable and instructive. In promiscuous company, unless some important subject of discourse was agitated, he spoke little, for he was not ambitious of being idly entertaining. He died from home, in the 56th year of his age. When he perceived his disease would prove mortal, he said to his daughter, who attended him, 'My dear daughter, it seems to me to be the will of God, that I should shortly leave you, therefore give my love to my dear wife, and tell her that the uncommon union that has so long subsisted between us, has been of such a nature as I trust is spiritual, and therefore will continue forever, and I hope she will be supported under so great a trial, and submit cheerfully to the will of God. And as to my children, you are now likely to be left fatherless, which I hope will be another inducement to you all to seek a Father, who will never fail you. As to my funeral, I would have it without ostentation; and any additional sum of money that might be expected to be laid out that way, I would have disposed of in charitable uses.' His last words were, 'Trust in God, and ye need not fear.'"

Why are Apples Scarce?—It is notorious that the apples grown in the vicinity of Philadelphia fall short of those produced in the same vicinity formerly, both in character and in quantity. Our farmers generally explain this decline by asserting that the climate has changed, or that the soil has lost those peculiar qualities which it had originally, and which were favourable to the cultivation of this popular fruit. And with this elucidation they dismiss the subject, and suffer the orchards to decay, without an effort to replace them.

We are satisfied that the first objection is without foundation, and that the force of the second is greatly overrated. First, as to the climate. If we disregard, as we should, the unassisted recollections of old persons, for it is their error to look back on their youth as a golden age in everything, we shall find that the climate differs but little, if at all, from what it was fifty years ago. The loose notions that the weather, on the whole, is warmer than it used to be, is a delusion. The meteorological observations which have been preserved, both privately and publicly, fully establish this. We have cycles of cold winters and hot summers, followed by cycles of mild winters and temperate summers, just as our ancestors had in the days of Franklin. If sometimes now it is warm for a few days, early in spring, we must not forget that when the battle of Lexington was fought, on the 15th of Fourth month, 1775, the fruit trees were in blossom even so far north as New England, and it is rarely they blossom so soon now.

Except in the slight degree in which the climate has been modified by cutting off the forests, it remains, therefore, substantially what it was at the beginning of the century. The apple had the same difficulty to contend with, in this neighbourhood, then as now, in reference to the late spring frosts. But there is doubtless some truth in the notion that the soil has changed. It is well known that wheat, maize, or even potatoes, if planted continually in the same field, will exhaust the ground. It is fair to infer, therefore, that fruit produces similar results. We think the heavy crop of apples this year a striking proof of the necessity of recuperating the soil, if cultivators would have the trees to bear vigorously; for the drought of last summer, by bringing to the surface the ingredients that had been accumulating below the usual depth of even the roots of trees, fertilized the soil incalculably, producing the same effect as if it had been richly manured. The hint should not be lost upon agriculturists. If proper attention was to be paid to the subject, so that the proper kinds of economical compost for apples, peaches and pears could be discovered, and this compost judiciously applied, there is no question but that the orchards of this vicinity would rival, and even excel, what they were in their palmiest days.

Most of our best apples come from New England, a fact by no means creditable to Pennsylvania agriculturists, for there are few things to which a farmer, who lives within range of the market of a great city, can devote his attention so profitably as the cultivation of fruit. It is vastly more remunerative than raising staples, while it is far less troublesome than trucking. Yet almost the only persons, who really cultivate fruit, near Philadelphia, are the peach-growers in the vicinity of Delaware city; for the rest of those who send fruit to our market, practically leave its growth to Nature entirely. Thousands of dollars have been lost, this season, by neglecting the simple expedient of early stripping the fruit trees of half their burdens, so that the fruit which remained might mature of better quality and command a higher price. Tens of thousands of dollars are sacrificed annually by the omission to plough orchards at least every other year; while an almost incalculable sum is wasted in the aggregate, by cultivators remaining content with worn-out varieties, instead of seeking to introduce improved ones.

We throw out these few hints rather to stimulate to action than to point out the remedy. The subject properly belongs to the agricultural journals. But there are many rural cultivators, we are sorry to say, who take no paper of that description. Yet as numbers of such farmers, especially those in the vicinity of Philadelphia, take the Ledger, they may be stimulated by what is said here, to a further inquiry, perhaps. For their benefit, as well as to correct a popular error, we have penned this article.—*Ledger.*

For "The Friend."

Providential and Maternal Care.

(Continued from page 395.)

Benjamin Bangs' mother did not join Friends until some years after her husband's death. He says, "My worthy mother, who now resided in Norwich, had conversation with the people called Quakers, of whom she entertained so good an opinion before; and being thoroughly satisfied that they were got to what she wanted, she readily embraced the principles they professed, and sat down with great satisfaction in their meetings. Three of her children, who lived with her, were also convinced of the Truth, and they lived in a great deal of love and unity one with another. Bein fully satisfied that she was come to the ground a foundation of true religion, she became very mu concerned for the rest of her children, and beir ready with her pen, wrote to acquaint them that sh had met with what she had long wanted. Among the rest she remembered me, and wrote to acquai me with what people she had joined herself; a there being so many good opportunities in the ci of London, she said she should be glad to he that I frequented their assemblies. I quarter then in Pall-mall, not far from the court. M companion was a pretty sober young man, wh professed himself to be a Presbyterian, with who I was sometimes a little too jocular in a banterir way. He was with me when the letter came my hands, which I read to myself; but comir to the words that advised me to go to the Quaker meetings, the evil nature got up in me, and p me into such a passion that I could read no fu ther, but put the letter into my pocket. This w on the Sixth-day of the week, and I think, in th year 1671. The First-day following after I ha dined, I went to take a walk under the arches Covent-garden, and in a little time a solid co cern came over my mind, and this arose in m thoughts, 'What is the matter that thou canst n read thy mother's letter?' With that I went an sat down on a large stone, and read the letter wit pleasure, and it arose in my mind to go to a mee ing. The enemy of all righteousness suggeste 'Thou knowest not where a meeting is;' but very intelligibly opened on my understanding 'Go down to Charing-cross, and there thou sha see some of that people; follow them.' Upon th I arose and went down the Hay-market to Charin cross, and there I saw five or six of the said pe ple, which was a confirmation to me that the ope ing was right. So I followed them at some di tance, and *their habits with their solid behaviou* affected me. They were going to the meeting Westminster, and when they came there, the went in, but I stood at the door for a while. Her the enemy was at work again, and would hav persuaded me to go away, intimating that if som of my old acquaintances came, they would laugh me; but the better part prevailed."

He went into the meeting-house, and place himself behind a post in the back part, so as be as much out of sight as he could. Here h had much reasoning in his mind, respecting th possibility of being deceived by the speakers, wh ther they were Friends or not. "It was not long, he says, "before one stood up, and I thought take good notice of what he said; but so man wandering thoughts prevailed, that I got no ben fit thereby. He sat down, and in a little tim another stood up, and I said to myself, Well, resolve I will mind what this man says; but was only a few minutes before my wanderin thoughts got into Holland, and thence I thought of going to France. Meeting with a secret chec in myself for these vain imaginations, I gave stamp upon the floor with my foot, which cause the eyes of those in the meeting to be upon m So in fervency of spirit, I said in myself, 'Wha is the matter that I cannot be master over m own mind?' I saw I was altogether wrong, an wanted inward strength to help me to get to stayedness of mind upon God. I was made sen sible that there was a spiritual warfare to h passed through, and that no stayedness of min could be attained to, till the inward enemies the soul came to be destroyed. I now saw m business was to get into an inward retiremen hoping thereby I might get to be somewhat ma ter over my mind. Being thus closely engage before the meeting broke up, I got to a sight

he possibility of obtaining what I was then deeply ngaged for, and this answered the end of my oming to the meeting; and I could then have rished that it would hold longer."

"When I came into Westminster-abbey-yard, met with some of my old acquaintance, who ould have had me go with them, but I denied heir invitation, finding I had another work to do, nd went to my quarters, where I had not been ong, before the young man, my companion, also ame in. I was sitting in a solid frame of mind, uch as he never observed me in before; and he aid, 'Where have you been to-day? you seem to e so serious.' I proceeded to give him an acount of what I had met with, and reminded him f the temper I was in at the reading of my mother's letter. 'Aye,' said he, 'I saw you were nder some dissatisfaction, but I knew not for what.' Why,' said I, 'it was for my mother's desiring me to go to the Quakers' meetings, which begot such nger in me, that I had not patience to read it hrough. But this day, walking in Coventgarden, a sweet visitation from the love of God rought such a calmness over my mind, with this ttending it, 'What is the matter that thou canst ot read thy mother's letter?' I then plucked it ut of my pocket, and read it with pleasure. Giving him the whole relation of what had passed, he was struck with admiration, saying to me, he had never heard anything like it; that it must be omething supernatural, or it never could have had such an effect upon you. And he was so far reached and convinced, that he soon after forsook his former profession, and joined himself to the Quakers. My country master's brother, who came n company with us to London, had been conrinced sometime before this, and came to pay me visit. Finding me grave and serious, he gave me an invitation to come to his quarters, at the house of two good honest Friends; the invitation was very pleasing to me, as was my company to him, and them to whom I came."

"The next meeting I went to was, I think, the Peel, where I met with our ancient Friend, James Park. I thought his doctrine reached home to my condition. I had some superfluity on my apparel, which became such a load to me, that I thought I groaned under the weight of it; and finding I could wear it no longer, after the meeting I stripped it off, and that gave me some ease." It appears to have been universally the case, that persons who have felt their minds drawn from religious duty to join Friends, have been convinced of the same faith and doctrine, and been bound to conform to the plainness and simplicity in dress and language, which the Lord led them into from the beginning. Had they not have complied with what he required, they could have made no progress, but would have been cripples, halting all their days, and probably have finally fallen away. Although this young man had attained to but little religious growth, yet being obedient to what was made known to him, his deportment and example had a good effect upon others, so that several came thereby to embrace the Truth. He followed his business closely, and kept to his religious meetings, where he partook of spiritual refreshment, and found himself improved by those good opportunities. He says, "The love of God was greatly towards me, and I felt a growth in it; and the overflowings of it were such at times, that I was ready to think the work was done, and the inward warfare nearly come to an end. But alas! I found myself mistaken. Going one day to a meeting at Grace-church street, where were William Dewsbury and Charles Harris; the latter stood up, exhorting Friends to faithfulness, and to resolve to do nothing, but what was agreeable to the Truth. I took such notice of it, that I said in myself, Well, I resolve to do nothing disagreeable to the Truth. No sooner had the resolution passed my thoughts, than I felt a check in myself, and a sensible decay to my inward enjoyment, which increased gradually upon me, so that in a short time I came to a considerable loss. This I took as a permission of the Almighty to bring me more to the knowledge of myself."

"In this state I continued some time, and my inward life decaying, I was brought very low as to my inward enjoyments, which I had been formerly so plentifully supplied with, so that I began *to grow a little careless;* and the enemy stepped in with it, saying, Thou art but young, and this is the only time for thee to take the pleasures of this world, and when thou art old, thou knowest now how to get to what thou hast been so earnestly engaged to come to the knowledge of. I continued some time in an *unconcernedness of mind,* by which I sustained so great a loss, that if I saw the faces of any of my friends in the street, I endeavoured to avoid them; for shame covered me, believing they knew what a loss I was come to. But this was a very merciful Lord remembered me, and as I sat at work, the word of the Lord came to me, This is thy day, harden not thy heart; which so struck me that I trembled. Upon this I soon removed and got to my old friends, George and Dorcas Lowe's, who dwelt not far from Aldersgate. Now my concern came to be so great, through losing by my transgression what I had formerly enjoyed, and I so lay under the judgment of God, that if I did but let out my thoughts towards any liberty, nay, if I did but smile, I was inwardly reproved; so that I saw I had no way to take, but to lie under the hand of God."

Resolutions formed in the will and strength of man, are often blown away by the first temptation; proving that however confident he may feel, like Peter, nothing can sustain and defend the soul, but the merciful interposition of the Lord's Holy Spirit. Seasons of mental desertion are as necessary for the humiliation of man's spirit, and to prepare him to bring forth fruit to the praise of the great husbandman, as the cold and wintry seasons, to fit the plants in the outward creation, to yield their appointed products for the sustenance of the body. Under divine visitation, many may be willing to submit to the introductory dispensation of love and tenderness; but when those sensations are withdrawn, and the soul is left as in a wilderness state, seemingly liable to perish for want of the sensible feeling of the presence of the Captain of salvation, there is a strong temptation to go back, and follow no more with him. The unsubjected spirit of man is opposed to the baptisms that are needful to destroy the chaffy nature, and to prepare the soul, like wheat to be gathered into the garner, under the heavenly Father's protecting power. But many have need to be brought more fully under the Lord's refining hand, that they may show forth his praise, and witness the universal prevalence of the love and fellowship, which is enjoyed by the children of God.

In passing through this humiliating dispensation, B. Bangs says, "In this state my exercise was very great; my tongue is too short to express it, and my pen to describe it; and the way to get to what I once enjoyed, I found by experience to be very narrow. For if I took a wrong step either by word or a vain thought, my inward instructor made it manifest that it did not belong to me; I had something else to do. Thus I continued for some time, being inwardly very poor and barren, and often beseeching the Almighty that he would be pleased to favour me with a small ray from the Sun of Righteousness, to comfort a little my afflicted spirit. In this state of affliction the enemy was not wanting with his temptations, to draw me into a belief, that the day of my visitation was over; but having had a knowledge of the manner of his dealings with me before, I now kept a strict watch against him in all those attempts. In the midst of these afflictions and hard besetments, I now and then met with some encouragement, being made sensible of some springs of life that helped me to believe that the Lord would not forsake me. And in this mournful and retired way of life, I had some divine openings by which it was manifested to me, that by being brought through these exercises, I should be the better prepared in time to be helpful to others. From this time I began to grow and increase in that which was good. Feeling the clouds to disperse, that had been over my mind, the weight of my oppression began to be gradually removed, and I felt my spirits grow more easy. Then my hunger and thirst after righteousness increased, which gave me encouragement to hope that in time all would be well; and I was so revived through it, that I said in myself, It is *good for me that I have been thus afflicted,* for now *I know something of what it is to buy the Truth: for it had cost me but little before this.*"

An aged preacher used to say, "That Society which does not often recur to first principles, will surely come to decay." To be preserved in the life and power of the blessed Truth, by which our religious Society was originally dignified and beautified, we must keep to first principles, both as regards doctrine, and the living experience of the Lord's chastening and humbling hand, to be laid upon us, by which Satan's kingdom is thrown down and cast out, and the heart made a temple for the Lord by his Spirit to dwell in.

B. Bangs proceeds: "Some time after, a Friend who had been banished for his religion, who dwelt near the Bull-and-mouth meeting-house, desired me to come to be the foreman in his shop, which I complied with, upon a certain salary for four years, which term I continued with him; and the Lord was with me, and gave me an understanding *to do everything honestly,* belonging to my place and station, and all things prospered under my hand. But being, through multiplicity of business, kept very close, I had many times longing desires to get to a meeting, and there with my Friends to sit down in a retired manner, out of the hurry and cares of the things of this world; for these opportunities were often greatly refreshing. Whilst in this service, I went with some public Friends to country meetings on First-days, which I took more than a little pleasure in, not only for the benefit I received of the meeting, but of a little country air, being still glad of embracing those opportunities. Lucretia Cook, an ancient woman Friend, who had a public testimony, came to desire me to ride before her to Hendon meeting, which was then pretty large. I did so, and in the meeting I was under no small concern, and a trembling laid hold of me; and as soon as the Friend had concluded in prayer, I was concerned to kneel down to supplicate the Lord, which had such an effect, that many present were broken into tenderness; it was indeed a comfortable opportunity.

(To be continued.)

Hickory Nut Oil, considered equal to the best lard or sperm oil for burning and machinery, is now manufactured in Dayton, Ohio. The oil remains in a fluid state at a very low temperature, and it does not "gum" like the ordinary oils. It is used in very delicate machinery.

From the Edinburgh Review.

On the Fibrous Plants of India.

(Continued from page 398.)

The Indian Government has not been wanting in its efforts to establish the growth of flax-fibre as a profitable industrial occupation for the natives of those districts which seem most fitted to produce it of good quality. They have caused numerous experiments to be made in various parts of India, and Dr. Jameson, to whom the superintendence of some of these experiments has been entrusted, states, as the result of his experience up to Eleventh mo. last (1854):

"For some years I have been cultivating flax on a small scale, from seed procured from Russia, and its fibre has been pronounced by parties in Calcutta to be of a very superior description. I have already made arrangements to grow it more extensively this season, in two or three different situations. There is nothing to prevent this country supplying both flax and hemp on a vast scale. It possesses immense advantages in abundance of land and cheap labour. In the Punjab, thousands of acres are available; and from the means of producing hemp and flax cheap, this part of India will always be able to compete with other countries."

This opinion from so competent an authority is both satisfactory and valuable, and will, doubtless, aid in so stimulating the growth of these raw materials in India as finally to render Great Britain independent of every European country for supplies of hemp and flax even of the strongest and finest qualities.

But with all the efforts and influence we can bring to bear on Indian agriculture several years must elapse before we can hope for such a change in the methods of growing and preparing hemp and flax in India as to realise even our reasonable expectations. That wide country, however, seems already prepared to supply us with almost unbounded quantities of other fibres which are fully capable of taking the place of hemp and flax in every kind of manufacture to which fibrous materials are usually applied. Of such comparatively new materials Dr. Royle enumerates, and methodically describes, a great variety. In plants, belonging to about twenty different natural families, he finds valuable fibres which may more or less easily and abundantly be grown in our eastern possessions for the supply of our home wants.—Thus, beginning with the grasses, he states that several species of the genus *saccharum* are employed for making ropes, and especially for making tow ropes, on the river Indus and on the Ganges. For this purpose their fibres are well fitted, being light, tenacious, and capable of bearing without injury alternate exposure to wet and dry. Of the sedges he also mentions a kind of cotton grass, *Eriophorum cannabinum*, which grows abundantly in all the ravines of the Himalayas, and which is platted into the ropes of which the jhoolas, or rope bridges over the large rivers, are almost universally made. It is not durable, however, requiring to be renewed every year. Then the fibre of the pine apple, a liliaceous plant, which covers whole islands near Singapore, is extracted for exportation to China, where it is used 'in the manufacture of linens.' This fact is the more worthy of attention because the pine apple (*Ananassa sativa*) grows also in enormous quantities on the Khasia hills, and is so abundant 'in the Tenasserim provinces as to be sold in Amherst Town in Sixth and Seventh mo.'s at two shillings for a boat load,' and because a patent has already been taken out in this country by M. Zincke for the manufacture of thread from its fibre. It seems that during the process of bleaching, the fibres of this material are separated from each other more completely, and the staple rendered so much finer and softer, that it can be spun in the same way as flax. From its beautiful silky lustre also, and its great strength, the patentee considers it well adapted to form a substitute for flax, and M. Dickson, of Deptford, 'for spinning yarn for the fine cambric manufacture of Ireland.' Should future trials prove these statements to be correct, the province of Tenasserim may hereafter become the seat of an extensive manufacture of this pine apple fibre.

Another liliaceous plant, the pita, agava, or American aloe, yields a fibre which is used for making the cordage employed in the mines of Mexico, by the shipping of Guayaquil, and for the bridge ropes of Quito. This plant has become naturalized and abundant in widely separated parts of India, and ropes made from its fibre have been tested in comparison with those of European hemp and found to be nearly equal to them in strength, so that, in the opinion of Dr. Royle, this fibre is sufficiently good to form an 'exportable article of considerable value, especially as the prejudice against white cordage will by degrees be removed, and the tow will be invaluable for the manufacture of paper.' This, like the growth of hemp and flax, is to be classed among the *possible* productions of India, however, and can scarcely be expected materially to supply any actually pressing wants.

A third liliaceous plant, the *Moorva* or *Sanseviera Zeylanica*, yields also a very fine fibre. The succulent leaves of this plant abound in beautiful silky threads, which may be obtained three or four feet long, are as fine as human hair, and yet possess extraordinary strength and tenacity. From remote times the natives of the Circars have made their best bowstrings of this fibre, and hence Dr. Roxburg proposed for it the name of bow-string hemp. The plant grows wild on the jungly salt soils, along the coast, is abundant in Ceylon, on the Bay of Bengal, and elsewhere. It is easily cultivated also, and the fibre easily separated from the leaf. Specimens of the fibre were sent to the Great Exhibition from Assam and Cuttock, from Madras, Coimbatoor, and the Malabar coast; and Dr. Royle is of opinion 'that it could be produced as cheaply as any of the other fibres.' And as the fibre is fitted not only for making string and cordage, but also for weaving and for paper making, we may regard it as the possible substitute for our common flax as well as for our ordinary hemp.

The plantain or banana tribe deserve a distinguished place among the yielders of fibre. Sometimes improperly spoken of as trees, they are only large herbaceous plants, of which the stem is formed by the foot-stalks of the leaves, which successively ensheath or wrap round each other. These sheathing footstalks—and therefore the entire stem of the plant, except the white and sprouting core—abound in fibre. From some varieties of plantain, and in some parts of the world, this fibre is already largely extracted as an article of commerce. The Manilla hemp, already well known as a substitute for the true hemp, is the produce of a banana, the *Musa textilis*. This variety of fibre has attracted much attention, from the beauty of its appearance, its durability, its power of resisting great strains, and also because it is lighter and cheaper than Russian hemp. The rigging of many vessels, especially of American build, has been made of Manilla hemp, and the cordage of this material, when worn out, has the advantage of being convertible into an excellent kind of paper.

The banana which yields the Manilla fibre is a native of the Phillippine Islands, where it grows wild in natural groves which are considered as private property, and is also extensively cultivated. The outer layers of fibres contained in the stem are coarser in quality. The inner layers are c various degrees of fineness and are woven into cloth which forms the universal wearing apparel of th country. Some of the cloth is so fine that a gau ment made of it 'may be inclosed in the hollow c the hand.' Nearly all the other known species c plantain or banana also abound in fibre. In Indi the fibre of the common plantain (*Musa sapien tum*) is separated and prepared by the natives c Dacca, and numerous experiments have been mad both in the East and in the West Indies, with th view of preparing it of good quality and at a chea rate. Various samples from different localitie were sent to the Great Exhibition, and it was state that, besides yielding the usual crop of fruit, th banana stems, hitherto allowed to rot on the ground would yield upwards of six hundred pounds of fibr per imperial acre. It was added on the part c the exhibitors from Demarara, that if a 'remune ative price—some nine or ten pounds a ton—coul be obtained for this fibre, a new branch of industr would be opened up to the colonists.' With view both to our home wants, therefore, and t our colonial prosperity, it is desirable that the pr paration and use of these plantain fibres should b encouraged. In 1854, average qualities of Manill hemp brought from 44*l.* to 50*l.* a ton; and i 1855, as much as 70*l.* to 76*l.* And although fro other localities, and from other species or varietie of the plant, fibres of equal strength and value ma not be obtained, yet there is a wide enough margi to allow of a considerable reduction in the price c that which may be made in our own colonies, an yet leave a remunerative return to the coloni grower.

Of fibrous substances obtained from the palm tribe, the split canes (*Calamus*) of China and th Eastern islands are famous for their use in th manufacture of cables, which, besides being stron and durable, are remarkable for their lightness— swimming like cork upon the sea. The Ejoo c Gomuto fibre, from the *Saguerus Rumphii*, onl occasionally heard of in the West under the nam of 'vegetable bristles,' is well known to Easter commerce and to Eastern shipping. 'The nativ shipping of all kinds are entirely equipped wit the cordage of the Gomuto, and the largest Eur pean shipping in the Indies use cables of it. Thes cables are described by all as remarkable for ten city and durability, and for undergoing no chang when exposed to wet or even when stowed awa in a wet state.' The Cocoa-nut fibre, or *Coir*, th produce of another palm, is more familiar to Wes ern manufacturers, and is already so extensivel used in this country, that from Cochin and Ceylo we import yearly about seven thousand tons. 'I character has long been established in the Eas and it is now well known in Europe as one of th best materials for cables, on account of its ligh ness, elasticity, and strength. It is durable, als and little affected when wetted with salt wate Numerous instances have been related of ship furnished with cables of this light, buoyant, an elastic material riding out a storm in securit while the stronger made, though less elastic rope of other vessels have snapped in two, and eve chain cables have given way. Indeed, until chai cables were so largely introduced, most of the ship navigating the Indian seas were furnished wit Coir cables.

(To be continued.)

To Keep Crows from Corn.—Take a quart c train oil, and as much turpentine and bruised gu powder; boil them together, and when hot di pieces of rag in the mixture, and fix them on stic in the field. About four are sufficient for an ac of corn.

Selected.

FORTITUDE.

Faint not, poor traveller, though thy way
Be rough, like that thy Saviour trod;
Though cold and stormy lower the day,
The path of suffering leads to God.

Nay, sink not, though from every limb
Are starting drops of toil and pain;
Thou dost but share the lot of Him
With whom his followers are to reign.

Thy friends are gone, and thou, alone,
Must bear the sorrows that assail;
Look upward to the eternal throne,
And know a friend who cannot fail.

Bear firmly; yet a few more days,
And thy hard trial will be past;
Then, wrapped in glory's opening blaze,
Thy feet will rest on heaven at last.

Christian! Thy Friend, thy Master pray'd,
When dread and anguish shook his frame;
Then met his sufferings undismay'd;
Wilt thou not strive to do the same?

O! think'st thou that his Father's love
Shone round him then with fainter rays
Than now, when, throned all height above,
Unceasing voices hymn his praise?

Go, sufferer! calmly meet the woes
Which God's own mercy bids thee bear;
Then, rising as thy Saviour rose,
Go! his eternal victory share.

Andrews Norton.

TO THE DAUGHTER OF A FRIEND.

I pray thee, by thy mother's face,
And by her look, and by her eye,
By every decent matron grace
That hover'd round the resting-place
Where thy young head did lie;
And by the voice that soothed thine ear,
The loving smile, the sigh, the tear,
That watch'd thy changeful mood,
By every holy word she taught,
By every blessing that she sought,
I pray thee to be good.

Is not the nestling, when it wakes,
Its eye upon the wood around,
And on its new-fledged pinions takes
Its taste of leaves, and boughs, and brakes—
Of motion, sight, and sound,—
Is it not like the parent? Then
Be like thy mother, child, and when
Thy wing is bold and strong,—
As pure and steady be thy sight,
As high and heavenly be thy flight,
As holy be thy song.

J. G. Brainard.

Lost Baggage.—Among the curiosities which the visitor may see for the asking in England, is the Lost Baggage Department of the Great Western Railroad, in Euston Square. In this depot may be found always every variety of articles, embracing the range of three kingdoms, animal, mineral and vegetable; poodle dogs, bedding, umbrellas, monkeys, French sole leather, trunks, canes, market-baskets, metallic cases, smuggled goods, green vegetables, despatches, &c., to the end of the catalogue. At stated times, whatever has laid unclaimed a certain number of months is sold at auction and the proceeds credited to lost baggage account, with full details. On the railroads in this country a similar department is becoming quite a distinguishing feature. Some of the larger companies are applying to their Legislatures for the right to dispose of these accumulations of stray baggage after the system pursued in Europe.

The New York and Erie Railroad have a depot for lost baggage at the foot of Duane street, New York city, to which all stray articles from their line are sent. The New York Central Railroad have their stray baggage depot at Rochester. To those who are not familiar with the incidents of travel, the amount of baggage and articles lost from the passenger trains by the occupants will seem almost incredible. This lost baggage depot at Rochester is two hundred feet long by seventy-five feet wide. The articles in it are so arranged that the marks upon them can be readily seen, and each style of article is placed together; the trunks in rows, each of similar colour and size, six or eight tiers in height, are arrayed around the sides of the hall and in parallel lines across. An officer of the company is constantly in attendance whose sole business it is to see to this charge. The average number of pieces of stray baggage always in this depot is about two thousand. People are continually applying for lost articles. Some ten thousand different pieces of passengers' baggage are restored to their owners every year from this road alone. Besides this general depot at Rochester, the local stations all along the line have more or less baggage in them awaiting claimants, which, after a certain number of days, if an owner is not found, such articles are forwarded to the general depot. Before stray baggage is put into position it is examined, and a full description of contents carefully recorded in books kept for the purpose, a copy of which is furnished to the company's travelling agent. This is a person who is constantly travelling on the railroad and steamboat routes everywhere in search of and to restore lost baggage. A convention of lost baggage agents from all parts of the United States is to meet at Rochester on the 20th, for the purpose of comparing their books, and facilitating the business of their departments.—*Boston Courier.*

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 396.)

JOHN HOMER.

Among the valuable ministering Friends belonging to Chesterfield Monthly Meeting, in the first settlement of that part of West Jersey, was John Homer. But no record has been preserved of his death.

SARAH DAVENPORT.

Sarah Davenport was also a minister of Chesterfield Monthly Meeting. She and her husband, Francis Davenport, had resided at Whittington, in Derbyshire, before coming to America, and had suffered much pecuniary loss from having meetings at their house. He was frequently employed in public business after their removal to West Jersey, and appears to have been a solid consistent Friend. Of Sarah and her labour in the ministry, there is but little account left on record. Her death took place, Fourth mo. 16, 1691.

JOHN WILFORD.

John Wilford, or, (as it is often printed in old documents,) John Wilsford, of Nether Broughton, in the vale of Belvoir, Leicestershire, was convinced of the Truth, soon after George Fox was commissioned to go forth and proclaim it throughout his native country. His marriage probably took place as early as 1660, and a few years afterwards we find him labouring in the ministry of the gospel.

What his occupation was we do not know, but we find that he soon had a flock of children growing around him, and that he was able to earn but a scant supply for their wants. In the year 1670, he was fined £20 for preaching, and when the officers of the law came to seize his goods to satisfy the fine, they found little upon his premises. His poor children, struck with sorrow at the sight, and fearing that the bread which was to satisfy their hunger, would be taken, began to cry out, "Father, will they take the loaf?" The scene proved too much for the officers; they were struck with compassion, trembled and wept, and after a time without taking anything, departed. This, however, would not pay the claim, and they returned, taking the cow, by which the poor children lost their supply of milk. All the goods they could find being insufficient to satisfy the claim, they made return of the warrant, declaring on oath, "*that they had not left him worth anything!*"

In the year 1673, he came out first as an author. His book bore for a title "The lying spirit, and false aspersions turned home again." The book was an Answer to a man, named Clement Needham, who had written two letters vindicating tithes.

John argues in reply to his Presbyterian opponent, that all tithes were done away in Christ; that the spirit which brought up tithes among those called Christians, was not a right spirit; and that the impropriator had less right to tithes than the poor had, or even the priest. He then adds a few words of warning to those who send their sons to universities to be made ministers of.

He concludes with the following letter to his antagonist:—

"C. Needham,—I find drawings in the bowels of love to write unto thee, and desire thee to employ thy wisdom, strength and precious time in and for the use and service of thy Creator, and against oppression that the poor groan under even as the children of Israel did under Pharaoh's taskmasters. Do not spend them in and for the use and service of the proud priests and impropriators, the beast and false prophet, except thou art able to prove they are of God, and their wages right according to His law, lest thou prove a servant to the devil; for he is the root from whence all evil springs. Thou canst not serve two masters.

If thou wilt persist in opposing the Truth, and the requirings of God's Spirit in the hearts of his people, be it known unto thee, that New Jerusalem which is coming down from God out of heaven, prepared as a bride adorned for her husband, (which thou writest against, and spendest thy precious time to oppose,) will prove a burdensome stone too heavy for thee to overturn.

Now it is in my heart to put thee in mind of thy unhandsome and unchristian-like dealings towards us. First, the time thou didst send thy letter to us, was when Friends of Clauson, where thou didst direct thy letter, were under suffering and grievous threatenings by John Reay, proprietor of the same town, whose envy was, and is, beyond the bounds of Christianity. Here thou seemest to add affliction to the afflicted, and to strengthen the hands of evil doers. Again, after thou hadst sent thy first letter, I sent one in love to thee; for the end that thy understanding might be opened to see the rise and ground of tithes, and what spirit brought them up, hoping a word to the wise might have been sufficient. Instead of accepting my love, thou vilified me with reviling words, as one that seemed to have neither common sense nor reason, and said, 'Thou wast unwilling that the nakedness of our pretence to Truth, should be exposed to censure through the ignorance, folly, and confidence of so weak a defendant.' Here thou didst manifest thy pride, as if thou scorned to meddle with me; much like Goliath, the Philistine, who defied Israel, and disdained David. Then (Thou) brought forth another monster more odious than the first,—and

we, being silent awhile, thou didst put them all in print; and for no other end, as I can see, but to render us odious to the whole nation, and to open a gap for further persecution.

After thy many arguments, and pleading papist laws, thou drawest thy conclusions,—'If ignorance will not, nothing else can excuse us before God, or man, from being more criminal than common notorious thieves.' Further, thou sayest, 'Malefactors do or may suffer death by law for stealing things of small account; but your robbery is of great value; and consequently the laws are very favourable towards you!' a sad consequence! Were ever such conclusions drawn against an innocent people? Truly, when I read them, I could but say, there is a snare laid for our lives. It brought to my remembrance the cruelty of New England persecutors. How just thy charge is, I hope, is or will in due time be manifest. From thy true friend,

JOHN WILFORD,

Who could be glad to see a persecuting Saul, become a preaching Paul."

Broughton, Eighth mo. 3, 1673.

He adds a postscript relative to the manner of treating his antagonist, and desires the reader to "consider C. N.'s wicked charge and unhandsome dealings towards me, and the rest of my Friends. Weigh them in the balance of equity, and then see if I could do any less than I have done; or, whether I have done any more than lay the load on the right horse. Further, consider, that notwithstanding Christ Jesus so loved the world as that he laid down his life for it, yet when the Jews rose up in envy against him, he told them how they had killed the prophets, and stoned them that were sent unto them. Mat. xxiii. Likewise, when the Jews rose up in envy against Peter, he told them how they crucified and slew the Lord of life. Acts ii. 3, 4. And Rev. xviii. 6, 7. 'Reward her, even as she rewarded you, double to her double, according to her works.' Some may say, 'Art thou pleading for a carnal weapon?' I answer, nay. The saints' weapons are not carnal, but spiritual. The Lamb's sword proceedeth out of his mouth. If any have an ear to hear, let him hear. Here is the wisdom and patience of saints. He that killeth with the sword, must with the sword be killed. So I leave, desiring every one to mind the light of Christ Jesus, which gives a true understanding of the mysteries of the kingdom."

In the year 1675, John Wilford with others, were concerned in preparing a book published with this title, "The continued cry of the oppressed for justice; being a further account of the late unjust and cruel proceedings of unreasonable men against the persons and estates of many of the people called Quakers, only for their peaceable meeting to worship God." In this work there is this certificate relative to the sufferings in Leicestershire.

"For a meeting at Long-Claxton or Clawson, four persons were sent to prison, and so much goods at divers times taken from some of the said meeting, that they had not a cow left to give the young children milk. Their very bed-clothes, working tools, and wearing clothes, escaped not the violence or avarice of the persecutors, who cruelly dragged some women in the streets by their necks, till they were near stifled, tearing the clothes off their heads and backs. One woman that gave suck was so beaten and bruised on her breast, that it festered and broke, with which she hath endured many weeks' misery and torture. Another woman, of seventy-five years of age, was violently thrown down upon the ground by one W. Guy, a constable. The men were sorely beaten, drawn and dragged out of the meeting, some by the heels, some by the hair of the head, and some so bruised, that they were not able to follow their day labour. Others they whipt on the face till the blood ran down. There was one they furiously trod upon, till the blood gushed out of his mouth and nose. To complete the matter, the informers took away from one of the prisoners his purse and money, as if he had not been a quiet neighbour, but a prisoner of war. Nor was this accidental, but design. No short fit of cruelty upon an extraordinary provocation, for at this bitter rate have they treated them for months."

This certificate is signed by John Wilford and four of his neighbours, and we can easily trace some of his own sufferings in the account, although names are not given. In the year 1676, John Wilford again came forth into print. His mind had been exercised for the well being of his Friends in religious communion, and he addressed them in "an epistle to the whole flock of God." Of this I have been unable to find a copy.

(To be continued.)

Agriculture in South Carolina.—According to the address issued by the Agricultural Convention, recently held at Columbia, S. C., agriculture is in a very backward condition in that State. We quote:

"Your Committee would earnestly bring to the attention of this Convention the mournful fact, that the interest heretofore taken by our citizens in agricultural improvement has become stationary; that our old fields are enlarging, our homesteads have been decreasing fearfully in numbers, and our energetic sons are annually seeking the rich and fertile lands of the Southwest, upon which they imagine that treble the amount of profits can be made upon capital than upon our own soils. Nor is this all. We are not only losing some of our most energetic and useful citizens to supply the bone and sinew of other States, but we are losing our *slave population*, which is the true wealth of the State. Our stocks of hogs, horses, mules, and cattle are diminishing in size and decreasing in number, and our purses are being strained for the last cent to supply their places from the Northwestern States."

[We may safely consider the above unexceptionable testimony in regard to the condition of agriculture, the leading industrial pursuit of South Carolina, and the one on which its prosperity mainly depends. The picture drawn is no doubt a truthful one, and the inquiry involuntarily arises, how far is this declining state of things owing to "the peculiar institution" to which our brethren of that State cling with such an infatuated grasp.]

For "The Friend."

Instruction in Nature.

Extracted from an Address recently delivered

BY M. F. MAURY.

When the spirit of God first moved on the face of the waters, the physical forces that produce the works of nature were brought into play. The wonders, the harmonies, and the beauties of creation, are but the display of these forces. As exhibited in the aspects of nature, they are never-ceasingly instructive. In the silent hours of night you may learn excellent lessons from them by watching the "hosts of heaven." I sometimes do this through the telescope; and of all the wonders and beauties that are revealed by this instrument, the simple passage of a star across the meridian is to me the most grand and imposing. At the dead of night, when the noise of the city is hushed in sleep, and all is still, I sometimes go over alone to the Observatory, to revel in this glorious spectacle. The assistants, wearied with watching, have retired to rest, and there is not a sound to be heard in the building, save the dead beat escapement of the clock, telling the footsteps of time in his ceaseless round. I take up the Ephemeris, and find, by calculation made years ago, that a star which will have never seen, will, when the hand of that clock points to a certain instant of time, enter the field of the telescope, flit across the meridian, and disappear. The instrument is set, and as the moment draws near, the stillness becomes more and more impressive. At last, I look—it is glorious! That pure, bright star, is marching through the field to the music of the spheres; and at the very instant predicted, even to the fraction of a second, it stalks across the wire, and is gone. The song that was sung by the morning stars has been *felt*, and the heart, swelling with emotions too deep for the organs of speech, almost bursts with the unutterable anthem.

The machinery by which the forces of the universe are regulated and controlled is exquisite. And if it be instructive to study the mechanism of a watch, or profitable to understand the principles of the steam engine, the contrivances of man's puny intellect, how much more profitable and instructive must it be to look out upon the broad face of nature, and study that machinery which was planned and arranged in the perfection of wisdom.

If you be at first a little skeptical as to this order and arrangement, taking the harmonies of nature for discord, you will soon feel satisfied that the machinery of the universe—that mechanism which gives nature her powers to act—is in all its parts the expression of one thought, as much so as the works of a watch are of one design; that the same hand which weighed the earth and gave gravitation its force, adjusted the fibres of the little snow-drop and proportioned their strength. The forces displayed in the blade of grass, in the wing of the bird, and in the flaming path of the comet, as it whirls around the sun, are all adjusted with equal nicety and care.

Chance has nothing to do with the works of nature; yet there are many of her operations which upon partial investigation only, do look like the results of accident. Botanists tell us of some. They say that certain plants have not the power of scattering their pollen; it is glutinous, and will not fly with the wind; but as the insects come to suck the flower, it adheres to them. These lighting on other blossoms, deposit it there in the right place for germination. Nay, students of these things go so far as to say, that the fig crop of Smyrna, which alone supports thousands of human beings, could not be brought forth if a certain little insect were to fail regularly, and at the right time, to perform certain offices for this plant. But are not insects as well as plants, agents and instruments of the Creator? Have they not their appointed offices to perform in the economy of the universe? And has the insect any more ability to resist the power of instinct than a good seed in good ground has to resist the forces of germination? On studying the works of nature, therefore, discard the idea that they are the result of chance or accident. In the mind of the truth-loving knowledge-seeking student, the coming of the gall fly in due season, to minister to the fig tree of Smyrna, and make it bear fruit for hungry thousands, is no more the work of chance, than it was by chance that the ravens carried bread and flesh in the morning, and bread and flesh in the evening to the prophet at the brook.

True meekness is not easily *offended*, but is easily *grieved*.

Letter of John Barclay.

To ———: May the blessing of heaven above, and of the earth beneath attend you and yours, the blessing which makes most truly rich, and adds thereto no sting of sorrow! This has been my secret petition in some of my best moments, when thinking of you, and surely I shall be excused for telling you so. There is *that* which crowns all other blessings, as you well know:—there is *that*, let the thoughtless, the unfeeling heart say what it may,) without which our very blessings are of no benefit to us, and every gift of Divine Providence and grace is liable to be perverted and abused, instead of being faithfully held in trust, and duly appreciated, and applied to the enduring good of ourselves, and of all with whom we have to do. This is nothing less than a sense of the presence, counsel, and aid of Him who giveth us all things richly to enjoy, and will graciously condescend to show us how we may use these things as not abusing them,—how we may no longer live to ourselves; but whether we eat or drink, or whatever we do, may do all to His glory. May this, my dear ———, be the first object in our eye, the very business of our lives, in all we undertake, in all we have to pass through. Then shall we not fail of that inheritance, which our dear Lord and Saviour purchased for us by his coming and by his death; then we shall be Christians indeed; and when our little moment of probation is over, then the eternal weight of unmingled joy and glory shall follow!

8th of Second mo. 1835.

Poisoning by Flavouring Extracts.—We would direct attention to the liability which exists—and which has several times proved a certainty—that the artificial extracts so extensively used in flavouring ice cream, custards and other confectionary, may occasion severe illness.

A case was reported to the Boston Society for Medical Improvement, in Fourth mo., 1854, (see American Journal of the Medical Sciences, Seventh mo., 1854,) by Dr. A. A. Hayes, the celebrated chemist, in which ice cream, flavoured with butyric acid ether, caused excessive sickness in several persons, and this, occurring just previous to the intended sending of the same confection to a festival, very properly led to the suppression of the article, and thus doubtless a vast deal of *discomfort* to the guests was avoided, to say nothing of probable danger. Chemical examination detected the above ether as the flavouring material, and the taste and odour of pine-apple was communicated to the cream. Dr. Hayes closed his remarks by the statement, "that a number of flavouring extracts, equally objectionable, are largely consumed by confectioners, as substitutes for the volatile oils, and cases of severe sickness and alarm are multiplied every season from the practice."

After the above report was read, another distinguished chemist of this city, Dr. John Bacon, remarked, that "the production of poisonous effects by the artificial flavouring extracts, which are now coming into general use, is a subject of practical importance, even if no more serious results should follow their use than sickness and vomiting, as occurred in the case reported by Dr. Hayes."

Dr. J. M. Warren said he had been called to a family in which seven persons had been more or less poisoned by custards largely flavoured with extract of vanilla, so termed—on analysis, nothing of a poisonous nature could be detected, yet, undoubtedly, the symptoms were referable to the said extract, which a cook, new to the family, had liberally used.

Dr. E. W. Townsend knew of instances in this city, of "illness caused, to all appearance, solely by the eating of what are termed 'acidulated drops,' and, particularly, of those known as 'banana drops;'" "he believed that one death, at least, in this city, during the last summer (1853) was to be ascribed to their use; and certainly several instances of apparent poisoning, declared by severe sickness at the stomach, &c." We believe that the "acidulated drops" have been *dropped*, pretty much; at least they are very rarely seen—but the artificial flavouring extracts are still in favour. Ought this to be so, when we every now and then hear, on good authority, of deleterious effects observed from their employment? If it be ever so convenient and profitable a method for flavouring the widely-consumed confections referred to, should it, for a moment, be tolerated, if once there is proof of a risk so incurred? In the report above alluded to, as made to the Society for Medical Improvement, Dr. Bacon stated that "the artificial extracts were first prominently brought forward at the London Exhibition, and were reported upon favourably by the chemists upon the jury (Dr. Hoffman and de la Rue,) as entirely safe substitutes for the volatile oils prepared from plants. It appears to have been assumed that the artificial products were identical in chemical composition, and in properties with the natural ones which they resemble in flavour, in which case there could be no objection to substituting less expensive modes of preparation. In some cases they are certainly not identical; and where any doubt exists, they should be used with great caution, until positively ascertained to be harmless in their action on the system. May it not often happen that wilful poisoning may be suspected, and even prosecutions instituted against persons entirely innocent, in cases where these questionable "extracts" have been used?—*Boston Medical Journal.*

Whatsoever divides man's heart from God, separates it from his neighbour; and he that loves self more than God, can never love his neighbour as himself. For, as the apostle said, If we do not love him whom we have seen, how can we love God whom we have not seen? Oh that we could see some men as eager to turn people to God, as they are to set them one against another. But indeed, those only have that pure and pious zeal, who are themselves turned to God, and have tasted the sweetness of that conversion which is to power, not form; to godliness, not gain. Such as these do bend their thoughts and pains, to appease, not increase, heats and animosities, to exhort people to *look at home*, sweep their *own* houses, and weed their *own* gardens. And in no age or time was there more need to set men at work in their own hearts, than this we live in, when so busy, wandering, envious a spirit prevails. For whatever some men may think, the disease of this kingdom is sin, impiety against God, and want of charity to men; and while this guilt is at our door, judgment can not be far off.—*W. Penn.*

Cause of Fires.—In an interesting paper on fires and fire insurance, published in the January number of the London Quarterly Review, it is asserted on the authority of —— Braidwood, as his belief, that by long exposure to heat, not much exceeding that of boiling water, or 212 degrees, timber is brought into such a condition that it will fire without the application of light. The time during which this dessication goes on, until it ends in spontaneous combustion, is, he thinks, from eight to ten years; so that a fire may be hatching on a man's premises during the whole of his lease, without making any sign. The small circulating pipes which convey hot water through a building, have been known to set fire to wood, even when the temperature of the water is not over 300 deg. Builders should inform themselves of these facts, and never place pipes conveying heated air or hot water near to the woodwork of the building.

1. By revelation we understand the discovery and illumination of the light and spirit of God relating to those things that properly and immediately concern the daily information and satisfaction of our souls, in the way of our duty to Him and our neighbour.

2. We renounce all fantastical and whimsical intoxications, or any pretence to the revelation of new matter in opposition to the ancient gospel declared by Christ Jesus and his Apostles: and therefore not the revelation of new things, but the renewed revelation of the eternal way of Truth.

3. This revelation is the life, virtue, condition and very soul of the gospel and second covenant.

4. None oppose this, but such as the god of this world hath blinded; and that through their ignorance of the spirituality of the evangelical dispensation, are whilst they pretend to be under it, sticklers for a more embondaged state than that of the ancient Jews.—*Penn.*

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to Eighth month 11th. Since the previous week, no warlike operations of moment had taken place. Omar Pacha had been appointed to the command of the Turkish army in Asia. The siege of Kars continued. Cholera has reappeared among the allied troops. The allies were demolishing the fortifications of Anapa, against the wishes of the Circassians. Gortschakoff's latest despatch from Sebastopol says, "The allies are pushing on their works under great difficulties, that the garrison is animated with the best spirit; there is nothing new in its situation." It is said that Spain and Portugal were about to join the alliance against Russia. It is confidently stated from Madrid, that on the 4th ult., the Spanish government decided to give formal adhesion to the Western Powers, and to send to the Crimea 25,000 men, to be paid and outfitted by England. The official Gazette denies this statement, while the Epoca and other journals as firmly maintain its truth, and add that the project will encounter great opposition in the Cortes. In return for this accession, Napoleon promises to put down all attempts against the throne of Isabella.

ITALY.—The Austrian army in Italy has been considerably increased. There are 44,000 men in Lombardy, and more than that number in the Venitian provinces. A seizure of arms was effected on the 28th of Seventh mo. at Rocco, by the police of Genoa, it having been ascertained that a fresh invasion of refugees was contemplated. The French government had made an energetic demand, that the Pope shall reform and secularize his government, with the view of remedying the present state of disorganization in the territories of the church. The Pope has excommunicated the King and Ministers of Sardinia, on account of the recent confiscation of church property, and has had a sharp correspondence with Zavala, the Spanish Minister of Foreign Affairs, upon the same subject. An awful explosion at Naples, occurred in the Castle of Nuovo, where percussion caps are made, on the 20th of Seventh mo. The entire building was blown up, and it is said that at least two hundred persons have been buried in the *debris*. Fearing that another revolution had broken out, the soldiers rushed to arms, whilst the inhabitants, imagining that an earthquake had happened, ran about in a frantic condition.

HANOVER.—The King has abolished the constitution granted in 1848, and the ministers have been directed by royal proclamation to reinstate the aristocracy in their former rights.

RUSSIA.—The war and consequent blockade of the Russian ports have had a serious effect upon the commerce and manufactures of the Empire. Various measures have been proposed in order to mitigate the evil. Treaties of commerce with Prussia and Austria are said to be in contemplation, in order to favour importation into Russia from Germany, together with changes in the custom's system, now in force, on the western frontier. There are now no large bodies of Russian troops in Poland. The cholera was in St. Petersburg, but did not prevail extensively. There were 283 cases on the 24th of Seventh mo. Mercantile letters from St. Petersburg state that business goes on quietly on a reduced scale, and that the exchanges are steady, and the funds well supported. Nothing can be gained from these letters as to the state of opinion on the war.

FRANCE.—On the 14th, the correctional tribunals condemned fifty-five persons to imprisonment for periods of five years, and under, for their participation in the proceedings of secret republican societies. The elections in France are almost everywhere characterized by the profound indifference which the electors have evinced ever since the re-establishment of the empire. Gen. Canrobert is expected in France. He is said to be suffering from the effects of an old wound. The Emperor ordered him to resign, and he has given up his division to Gen. McMahon. An Imperial decree in the Moniteur applies to the army before Sebastopol the law which permits the troops out of Europe to count their services as two years for one.

GREAT BRITAIN.—The business of Parliament for the week had been of a hurried and miscellaneous character. Lord John Russell had made a speech on the prospects of the war and other topics, indicating his desire for an early peace. When the subject of Indian affairs was before the house, John Bright denounced with just indignation the practice of torture in India, which, it appears, is still practised by the native administrators of the law. *Commercial.*—The cotton market was steady, and prices unchanged. Sales of the week, 38,000 bales. Breadstuffs, with the exception of corn, were declining in price. Iron was in active demand, and prices advancing. Consols remained at 91.

PERSIA.—Statements had reached England to the effect that the Persian government has suppressed the public schools for Protestants formed in that country, and that Russian influence had instigated the suppression.

MEXICO.—A despatch from New Orleans, dated Eighth mo. 25th, states the arrival of the steamer Orizaba, with dates from Vera Cruz to the 22d. The important announcement is given that *Santa Anna had abdicated*, and left the country. He embarked on the 17th of Eighth mo., at Vera Cruz, for Havana. The Alvarez platform has been adopted. General Carre is provisional President of Mexico, and La Vega commander-in-chief of the army. All the state prisoners had been liberated.

UNITED STATES.—*The Crops.*—In Alabama, the crops of corn and wheat are said to be unusually large; cotton good. Georgia, the largest wheat and corn crop ever known; cotton promising. Louisiana, an average yield, drought having somewhat affected the crops. Texas, corn and wheat abundant. Mississippi, corn and cotton very promising; wheat abundant. Florida, a heavy yield of all kinds. Tennessee, 20 per cent. over an average in all the grain crops. Kentucky, largely over an average of all kinds of crops. Indiana, grain better than ever before known. Missouri, the same report. Ohio, only an average yield. In North Carolina, Iowa and Wisconsin, the prospects of an abundant harvest were never known to be so good. In Illinois and Michigan, an abundant yield of every description of produce. In Maryland, nearly all parts of the State have produced well, including tobacco, fruit and hay. Virginia, an average crop of wheat; potatoes and fruit in great abundance. The New York Courier and Enquirer has an elaborate article on the wheat crop of 1855. The total product is estimated by this paper at 175 millions of bushels, which, it is thought, will leave a large surplus for exportation. The yield of the three States of Ohio, Indiana and Illinois, is computed at 48,000,000 bushels.

Exports of Breadstuffs and Provisions, from the United States to foreign countries, for each fiscal year, from 1846 to 1854, viz:

Years.	Value.	Years.	Value.
1846 .	$27,701,121	1851 .	$21,948,651
1847 .	68,701,921	1852 .	25,857,027
1848 .	37,472,751	1853 .	32,985,322
1849 .	38,155,507	1854 .	65,901,240
1850 .	26,051,373		

Lawless Invasion of Mexico.—Late advices from Texas seem to leave no doubt, that a military force has been organized in that State, with the design of aiding in the establishment in Northern Mexico of a government, favourable to the interests of Texas. The frequent escapes of slaves from Texas into Mexico, has been long complained of by the Texan settlers.

Yellow Fever.—At the last accounts, there did not seem to be any abatement of this disease in New Orleans, and Norfolk and its vicinity. The number of deaths from fever in the Charity Hospital, New Orleans, during the last week, was 128.

New York.—According to the census recently taken, this city has 624,179 inhabitants. In 1850, the number was 515,545; increase in five years, 108,634. Mortality last week, 585, only 111 of whom were adults.

Philadelphia.—Mortality last week, 291.

California.—The steamship George Law arrived at New York on the 25th ult., with the California mails of Eighth mo. 1st, 442 passengers, and $1,285,616 in gold. A line of telegraph has been constructed between Aspinwall and Panama, and is now in successful operation. The health of the Isthmus is good. There has been but little rain, and the railroad is in excellent condition. In San Francisco, the affairs of the broken bankers, and the settlement of their affairs, were still prominent subjects of attention. There were charges of fraud on all sides, quarrels, and seemingly interminable difficulties.

Oregon.—Oregon papers to Seventh mo. 21st, had been received at San Francisco. They contain glorious accounts of gold and lead mines. The editor of the Standard remarks, that "farmers act unwisely in selling out their fields of grain at great sacrifice, and going to the mines." Several hundred persons had crossed the Cascades, within a few days, on their way to the mines. At the Colville gold mines, extensive veins of lead had been found, which produced 85 per cent. pure metal. Coal, in great abundance, had been found near the line dividing the British possessions from the old boundary line of Oregon. A Catholic missionary reports that this coal is far superior to any he had seen on the coast.

Miscellaneous.—Reduction of Freight on Grain.—The Pennsylvania Central Railroad now delivers grain in sacks from Pittsburg, in Philadelphia and Baltimore, at thirty-three and a third cents per one hundred pounds —sacks returned free of charge.

Elements of Mormonism.—Of 3626 Mormon emigrants for the Salt Lake, shipped from Liverpool, from the 27th of Eleventh month, 1854, to the 26th of Fourth month, 1855, there were 2231 English, 409 Danes, 401 Scots, 344 Welsh, 75 French, 71 Swedes, 53 Norwegians, 28 Irish, 15 Swiss, 15 Piedmontese, 13 Germans, and 1 Prussian.

Second Growth of Wheat.—On some lots near this town (says the Winchester Virginian) may be seen the unusual spectacle of a second growth of wheat, from the stubble of the gathered crop. Some stalks shown to us were between one and two feet high, and exhibited imperfectly formed heads of about half the common size.

Something New.—An undertaking has been started, under respectable auspices, called the British Slag Company, with a view of carrying out a method patented by Dr. W. H. Smith, of Philadelphia, for converting the slag, or refuse of iron works, into an indestructible material capable of being applied to the various common uses for which stone or marble is at present employed. The capital of the company is fixed at £120,000, in £5 shares.

Algerian Tobacco.—The culture of tobacco is extending in Algiers. The portion of last season's crop purchased by the French government, amounted to 9,086,000 pounds, at a cost of 3,923,000 francs. The extent of ground under cultivation is about 9270 acres, and the total production about 10,000,000 pounds.

Corn in Kentucky.—The corn is said to be superabundant in Scott county, Ky., and contracts are being made at *fifteen cents* per bushel.

Reaping Machines.—At the Industrial Fair in Paris, a trial has taken place in which the American machines carried off the palm from the English and French machines. Much interest had been excited in them, and their general introduction in France was anticipated.

Quick Work.—A late paper says, J. Hall, of Piqua, Ohio, purchased, at Woodstock, forty miles east of that place, on Fourth-day morning, 132 bushels of wheat, in the sheaf. It was threshed, cleaned and sent that afternoon to the mills, manufactured into flour, (A. No. 1,) that night, and shipped to the cars by 5 o'clock on Fifth-day morning, and at 10 o'clock was at Columbus, and sold from the platform on delivery.

The Rice Crop.—The Southern journals represent that the rice crops are unusually flourishing, and that the indications promise more than an average yield for this season.

WEST-TOWN BOARDING-SCHOOL.

The Winter Session of the School will commence o Second-day, the 5th of Eleventh month next. In ord to avoid disappointment in case the School should b full, members of Philadelphia Yearly Meeting inten ing to send children, will please make immediate appl cation for their admission to Joseph Snowdon, Supe intendent at the School, or Joseph Scattergood, Trea surer, No. 84 Arch street, Philadelphia. Those livin out of the limits of Philadelphia Yearly Meeting, wh have or may apply for the admission of children, wi be informed after the 15th of this month, whether the can be admitted.

Ninth mo. 1, 1855.

The Moral Almanac for 1856 is received, and for sal at Friends' Bookstore, 84 Arch street.

Philad., Eighth mo. 20, 1855.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in thi Institution.

Application may be made to either of the undersigned members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS, } Philada.
SAMUEL BETTLE, Jr. }

Evening Schools for Adult Coloured Persons.

Wanted, A Principal and three Assistant Teacher for the Men's School, and a Principal and four Assistants for the Women's School.

Application may be made to either of the undersigned.

JOHN C. ALLEN, No. 179 S. Fifth St.
SAMUEL ALLEN, No. 134 S. Front St.
WILLIAM L. EDWARDS, No. 37 Arch St.

DIED, at Ledyard, Cayuga county, N. Y., on the 16th of Sixth month last, JOSEPH M. CHASE; aged 55 years. He was very patient during his illness, which was of several weeks' duration, and was earnestly concerned to know an entire preparation for the change which awaited him; often praising the Lord for His goodness, and supplicating for the continuance of Divine regard and merciful help. His close was in great sweetness and quietness of mind, under a full belief that his peace was made, and that it would be well with him. He left an excellent savour amongst his Friends and neighbours.

——, at his residence in Hockessin, on the 11th of Eighth month, in the 81st year of his age, ISAAC PYLE; an overseer and elder of Kennett Monthly Meeting. He bore his last illness with patience and resignation, feeling it to be, as he said, "a great comfort" to have an anchor to the soul at that solemn time. Hockessin Meeting had been held at his dwelling for many months, previous to his death, and at the last Preparative Meeting, he spoke encouragingly on the Queries, acknowledging that he felt among them an increase of love and unity. On one occasion, being tried with feelings of apparent desertion, the declaration of the Most High by the prophet was quoted,—"For a small moment have I forsaken thee, but with great mercy will I gather thee," and he was reminded that the faithful servant was not to look for his reward until the work was accomplished. The next morning he gratefully acknowledged, "All is quiet! What a favour! -Nothing wanted, only to go home." And again, "All is right! All is right! The clouds have passed away, and all is serene." The day before his death, expecting that his close was near, he took an affectionate farewell of his family. A Friend coming in afterwards, he said, "'The spirit and the bride say, Come, and let him that heareth say, Come, and let him that is athirst come, and whosoever will, let him take of the water of life freely.' What a favour! what a favour!" He continued evidently favoured with the Divine presence, until he passed away. "Blessed are the dead who die in the Lord."

——, on the 20th ult., after a short illness, KEZIA, wife of William P. Bedell; a member of Linn Preparative and Red Cedar Monthly Meeting, Iowa. She was of a meek and forgiving spirit, and was concerned for the support of our principles and testimonies in their ancient purity. We believe her lamp was trimmed, and her light burning, and she prepared for that abode where the wicked cease from troubling, and the weary are at rest.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any rt of the United States, for three months, if paid in vance, six and a-half cents.

From the Edinburgh Review.

The Land of Silence.

(Continued from page 401.)

It is beyond doubt that 'the ingenious Dr. 'allis,' who corresponded with Robert Boyle, and as Professor of Mathematics at Oxford in the year 653,—who also published a 'Treatise on Words r of the Formation of Sounds,' most disingenu-sly plundered his predecessor Dalgarno of much hat afterwards brought fame to himself. . . . 'allis was also in communication with Sir Kenelm igby, and from him most probably, if not cer-inly, obtained much of that information concern-g Bonet's success in Spain, which Bulwer had ncorporated in the 15th chapter of 'Philocophus.' o that we are inclined to regard the learned Doc-or simply as having taken some pains to systema-se what had already been achieved by his prede-essors. His two objects, he says in his letter to oyle, are 'to teach a person who cannot hear to ronounce the sound of words, and to understand language, and know the signification of those ords *spoken* or *written*, whereby he may express is own sense and understand the thoughts of thers.' His pupil, Daniel Whalley, was exhib-ed before the Royal Society in 1662, and proved hat at least in one instance the Doctor's plan had artly succeeded. However successful a teacher, is public works on the subject are marked by dull-ess of expression and penury of original thought. rance, who has since that period laboured so de-otedly and successfully in this art, was the last mong the enlightened nations to commence its tudy, about the middle of the 18th century. M. ereire, the first whose system was deemed worthy f Parisian discussion, kept his plans so profoundly ecret, that even at the present time little is clear-y known concerning them. But of their apparent esults no doubt appears to have existed. His upils are said (in a Report of a Committee of the cademy of Sciences) to have been capable of un-erstanding what was said to them, whether by igns or by writing: they could read and pronounce istinctly all sorts of French expressions; they ave very sensible replies to all questions proposed o them; they understood grammar and its appli-ations; they knew the rules of arithmetic, and ould perform exercises in geography: and it ap-eared that M. Pereire had given them, with speech, he faculty of acquiring abstract ideas. In short, f this account be true, M. Pereire's pupils, though eaf-mutes, were, on the whole, possessed of a etter education and higher intellectual power than any persons in their own station of life, in pos-ession of the full complement of senses! And yet, since those days, the nations of Europe have not retrograded either in physical or intellectual development. The modes of instruction for articulate-speaking men remain more or less the same; or if changed, are changed for the better. For one person in the lower or even middle class of life, who could in that day think, utter his own thoughts, and act for himself, we have at least ten in this busy, spirit-rapping, biological 19th century. And we have good ground for believing that the deaf and dumb, the blind, and every other isolated section of humanity, have shared—at least to some extent—in the increase of knowledge and enlargement of the domain of intellect. However zealous the labours of M. Pereire; however unwearied his industry, or great his talents, no 'laudator temporis acti' need now search in vain among our teachers of deaf and dumb, for equal industry, talents as great and brilliant, labours as unwearied. They are to be found in the Old Kent Road, London, and in Yorkshire; from Liverpool to Edinburgh, from Exeter to the mouth of the Clyde. We believe, therefore, that whatever M. Pereire achieved for his pupils, far more has since been done for pupils of like powers and capabilities in sure intellectual cultivation and progress. The general principles of his method were articulation, reading from the lips, and the manual alphabet, and *Syllabic Dactylology, i. e.*, digital signs not representing *single letters*, as in the ordinary deaf and dumb alphabet, but each one an *entire syllable*. By this last means a rapid communication may perhaps be maintained between teacher and disciple, and an acquaintance with the words of a language be more readily acquired, so far at least as their appearance to the eye is concerned. But it must not be forgotten that to be of real value the acquisition of mere words in this way is but the last link in the chain, and presupposes the first and most difficult steps in intellectual education to have been already achieved; for of what use is it to enable a deaf-mute to utter words of the meaning of which he is but remotely and vaguely sensible? But how to make the deaf mute thus conscious or thus sensible of the power of language, or of the manner in which he achieved this, Pereire tells us nothing. A great writer remarks that although it may be possible for the deaf mute to imitate sounds by imitating organic modifications on which it depends, 'there still in reality exists no sound for the deaf; that the signs to which they attach ideas are only perceptions of *sight* and *feeling*; that these on the one hand are minute, ambiguous, and fugitive, and on the other difficult; and that it would be far better to associate thought with a system of signs more easy to produce, and less liable to be mistaken.' Upon the important question involved in the latter part of this assertion—whether the deaf-mute shall be chiefly taught by a system of articulation and reading on the lips, or of arbitrary signs as adopted by the 'immortal Abbé, the highest authorities are still divided. The distinction between the two plans, in fact, forms the line on either side of which all the systems naturally group themselves. At the head of the one clearly stand Dalgarno the Scot, and the Abbé; at the head of the other is Petrus Pontius, the Benedictine.

'Of late years,' says M. Baker, 'artificial articulation, with or without the exercise of reading from the lips of a speaker, has come into almost general favour in the institutions for the deaf. At the London Asylum, it has always occupied a prominent place, and at the Royal Parisian Institution; it is also employed at Groningen, Gudensberg, Quedlingbourgh, Breslau, Gmünd, Zurich, Sleswig, Leipsic, and Munich;' but in most of the provincial establishments in England speech has *not* been made (wisely we think) an object of exclusive importance. By *artificial articulation* we suppose is meant the power of reading from the lips of another inaudible words, and of replying to them by such gestures of the vocal organs as would in an ordinary case produce audible speech, and in the deaf-mute's case, do actually produce what we must call a good imitation of it. The possession of this faculty of course includes in it such a knowledge of words as admits of the pupil's writing down his answer instead of merely pantomiming its utterance.

If this definition be correct, we can conceive nothing in the whole education of the deaf-mute of more vital importance, not so much *as an end, as a means*. We are, therefore, surprised to find that in most of the English Institutions its importance is not more fully acknowledged and acted on. We are told that the great objection is its demanding more than a due share of time. We can imagine no time to be so well or so fruitfully spent on any other subject; not only as the test of knowledge already acquired, but as the surest means of acquiring new information. Without a doubt a system of signs, whether purely arbitrary, natural, or conventional, possesses some advantages over the slower mode of articulation in ordinary language. But it must never be forgotten that in the education of the deaf-mute every substitution of a gesture or sign for vocal utterance of that language by which the rest of the world communicate with each other, is a step in the wrong direction. Every such step tends to render the isolation of the deaf and dumb more complete, and to remove them still further from the common sympathies of men; to render them more and more a peculiar people, and to make them forget that they still live in a world of *speaking, hearing* men, and are still sharers in all their privileges, rights, and feelings. Every step in this direction tends to lower them to the rank of mere animals, with whom rational beings gifted with speech are wont to communicate by signs and gesticulations. As in the case of the blind, we strongly urge the necessity of binding them by every available link to their fellow men, *as far as may be*, by subjects of instruction common to all learners, in the very language and in the very words in use for other purposes. If the blind or the deaf-mutes of England are to become an *educated* class, in however restricted a sense of the word, it will not be achieved by cutting them off as utterly distinct and different from the rest of humanity; but rather by infusing fresh life and strength into every tie and every connexion which yet remains between us and them.

'After any pupil,' says M. Watson, 'with ordinary intellect has acquired the use of written and spoken langaage, he should have frequent inter-

course with those who can only communicate with him in the language which he has recently, and as yet, imperfectly acquired. This language will then be daily increased and improved by such intercourse; whereas should he unfortunately be again thrown among his own class (deaf and dumb,) he will naturally revert to his rude gestures and mimic forms, perfectly incomprehensible to the uninitiated, and wholly useless as a general means of communication.' If, indeed, the deaf and dumb are to be considered as a degraded class, not fitted for intercourse with their more fortunate fellow creatures, then their complete isolation by every possible means, and entire exclusion from general society, might be considered an act of mercy. But in common justice, and common charity, they cannot be thus considered. It is true, without doubt, that by the total want of hearing, *high intellectual culture* is in almost all cases seriously if not entirely impeded. But every deaf-mute who leaves the school, after average training, and average acquaintance with written and spoken language, has at least eyes, hands, and sagacity; he can learn a trade by being shown what to do, as other apprentices are. Why, then, should he be condemned to talk to his master by signs like a monkey, or merely to gesticulate as an Indian savage? Will not such a course infallibly drive him back from that position in the social scale which it was one chief object of his education to enable him to attain, into his former state of ignorance and degradation? His stock of words may be comparatively small, but still sufficient for the ordinary purpose of every-day life and conversation. If he has few words at command, and knows well how to use them, the chances are that by constant intercourse he will add to their number, and every word thus gained will become a germ of new thoughts and ideas, a seed and centre of renewed life.

(To be continued.)

For "The Friend."

Not Sayers, but Doers.

The following epistle of George Fox written in 1652, early after he began to travel in the work of the ministry, and had been instrumental in gathering others to the Truth, shows the clearness of his views on the spiritual practical nature of true religion, and the preserving power of the Spirit of Christ out of all extremes, and the liberties which are creaturely, which, if given way to, unsettle those who may have once known the blessed Truth. "To all my dear brethren, whom the God of power hath enlightened with his eternal light, and discovered unto you his way of Truth, and brought you out of the dark ways, wherein ye have walked; which dark ways all the world walks in; but where the pure light of God is witnessed, it guides to himself. The light is but one, which leads out of darkness, and the dark world, into the world which is without end. Therefore, all Friends and brethren in the eternal Truth of God, walk in it up to God, and be not sayers only, nor backsliders; for the backslider is a sayer and not a doer, and there ariseth ambition, pride, and presumption out of that nature. But dwell in the pure light, which God hath made manifest to you in your understanding, and turn your minds to him, and walk as children of the light, and of the day, and be not drunken in anything, nor run to extremes in anything, but be moderate and patient. Wait for the presence of the great God, and our Lord and Saviour Jesus Christ; and be not so childish, as to be tossed with men's words without life. Run not out after others' liberties, which they have got into their notions; for thou that dost so will not abide in the Truth, and so thou mayest come to be shaken and to shake others who look at words. Wait every one in particular, in the measure that God hath given you, upon God, in the fear of God; then your hearts will be kept clean; and this is the sure way. All wait to have the Son made manifest in you, and the Son alone to make you free in yourselves; and all that are made free by the Son, are one. But the first nature that would have liberty, must go into captivity, which they that live in their carnal reasoning, seek freedom for; but here is man deceived in his first birth.

"But ye all in whom the immortal seed is brought to light, who are raised up to sit in heavenly places in Christ Jesus, and are become children of the day, walk as children of the day and of the light, and let your light so shine before men, that they may glorify your Father which is in heaven. All loving the light, ye love the one thing which gathers your hearts together to the Fountain of light and life; and walking in it, ye have unity one with another, and the blood of Jesus Christ cleanseth you from all sin. The knowledge of the letter, which you formerly got into your notions and comprehensions, the dark mind gave dark meanings to it, and so kept you in the broad way. But now, all wait to have the same Spirit manifested in your understandings, which was in them that gave forth the Scriptures, who were come out of the broad way—holy men of God, who had escaped the pollutions of the world. If every particular of you know not a principle within, which is of God, to guide you to wait upon God, ye are still in your own knowledge, which is brutish and sensual; but waiting upon God in that which is of God, ye are kept open to receive the teachings of God. The pure wisdom and knowledge is that which comes from above, which is to know God, and Jesus Christ, the way which is hid from the world; and to walk out of your own ways and your own thoughts. Dwelling in that which is pure up to God, it commands your own reason to keep silent, and to cast your own thoughts out, and dwelling in that which is pure, it discovereth all this. So dwelling in the Spirit, it keeps all your hearts to God; to whom be all praise, honour and glory forever."—*G. F.*

Eruptions of Vesuvius.—The late eruptions of Vesuvius have recalled attention to the somewhat curious history of that volcano. To the ancients up to the first century of the Christian era, it was not known in its peculiar character. Apart from a few close observers, among whom Strabo, the geographer, who was one, and who recognized an analogy between its structure and other volcanoes, it was not supposed to differ from ordinary mountains. Luxuriant fields stretched almost to its summit, villages were scattered about its flanks, and two populous cities, Herculaneum and Pompeii, reposed at its base. But in the year A. D. 63, an earthquake visited the region, and for the next sixteen years slight shocks were frequent. At last, A. D. 79, the mountain opened, and a violent eruption took place. Herculaneum and Pompeii were both buried, not by lava, as is popularly supposed, nor even of showers of ashes alone, but by volcanic mud, which flowed into the cellars and beneath roofs, where ashes alone could never have penetrated. In the case of Herculaneum, which is the more exposed of the two cities, lava was subsequently added from other eruptions, till the town was buried more than a hundred feet below the surface.

From this time, up to A. D. 1036, history records seven eruptions. Thirteen years subsequently another eruption occurred, and A. D. 1138 another, after which the mountain was quiet for a hundred and sixty-eight years. Between this a A. D. 1631, there was but one eruption. All these had been comparatively slight. At la after having been harmless again for nearly f hundred years, Vesuvius, A. D. 1631, belched fo such streams of fire, mud and lava, that the s rounding region was almost reduced to a dese and from that time to the present, the mount has been in nearly constant activity, an eruptio taking place every ten years on an average. T most destructive agent in these eruptions has variably been the volcanic mud. Immense qu tities of vapour, or strictly speaking, steam, r from the vents of a volcano during an eruptic and being rapidly condensed, bring on tremendo rains, which, mixing with the ashes, descends torrents of mud, overwhelming vineyards, villag and even cities. It was in this material that t cast of a woman, bearing an infant, was ov whelmed in Pompeii; the tuff, as it is scientifica called, having hardened, and retained the impr sion of her form.

Persons unaccustomed to volcanic regions f quently express astonishment at what they call t foolhardiness of those who inhabit such localiti But the risk is less than is supposed. Such d tricts enjoy a remarkable immunity from epidemi and even from the ordinary diseases which short human life, so that it is doubtful whether, on t average, the chances of a protracted existence a not greater there than in most other places. I sides, the peril of living near a volcano is remo not certain; and each generation, as well as in vidual, indulges the hope of exemption from t threatened danger. To put an every-day illustr tion, there is as much risk in railroad-travelli as in cultivating fields on the flank of a volcan yet there are but few who decline a journey fr fear of the cars. The soil around volcanoes always eminently rich. Sir Charles Lyell sa that the sloping sides of Vesuvius, and even t hills and plains within reach of its ejected matte sustain twenty times the population that cou have found sustenance on the same area, if t original limestone of the district had remained u covered by volcanic soil.

Vesuvius is the safety-valve of Italy. Witho it, earthquakes would be far more frequent, an loss of life, besides changes in the structure of t country, would be vastly increased. The volca gives vent to the pent-up internal fires, and th secures, at little risk, the fertility and safety Italy.—*Ledger.*

For "The Friend."

Providential and Maternal Care.

(Continued from page 403.)

"This opened my way," B. Bangs says, "to fa ther service; I began to be concerned to appear public, and there was a tender care in the elders ov me, who would often be dropping some seasonab cautions to me, by which I was greatly benefite After my four years' service was accomplished, quitted myself thereof, and a Friend being incline to set up in the like business in the same stree he requested me to be an assistant to him, whic I complied with, but it continued not long; for felt drawings in my mind to visit some meetings Hertfordshire." From thence B. Bangs went Somersetshire and Dorsetshire, and to Ringwoo in Hampshire, where he had several meetings, an four or five young people were convinced of th Truth. Passing to Southampton, and to the Is of Wight, he found it his place to return to Rin wood, where Friends and the newly convince young people, very gladly received him. He he had another meeting, when it opened upon h mind to go to Leamington, where there were fe

'riends; but a meeting being appointed, several went with him, and a considerable company of the town's people came, some of whom were baptists. 'After a pretty time of silence,' he states, "I stood up and began to speak, and the priest of the town came in with two young men. He sat down just before me, staid the meeting till I had done, and then said to me, 'What you have said are good and wholesome words, and good for edification. But you talk of the teachings of the Spirit of God; how shall we come by the Spirit of God?' I said, 'What art thou?' He answered, 'I am a minister of the gospel.' 'What,' said I, 'a minister of the gospel, and ask, how we shall come by the Spirit of God? He that hath not the Spirit of Christ, is none of his; and as many as are led by the Spirit of God, they are the sons of God.' 'Why, that is Scripture,' said he. 'Well, you say that you may live here without sin.' 'Didst thou hear me say so,' said I. 'No,' replied he, 'but I have a little book in my study that does say, That men may attain to a sinless state on this side the grave.' I queried of him, who wrote that book? 'Why,' said he, 'one of your Quakers; I think his name is Whitehead.' 'What doctrine,' said I, 'dost thou preach to the people? Is it to continue in, or to come out of sin.' He answered, 'To come out of sin; but to attain to a state of sinless perfection is impossible, for all our righteousness is as filthy rags.' 'But I hope,' said I, 'that thou wilt not say, that the righteousness of God is as filthy rags.' 'No,' says he, 'God forbid I should say so; but in many things we all sin.' 'That,' replied I, 'is for want of coming to the one thing needful.' 'People,' says he, 'we never read of the one thing needful in all our lives.' 'Didst thou never read,' said I, 'that Christ told Martha, she was cumbered in much serving, but Mary had chosen that good part, the one thing needful, that should not be taken from her?' 'Why,' said he, 'that is Scripture too; I had forgotten it.' 'Well, but,' said he, 'Paul cried out, Oh, wretched man that I am; are you better than Paul?' 'Dost thou believe,' said I, 'that Paul was a sinner, and a wretched one too, when he wrote that evangelical epistle to the Romans? Or that he could be so in his writing the 24th verse of the seventh chapter, when in the next verse, but one, he says, There is, therefore, now no condemnation to them which are in Christ Jesus, who walk not after the flesh, but after the Spirit? For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death?' 'That is Scripture,' said he.

"After he had sat a little while, 'Now,' says he, 'I have something come into my mind; I think God has brought it to me,—He that saith he hath no sin, deceiveth himself, and the truth is not in him.' He then made a flourish, saying, 'I have you fast now; I care not for you, nor all the Quakers in England.' I replied, 'Thou art an old man; I am very sorry to find that thou takes upon thee to plead so much for the devil's kingdom.' 'I tell you,' said he, 'I don't plead for the devil's kingdom.' 'Why,' said I, 'thou pleads for nothing but sin; and all sin being of the devil, and thou pleading for nothing but sin, must consequently be a pleader for the devil.' 'This,' said he, 'is only a digression from the matter; I have you fast; you can never answer me.' 'Didst thou ever read the verse before that?' said I. 'Yes,' said he, 'I believe I have, but I have forgot it. What is it?' 'Why, it is this; If we walk in the light as He is in the light, we have fellowship one with another, and the blood of Jesus Christ his Son cleanseth us from all sin. But if we walk not in the light, we lose the benefit of the blood of Christ. If any should then say he hath no sin, he deceiveth himself, and the truth is not in him. The next verse is, If we confess our sins, he is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness. If after this any should say, We have not sinned, we make him a liar, and his word is not in us. Be not deceived, he that doth righteousness is righteous, even as he is righteous. He that is born of God sinneth not, neither indeed can he, for his Seed remaineth in him, and he cannot sin, because he is born of God. But he that committeth sin is of the devil.' I said to the priest, 'Art not thou now ashamed to plead so much for sin, which is of the devil's kingdom?' I further queried of him, 'Dost thou take money for preaching such doctrine as this, preaching up the necessity of sinning to the people, when they do that too much without thy encouraging them?' Upon which he got up and said, 'Well, I will be gone,' but I desired him to stay, and I would prove him to be a deceiver before the people present. He answered, 'I will not stay upon your demand.' So, away he went, after which the people settled, and we had a good opportunity, and parted in peace."

Here is a specimen of some of the teachers of that day, and the doctrine which they taught. In the first place, he appeared to question the Spirit of God being given to every man to profit withal, in working out his salvation; and in the second, denies the possibility of man's being made free from sin, and consequently pleads for his being a sinner to the end of life. Are there not many professors of religion, who practically hold the same sentiments in this day? Do they believe in and submit to the immediate teaching of the Holy Spirit in their hearts? Do they take up their cross daily, deny themselves, and the temptations of Satan, and follow Christ as he appears in them? If they do, they will be led by him out of all sin, into perfect victory over the devil and all his temptations, and thus be made complete in Christ, who is the Head of all principality and power.

Benjamin Bangs returned to Ringwood that night; from whence after a short stay, he proceeded towards London, having comfortable meetings at Portsmouth, and on his way to this city. In the course of a few days, he and William Bingley went into Kent, and were at the Quarterly Meeting in that county, which was pretty large, and the business managed with much calmness and wisdom. They had appointed meetings on their way to Worminghurst in Sussex, the seat of William Penn, where they staid a night or two, and then parted, Benjamin returning to London. Finding his health much impaired, and being drawn to visit Norwich, he set out, held some meetings on the way, and reached it in a better state of health than on leaving London. Here he was received by his dear mother with a great deal of joy, not having seen each other for several years. He says, "The first meeting I was at there, was indeed a very tendering opportunity, the hearts of many being greatly affected. I found it now to be my place to take my abode there; and in a short time, a great many of the younger people frequented the meeting, and several were convinced; several Friends also had their mouths opened in testimony, who grew to be very serviceable in their generation." In the year 1677, he left home on a religious visit to the north, took meetings in Lincolnshire until he came to Brigg, where he was taken ill with a fever, so that his life was despaired of. George Whitehead being in the country, and hearing of his sickness, went to see him, which he took very kindly. His fever was not then at its height, yet he says, "through the goodness of God, I recovered sooner than could have been expected." He travelled again until he reached his home at Norwich, having many favoured meetings. The ague continued several months, and he grew so weak many despaired of his recovery. In the following spring he recruited so as to be able to visit some neighbouring meetings. "When at home," he says, "I was not idle, but worked at my trade very diligently, and was also a constant frequenter of our First-day and week-day meetings."

"Although things had been at a low ebb for several years, in the city of Norwich, as to the growth and prosperity of Truth, yet now the hearts of many were opened to receive the testimony of it, and they joined with and sat down amongst us, and their gravity and sobriety gained them a good report amongst the people; by which several who were strangers to us, came also to be convinced, and received the Truth, joining themselves to our society. We were now straitened for room where the meeting was kept; and there being a piece of ground that Friends had formerly purchased, we began to talk of building a meeting-house there, which the younger Friends were zealously concerned for; but there not being many wealthy men among us, although they were sensible such a place was wanting, they began to consult how money could be raised to answer the occasion." After those of the best abilities had made their subscriptions, those of small means, being mostly journeymen combers, weavers, shoemakers, &c., considered what they could spare out of their weekly wages, upon which it was found a handsome sum could be raised, and the workmen were contracted with to erect such a building as was proposed. After the foundation was laid, several Friends believed it would not be large enough to accommodate the meeting, and the subscribers agreed to add to the sums before put down; the labouring men "found the Lord had so blessed their endeavours, that they could contribute more than they thought they could when they subscribed before, and so advanced above their first proposal; and even the young women servants, raised several pounds among them." Here we have an instance of what a sincere love to the blessed Truth, and a willing heart to part with their substance, will do in a good cause, though their means may be very limited. It is probable they loved one another, and their dear Lord and Saviour, above all worldly attractions. "When everything was finished, we had our first meeting there on a Fourth-day, in the year 1680, which was large and comfortable, for the Lord's blessed presence was among us, and we parted peaceably. The First-day following we met again in the morning, which meeting also ended in peace, to our great satisfaction. In the afternoon the meeting was much larger, but towards the conclusion came the recorder, with the priest of the parish, and several officers, soldiers and others. I was at prayer when they came in, and the recorder and the priest stepped up on a seat, and there stood till I had almost done; then the recorder cried out, 'Silence there.' When I arose from my knees, he asked me my name, and what trade I was of, and ordered the constables to take me out into the passage that goes to the street, and went on, taking the names of Friends present; but the priest was quickly weary of staying, for several told him it ill became him to appear there, to encourage a spirit of persecution against his peaceable neighbours. The recorder replied, 'You meet in contempt of the law.' He was answered, that we looked upon it as our indispensable duty to meet together, to perform that worship which we owe to Almighty God, and that we were no disturbance to the government, being peaceably met together, of which they themselves

were witnesses." "I expected to be committed, being kept under a guard in the passage; but when the recorder came out, he looked upon me yet said nothing, but passed away, which the guard observing, they also passed away, and left me at liberty."

(To be continued.)

From the Edinburgh Review.

On the Fibrous Plants of India.

(Continued from page 404.)

In this country it is employed in the manufacture of cordage, yarns, sheep netting, floor mattings, door mats, stair carpets, instead of hair for stuffing mattresses, and instead of bristles for making brushes. It will gradually supersede, therefore, for many purposes, the coarser kinds of hemp, and it has so far the advantage over many of the fibres already mentioned, that the supply is not only equal to the actual demand, but appears ready to augment itself as rapidly as the demand can increase. The cocoa-nut and Gormuto fibres possess also this singular and interesting quality, that for a great many purposes they are capable of supplying the place of Russian bristles—another article of import which the present hostilities may keep back from our markets. Brushes of every kind are made of these fibres; and, 'so far as it is possible to form an opinion from mere observation, they appear quite as well adapted for all ordinary purposes as the best bristle brush, while the difference in price is considerable.'

The lime, or linden tree, (*Tilia Europea*) is known to us chiefly for its elegant appearance and its sweet-scented flowers, and is planted for ornamental purposes. In the north of Europe—in Sweden, and especially in Russia, where it abounds in the natural forests, it is esteemed for its fibrous bark, and yields the raw material for an important manufacture.

"When steeped in water this bark separates into thin layers, which are employed for making a coarse kind of rope, for making matted shoes, much worn by the Russian peasantry, and also for making the mats which are so largely exported from Russia, and which are so extensively used in this country for packing furniture, as well as for gardening purposes, and for covering the floor. To every pair of shoes, from two to four young linden stems, at least three years old, are requisite. The consumption, therefore, is enormous, and the destruction of the linden tree in consequence immense. For the better and larger kind of mats, trees of from eight to sixteen years are cut down when full of sap, and the bark is immediately separated both from the tree and the branches. When removed, it is stretched on the ground to dry, two or three strips being laid one over the other and kept straight by being tied down to long poles. They are employed for making ropes in some parts of England, and for well-ropes in France. When required for use they are steeped in water, which causes the cortical layers readily to separate from each other. The best of these layers are those which are in the interior, while the coarser layers are on the outside.

"The manufacture of mats is nearly confined to Russia and some parts of Sweden. Trees of from six inches to one foot in diameter are selected in the woods, and in the beginning of summer the bark is stripped from the trees in lengths of from six feet to eight feet. These, after being steeped in water, are separated into ribands or strands, which are hung up in the shade, and in the course of the summer are manufactured into mats. The fishermen of Sweden make fishing nets out of the fibres of the inner bark."

The production of mats alone in Russia is estimated at fourteen millions of pieces; of which, in 1853, about six hundred and sixty thousand were imported into England. At a shilling each, these mats were worth about thirty thousand pounds. It will not be difficult to find a substitute for this matting among the cheap products of India should the supply from Russia to any extent be stopped.

But we mention this home linden tree and its fibrous bark chiefly as an illustration of the close connection in economical qualities which exists between different plants even when they grow in far separate countries, provided they belong to the same natural family. The linden tree (Tilia) is the type of a large natural family, the *Tiliaceæ*, in every species belonging to which family the economical botanist would expect to find more or less prominently developed some one or other of the distinctive products of the lime tree of northern Europe. Accordingly, in the hotter countries of Asia, the coarse matting fibre of the Russian lime tree changes into the soft and silky fibre of the *corchorus*, called by the Malays Chinese hemp, but known in India and England by the name of *Jute*.

In the neighbourhood of Aleppo, the traveller sees growing in the fields, and occasionally served upon his table, a species of this genus Corchorus, commonly known as the Jew's mallow, or *Olus Judaicum*. It is the *Corchorus olitorius* of botanists, and is eaten as a pot-herb in Syria, in Arabia, and in Palestine. It is the plant mentioned by Job (xxx. 4,) as eaten in his time by the poor and outcast, such as the Jews are now even in their own land: 'Who eat up mallows by the bushes and juniper roots for their meat.'

Small and herbaceous in the dry soil of Syria, it grows to a height of four or five feet in the north of India; while in the hot moist climate of Bengal it attains to twelve or even fifteen feet. In India, the leaves and tender shoots are partially cultivated as an article of food, and eaten both by Mussulmans and by Hindoos. But for its fibre also it is extensively cultivated in the delta of Bengal, and is spun almost universally by the native Hindoos. It is an annual plant sown in the Fourth or Fifth mo., and cut down when in flower from the end of Seventh mo. to the middle of Ninth mo. It is then steeped, as we do with flax, for eight or ten days, when the fibre is stripped off and washed. The produce of marketable fibre varies from 400 to 700 lbs. an acre. The best qualities are worth in this country from 16*l.* to 17*l.* a ton.

The culture of this plant in the delta of Bengal is far more extensive than that of any other from which a useful fibre is obtained. Its easy culture, rapid growth, and comparatively large produce, present advantages not to be overlooked by the economical and eminently practical natives of Bengal.

"The great trade and principal employment of Jute is for the manufacture of gunnychuts or chuttes—that is, lengths suitable for making cotton or sugar bags. This industry forms the grand domestic manufacture of all the populous eastern districts of Lower Bengal. It pervades all classes, and penetrates into every household. Men, women, and children find occupation therein. Boatmen in their spare moments, husbandmen, palankeen-carriers, and domestic servants—every body, in fact, being Hindoos—for Mussulmans spin cotton only—pass their leisure moments, distaff in hand, spinning gunny twist. Its preparation, together with the weaving into lengths, forms the never-failing resource of that most humble, patient, and despised of created beings, the Hindoo widow, saved by law from the pile, but condemned by opinion and custom for the remainder of her days literally to sackcloth and ashes, and the lowest domestic drudgery in the very household where once, perhaps, her will was law. This manufacture spares her from being a charge on her family—she can always earn her bread. Amongst these causes will be discerned the very low prices at which Gunny manufactures are produced in Bengal, and which have attracted the demand of the whole commercial world. There is, perhaps, no other article so universally diffused over the globe as the Indian gunny bag. All the finer and long-stapled Jute is reserved for the export trade, in which it bears a comparatively high price. The short staple serves for the local manufactures, and it may be remarked that a given weight of gunny bags may be purchased at about the same price as a similar weight of the raw material, leaving no apparent margin for spinning and weaving.

Jute is a remarkably beautiful fibre—soft, silky and easily spun; and if to its other advantages were added those of strength and durability, it would probably supersede all other fibrous materials. But it is as rapid in its decay as in its growth, and is in reality, the most perishable of fibres. From the period of its first production in the clean state, slowly, and of its own accord, changes in colour, losing the beautiful pearly white which at first distinguishes it, and assuming successive shades of fawn colour and brown. At the same time, its strength proportionately diminishes. Circumstances hasten or retard this decay, and moisture is particularly injurious to it. High pressure steam almost melts it away, so that when sail-cloth saturated with jute is submitted to high-pressure steam (of only 30 lb. pressure) for four hours, merely washing afterwards, removes the jute. It is believed that an improvement in the process of setting would increase both its strength and durability; but it is very doubtful if it can ever be rendered equal in these respects to either hemp or flax.

The extent of the foreign traffic which has already been established in this fibre, notwithstanding its imperfections, may be judged of from the fact that in the years 1850 and 1851 the quantity of jute exported from Calcutta alone was valued at two millions of rupees, or 200,000*l.*, and the jute or gunny cloth at an equal sum. And that it has already obtained a considerable place among the raw materials employed in our British manufactories may be inferred from the fact, that fifteen thousand tons a year are worked up in the town of Dundee alone.

The common mallow of Europe (*Malva Sylvestris*) and our common marsh mallow (*Althæa officinalis*) abound in mucilaginous matter, for which we esteem and sometimes use these plants; but their bark is also rich in fibre. Other mallows surpass those we have mentioned in this latter respect, so that in Syria the fibre is separated for use from the *Malva crispa*, and in southern Europe from the *Althæa cannobina*. But in India many plants belonging to the same family (the Malvaciæ) are extensively cultivated and highly esteemed for their fibre. Among these, according to Dr. Roxburgh, the Ambarree (*Hibiscus cannobinus*) is much cultivated by the natives of Coromandel. Its leaves taste like sorrel, and are commonly used as an esculent vegetable. Its bark abounds in strong and tolerably soft fibres, which are employed as a substitute for hemp, and are made into a coarse sackcloth. 'Dr. Buchanan states, as the result of his experience in the lower provinces, that it is cultivated everywhere in India on account of its leaves, which are eaten as a vegetable, and for its bark, which is most useful for making cordage. In the north-western provinces it is very generally cultivated, chiefly for cordage for domestic and for agricultura purposes.'

The Ambarree fibre is imported into this country, though to what extent is not known. It is not as yet recognized as a distinct article of commerce; but under the general designation of *hemp* it has hitherto been classed along with most of the other fibrous materials exported from India. It is more remarkable for fineness than for strength, but no doubt finds an appropriate use in our manufactories, probably for making mixed fabrics. The fibre of another malvaceous plant—the *Sida tiliæfolia*—is described by Dr. Roxburgh as strong, pliable, and very silky in its nature. The plant itself is of very rapid and luxuriant growth, so that three crops are obtained in a year. He adds, that it may be brought into this country at the estimated price of £8. a ton, which, at the time he wrote, was about one-fifth of the price of hemp of the best quality. It is cultivated in China Proper, and is there preferred for cordage; but we have no distinct information as to whether it has yet been imported into England as an article of commerce, or to what extent.

We pass over the natural order, to which belong the *Bombax*, or silk-cotton tree, yielding a downy cotton too short to spin, and the *Abroma augusta*, which, according to Dr. Roxburgh, deserves more than common attention as a substitute for hemp, on account of the beauty, fineness, and strength of its fibres. The produce of neither of these trees appear at present to be brought into the Indian markets. The family of Leguminous plants, however, is rich in marketable fibres; and from one of these is derived the bulk of what is brought to England under the names of Sunn Sunn hemp, Madras hemp, Conkanee hemp, Salsette or Bombay hemp, and Indian brown hemp.

(To be concluded.)

Selected.

ONE BY ONE.

One by one the sands are flowing,
One by one the moments fall;
Some are coming, some are going,
Do not strive to grasp them all.

One by one thy duties wait thee,
Let thy whole strength go to each,
Let no future dreams elate thee,
Learn thou first what these can teach.

One by one (bright gifts from heaven,)
Joys are sent thee here below;
Take them readily when given,
Ready too to let them go.

One by one thy griefs shall meet thee,
Do not fear an armed band;
One will fade as others greet thee
Shadows passing through the land.

Do not look at life's long sorrow;
See how small each moment's pain,
God will help thee, for to-morrow,
Every day begins again.

Every hour that fleets so slowly,
Has its task to do or bear;
Luminous the crown, and holy,
If thou set the gem with care.

Do not linger with regretting,
Or for passing hours despond;
Nor the daily toil forgetting,
Look to loyalty beyond.

Hours are golden links, God's tokens
Reaching heaven; but one by one
Take them, lest the chain be broken
Ere the pilgrimage be done.

Household Words.

"From the flame's refining power,
More pure the gold of Ophir flows;
From affliction's fiery hour,
More bright the Christian's virtue flows."

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

JOHN WILFORD.

(Continued from page 406.)

In the year 1677, John Wilford published "A General Testimony to the Everlasting Truth of God; partly intended for the inhabitants of Nether Broughton, in the county of Leicester." In 1680, he was again in print, this time, with "A few words in love to all those bishops, priests, magistrates and others, who have a hand in persecuting the innocent." This last publication was doubtless written in prison, as we find that John Wilford was, in that year, in the gaol of Leicester where he had been for a considerable time.

Soon after, the year I have not discovered, John and his family removed to West Jersey, and settled near Chesterfield. When about 1684, a meeting was established for discipline at Chesterfield, John and two of his Friends prepared the following introductory remarks to be placed in the first book of minutes.

"It hath pleased the Mighty God and great Jehovah, in this last age, after the great night of darkness and apostacy, which hath spread over nations, kindreds, tongues, and people, since the glorious days in which the apostles lived, by his outstretched arm, and by the word of his eternal power, to gather a people who were weary of all dead forms, and outside professions, into a waiting frame of Spirit; where we durst not think our own thoughts, nor speak our own words, relating to his kingdom and way of worship.

"Being thus brought down by the mighty power of God, we were the more capable to receive counsel and instruction from him, who, through and by his Son, Christ Jesus, the true light that lighteth every one that cometh into the world, appeared in us, and taught us his way and worship, which is in Spirit and in Truth. This he taught us while we were in Old England, our native land, which, through the great mercy of the Lord, was in this latter age the first of nations where the Lord appeared in so mighty a power and bright shining glory, to the gathering of thousands into his fold, whereby his people became a body, of which Christ is the Head.

"Then the Lord our God, as he did unto Paul and the elders of the churches in the apostle's days, begot a godly care in the hearts of some of his people, whom he had gathered and brought into a living sense of his work in this day; and also of the mysterious working of the enemy of all good, who, in all ages, as the Scriptures of Truth fully testify, laboured by his subtlety and transforming, to draw the Lord's people into looseness and disorder, that so the precious truth and pure way of the Lord might be dishonoured, and his worthy name blasphemed; we say, the Lord hath set some as watchmen upon the walls of Jerusalem, and hath laid a godly care and necessity upon some of his people, that in all things the churches of Christ may be kept sweet and clean; and that marriages and all other things relating to the church affairs may be performed in the good order of the gospel of peace. Therefore, in the wisdom and counsel of God, it was seen meet that First-day and weekly Meetings might be appointed and diligently kept unto for edification, and the worshipping of God, and that Monthly, Quarterly, and Yearly Meetings, might be appointed and diligently kept unto by all such who are of an honest conversation, as becomes Truth, and hath the weight of the Lord's work in these days, and the care of the churches upon them, for the settling and ordering the affairs thereof; and to admonish and give advice unto such as stand in need. And the Lord, by his providence and mighty power, hath brought some of his people out of their native country, over the great deep, into this wilderness, and remote part of the world, as West Jersey, and places adjacent; where he hath laid the same weight and care upon some of us, as he did in our native land,—that all things may be well among us to the honour of his great and worthy name, which is the ground and end of the following book.

JOHN WILFORD,
FRANCIS DEVENPORT,
WILLIAM WATSON."

John afterwards added the following:—

"All dear Friends, both men and women,—When you come to meet about business, as well as at other meetings, wait to feel the power of God, so what you do in things relating to church affairs may be done in that power which is over deceit and disorder. Then, if any should be so stubborn or wilful as to oppose what you do, or resist your counsel or advice, they will oppose and resist the power of God, which is the higher power, to which all should be subject, both in themselves and in others in whom it appears; which power will stand over all that is unruly and rebellious.

"And as to women's meetings, I certainly know they have a service for God and his church, and the Lord's power doth often attend their assemblies in a wonderful manner; and he hath made them, and will make such who keep in the power of God, to answer the end for which they were created, viz., to be help-meets, as the woman was in the beginning, while she stood in God's counsel; but when she lost that, and took counsel of the serpent, she became hurtful to the man. So all should keep in the power of God, that so they may receive counsel from Him. So will they be co-workers and fellow-labourers, and help on in the work of the Lord; the older instructing the younger, as the holy women did in the days of old. Dear Friends, in the love of God, are these few lines written, and in the same I desire they may be received.

JOHN WILFORD."

"1st of Tenth month, 1687."

To the Yearly Meeting of Philadelphia, in 1688, John was a representative, and was appointed one of them to draft the Epistle to London. Early in 1689, with the unity of his Friends, John paid a religious visit in New England. Returning about the middle of the year, he gave a very satisfactory account to his Friends of the service he had been enabled to perform, and of the openness he had met with. At the Yearly Meeting, Seventh mo. 4th, that year, he was appointed one of a committee to draw up a paper, "earnestly to incite the Quarterly Meetings to the keeping up a godly discipline, and a tender inspection over the youth; and whatever other particulars they shall find needful. They are also desired to draw an Epistle to London, giving a salutation of love, and informing them of the blessed presence of the Lord being with this meeting."

At the Meeting of Ministers, held First mo. 1st, 1690, John presented an Epistle for its consideration, which he had prepared for general service. It was read, approved and directed to be printed. A copy I have not been able to find. At the next Meeting of Ministers, held in the Fourth month, John was appointed one of the committee to examine all writings of Friends proposed to be printed.

In the following year, he published the following:—

"A brief exhortation to all who profess the

Truth, to come clear out of Babylon, and not join with any hurtful or unseemly practice, nor make marriages with unbelievers, but be a separate people from every unclean thing, that God may receive you.

"My dear and well-beloved Friends,—There is or hath been a long time, a great travail and exercise upon me for the prosperity of Sion, and the tranquillity of new and heavenly Jerusalem, that she may be the praise of the whole earth, and that her spiritual government may spread over nations, kindreds, tongues and people, where the Spirit hath sat, which hath led people from God into Babylon, which is confusion and disorder. What shall I say! My soul is grieved and pained within me, when I take a view of the numberless hurtful things that this Spirit hath led people into. That, which on the other hand is comfort unto me, is, that the Lord our God, in his unutterable loving kindness, hath made bare his holy arm, and caused his glorious light to shine in the hearts of many thousands, discovering mystery Babylon, the mother of harlots and all abominations, in a great measure. Praise be to his great name, forever. Amen.

"Dear Friends, that which ought to be the concern of all, to whom the Lord hath so largely appeared, making us a kind of first fruits to himself in this latter age, is, to see that we come clear out of Babylon; that we be not partakers with her in any of her hurtful things, which have been brought in, in the midnight of darkness and popery. The cry is now, (the same as,) John heard many years ago, 'Come out of her, my people,—partake not of her sins, lest ye also partake of her plagues. For strong is the Lord that judgeth her.'

"Now, dear Friends, her worship, in all her finest dresses and names, under what profession soever, ye that are come in the least measure almost to believe in the blessed light, I doubt not, see over it, and cannot join with it. Yet bear with me a little. There may be things that some may stick in, or not so clearly see, as they should or might do, if they well minded the light. We read of some of old who had much good in them, yet were short in some things. Some, in all ages, have seen before others, for a time. Those who were truly faithful to what they did know, not regarding the friendship of the world, nor yet its frown, had their understandings more and more opened, and were made instrumental to convince, to strengthen, and to confirm others.

"So, all dear Friends, dwell in the light, that you may clearly see every little thing that is to be denied, and the tendency of every spirit, practice or custom, that may be hurtful, either in our day, or to succeeding generations. Christ told his disciples, 'they were as a city set upon a hill,' which could not be hid, and the salt of the earth.' The salt is to season that which otherwise would be unsavoury. Oh! the Lord help all his people well and truly to consider this weighty thing, that in our commerce with all sorts of people, God's pure witness may be reached in them, and every appearance of evil, borne testimony against. The Lord is about to make a clean separation; he will not bear much longer, as he hath done in the time of ignorance. Therefore, let us all see that we do not uphold or countenance any vain custom or practice that hath been brought up in the dark night of apostacy, or that may be of an evil tendency. Rather let us dwell alone in those things. What if we be not reckoned among the nations, as was prophesied of old. The prophet Isaiah, speaking of gospel times, said, 'Depart ye, depart ye, go ye out, touch no unclean thing, be ye clean that bear the vessels of the Lord.' The apostle saith, 'Be ye separated, saith the Lord, and touch not the unclean thing, and I will receive you, and I will be a Father unto you, and ye shall be my sons and daughters, saith the Lord Almighty.' This is a precious promise. What if we be slighted by the world, because we cannot join with them in any excess of riot or evil custom? The apostle said, 'The friendship of this world is enmity with God.' Hath not God put enmity between the two seeds?—how then can they have affinity together, though there may be commerce in things civil? Let this be well minded in all our marriages. The apostle said, 'Be not unequally yoked with unbelievers. For what fellowship hath righteousness with unrighteousness? and what concord hath Christ with Beliel, or what part hath he that believeth with an infidel?' Joshua said to Israel of old, 'If ye do in anywise go back and cleave unto the remnant of these nations, and shall make marriages with them, they shall be snares and traps unto you, and scourges in your sides, and thorns in your eyes, until you perish from off the good land.' Did not this come to pass? and had not we need to take great care in this matter? Truly, I see rather more need (in this country) than we had in our native land. Many come to our meetings, and will get a Friend by the hand, that know little of Truth in their hearts. Therefore, it concerns our Monthly Meetings to inspect well into this matter, that we may not become a mixed people, and the Lord be angry and spue us out. Abraham commanded his servant 'not to take a wife for his son Isaac of the daughters of the Cananites, but of his kindred, and the like charge Isaac gave Jacob.' When marriages with outward kindred were forbidden, they were to marry with such as kept the ordinances of God. Doth not our Society stand in that which is heavenly and spiritual, which may be called a spiritual kindred, with whom we may, in the fear of God, join in marriage? If any hasty marriage happen, when a man or woman doth not stay a convenient time after the decease of the husband or wife, Friends should show their dislike, and not countenance them at all, that we may be witness against all unrighteousness of flesh and spirit. 'Know ye not that the saints shall judge the world?' but if we join with any uncomely action, it will judge us."

(To be continued.)

Russia in a Commercial Point of View.

Russia possesses, in her population of seventy millions of inhabitants, and in her vast tracts of fertile soil, the labouring power and the material for the production of national wealth, and consequently, the first and most important elements for the development of great commercial strength. For centuries, however, she has been excluded from the seas, and these natural advantages have been comparatively useless to her. Debarred from intercourse with foreign nations, her progress was retarded and her social condition for ages retained the characteristics of its rude infancy. Peter the Great was the first who conceived the daring plan of tearing to pieces the traditions and records of a narrow-minded policy, founded upon the principle of decentralization. Russia, as he found it, was nothing but an immense number of distinct patriarchial estates, each ruled by petty tyrants, without any union of material or moral interests to warrant the appellation of a State. The master mind of this great ruler instantly perceived the root of the evil. The isolation of estates, the separation of individuals and interests was an inevitable consequence of the isolation of the nation. He therefore conceived the idea of forging with his own hands the first connecting link between his Russians and the civilized world. Commerce, he thought, was the grand lever—the only o with whose aid the herculean task could be a complished. But Russia had no coast; and h became a conqueror, not from sordid motives, n for the sham glory of feats of arms, not for t possession of territory or population, but to car with the sword his way to the sea—to the civiliz tion of Europe. Russia had no ships, no shipbuil ers, no knowledge of the first rudiments even navigation. The great man laid aside the purpl divested himself of all the pomp and glory su rounding an imperial throne, and became a wande er in foreign lands. The hand that had weighe the golden sceptre, swung the hammer of the m chanic; the head, pregnant with the grandest an noblest plans, which had rested on silk and velve slept cheerfully for years on a pillow of straw, i the wooden huts of the dock yards of Holland an England. This was more than one hundred an thirty years ago, and ever since Russia has fol lowed the course pointed out by the hero, wh first, with one mighty stroke of his genius, shat tered the fetters which kept her in the thraldom of barbarism.

The sea is for Russia the light, the load star, th only hope of progress, national wealth and refine ment. She wishes to breath free, and towards th sea she pushes with a panting breast. France an England grasp her throat, to crush the first sign of life out of her young maritime power, lest i should form, one day, a counterpoise against thei supremacy. Their endeavours are directed against the strength of her coasts and naval establishments France and England can blockade, at any moment the only two outlets into the ocean which Russia possesses, and they mean to preserve this ascendancy, cost what it may. The danger of Russian preponderance in the Black Sea vanishes before the rule of France and England in the Mediterranean, in the Gulf of Mexico, on the coasts of Africa, China, and South America. At Vienna, Russia proposed the entire freedom of the Black Sea to all nations. France and England rejected positively this proposition. They hold, actually, the key of the Dardanelles, and mean to keep it. They have succeeded in utterly subverting the Ottoman power. Under the pretext of saving the pseudo-nationality of a few millions of Asiatic marauders, they continue to drench the Crimea with human blood, and reject a liberal proposition which would have opened the Dardanelles to all maritime nations, and removed forever, in the simplest and most effectual way, every cause of conflict. The Western powers want to control this important passage exclusively, and with it the commercial relations of Russia, as they control those of Syria, Egypt, Turkey, Italy, Greece, etc. They seek the destruction of Sebastopol and of the fleet, because these protect the commercial interests of Russia. In the freedom of commerce lies the germ of the future greatness of the empire: the blows of the Allies are directed against it.

Peter the Great laid the foundation of the commerce of Russia. His successors continued the work with great perseverance, and not without ability. Treaties were concluded, banks established, and markets opened. The Russian confines himself to the trade of the interior. The importing business is almost exclusively in the hands of foreigners. The Baltic, the White sea, the Black sea, and the Caspian sea are connected by canals. Rivers lead to the mines and gold diggings of the Ural. Water communications form at present the principal means of transport, but being frozen and useless for the greatest part of the year, the necessity has been felt by the government of superseding the present system by a complete net of railroads. Only a few roads are as yet finished, namely, those

m St. Petersburg to Pawlowsk, from St. Peters-
rg to Moscow, and from Warsaw to St. Peters-
rg. These have been built very recently. The
are of Russia, her progress and civilization, de-
nd upon the construction of railroads, the
ength of her harbours, the protection of her flag,
d the freedom of her outlets into the ocean. Her
ilroads have been built by American engineers.
ost of her locomotives are the product of Amer-
n workshops. The steamers of her navy and
vers and their engines have been constructed in
ngland. The manufacturing efficiency of Russia
very limited. This business is also in the hands
foreigners, who either have contracts with the
overnment or act on their own account.

The importation of various goods into Russia
nounted, in 1851, to nearly one hundred and
ur millions of silver roubles, (which was about
n millions more than in 1850.) Of this total there
ere imported over the Russian frontier seventy-
ght millions into Russia proper; nine millions
nto Poland; one million into Finland; and over the
siatic frontiers about sixteen millions. The im-
ortations into Russia consist chiefly of raw and
anufactured cotton, tobacco, engines, cutlery, and
ardware, machinery and instruments of various
escriptions, different metals, coals, silk, oil, dye
tuffs, coffee, tea, wine, and furs. The exportation
rom Russia to different countries amounted, in
851, to the sum total of ninety-seven millions of
ilver roubles (in round numbers) which was about
ne million less than in 1850. Of the above sum
ere exported over the European frontiers from
tussia proper seventy-nine millions; from Poland
ive millions; from Finland two millions; over the
siatic frontiers into Asia about eleven millions.
The principal articles of exportation are hemp, flax,
iemp and flax seed, grain, tallow, copper, wool,
eather, cordage and coarse linen goods. The ports
f the Baltic were entered in 1851 by 3790 vessels,
hose of the White Sea by 721, those of the Black
Sea by 2585, and those of the Caspian Sea by 227.
It will be seen that the amount of shipping business
f the Black Sea is as yet inferior to that of the
Baltic, but there is no doubt that the ports of the
former will exceed in importance, at a future day,
hose of the north, as they generally remain acces-
sible throughout the whole year.

The commerce of the interior is carried on in a
singular way. Fairs are held every year in the
principal towns and cities of the empire, where the
people and the retail dealers purchase their stock.
The merchandize is sent thither from all parts
of the country, and exhibited in temporary tents,
erected of boards. The principal is that of Nishny-
Novgorod which takes place every year, in the Sev-
enth or Eighth mo. The value of the goods for sale
at this place amounted, in 1840, to 55,000,000, and
in 1849 to 60,000,000 silver roubles. The Russo
Chinese trade has its principal seat at Kiachta,
where the government has established a school for
the study of the Chinese language, in order to give
the greatest facilities to the commercial intercourse
with the Celestial Empire.

The commerce of the Russian Empire is as yet
in its infancy. It is struggling, at present, to
shake off the fetters which retard and cripple its
growth.

A Portable Stove.—A new portable stove is described in London Mining Journal. It is made of wrought iron, without any flue, and may be used upon any table or in any room. The fuel employed is cocoa nut stearine in cakes, burnt by means of six wicks introduced into each cake, the cake fitting into a tin dish, made exactly to contain it. No smoke is produced and the stove is capable of boiling, baking, and broiling, and the whole is comprised in a cube of about 16 inches The cost of fuel burnt is at the rate of one penny per hour, a cake lasting eight hours.

THE FRIEND.

NINTH MONTH 8, 1855.

OHIO YEARLY MEETING.

By a letter received just as our paper was going to press, we are informed that Ohio Yearly Meeting assembled at Mount Pleasant on Second-day, the 3d inst., the Meeting of Ministers and Elders having been held on Seventh-day, the 1st, which is spoken of as having been "a comfortable time." On Second-day, both bodies met together, and after preaching and prayer, Benj. Hoyle opened the meeting. All the representatives answered to their names. The reports from the Quarterly Meetings were then read; a committee on the Treasurer's account appointed, and the representatives being requested to meet for the consideration of a suitable Friend to serve the Meeting as Clerk, the Meeting adjourned to 10 o'clock on Third-day morning; leaving those who have separated in the house. It was understood that the latter adjourned to meet at 9 o'clock the next morning.

The dreadful railroad accident which happened on the Camden and Amboy Railroad, on the 30th ult., about a mile and a half north-east of Burlington, N. J., has cast a general gloom over the community, and awakened for the time being, earnest expression of the necessity for some more efficient precautions being taken, to remove as much as possible, the dangers that attend this mode of conveyance, as now conducted. That there is often on the part of railroad companies and their workmen, culpable disregard of risk, and a disposition to provide more for reaping large pecuniary gain, than for securing safety of life and limb to the passengers, so far as human foresight and care can do so, is too evident to be denied; and yet we think they should not bear all the blame of many of the accidents recorded almost daily, while the public demands to be carried at a rate so fearfully rapid, at a price insufficient to pay for all that is necessary to provide against accident, and at the same time to yield a reasonable profit. When we consider the value of a single human life, and the awfulness of suddenly sending men, women, and children into eternity, prepared or unprepared; there is no one we suppose, but who would think that whatever might be the outlay of money required to guard railroad travelling effectually against such a contingency, everything tending to that end should be done, before a company was justified in undertaking the transportation of passengers from one point to another. With this view, we cannot but think that the Camden and Amboy Railroad Company is greatly to be blamed for risking the lives of so many thousands as pass over their road, by having but a single track laid down. On a thoroughfare so thronged with passengers, there can be no sufficient excuse for such a hazard being daily and hourly run, and the public voice should be heard demanding its removal, in tones that may not be disregarded, until it is effected.

There have been twenty-two deaths, and several are maimed for life.

The following we believe, is a correct account of the accident:

"The train of cars which left Philadelphia, at ten o'clock, consisting of five passenger cars, baggage car and locomotive, had reached Burlington just before 11 o'clock. It then stopped, waiting for the arrival of the 8 o'clock New York train, from Jersey City, which passes at this place. After waiting for from five to ten minutes, and the New York train not appearing, the Philadelphia train went forward slowly, watching for the approach of the downward train. It had gone forward about a mile and a quarter, when the New York train came in sight. The whistle for the breaks and to reverse the engine, was blown, and the Philadelphia train commenced backing, and soon got under rapid headway for Burlington again. In this reverse movement, the passenger cars, usually placed behind and coming after the locomotive, were now in front, and pushed forward by the locomotive. The engineer being with the locomotive, of course had not the advantage of seeing what was ahead of the backward going train. He had run but a quarter of a mile, and a mile from Burlington, when the first passenger car came in collision with a light pleasure wagon, driven by Dr. Hinniken, of Columbus, N. J., who attempted to cross the track in front of the cars.

"The wagon contained Dr. Hinniken, his wife, and two children. The doctor had seen the cars pass as he was driving down the road, and supposing all safe, neglected to keep a proper lookout. The first passenger car struck the two horses in the wagon, just as they were crossing the track, killed them instantly, and threw one thirty feet on one side of the track, and the other forty yards on the other side. The wagon was turned round and upset, none of its inmates being injured, except in slight bruises. The front car, A, after striking the horses, ran forward, and off the track, about one hundred yards, and over a small embankment. The second car, B, was thrown directly across the track. The third car (C) went through car B and stopped diagonally across the road, the fourth car (D) followed and ran into C. The fifth passenger car and the baggage car stopped without leaving the track. The two latter were not injured, but three of the other passenger cars were knocked to pieces, and many of their occupants were killed, wounded, and maimed.

"It is impossible to describe the horrible scene that ensued. The cars were piled upon each other, and numbers of human beings were lying among the ruins —some dead, some dying, some shrieking from pain. Those saved in the train, and the passengers on the down train, aided by citizens of Burlington, who were quickly informed of the terrible accident, went to work to rescue the wounded and dying from the ruins. As soon as taken out, they were conveyed to Burlington, where many private houses, as well as Agnew's and Kelly's taverns, were thrown open to the admission of the wounded, while the Lyceum was appropriated for the reception of the dead. Some had been crushed to death instantly, leaving scarcely a trace to recognize them by; some had been torn limb from limb by the splinters, benches and floors, and their remains scattered in every direction. Many were suffering from crushed limbs, broken backs, and injured and lacerated bodies. The scene was a heart-sickening one; but, amid all its terrors, there were noble instances of resignation, a self-sacrificing spirit from the sufferers, which honoured human nature."

SUMMARY OF EVENTS.

EUROPE.—News from England to Eighth mo. 18th.

The War.—Despatches from the Crimea state, that on the morning of the 16th, the Russian forces under Gen. Liprandi had attacked the lines of the allies at Tchernaya, and after a battle which lasted three hours, were repulsed by the French and Sardinians, with a reported loss of several thousand men, in killed and wounded, and four hundred prisoners. The loss of the allies was unascertained, but was said to be less than that of the Russians. General Simpson telegraphed on the 16th, "General Pelissier and I have decided to open fire from the English and French batteries to-morrow morning at daybreak." Omar Pacha had received orders to return to the Crimea instead of Asia. A despatch from St. Petersburg says, Gortschakoff has orders to sink the Russian fleet if Sebastopol falls. The London Morning Post, a Ministerial paper, says it has reason to expect stirring and hitherto unexpected news from the Crimea. It is supposed to refer to some secret expedition. The latest accounts from Asia Minor state that Kars is completely invested. The first parallel has been opened. All communication with Erzeroum has been stopped. Turkey is sending reinforcements to Kars. Advices from the Baltic state that Sweaborg, a town in Russian Finland, containing about three thousand inhabitants, was bombarded by the allied fleet, from the 9th to the 11th ult. The Russian despatch simply states the fact of the bombardment. Those of the allies add that the

town had sustained immense damage, the bombardment having caused a conflagration which continued 45 hours, and destroyed nearly all the store-houses, magazines, &c. Sweaborg was a strongly fortified place, and it is supposed the attack inflicted no serious injury upon its defences.

ITALY.—A Turin letter of the 9th announces that the Papal Court has authorized the clergy of Sardinia to accept from the government the stipends to which they are entitled under the recent convents' suppression law. Yet, the Pope only recently solemnly denounced that law as infamous, and declared that the government, and all persons concerned in counselling it, or carrying it out, had incurred the penalties of excommunication!

DENMARK.—It is reported that the Danish Admiral, Nouvier, has gone to Paris, to ask the advice and assistance of France touching their differences with America concerning the Sound duties. Denmark fears that the United States will commence hostilities by taking possession of the Danish West India Islands.

RUSSIA.—It is reported that the Commissariat of Southern Russia has declared it impossible to provision more men than are now in the Crimea, consequently no further reinforcements will be sent.

GREAT BRITAIN.—The British Parliament was prorogued on the 14th, the Queen's speech having been delivered by proxy. The speech congratulates the country on the increasing strength of the union between France and England, and the accession of Sardinia to the Alliance. Regrets are expressed that the Vienna Conference failed to accomplish the result so desired. These endeavours having failed, no other course is left but to prosecute the war with all possible rigour. Negotiations are still going on between London, Paris and Vienna, respecting Austria's continued occupation of the Principalities. The London papers say the negotiations have arrived at a point for a triple treaty binding France, England and Austria not to conclude any arrangement separately with Russia. Queen Victoria, escorted by six ships of war, crossed the channel to Boulogne on the 17th. Great preparations for her reception had been made in France. The Emperor was to meet her at Boulogne.

Liverpool Market.—The sales of cotton for the week reached 80,000 bales, including 24,000 on speculation; fair Orleans, 7¼*d.*; middling, 6 7-16*d.*; Uplands, fair, 6¾*d.*; middling, 6¼*d.* Flour and breadstuffs were dull at a small decline in price. The weather has been favourable for the crops, and there was a prospect of a good yield.

MADEIRA.—The vintage in this island had again failed, this being the fourth consecutive year. There is consequently much destitution among the inhabitants.

KAMSCHATKA.—By the last arrival from California, an account was received of the abandonment by the Russians of the town of Petropaulouski, which last year was attacked without success by the allied fleet. On the 15th of Fifth month, about four weeks after the departure of the Russian garrison, the place was visited by a large fleet of English and French ships of war, which before their departure razed the forts, and destroyed the public buildings. The Russians carried away the guns and valuable property of all kinds. They are supposed to have removed to the strong fortifications near the mouth of the river Amour.

UNITED STATES. — *Foreign Immigration.* — Since Castle Garden, New York city, has been used as an emigrant depot, a period of about four weeks, 6853 immigrants have arrived there from foreign ports, who have brought with them money to the amount of $520,323.

Imports and Exports.—During the quarter ending the Sixth month 30th last, the total imports into the United States amounted to $62,397,663. The exports consisted of foreign merchandise, $7,668,572; domestic produce, $41,826,039; specie, $19,947,803. Total exports, $68,-902,414. The Pacific ports are included in the statement.

Utah.—Advices from the Great Salt Lake, to Seventh mo. 1st, state that the prospects of famine were imminent. The grasshoppers, or locusts as they are there called, had devoured almost every green thing, including the young third crop of wheat, as soon as it showed above ground. Not only grass and vegetables were devoured, but thousands of fruit trees had been barked and killed by them.

Yellow Fever.—The deaths in New Orleans, for the week ending the 27th ult., were 471, including 357 from yellow fever. The disease is unabated at Norfolk and Portsmouth, Va.

New York.—Last week the ship Charmer arrived at this port with a valuable cargo of flour and wheat, from California, whence she sailed on the 18th of Fifth mo. Seven other vessels are on their way with like cargoes. Many houses in New York are unoccupied; the Real Estate Journal says there is more vacant property to let now than there has been since the great panic in 1837. Rents, however, continue very high. Mortality last week, 548; adults, 138; children, 410.

State of the Ohio.—On the 31st ult., there was four feet seven inches water in the channel at Pittsburg. Freights to St. Louis, 40 cents per cwt.

Explosion of a Steamer.—On the 24th of Eighth month, the Coast Survey steamer Hetzel burst her boiler near the Capes of the Chesapeake. The vessel was nearly destroyed; five persons were killed, and several others injured.

The German Colony in Texas.—Fifteen thousand Germans have left Hamburg, Germany, for Texas, and are expected to arrive at Indianola, within a month or two.

Philadelphia.—The interments last week numbered 228, viz., 85 adults and 143 children.

Miscellaneous.—The submarine cable recently received at the north for a part of the Newfoundland and St. John telegraph, has been lost in the sea by mismanagement. It was insured for $70,000.

Census of Providence.—The census of the city of Providence, Rhode Island, has just been completed, from which, it appears that the whole number of inhabitants, at the present time is 46,687, being an increase of 5,176 since 1850, whilst in 1845, the population was only 34,753.

The Great Russian Bell.—After three months' incessant labour, the Russians have replaced the great bell in the tower of San Juan, on the Kremlin, which, on being tolled for the late Czar, fell and broke through no less than three separate stories of vaults, killing five persons on the spot. The bell is said to be the largest in the world, weighing no less than 80,000 pounds.

Great Field of Hay.—The St. Louis (Mo.) Republican states that on one acre of ground on the farm of Judge Inge, in Franklin county, State of Missouri, there was raised and cut eleven thousand five hundred and nineteen pounds of hay.

The Census of Newark, N. J., is at length complete, and shows an aggregate population of 50,711, of whom 20,577 are of foreign birth, and 28,902 native.

Our Western Waters.—There are, on the rivers of the West, 523 steamers, besides 600 freight, tow and ferry boats. The engineers of these steamers have an organized association, numbering 1593 members.

Escape of Slaves.—The Richmond Despatch speaks of a pamphlet just published in that vicinity, which estimates that, within the last forty years, 61,664 slaves have escaped from the South, or fifteen hundred annually, and that the total loss is $27,740,800.

To Keep Crows from Corn.—A short article with this heading, appeared in the last number of "The Friend." It was most likely a newspaper scrap that found its way into the printer's hands through inadvertence, and will probably do no mischief, as it cannot be presumed any one would undertake the silly exploit of attempting to *boil* equal quantities of *gunpowder*, *turpentine*, and *train oil* together.

Correction.—In last week's summary, under the head of Oregon, for "glorious," read "glowing."

RECEIPTS.

Received from Jesse Cope, Pa., $2, vol. 29; from S. Hobson, agt., O., $2, vol. 29, and for J. Mershall, Harmon Rhoads, $2 each, vol. 28; from Jesse Hall, agt., O., for Nathan Smith and Jos. Walton, $2 each, vol. 29; from J. Shotwell, Wis., $2, vol. 28; from A. Battey, agt., Vt., for D. Hallock, and Benj. Macomber, $2 each, vol. 28, for Dl. Nichols, $4, vols. 28 and 29.

FRIENDS' SELECT SCHOOLS.

These Seminaries were re-opened for the Winter Session, on the 1st instant. That for Boys in the house on Cherry street, below Ninth; and that for Girls in the house on James' street, above Sixth. Friends intending to enter their children in these Schools, are desired to do so as early in the session as practicable, in order that the proper classification may be made early. The elementary schools in the Northern and Western Districts, have also been re-opened.

WANTED.

A young man, aged from 18 to 20, to learn the retail dry goods business. A Friend from the country preferred, to board in the family. Apply at Friends' Bookstore, 84 Arch street.

WANTED.

A competent (male or female) Teacher for the schoo under the care of Nottingham Preparative Meeting Friends.

Address, Lloyd Balderston, Port Deposit, Cecil Co., M Ninth Mo. 4th, 1855.

WEST-TOWN BOARDING-SCHOOL.

The Winter Session of the School will commence o Second-day, the 5th of Eleventh month next. In ord to avoid disappointment in case the School should b full, members of Philadelphia Yearly Meeting intend ing to send children, will please make immediate appl cation for their admission to Joseph Snowdon, Supe intendent at the School, or Joseph Scattergood, Tres surer, No. 84 Arch street, Philadelphia. Those livin out of the limits of Philadelphia Yearly Meeting, wh have or may apply for the admission of children, wi be informed after the 15th of this month, whether the can be admitted.

Ninth mo. 1, 1855.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in thi Institution.

Application may be made to either of the undersigned members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS, } Philada.
SAMUEL BETTLE, Jr. }

Evening Schools for Adult Coloured Persons.

Wanted, A Principal and three Assistant Teacher for the Men's School, and a Principal and four Assist ants for the Women's School.

Application may be made to either of the under signed.

JOHN C. ALLEN, No. 179 S. Fifth St.
SAMUEL ALLEN, No. 134 S. Front St.
WILLIAM L. EDWARDS, No. 37 Arch St.

DIED, at his residence near New Garden, in Guilford county, N. C., on the 23d of Eighth month, 1855, Dougan Clare, Senior; an esteemed minister and a member of New Garden Monthly meeting, in the 72d year of his age. He had been for several years afflicted with a painful disease, which he bore with truly Christian patience and resignation. During his last confinement, he experienced frequent and very distressing paroxysms of pain, in the internals of which he lay quiet and apparently easy, but seemed but little inclined to converse. On the 29th of the Seventh month, being apparently under great exercise of mind, after expressing to his wife a very humiliating view of his past life; he continued, nearly as follows:—"I do not want to say much, I think there is a great deal too much said; but I wish no one to be uneasy about me, for I had a clear evidence last night, that all would be well with me." He then expressed his grief on account of the difficulties in our religious Society, and said he believed there had been errors on both sides; that with regard to himself, he had turned the thing in every way, and had been willing at any moment to change his views if he could be convinced that he was wrong, but he could see no peace nor comfort, except in the stand which he had taken, and he felt perfectly satisfied. He also said he had nothing to trust to but the mercy of God in Christ Jesus. After he had said but little, only at times a few words, expressive of the quietude of his mind. His close was eminently calm and peaceful, and we think there is full ground for believing, that he has entered into his rest.

——, at the same place, on the 16th of Sixth month, 1855, Mary E., only daughter of Nathan H. and Semira H. Clark, in the 5th year of her age.

——, on the 25th of the Eighth month, at her residence in this city, Rebecca Savery; a member of Philadelphia Monthly Meeting, in the 86th year of her age. This dear Friend, during the last few years of her life, was confined to her house by indisposition, attended at times with intense bodily suffering which she was enabled to endure with much patience and resignation. She always evinced great care and consideration for the happiness and well being of those around her, which, added to her benevolent and Christian disposition, gained for her the affection and esteem of those who knew her. Near the close of her long and useful life, she was very desirous of being taken home to those mansions of peace and rest, prepared for all who love the appearing of their Divine Lord and Master.

THE

FRIEND.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXIX. SEVENTH-DAY, NINTH MONTH 15, 1855. NO. 1.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, if paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Edinburgh Review.

The Land of Silence.

(Continued from page 410.)

Of the importance of the study of words, and the utterance of thought in spoken or written language, it is scarcely necessary to speak. If we believe that language was given to man by Him who also gave reason, 'and just because He gave reason for what is man's word but his reason coming forth so that it may behold itself,) that it was given because he could not be man—that is a *social* being—without it,' we need no arguments to convince us of the infinite value of this acquirement to the deaf-mute. *He cannot be a social being without it;* and failing of *this*—one great and most manifest object of his education—he must either sink down to the level of those in a like condition with himself—herding with them as a mere animal among animals—or pass the rest of his days as a silent, moping, solitary, helpless, hopeless unit of mortality, in a world which he was meant to enjoy, amid thousands with whom he was intended to hold some, however restricted, converse. Accident, sudden disease, innate malformation, or other causes,

'May seal the ear of man
'Gainst every message of sweet vocal air;'

and thus indirectly or directly check, and at last totally destroy the power of utterance; yet it must not be forgotten that 'the power of naming things and expressing their relations, has been laid up in the depths of man's being—a divine capacity with which he was created;' which cannot remain dormant in him, since man can only be man through its exercise. Regarding this power as thus innate, we may induce it 'to bud and blossom out from within him at every solicitation from the world without, and from his fellow,' and this we conceive to be one object of education in its highest sense. M. Trench states, in the remarkable volume to which we refer, that as a tribe or nation or people 'loses one habit of civilization after another, the words also which those habits demanded have dropped, first out of *use*, then out of *memory;* and thus after a while have been wholly lost.' Thus the South African traveller, Moffat, tells us of one savage race of Caffres, among whom the word '*Morimo*,' once used to designate Him that is above, or in heaven, had actually disappeared from the language, carrying with it also its corresponding spiritual idea. Here and there an old man might be met with—scarcely one or two in a thousand—who remembered, in his youth, to have heard speak of '*Morimo*;' but this word, once so deeply significant, now only survived in the spells and charms of the so-called rainmakers and sorcerers. 'And as there is no such witness to the degradation of the savage as the brutal poverty of his language, so there is nothing that so effectually tends to keep him in the depths to which he has fallen. *You cannot impart to any man more than the words which he understands either now contain, or can be made, intelligibly to him to contain.* Language is as truly on one side the limit and restraint of thought, as on the other side that which feeds and unfolds it.'

We believe this to be true not only of the savage properly so called of New Zealand and South Africa, but of the savage of *England—the deaf-mute;* who, if left alone, neglected, and untaught, or taught only by a system of signs and gestures, will sink down to a state of semi-barbarism, equal in degradation and in darkness to the more open grossness of the South Sea islander. If it be true (and we have ample evidence that it is so) that a savage nation, or tribe, or individual, as it sinks to a lower status, gradually loses the words expressive of its highest and noblest duties, belief, and practice,—so in a measure the converse of this, as of every great truth, is unanswerably true. As words, themselves the outward signs and symbols of inner thought and impression, die out of use when their corresponding ideas perish in the mind, so impression and knowledge, and idea in the mind will at best remain but a cloudy and indistinct vision till they find being and utterance in the living word of the deaf-mute. We trace the same law in the growth and structure of languages, as in the formation and utterance of single words. Wherever men are learning more 'accurately to define and distinguish, more truly to know;' 'wherever new thoughts are rising up over the horizon of a nation's mind, new feelings stirring at a nation's heart, and new facts coming within the sphere of its knowledge, *there* language is growing and advancing. It cannot lag behind; for man feels that nothing is properly his own, that he has not secured any new thought, or entered upon any new spiritual inheritance, till he has fixed it in language, till he can contemplate it as his own Word.'

It may be all very well, as a matter of amusement or speculation, for Dr. Orpen to talk about a theory of signs for the deaf and dumb, and of a tribe of North American Indians, who use a language of signs, though not deaf and dumb; but as a matter of practical value we count it of little worth. The North American Indian, it is true, has recourse to occasional signs to express his meaning; he uses them to eke out the meagreness of his language; and between the two, by dint of gesture and imagery, and by force of expression, he succeeds in saying vaguely what the white man says succinctly and clearly, without signs, in half the number of words. If the deaf-mute is taught to speak by signs only, he will use them not to eke out his imperfect knowledge or command of language, but gradually as a *substitute for spoken words;* and herein lies the peril of adopting signs but as a subordinate and secondary means of communication. Dr. Orpen tells us that 'the language of signs is so true to nature that the deaf and dumb, from different parts of the globe, will immediately on meeting understand each other Our great object, however, should be not so much that the deaf and dumb may communicate with each other, as with the rest of the world. If they, as a body, were in after life to live together, and mingle not with hearing and speaking men, the question of signs might be viewed under another aspect. But as, after they leave school, they will very rarely, if ever, associate with even a single deaf-mute, the Doctor's argument, if it can be so called, is without value. But he instantly adds, that their language (of signs) is limited to the expression of their immediate wants, and to the few ideas which they have acquired by their silent intercourse with their fellow-beings,—a result far below what may be, and has since been, done for this unfortunate class of persons.

A deaf-mute's words on this subject will serve to show our readers in what light signs are regarded by the deaf and dumb themselves and in a measure, also, their power of expression and knowledge of words:—

'The language of signs is the action of some members of the body with the arms, and the expression of the face, or the counterfeit of the feelings. The expressions of the soul, or counterfeited feelings, are indispensable to the language of signs. If the expression of a real or false feeling were not used with the sign of feeling, the sign would be unique. Signs would be advantageous to persons. A person who can speak his own language cannot speak another language of another.' (*Report of American Asylum, Hartford*, 1823.)

We do not print this fragment because of its intrinsic merit; certainly not because of any cleverness of composition or of thought, but as a fair *average* specimen of what an educated deaf-mute can do towards uttering his thoughts, after being trained for the usual time in one of our Deaf and Dumb Schools. Some pupils would be found to surpass—the average number certainly to equal—this specimen of composition, both in style and in originality of thought. How far such letters as those to be found in Dr. Orpen's book are to be relied on as genuine, our readers must judge for themselves. The testimony of Mr. Watson, one of the ablest instructors of the deaf and dumb in Europe, inclines us to doubt their value. But as the subject is vitally connected with the state of education among the deaf and dumb, we shall cull a few specimens from the works before us.

It is first of all to be borne in mind that written composition is to all deaf-mutes an act of considerable mental exertion, and to many of extreme difficulty. Their letters (speaking of those we know to be authentic) for the most part bear traces of the broken and disjointed condition of their vocabulary; many of the words at command being stored up in their minds as solitary, lifeless fragments, rather than living germs of thought, connected by association with past ideas, and ready for new life. They resemble, in some respects, the letters of a foreigner attempting, after a few months' study, to master the English idiom. Adjectives, nouns, and verbs are dashed into a sentence, just managing to stand upright, and,

to a certain extent, tell their own story with truth.

A deaf-mute's account of her former ideas as to death and its effects.

'I thought formerly a person died, and he was deceitful to die. I talked with my sister Sally (also deaf and dumb) about him. We true thought he buried alive, and also cried the people did not hear him, and also did not eat the meat, and drink the water, the people did not come there and also did not dig the ground. He was very hungry and angry to rise from the grave in the midnight. I wondered at him who did not rise from the grave for a few days.' (*Eliza M——, aged* 19.)

This extract appears genuine, and the more so because it corresponds in roughness of diction, and want of rhythm, with what we have ourselves seen written by the pupils of a deaf and dumb school. It may possibly be surpassed in originality as well as correctness and ease of expression; though, on the whole, we consider it as a fair average specimen in its native state.

(To be continued.)

Selected.

Over-ruling Providence.

Accident, and *chance*, and *fortune*, are words which we often hear mentioned, and much is ascribed to them in the life of man. But they are words without meaning; for it is certain in God's universe, nothing comes to pass causelessly or in vain. The whole series of external causes are arranged according to His pleasure, and the hearts of all men are in His hands, to turn them wheresoever He will, as rivers of water. From the imperfection of our knowledge to ascertain what is good for us, and from the defect of our power to bring about the good when known, arise all those disappointments, which continually testify, that "the way of man is not in himself;" that he is not the master of his own lot; that though he may devise, it is God who *directs;* God who can make the smallest incident an effectual instrument of His providence for overturning the most laboured plans of men. The uniform doctrine of the sacred writings is, that throughout the universe nothing happens without God; that His hand is ever active, and His decree or permission intervenes in all; nothing is too great or unwieldy for His management, and nothing so minute or inconsiderable as to be below His inspection and care. While He is guiding the sun and the moon in their course through the heavens; while in this inferior world he is ruling among empires, stilling the ragings of the waters, and the tumults of the people, He is at the same time watching over the humble good man, who, in the obscurity of his cottage, is serving and worshipping Him.

We cannot, indeed, conceive God acting as the governor of the universe at all, unless His government were to extend to all the events that happen upon it. It is upon the belief of a particular providence that our worship and prayer to Him are founded. All His perfections would be utterly insignificant to us, if they were not exercised, on every occasion, according as the circumstances of His creatures required. "The Lord sitteth upon the flood. The Lord maketh the wrath of man to praise Him, as He maketh the hail and rain obey His word. He has prepared His throne in the heavens; and His kingdom ruleth over all. A man's heart deviseth his way, but the Lord directeth his steps."

Do nothing upon which thou durst not ask the Lord's blessing.

From the Edinburgh Review.

On the Fibrous Plants of India.

(Continued from page 413.)

If we turn to our native plants, we find in the common broom, which adorns so many of our waste places, a familiar type of the leguminous class, to which the Sunn plant of India belongs.

"The *Spartium junceum*, or Spanish broom, common in the sterile parts of the south of Europe, affords a fibrous thread which used to be made into cloth in Turkey, in Italy, and in the south of France. Near Lucca the twigs were formerly steeped in the thermal waters of Bagno a Acqua. After this process the bark is easily stripped off, and it is then combed and otherwise treated like flax. In the vicinity of Pisa, also, the twigs were soaked in the thermal waters. In the south of France the broom is grown in dry and unproductive parts, and also carefully prepared. The coarser thread is used to make bags for holding legumes, corn, etc.; the finer for making sheets, napkins, and shirts. A white-flowered plant has also been long used for the same purposes. This, there is little doubt, is the *Spartium monospermum*, or the white single-seed broom; and probably also *S. multiflorum*, which is the Portugal white broom. As these plants are naturalised in our gardens, it is easy to ascertain the toughness of their fibres by endeavouring to break one of their twigs.

"In the subdivision of leguminous plants to which these brooms belong, we find the *Sunn* plant of India (*Crotalaria juncea*), which has so close a general resemblance to the Spanish broom, that Mr. Yates has figured them together in the same plate, with the object of showing their affinity.

"The Sunn is probably the earliest of the distinctly named fibres, inasmuch as we find in the Hindoo 'Institutes of Menu,' that the sacrificial thread of the Cshatriya or Rajpoot is directed to be made of *Sana;* cotton being reserved for the Brahmins. Towards the close of the last, and the beginning of this century it attracted much attention both in India and in England; and much information respecting it is contained in the works of Dr. Roxburgh and Mr. Wisset. It is an annual plant, very generally cultivated in the southern parts of Asia, and everywhere in India, for the fibres of its bark, so well known as Sunn and Sunn hemp."

The fibre is very strong; but it is remarkable of the Sunn, as it is of common hemp, that the produce of one part of India is found stronger than that of another. Grown in the west of India, it is stronger than when grown in Bengal; and this is recognised in the higher price which western Sunn commands in the European market. It is possible that a difference in the mode of steeping and preparing the plant may have some influence in causing this difference of strength; but Dr. Roxburgh considers it "probable that the climate of the west of India may be more favourable than that of Bengal for the production of a strong fibre." Rope made of western Sunn has recently been tested at the arsenal and government dockyards in Calcutta, and has "proved perfectly equal to any and all the purposes which cordage made of Russian hemp has hitherto been used for." Tried against Petersburgh hemp, a cord of

	lbs.
New Sunn broke with	150
Old Sunn	170
Petersburgh hemp	160
Jubbulpore hemp	190

For cordage, therefore, good western Sunn, carefully manufactured, may be considered equal to the best Russian hemp; while it is stated also, by Mr. Dickson to be *better than any Russian flax for spinning*. To bring this fibre to a state of perfection—the only thing he considers necessary is "European superintendence in the growth and manufacture of the material."

Of this Sunn, there was already imported into this country in 1853 a quantity which, at peace prices, was valued at 22,000*l*. The culture, it is said, may be indefinitely extended towards the western Ghauts, from which it can also be easily exported by sea. Considering its many good qualities, therefore, we may hope that present circumstances will so encourage and extend the cultivation and improve the modes of preparing it that no future European war shall endanger the supplies of raw material which our manufactures and our navy alike require.

Another species of Crotalaria (*C. tenuifolia*) produces a fibre which has been named Jubbulpore hemp, and which, according to the experiment above-mentioned, is stronger even than the best Russian hemp. It grows best on the sides of the hills; that which is produced in the plains, as is the case with common hemp, being less strong. It is much approved of by home buyers, and, if properly prepared, would meet with a ready home market at a fair price.

Dhunchee is the name given by the natives of Bengal to the fibre of another leguminous plant—the *Sesbania aculeata*, which they value highly and familiarly employ. The fibres of its bark form a substitute for hemp.

"This plant, generally cultivated about Calcutta during the rains, grows to the height of from six to ten feet, the fibres are six to seven feet long, but coarser and more harsh than those of hemp, unless cut at a very early period. From its great strength it is well calculated for the manufacture of cordage and cables. In Bengal the fishermen make drag-ropes to their nets of this substance on account of its strength and durability in water. Indeed, by the Bengalese it is considered more durable in water than either *sunn* or *paut*. It has surprised persons well acquainted with this fibre in India that the Dhunchee has remained so much neglected in this country, as it is really a very excellent fibre for common cord and twine, and certainly very much superior in strength and durability to Jute. It is also a much hardier plant than Jute; the latter, indeed, being rather an uncertain crop for the production of the fine, long, silky fibre so much called for in this country. Though rather wiry it is strong, and is chiefly remarkable for its amount of contraction when wetted. This is so great that it would ever carry away the mainmast of a ship by mere contraction."

It is described by Dr. Royle as very suitable for ropes, and as worth, at peace prices, 35*l*. a ton. He adds, that like all the fibres from the East, it would be much more valuable if properly scutched, and that if scutching mills were sent out, these fibres could be brought in a greatly improved state to market.

Passing several other natural families, represented in India by fibre-yielding plants which are but little cultivated, we merely mention two Asclepiads as affording fibres which may be found in the list of future Indian exports. The *Marsdenia tenacissima* grows on dry and barren places among the Rajmahl hills, and of the fibres of its bark the mountaineers of that district make their bow strings. Nets also are formed of it on the rivers where it is found to be stronger and more durable than hemp, being less liable to rot when kept long in water. It is further remarkable, from the circumstance that Dr. Roxburgh has described this fibre to be "not only beautiful in appearance and durable, but the *strongest of any he had met with.*"

The Mudar or Yercum (*Calotropis gigantea*), another Asclepaid, grows over all India, and thrives on soils which either reject or destroy everything else. It yields a fibre which Dr. Wight considered as the strongest on the Madras side of India. It is by present processes somewhat tedious and costly to separate; but, on the other hand, it possesses the double value of being calculated from its fineness to answer many of the purposes of flax, while, from its strength, it is also well suited to supply the place of hemp. A plant so valuable and so easily cultivated deserves and will repay some outlay of time and thought in improving the old methods of preparing it for market.

We notice, in passing, two facts about fibres which, though not rigorously belonging to our immediate subject, will, we believe, be interesting to our readers.

The *Daphne cannabina*, or Nepal paper plant—allied to the *Daphne Mezereum* now common in our gardens—contains in its inner bark a species of fibre which is remarkably adapted for the manufacture of paper. For this purpose, the inner bark is boiled in a ley of wood ashes for half an hour, by which the slips of bark are softened. They are then beaten in a stone mortar with a wooden mallet till they are reduced to a pulp; after which, they are diffused through water and made into paper upon sieves or frames in the ordinary manner.

"Dr. Campbell described the paper, as made by the Bhoteahs, 'as strong and durable as leather almost, and quite smooth enough to write on, and for office records incomparably better than any India paper. It is occasionally poisoned by being washed with preparations of arsenic, in order to prevent the destruction caused by insects. Many of the books in Nepal, written on this paper, are said to be of considerable age, and that the art of making paper seems to have been introduced about 500 years ago from China, and not from India.' He states that this paper may easily be procured at Patna, Purneah, and other places in the plains of both Southern and Northwestern India."

Again: allied to the mulberry is a stately forest tree called Chandul (*Lepurandra saccadora*), which is indigenous to the west side of India, as in the ravines at Kandalla, and in the jungles near Coorg, and from which the natives manufacture bark sacks in a very ingenious manner.

"A branch is cut corresponding to the length and diameter of the sack wanted. It is soaked a little and then beaten with clubs until the inner bark separates from the wood. This done, the sack formed of the bark is turned inside out and pulled down until the wood is sawed off, with the exception of a small piece left to form the bottom of the sack, and which is carefully left untouched. These sacks are in general use among the villagers for carrying rice, and are sold for about six annas each."

(To be concluded.)

Christian Charity.

My brethren, we are now, upon earth, masters of our own conduct, and accountable to no one here for the tempers which we cherish, or the dispositions we show. We may hate our enemies, and refuse to forgive an injury; we may *pass by on the other side*, while our neighbor is in grievous want; we may spend our substance in selfish gratifications, or lay it up for our children, and refuse meanwhile to bestow any portion of it upon the bodies or the souls of our poorer brethren; and, at the same time, none have a right to call us to account, except by a friendly warning: God leaves us to follow our own bent: no fire comes down from heaven to consume the churlish or the malicious; the sun shines alike on the merciful and on the uncharitable; and the rain fertilizes alike those fields which spread their bounty upon God's needy creatures, and those which enrich no one but their covetous owner. We are free to use as we like the gifts of Providence; and this freedom affords the opportunity by which our characters are formed and displayed.

But it will not be always so. There will be a time when we must render an account; when all superiority of strength, or talent, or influence, or place, or fortune, will be levelled; when the strongest, and the cleverest, and the greatest, and the richest, must yield up and return their several gifts to Him who lent them; and with their gifts must return an account of the way in which they have used them. The question will be, have you used your strength to injure, your wit to insult, your power to oppress? Have you, like the rich man in the parable, kept to yourselves your *good things*, and taken no care to *lay up for yourselves a good foundation against the time to come?* Have you never thought of spreading around you, as far as your opportunities allowed, temporal comfort and religious knowledge? Have you suffered the fatherless and widows to lie unfriended in their affliction, when you might have supported or consoled them? Has the ignorant man, as far as concerned you, continued in his ignorance, and the wicked died in his sin? Then you have shown yourself wanting in that quality which most certainly distinguishes the followers of Jesus: you have borne the name, but you have not possessed the spirit of a Christian: you have not been merciful in your generation; and now you have no claim to mercy, when nothing else can snatch you from the *wrath to come*.

No doubt the scrutiny of *the great day* will extend much farther, and relate to other qualities, besides the grace of charity. Those on the right hand, which shall hear the summons, *Come ye blessed children of my Father*, must be humble, and penitent, and meek, and pure in heart, as well as merciful. But the very prominent place which our Lord has assigned to charity in this awful description of the tribunal, where he will himself appear in his glory as Judge, and, *before him shall be gathered all nations*, shows thus much, at least, that this virtue is indispensable; is one by which the Christian must often examine himself, and prove his own soul; inasmuch as, without it, his Saviour will not acknowledge him: he shall not *obtain mercy*. Not that charity, or any other virtue, can redeem us from the punishment of sin, or entitle us to the reward of heaven; *eternal life is the gift of God through Jesus Christ*. It would be a miserable error for a man to suppose that by giving an alms he could attone for a crime, or by excusing his debtor here, clear his own account with God. Forgiveness and pity are necessary parts of that character which Christ will save, but cannot alone save us, or be placed in the stead of Christ. But, as I observed, they are necessary features of that character which Christ will save. Without these it will be in vain for a man to cry unto him in that day, *Lord, Lord, have we not been called by thy name?* He may still answer, you could not have a proper sense of the mercy which I showed, in *bearing your sins in my own body on the tree*, when you showed no mercy towards your own brethren, who had not offended you, by ten thousand times, as heavily as you have offended against your Almighty Father. Neither could you love your brethren, as I commanded you to love them, when you refused to do unto them as ye would they should do unto you: therefore, yours is not the character which shall *obtain mercy*, nor the character for which my heavenly kingdom is prepared.

My brethren, if any of you are conscious that you have not forgiven a neighbor when he trespassed against you; if any of you are conscious that you have taken a malicious pleasure in making a brother's offences known, and injuring his credit; if any have pushed your rights to an extreme, and insisted on a severity of justice when you might rather have shown mercy and pity; if any have no feeling for their fellow-creatures' wants, and are contented to enjoy themselves, without bestowing a thought on those who have in this life *evil things;* you plainly perceive that the blessing bestowed on the merciful is not addressed to you: you must expect judgment without mercy, if you have shown no mercy. Pray therefore to the Lord Jesus Christ, that He who first set the most beautiful example of charity, and displayed his almighty power, not by removing mountains or destroying cities, but went about doing good, reforming the sinner, and curing the diseased, and relieving the distressed, and blessing those who persecuted him, may "pour into your hearts that most excellent gift of charity, without which all other qualities are nothing worth." Whenever you are tempted to resent an injury, reflect with yourselves, has God no account against you? When you are inclined to speak, or to think hardly of your neighbor, who may have fallen into sin, reflect, Am I so without sin that I can venture to *cast the first stone* against another? When you are unwilling to take some trouble, or to spare some little of your substance to relieve another's wants, remember the sentence of your Lord and Judge, *Inasmuch as ye did it not unto one of the least of these, ye did it not unto me.*—*J. B. Sumner.*

Birds and Insects.—Wilson Flagg, in a late number of Hovey's Magazine, makes five classes of insects, and as many birds, acting as natural checks upon the increase of insects.

The swallows are the natural enemies of the swarming insects, living almost entirely upon them taking their food upon the wing. The common martin devours great quantities of wasps, beetles, and goldsmiths. A single bird will devour five thousand butterflies in a week. The moral of this is, that the husbandman should cultivate the society of swallows and martins about his land and out buildings.

The sparrows and wrens feed upon the falling insects that lurk within the buds, foliage and flowers of plants. The wrens are pugnacious, and a little box in a cherry tree will soon be appropriated by them, and they will drive away other birds that feed upon the fruit—a hint that cherry-growers should remember in the spring, and act upon.

The thrushes, blue-birds, jays, and crows, prey upon butterflies, grasshoppers, crickets, locusts, and the larger beetles. A single family of jays will consume 20,000 of these in a season of three months.

The woodpeckers are armed with a stout, long bill, to penetrate the wood of trees, where the borers deposit their larvæ. They live almost entirely upon these worms.

Advice to parents.

I have taken notice, that divers parents, who as to their *outward appearance*, seem to have learned, in degree, the lesson of humility and self-denial, however as far as could be discovered by their dress and address, yet seem to have no aversion to their children making a different appearance; nay, some will even introduce them into it themselves

whilst very young; by which it is plain they have a pride in it themselves, in seeing them so, and cannot help (notwithstanding their outward show) discovering great unsoundness, and that they themselves *are not what they would pass for*.

I sincerely wish that parents, who are apt to indulge wrong liberties in their children, by *suffering* them to deviate from that pure simplicity and self-denial, Truth led our ancestors, and *still* leads those who follow it into, would consider in the first place, the injury their children sustain thereby, by being placed in a difficult and dangerous situation with respect to temptations which may be presented to them by the children of the land or of the world; for doubtless the more like them they appear, the more free and intimate will such make themselves with them, that they may be drawn out into undue liberties; whereas, did they make an appearance quite consistent with their self-denying profession, that sort would be more backward to attempt an access to them.—*John Griffith's Journal.*

For "The Friend."

Meteorological Notice.

West Town. The average temperature of the Sixth month was 66⅘°, which was about ⅕ of a degree cooler than for the same month last year. Range of the thermometer from 42° on the 5th, to 96° on the 30th. The latter part of the month was very warm and oppressive. Amount of rain for the month was 7.80 inches, which was 4¾ inches more than for the same month last year, and considerably above the usual average; at the close of the month the earth was more completely soaked than it had been for more than a year previous.

The average temperature for the Seventh month was 75½° which was ½° higher than for the Seventh month last year. Range of the thermometer from 51° on the 9th to 97° on the 19th. On eleven days the thermometer was at or above 90° at mid-day: and there were but five days during the month that it did not reach 80° or above. Amount of rain was 3.38 inches. On the 20th of the month a tremendous rain fell at Philadelphia, but not any here.

The average temperature of the Eighth month was 70⅘°, about one degree cooler than that for the same month last year. Range of thermometer from 50°, on the 19th to 86° on the 4th and 16th. Some pretty cool weather during the month. The amount of rain was 3.58 inches.

The mean temperature of the three summer months was 70½°, which was ½° below that of the previous summer, and the same as the summer of 1853. The amount of rain was 14.76: in 1854 it was 10.44 inches.

Selected.

The practice of employing immoral or irreligious persons in families where there are young children, is often attended with very injurious consequences to their tender minds. Parents who are desirous of training up their offspring in the fear of the Lord, should exercise great care as regards those they employ. I well remember the corrupting conversation and conduct of some who were engaged in my father's business, when he was altogether ignorant of what was passing. The sons of farmers, who are left to labour with the workmen, without the presence of their parents, are in a particular manner exposed to contamination, many of that class being of the lowest grade, and hardened in wickedness. It is no less important in the education of children, that suitable teachers should be sought for. Greatly have the children, in many parts of the country, suffered from the want of this care; too many being more anxious to obtain a teacher at a low rate, than to get one of good character, whose services may cost a little more; and hence some persons who would rank among the dregs of mankind, have been trusted with the oversight and tuition of tender children. One of this description who had been a soldier in the British army (during the American Revolution), was employed in the neighbourhood where I lived, and from him I derived much of my small share of school learning. He would often leave his pupils under the care of one of the elder boys, while he spent his time at a tippling-house with his drunken companions, and returning to the school intoxicated, would beat the boys unmercifully, while his own face bore the marks of the blows he had received from his quarrelsome and inebriated associates. This, however, is a strong case, and I believe Friends are now more careful; and the concern to have suitable teachers, appears to be generally gaining ground. —*Henry Hall.*

It is not very probable that children would now be entrusted to the education of an intemperate person; but we may easily conceive that men and women of fair reputation, but secretly holding wrong principles, may be unwittingly employed as teachers, and infuse very dangerous opinions into the minds of their pupils, especially in public seminaries managed by persons of loose sentiments on the subject of religion. The character and faith of a teacher are of unspeakable moment to the scholar, either for good or evil.

TO THE AUTUMN LEAF.

Thou faded leaf! It seems to be
But as of yesterday,
When thou didst flourish on the tree
In all the pride of May:
Then 'twas the merry hour of spring,
Of nature's fairest blossoming,
On field, on flower, and spray:
It promised fair; how changed the scene
To what is now, from what hath been!

So fares it with life's early spring;
Hope gilds each coming day,
And sweetly doth the syren sing
Her fond, delusive lay:
Then the young fervent heart beats high,
While passion kindles in the eye,
With bright, unceasing play;
Fair are thy tints, thou genial hour,
Yet transient as the autumn flower.

Thou faded leaf! how like to thee
Is beauty in her morning pride,
When life is but a summer sea,
And hope illumes its placid tide:
Alas! for beauty's autumn hour,
Alas! for beauty's blighted flower,
When hope and bliss have died!
Her pallid brow, her cheek of grief,
Have thy sad hue, thou faded leaf!

Autumnal leaf! there is a stern
And warning tone in thy decay;
Like thee must man to death return
With his frail tenement of clay:
Thy warning is of death and doom,
Of genius blighted in its bloom,
Of joy's beclouded ray;
Life, rapture, hope, ye are as brief
And fleeting as the autumn leaf!

AUTUMN EVENING.

Behold the western evening light!
It melts in deepening gloom;
So calmly Christians sink away,
Descending to the tomb.

The wind breathes low; the withering leaf
Scarce whispers from the tree;
So gently flows the parting breath,
When good men cease to be.

How beautiful on all the hills
The crimson light is shed!
'Tis like the peace the Christian gives
To mourners round his bed.

How mildly on the wandering cloud
The sunset beam is cast!
'Tis like the memory left behind
When loved ones breathe their last.

And now, above the dews of night,
The golden star appears;
So faith springs in the heart of those
Whose eyes are bathed in tears.

But soon the morning's happier light
Its glory shall restore;
And eyelids that are sealed in death
Shall wake, to close no more.

For "The Friend.

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

JOHN WILFORD.

(Continued from page 414.)

"Take heed of too much observing the custo of making great feasts at weddings, or of joini the world therein. Let all wait to be guided God's wisdom, that so all things may be done His honour; for marriage is a weighty thing, a ought to be solemnly performed in the fear God,—not in revelling and lightness, as many the world have done. Let no unseemly word action be once mentioned amongst any that p fess the truth of God. Let all Friends take h of making, or joining with them that do ma appointed feasts some small time after a child born. I, with many of the Lord's people, h seen much evil therein, and have been constrain to bear our testimony against it. Yet let all ware of covetousness in that and other thing providing things honest in the sight of men. T Apostle Paul said, 'Whatsoever things are tr just, honest, pure, lovely, and of good report there be any virtue, think on these things.' Th should be minded in our marriages, births, s burials, that all may be in a comely, solid ord out of all extremes: so we shall overcome e with good, and leave a good pattern to posteri

"There is one thing more, which, for the s of our youth and a few others, I cannot well on the observing the time called Christmas. T the false Christians set up, as they did many ot days, called saints' days. These, the Lord h laid a holy constraint upon His people to b their testimony against, though some have t been so clear as they should have been there Now Friends, this is that which God by his li and spirit opened in my heart many years a When they had in a great measure lost the sain life and Christ's day within them, then in e darkness they set up saints' day and Christ's d as they call it, without them,—at which times m wickedness is acted than at other times. I cou say much about that and other things set up the night of darkness, but these things were weight upon me. This is the sense which (t hath given me,—that none who profess Tr should make any show of observing these tim either in apparel or provision, or going visiti or neglecting their usual business. Some m object that they have known Friends appoi meetings on that day, or about that time. I answer, True, but for what end? Has it been to serve the time? No such matter,—but to co people when they were idle,—and to labour bring them from the observation of days with in vanity, to the day of Christ within. That t may walk in the light of it, and be saved fr their sins.

"Written the 25th of the 1st month, 1691 your travailing brother, "JOHN WILFORD

'Postscript. There is another thing comes esh upon me, which I cannot well omit. It meth an uncomely thing, and sheweth too little e to the former wife or husband, for either man woman to be concerned or to keep company ith any in the way of marriage, too soon after the ife or husband be dead, although they may stay ear before they marry, yet if they keep compa-, or be too soon concerned on account of mar-ge, it is not of good savour. All who profess e Truth should be good examples to them that e without, that they, seeing our sober, solid, godly nversation, coupled with fear, may have cause glorify God in our behalf, in the day of their isitation."

In the same pamphlet containing the "Brief hortation," the following production of John ilford's pen is inserted :—

"A short testimony for the good order of Truth, it is established and preached amongst the people lled Quakers;" showing how by degrees the ord in His love led us into it. Written partly r the opening the understanding of the weak nd honest hearted, and for convincing opposers nd gainsayers.

"Dear Friends and People.—When first the ord Almighty cast his eye of pity towards us, e were a poor people, scattered upon the barren ountains and parched heaths, where some of us andered from mountain to hill,—from one pro-ession to another. We sought the living amongst ie dead, but found him not there; for he was sen. Our rest, some in one profession and some a another, was polluted, and we were troubled,—eing as sheep without a shepherd. Then we ried unto the Lord, and sought secret places to our out our souls before Him, as well as we ould, crying for the holy guidings of His pure pirit; for we were at a loss, and knew no bottom o stand on. In this day of distress, which was iore than tongue can declare, the Lord in his un-tterable loving kindness opened his way unto us, nd showed us, that we should wait in his light nd spirit within us, for that which was to be nown of God was manifest within. Then we urst not give our own meanings to the Scriptures, r other writings of holy men, but came to know time of true silence, for which my soul hath reat cause to praise the Lord. He showed me, nd many more, that we must wait upon him out f our own thoughts, imaginations, or conceivings. Then was judgment laid to the line, and right-ousness to the plummet. Our sins were set in rder before us, and there was no help nor strength eft in us. Of ourselves we could do nothing but ie down under the judgments of the Lord, and bide the day of his coming, until judgment was rought forth unto victory, and he was pleased to eveal his own righteousness, and overshadow us rith his loving kindness, and cause us to drink of he still waters of Shilo, making our hearts to be lad, being overcome with his love. Then we aid, O Lord! show us more and more what thou ouldst have us to do,—for thou hast won our earts, and overcome our souls, and we are given p to do thy will, whatever it cost us. As we ontinued waiting upon Him in His light and spirit, ur understanding was more and more opened, nd our numbers increased, the net was cast nto the sea, and gathered of every kind, for the ord made us fishers of men. Then he shewed s that there was need of discipline and order mongst us touching marriage, and many other hings. If any offended they should be dealt with s Christ taught in the 18th Chapter of Matthew, nd as Paul said, 'warn them that are unruly,'—nd further, 'We command you brethren, withdraw ourselves from every brother that walketh disor-derly.' Yet it was the mind of Christ, and also of the apostle, that if a man was overtaken with a fault, those that were spiritual should labour to restore him in the spirit of meekness; and that those who opposed themselves should be instructed, that if God, peradventure, would give them re-pentance, to the acknowledging the truth. As we continued waiting upon the Lord, he led us by degrees, according to our measures, into this way and method, and we have laboured to instruct, advise, and council one another. Though there be diversities of gifts and operations, yet it is by the same spirit that worketh all in all,—to the edifying of the body of which Christ is the head; to the end that there be no schism, but true unity and harmony amongst all the members. Indeed one member cannot suffer alone. It is the nature of the body, if one member be out of joint, to en-deavour to bring it in again. If it cannot be gotten in, but becomes putrified, and in danger of hurting or spoiling the whole body, the skilful chirurgeon will advise to cut it off, rather than the whole body should perish. This is not de-lightful to the body, but sorrow and pain to lose a member. It is seldom done until all the Friends of a Monthly or Quarterly meeting, whereunto such an offender belongs, are clear of him. It is the labour, care, and desire of Friends, that if any professing Truth, should be overtaken with a fault by which Truth may suffer, that they may see it, and repent and clear Truth themselves. Let not any think it to be a light thing to be so stubborn and rebellious as to cause the body or church of Christ to disown them. Although the Papists have assumed to themselves, for filthy lucre's sake, that power which God never gave them, yet there is much in Christ's words, who never spake unadvisedly, when he saith of offenders, 'If he neglect to hear the church, let him be unto thee as a heathen man or a publican. Verily I say unto you, whatsoever ye shall bind on earth, shall be bound in heaven; and whatsoever ye shall loose on earth, shall be loosed in heaven. Again, I say unto you, that if two of you shall agree on earth touching any thing that they shall ask, it shall be done for them of my Father which is in heaven. For where two or three are gathered together in my name, there am I in the midst of them.' These are weighty sayings of our Lord, and ought to be well considered on all hands. Was it ever known that any member prospered, being separated from the living body whereunto it did belong."

After some directions about marriage, he thus concludes :—

"All, dear Friends, who have the concerns of Truth and the care of the church upon you, wait to feel the living power of God in all your gather-ings, and the mind of the Spirit, that all things may be done in the wisdom of God, which is from above,—pure, peaceable, and easy to be entreated, to every good thing. All, both male and female, wait to know your several services in the church. The body is not one member, but many. The eye cannot say to the hand, I have no need of thee,—nor the head to the foot, I have no need of thee; but every member has its proper service. Though the man is not without the woman, nor the woman without the man in the Lord, yet they have their particular service in the outward family, and in the spiritual family, or church of Christ. Let them that read, understand. Does not the good woman take care that nothing be lacking in the family? and are not good men one with them in it! Oh! dearly beloved Friends! my soul loves you, and I desire that all may feel the unity of the spirit, which is the bond of true and lasting peace. The Devil is labouring to make divisions all the world over, and can we expect to be free from his temptations? Therefore we had need watch and pray, that we may be delivered from evil, that we all may be as lively stones built up! a spiritual house to offer spiritual sacrifices accept-able to God by Jesus Christ, that we may show forth the praises of Him who hath called us out of darkness into his marvellous light. This is the earnest desire and prayer of your friend, who at the close of this epistle is filled with the love of God to all the flock.

"Written 4th of Second mo. 1691.

"JOHN WILFORD."

It appears that John Wilford saw the outward tendency of some Friends before the full outbreak of George Keith, and he was constrained to lift up his voice against the spirit which was depart-ing from and condemning Friends' ancient testi-monies. His faithfulness may have been blessed to the saving of some from being carried away by Keith, and he doubtless had peace in his labours, although much spoken against and reviled. Caleb Wheatley, who had been so far carried off as to feel an obligation resting on him to make a public acknowledgment, says :—"Long before George Keith set up his separate meeting, my mind was at times gone out of the pure fear of God into my own reason and conceivings, and in that I took in hand to judge of Friend's testimonies, and therein speak evil of that which through God's goodness, I now see I understood not—and particularly against John Wilford, who often gave us warning of what is now come to pass, telling us in the power and demonstration of God's pure spirit, that if we went from the guidance of God's spirit unto our own imaginations and huntings, to study God's secrets, it would gender to strife and contention, and we should be like heads and horns, pushing and rushing one at another; which is too appa-rent."

There is just such a spirit prevalent at the pre-sent day! It commenced with great apparent searching and investigating into religious things. Human art with all its arguments has been at work, with the aid of biblical commentators, in making buildings of knowledge, reaching, it may presume, heavenward. Pleased with their Babel-like structure, which, as they have framed it all, they think they understand, the architects begin to scoff at the more spiritual testimony of their fathers. One can see no use of enforcing the doctrine of the Light of Christ and obedience thereto, as of necessary consequence to salvation; another finds no necessity in keeping to sim-plicity in marriages, burials, and in graveyards with-out monuments; and others again, are prepared for laying aside the plain garb and plain language, regarding them as "stumbling blocks." Caleb Wheatley says of his connection with the Keith-ites, "I had no true peace with them. I often cried for life, when I could not feel it amongst them, but instead thereof, sorrow and anguish of soul. If I had kept to the guidance of God's pure spirit, and the light of Christ in my own heart,—which some of them in my hearing have under-valued, saying, they thought I had known better things, when I said I ought to believe in the light within which reproveth for sin. I say, if I had kept to this I had never joined with them."

John Wilford was one of the Committee of the Meeting of Ministers which prepared the testimony against Keith. He lived to see the party which that apostate carried with him, broken to pieces and scattered in fragments into various societies. He was a diligent attender of Yearly Meetings, and in the year 1698 paid a religious visit throughout New England. This is the last notice we find of him. John Whiting, in his Catalogue of Friends' books printed in 1708, after

enumerating sundry publications of John Wilford's, says, "He went to New Jersey, there died, and was buried at Burlington." He does not mention the time of his decease, but it was near the commencement of the last century.

(To be continued.)

Wheeler Slave Case.

As all our readers, in common with every citizen of Pennsylvania, are interested in the facts and the result of the case of P. Williamson, involving as they do, principles of law and of right which should be clearly understood, we give place to the following extract from a statement published in several of the daily papers, which we believe to be in accordance with the evidence produced in the case.

"John H. Wheeler of North Carolina, the accredited Minister of the United States to Nicaragua, after spending several months at his post, returned suddenly to this country early in July last. A few days later he left Washington for Nicaragua, taking with him Jane Johnson, a slave woman whom he had purchased some two years before at Richmond, Virginia, and her two children, both sons, one between 6 and 7, and the other between 10 and 11 years of age. His professed design was to hold them as slaves, not only in the free States of Pennsylvania, New Jersey and New York, but also in the free country of Nicaragua. Lawyer by profession, and Diplomatist by occupation, he was fully aware that none of the States named tolerated the existence of Slavery for a moment within their limits, excepting in the case of slaves escaping from other States. He seems to have relied for immunity upon the respect inspired by his representative character and upon his personal vigilance in guarding Jane and her children.

"Upon his arrival at the Baltimore Railroad Depot, corner of Broad and Prime streets, in this city, he took a close carriage, got into it with them, and drove to Bloodgood's Hotel, stopping on the way at the house of a relative. During the two hours and a half of their stay at Bloodgood's he lost sight but once of his companions. Most of this time was spent upon the second story balcony, which overlooks the river, J. H. Wheeler sitting between Jane and the entrance to the balcony. In this situation the unusual group attracted much attention upon the wharves. Jane's intention to assert her freedom at the earliest opportunity had been fully formed before starting from the South. She is a remarkably intelligent woman for one wholly without education. When J. H. Wheeler was called to dinner, she feared to move, thinking his eye was upon her. It was well she did so, for in a few minutes he left the dining hall to see whether she was still there; and being satisfied on that point, returned to finish a hasty repast. It was at this time she spoke to a coloured woman who was passing, and told her that she wanted to be free; and to a coloured man she said the same thing a moment afterwards. The thing was soon noised about through the house, and an hour afterwards Wm. Still, a clerk at the Anti-Slavery Office, received, by an errand boy, a note asking him to come down to Bloodgood's hotel as soon as possible, as there were three slaves there who wanted liberty, and that their master was with them, on his way to New York.

With this note in his hand, Wm. Still called upon the Secretary of the Acting Committee of "The Pennsylvania Society for Promoting the Abolition of Slavery, and *for the Relief of Free Negroes unlawfully held in Bondage*, and for improving the condition of the African Race." This Society, whose objects are sufficiently indicated by its name, was incorporated by Legislative Act in 1789; Benjamin Franklin was its first President, and it has ever since been an efficient aid to freedom in Pennsylvania. P. Williamson, the present Secretary, is every way worthy to fill his post. A conveyancer of good standing, well educated, intelligent, a thorough business man, of active habits and sound judgment, he has long enjoyed the respect and unlimited confidence of a large circle of acquaintances and friends. At the time Wm. Still asked him to perform the official duty imposed upon him by the practice and regulations of the Society, and do something for the relief of Jane and her children, unlawfully held in bondage, P. Williamson was busily engaged making preparations to leave for Harrisburg that evening, for the purpose of attending an election of the Atlantic and Ohio Telegraph Company. He excused himself, therefore, and told Still to go down and get the names and telegraph to New York, so that a habeas corpus might be taken out there; but, on second thought he went down himself, getting there before Still. Upon inquiring at the hotel, he learned that the parties had gone on board the ferry boat then at the wharf, designing to take the five o'clock Camden and Amboy train for New York. A coloured boy accompanied him on the boat as guide. After an examination of the lower deck, P. Williamson proceeded to the upper one, and found Jane and her children sitting upon the bench running round the edge on the outside and nearly opposite the stairway. He went up to her and said, "You are the person I am looking for, I presume." J. H. Wheeler, who was sitting on the same bench, three or four feet from her, asked what P. Williamson wanted with him. The answer was, "Nothing, my business is entirely with this woman." Amid repeated interruptions from J. H. Wheeler, P. Williamson calmly explained to Jane that she was free under the laws of Pennsylvania, and could either go with J. H. Wheeler, or enjoy her freedom by going on shore. The conversation between Williamson, Wheeler, Still, and a by-stander, was kept up for several minutes, the same ideas being frequently repeated. A few persons gathered about them to hear. At last the bell rang, and P. Williamson, supposing the boat was about to start, turned to Jane and said, "The time has come when you must act; if you wish to exercise your right of freedom, you will have to come ashore immediately." She looked round at her two children, grasped the hand or arm of the one next her, and attempted to rise from her seat. Wheeler pushed her back, saying, "Now, don't go, Jane." She renewed her effort to get up, and did so, with the aid of P. Williamson. At the same time two coloured men, whose business as porters had brought them on the boat, prompted by sympathy, took hold of the children, and the movement toward the stairway commenced, Wheeler opposing their progress. The youngest child was frightened, and cried. Wheeler's first movement had been to push Jane back, but he soon clasped her tightly round the body, and begged her, in the most hurried and earnest manner, to say she wanted to go with him to her friends in Virginia. She made answer that she wanted to see her friends, but would rather be free, and moved steadily forward towards the stairway leading to the lower deck. When near it, P. Williamson detained J. H. Wheeler until Jane and her friends passed down, and afterwards descended in company with him, and left the boat. It was at the head of the stairway, if we may believe J. H. Wheeler, that he was seized by two coloured men and threatened by one of them; but the most careful and repeated examination of witnesses has failed to elicit any testimony except to a threat made on the lower deck.

"The persons who aided Jane Johnson to de... the stairs, pass the gangway and walk to th... ner of Front and Dock streets, were porter... labourers about the wharves and ferry boat, w... sympathies had led them to join the crowd w... gathered around Williamson and Wheele... the beginning of their conversation. They ... her quietly and effectively. There was no tur... noise or uncalled for display of resolution. ... police officers were present and declined i... fering because of the absence of any viol... noise or tumult to justify them in doing so.

"About the same time, and while followin... the wharf the little group around Jane, J... Wheeler demanded of P. Williamson his n... This was promptly given, with the assurance ... P. Williamson would meet the responsibilit... any injury sustained by the legal rights of J... Wheeler. At the corner of Front and Dock str... Jane got into a carriage with her children. ... coloured man took his seat by her side. J. H. Wh... er begged the driver to stop, threatened him, ... ran after him nearly to Spruce street. The ... riage drove off and the Minister returned alon... the boat. Jane and her children were hospit... received by friends, remained here a few days, ... then left for New York city."

J. H. Wheeler applied to Judge Kan... the District Court of the United States in ... Eastern District of Pennsylvania, who grant... writ of Habeas Corpus directed to P. William... commanding him to bring the said J. John... and her two sons before him, holding the ... Court. On the 20th of Seventh month, P. W... liamson appeared before the Court, and by ... attorney made return to the writ, in which he ... clared that the said Jane, Daniel and Isaiah Jo... son "are not now, nor was at the time of issu... the said writ, *or at any other time* in the custo... power or possession of, nor confined nor restrai... their liberty by him," and that therefore he co... not bring them before the Court as directed.

Exception was taken by the District Attorney ... the United States to this return, who offered to pr... by testimony, that the respondent had then, or l... had, the three persons named, in his possession; ... the judge intimated, before hearing any eviden... that he might find it his duty to bind the respond... over for perjury. Evidence was then heard as to ... facts of the case, J. H. Wheeler and others ... ing their version of the transaction above ... rated; after which, P. Williamson took the sta... and stated how, and in what manner he had act... and why he made the return then before ... Court. The Judge in order to give a written ... cision adjourned the case, requiring bail to ... amount of $5,000. On the 27th Judge Kane ... livered his decision, the amount of which w... that by the introduction of the words *"or at a... other time,"* in the return to the writ of Habeas C... pus, P. Williamson was guilty of "contempt" ... for which he was sentenced to imprisonment wi... out bail or mainprize during the pleasure of t... Court. On the 31st, application was made ... Judge Lewis of the Supreme Court of Pennsylvan... for a writ of Habeas Corpus to bring P. Willia... son before him, but the application was refus... The Supreme Court of Pennsylvania sitting ... banc at Bedford, application for a writ of Habe... Corpus was made to it on the 13th ult., and arg... ment enforcing the application heard: the Co... adjourned without giving a decision. On ... venth day the 8th inst., the Court gave its de... sion in Philadelphia, disallowing the applicati... on the ground that they have no jurisdiction ... the case. Judge Knox dissented and deliver... an opinion that the Court was bound to grant t... writ.

; P. Williamson stands committed, his liber-
, as his imprisonment, is altogether at the
etion of Judge Kane, who it appears may
him incarcerated for life, unless he produces
hree persons named or amends his return, by
tting that he at one time had possession of
aid Jane Johnson and her two sons.

may be proper to state, that several of the
ired men who were engaged in assisting J.
nson and her sons in effecting their escape
detention by their former master, having
indicted for riot and assault, and battery,
were tried before the Court of Quarter Ses-
s in Philadelphia, and all but two acquitted,
two being found guilty of "assault" only, and
enced severally to a fine of $10 and one week's
risonment.

THE FRIEND.

NINTH MONTH 15, 1855.

he beginning of another volume of the Friend
ibly reminds us of the rapid flight of time.
v short the interval appears since our last vol-
e was commenced, and yet that interval com-
es a year—one-seventieth of the period allotted
he life of man—truly "our days on the earth
as a shadow, and there is none abiding."
s consideration should not only stimulate to
ewed exertion in the performance of duty, but
mpt to a close inspection of our motives to
on; for to those on whom the greatest weight
ears may be permitted to rest, the hour must
arrive, when they must render an account of
r stewardship, and receive a righteous reward
their deeds.

The objects for which this Journal was estab-
ed have been repeatedly set forth in its col-
ns, and it may not be necessary to dwell on
n at the present time. They have, however,
none of their importance or interest, nor is the
y to strive for their attainment felt to be di-
ished.

The present condition of our religious Society
st awaken feelings of humiliation and deep con-
n in every member of it who is really alive to
est interest. Distracted and divided, one part
wning the other, its faith is in danger of be-
ing vitiated, and its divinely authorized form
overnment weakened or set at naught. How-
r, the plea may be put forth, that the charge
never been brought home to any particular in-
iduals, of promulgating the errors contained in
works of J. J. Gurney and E. Ash, yet it is
l known that the works of the former are
ly circulated, and strenuous efforts made to se-
e their reception, as worthy of all confidence,
to prove their author sound in the faith, be-
se, it is alleged, many sound views are to be
nd in these works, and that the passages ob-
ted to, may be attributed to the bias of educa-
, or peculiarity of expression: very much the
e plea as was made by the followers of E.
ks on behalf of his sermons. The sad effect
duced by the promulgation of those errors
hin the Society, is amply demonstrated by its
sent convulsed condition, and the fact that that
t of the Society which has conscientiously per-
med its duty in testifying against these errors,
consistently maintaining that testimony, has
reby brought upon itself censure, and oft-re-
ted charges of acting from unworthy motives,
ile some portions of it have been rejected and
owned by their fellow professors, and those who
e separated from them, countenanced, in their
disorder and disregard of the discipline of the Society. The position occupied by those Yearly Meetings which have testified against the modern innovations attempted on the principles of Friends, and the divisions arising out of that attempt; and the peculiarly trying situation of those members of other Yearly Meetings, who feel themselves bound to maintain a similar testimony, and cannot, therefore, unite with the course pursued by their Meetings towards the Separatists, are subjects of absorbing import, involving as they do, the future integrity of the Society.

The Friend, as its readers are aware, has steadily opposed the reception of the modified Quakerism of the day, and sought, as suitable opportunity presented, to uphold and strengthen the hands of those who are maintaining a consistent testimony against it. How far it has succeeded in satisfying the expectations of its readers, it is not for us to say, as we know it is easy to indulge more favourable conceptions of our own course than it is to impress its correctness on others. Our aim has been, and continues to be, to support the Truth for its own sake and for no party purposes; and our main desire is, that all the members of our religious Society should be individually brought into a practical exemplification of the purity and fulness of our holy profession; for it is easy to confound the praise and defence of sound principles, with the supposition that we availingly hold them; and to judge of ourselves merely by our opinions instead of by our actions, the consistency of our lives and the lamb-like spirit with which we may be clothed. As this practical exemplification comes to be more generally witnessed, we believe divine strength and wisdom will also be more abundantly dispensed, for the right ordering of the affairs of the Church, and for the comforting and edifying of the "afflicted and poor people" left in our midst, and whom the Lord delighteth to preserve and defend. Although we cannot divest the mind of solicitude respecting the present condition and the future prospects of the Society, nor should we wish to do so; yet it is wise not to allow ourselves to be harassed by undue anxiety about anticipated difficulties and trials which may never occur, and to endeavour to repose with confidence on Him, who is omniscient, and the Almigty disposer of events, and who, in the counsels of his wisdom, will secure the final triumph of his truth and people.

Nor should any permit the present unhappy condition of our religious Society, to betray them into the delusion, that because "the love of many has waxed cold" they are liberated from the obligation to maintain a life and conversation consistent with the self-denying religion the Society has ever professed to the world. The value of this religion can be known and enjoyed only so far as it is permitted to cleanse the heart and extend its government over each one individually. Its authority is affected by no change of circumstances, nor can the unfaithfulness of one liberate another from obedience to its demands. So, likewise, its blessed rewards cannot be turned away from the upright in heart, by the defection or disobedience of the multitude, for amid all the commotion and strife of tongues, the foundation of God standeth sure; having this seal, the Lord knoweth them that are his.

A practical faith in this religion on the part of each of the members of our Society, would soon extricate it from all its present difficulties, and bring us as a united band, to labour harmoniously to cleanse the camp of its defilements, and uphold inviolate the doctrines, testimonies and discipline entrusted to us, to the honour of our Divine Master and the spread of his kingdom. If, amid its other aims, the Friend may be instrumental in promoting this good work, it will fulfil the fervent wishes of those who conduct it. We shall not relax in our efforts to make it interesting and instructive in the other and different departments, and we trust our friends will, as heretofore, encourage us by their countenance and support.

OHIO YEARLY MEETING.

Further accounts received from members of Ohio Yearly Meeting inform us that, when Friends assembled on Third-day morning, at the hour adjourned to, they found the house occupied by the Separatists (who had met at 9 o'clock), and were consequently obliged, notwithstanding rain was falling, to hold their meeting in the yard. After receiving the report from the representatives, and appointing clerks and assistants, the meeting adjourned until 2 o'clock, P. M., and continued to hold its sittings in the afternoon of each day until the conclusion, which was late on Fifth-day. We are in possession of but few particulars relating to the business transacted; but understand that epistles were addressed to Dublin and Philadelphia Yearly Meetings. Both communications from Baltimore were read, and that signed by R. H. Thomas, together with a similar communication from Indiana, was referred to the Meeting for Sufferings. After deliberate consideration, a minute was adopted by the Meeting, expressing its sympathy with the Friends composing the meeting of which W. Waring was clerk, but that no way now opened to take further action in the case.

The Meeting is represented to have been large, and the business transacted in condescension and harmony, to the mutual comfort and strengthening of the members under their peculiar trials. It was concluded that the time of holding the Yearly Meeting next year should be one month later than it has heretofore assembled.

When the minutes are received, further particulars will be given.

SUMMARY OF EVENTS.

EUROPE.—The steamship Atlantic arrived at New York on the 6th inst. with Liverpool dates to Eighth mo. 25th. The Russian attack of the Allied lines near the Tchernaya on the 16th ult. was a sanguinary affair, but the despatches do not show with clearness the loss sustained by the respective parties. Prince Gortschakoff telegraphs—"Evening, August 16th.—Part of our troops crossed the Tchernaya and attacked the heights of Tedioukine. Having encountered very considerable forces, we, after an obstinate fight, thought proper to retire to the right bank, where we awaited the advance of the enemy for four hours. As they did not move forward, we returned to our position. The loss is heavy on both sides." A French despatch dated the 19th, says:—"It was necessary to continue the armistice demanded yesterday by the Russians, from 5 A. M. to 2 P. M. to-day, for them to carry away their dead. The nearest enumeration we could make gives the following results:—Russians buried by the French, 2129; by the Russians, 1200; total, 3329." Another account says:—"The Russians left at least 2500 dead on the field; 38 of their officers and 1620 men are in our ambulances. Three Russian Generals are said to have been killed. We moreover made 400 prisoners. Our loss is 180 killed and 810 wounded. The loss of the Sardinian troops is stated at 600 killed and wounded." Gortschakoff's latest despatch from Sebastopol, on the 21st, says: "The fire of the Allies was sensibly diminished, and does but little damage."

THE WAR IN ASIA.—A Russian division, between Kars and Erzeroum, having been reinforced, had marched upon Kenpri-Kerri, and drove the Turkish troops from their position, and finally encamped three leagues from Erzeroum.

THE BALTIC.—According to the Russian Admiral's account of the bombardment of Sweaborg, the Allies appear to have done but little damage beside burning the public stores. He says, no damage whatever has been done to the fortifications, batteries or guns of the forts, and closes his despatch on the evening of the 12th,

thus: "The enemy remain at their old anchorage, and do not renew the attack."

The attack on Riga was commenced at four o'clock on the morning of the 10th, by two English steamers. One two-decker and one frigate. The bombardment continued till 7 o'clock in the evening, doing apparently no damage. About 40 Russians were killed and 60 wounded in the attack of Sweaborg.

SPAIN.—The sale by public auction of the national property commenced at the Town Hall of Madrid on the 10th. The sale was well attended, and the competition between the bidders spirited. Energetic measures were being taken to get possession of the property of the church, and yet the Government endeavours to avoid a direct rupture with Rome.

FRANCE.—On the 17th ult. the Queen of England crossed the channel to Boulogne, where she was received by the French Emperor with great distinction. The royal party proceeded to Paris by railway. At all the stations on the road from Boulogne to Paris, troops were drawn up, arches erected, and ceremonies of homage performed.

PRUSSIA.—Count Labinsky, the Governor of the Bank of Poland, had arrived in Berlin for the purpose of negotiating a loan for the Russian Government.

GREAT BRITAIN.—The accounts respecting the crops were conflicting, but on the whole rather unfavourable. It was thought that considerable importations of grains would be needed. At Liverpool flour had advanced about 2s. a bbl. Cotton was unchanged in price, sales of the week 45,000 bales. The stock of American cotton in port was 372,500 bales. Iron was in good demand. Consols, 91¼.

NICARAGUA.—On the 18th ult. a bloody battle was fought between the Government troops, under Guardiola, and the Democratic or Revolutionary army, under Munos, assisted by Alvares, with forces from Honduras, which resulted in the complete defeat of Guardiola, and the death of Munos.

On the 29th, Col. Walker landed at San Juan del Sud, with 56 men of his command and 170 of the Democratic army, under Mendez. He was endeavouring to recruit from the California passengers, with but little success. Col. Kinney's party is still at San Juan del Norte.

CHINA.—By way of California, Hong Kong dates to Sixth mo. 26th, have been received. The Pekin Gazette records further successes against the insurgents in the North, and mentions that the capital of Hupeh, and the district around it, continue to be infested by rebel bands. From Nanking there is nothing additional. The trade of Shanghai proceeds without interruption, and Canton was rapidly recovering its commercial activity. There had been on an average more than two hundred persons executed in Canton daily for the fortnight previous to the 16th of June, and the prisons were not then cleared. The two leaders who took the city of Shun-teh in August one year ago, were cut in pieces on the 1st of June.

UNITED STATES.—*Kansas.*—The (mob) Legislature of Kansas adjourned on the 30th ult., after having adopted such portions of the Missouri code of laws as are not locally inapplicable or inconsistent with the laws of Kansas already passed. The pro-slavery convention has nominated General Whitefield as delegate to Congress.

New Orleans.—The fever appears to be abating. The deaths for the week ending 3rd inst. were 400, including 294 from yellow fever.

Commerce of the Port.—According to the annual statement published on the 7th inst., the receipts of cotton for the year had been 1,278,500 bales, being a decrease of 155,000 bales against the previous year. The exports of the year had been 1,475,000 bales, being a decrease of 151,700 bales. The whole crop has been about 2,000,000 bales. The receipts of sugar have been 189,000 hhds., being a decrease of 82,500 hhds. The crop of Louisiana is estimated at 314,000 hhds. The receipts of molasses have been 311,000 hhds. The crop of Louisiana is estimated at 23,000,000 gallons. There had been an increase in the receipts of flour and pork, and a large decrease in the receipts of corn. The total value of the exports for the year was $83,669,000. The receipts of duties at the custom-house for the year, had been $2,128,000, being a decrease of $430,000 compared with the previous year.

Norfolk and Portsmouth, Va.—These cities have been desolated by the yellow fever. At the last accounts the mortality was very heavy, notwithstanding the greater portion of the inhabitants had fled from the pestilence. Recently there were about 1000 persons sick of the disease in Norfolk, and about 450 in Portsmouth. The remaining inhabitants were said to be suffering from famine as well as fever. The sympathy of the people of more favoured cities has been manifested by contributions in aid of the suffering poor, and a number of physicians and nurses from various quarters have generously devoted themselves to the relief of their afflicted fellow creatures.

Boston.—The new law, allowing coloured children to attend all the public schools, has gone into effect, and many of them now attend with the white children. Of the first attendance, the Boston Transcript says: "They created quite a 'sensation' among the boys and girls, but no violent manifestations of dislike were seen."

California.—On the 8th inst. the Northern Light arrived at New York, bringing 447 passengers, $1,065,597 in gold, and seventeen days later news from San Francisco. Trade was dull, and merchandize generally had declined in price. The miners continued to do well. The California wheat crop was estimated at about 2,000,000 bushels. Indian wars were raging in Northern California and Southern Oregon. Woods, late one of the partners in Adams & Co.'s banking-house, absconded on the ship Andreda, bound for Australia. He is said to have retained $100,000 of the assets of the firm.

Oregon.—The dates are to the Eighth mo. 5th. The annual conference of the Methodist Episcopal Church was then in session in Oregon City. An express messenger from Governor Stevens had arrived at Portland, bringing intelligence that treaties had been concluded with the Kootanic, Kackispiec and Flathead Indians, upon terms very advantageous to the United States.

New York.—There has been some revival in the export trade, and considerable quantities of flour and grain are being sent to Europe. Interments last week, 541.

Philadelphia.—Interments last week, 252.

Miscellaneous.—Gratifying Result.—The Tejon Indian Reservation in California has proved a very successful experiment. The last mail brought accounts that every thing was quiet and prosperous there, and that the Indians had gathered their crops, and were pursuing their civilized avocations industriously, and without giving trouble to their white neighbours.

Alabama vs. Turkey.—The Mobile (Ala.) Advertiser states that figs can be grown and dried in Alabama, which, in two years' time, will equal, if not surpass the best imported qualities.

Great Steamboat speed.—The steamer Commonwealth, running between New York and Allyn's Point, on the Worcester and Norwich line from Boston to New York, recently made the whole distance, 133 miles, *in six hours and twelve minutes*, inclusive of a stop at New London. The average rate of speed was 22 miles per hour. This is the best time on record.

White Deer.—The Cincinnati (Ohio) Gazette says:—"Two white deer arrived in this city, on Tuesday, from St. Louis. They were caught in the Rocky Mountains. They are perfectly white; not a coloured hair is to be seen on the body of either. One is a roe and the other a buck. The deer were purchased for $2000."

Hogs in Kentucky.—According to returns to the Auditor of Kentucky, there are in that State this year 1,440,266 hogs over six months old, against 1,682,244 last year. This decrease in number is attributed to the short crop of corn last year.

Census of Essex Co., N. J.—The population of Essex county, N. J., according to the late census, is 96,923, being an increase of 22,979 in the five years since the last census.

Four hundred years ago.—The first book ever printed with a date appeared in 1455, just four centuries ago.

An old vessel.—It is said that the barque William and Ann, built in London in the year 1759, which vessel conveyed General Wolfe at the time of the siege of Quebec, is still in existence, and is classed in Lloyd's register book, as A, No. 1.

New kind of paper.—A company has been formed in England for the manufacture of paper from the stem of the plantain, and is about going into operation. It is expected to furnish a good printing and wrapping paper.

Yellow Fever in the West Indies.—By a late arrival from Bermuda, Demerara papers to the 11th ult. have been received. They state that the yellow fever had broken out with great violence at the island of Barbadoes, and at the Dutch Colony of Surinam. The number of deaths at Barbadoes had reached thirty a day. Demerara was unusually healthy.

Fever Down East.—The Providence (R. I.) Journal states that the frost of last week was very destructive in many parts of Rhode Island. In some places, beans, cucumbers, squashes, melons, and other tender vegetables, were entirely ruined.

Cholera in Nicaragua.—Late intelligence from Nicaragua states that the cholera had abated. It had swept away nearly all the Government forces. The epidemic had also visited Leon, and the revolutionary army suffered much from the disease.

Preparing for Slave Trading.—It is stated that contracts have been made for the introduction this into the Island of Cuba of large numbers of Af slaves. One party alone has contracted for the s of 7000. Portugese agents, it is said, are now in York making arrangements.

RECEIPTS.

Received from C. Bracken, agent, O., for Abra Packer, $2, vol. 28; from S. Hobson, agt., O., for J Bowman, $2, vol. 29; from Samuel Marriott, N. Y., vol. 29; from James Austin, agt., Nant., for Sally Ea $2, vol. 29; from P. Vickers, $2, vol. 28.

MARY HODGSON, Jr., No. 94 N. TENTH STR is prepared to accommodate with board, a limited n ber of such pupils as are educated in her school; a they would receive instruction in the usual En branches, including French and Drawing, and enjo comforts and privileges of a home. Particular a tion is paid to the morals, habits, and studies of who compose her family.

History of the Life of THOMAS ELLWOOD, wr by himself—new edition. For sale at Friends' Store, No. 84 Arch street, and at the office of FRIEND, No. 50 North Fourth street.

A few Friends can be accommodated with board Friend's family. Apply at this office, or at Fri Book Store, No. 84 Arch street.

WANTED.

A Female Teacher in the family of a Friend, Coatesville. One who can teach the Latin lang preferred.

FRIENDS' SELECT SCHOOLS.

These Seminaries were re-opened for the Winter sion, on the 1st instant. That for Boys in the hous Cherry street, below Ninth; and that for Girls in house on James' street, above Sixth. Friends inten to enter their children in these Schools, are desire so as early in the session as practicable, in o that the proper classification may be made early. elementary schools in the Northern and Western tricts, have also been re-opened.

WANTED.

A young man, in Germantown, aged from 18 to to learn the retail dry goods business. A Friend the country preferred, to board in the family. Appl Friends' Bookstore, 84 Arch street.

WANTED.

A competent (male or female) Teacher for the sch under the care of Nottingham Preparative Meetin Friends.

Address, Lloyd Balderston, Port Deposit, Cecil Co., Ninth Mo. 4th, 1855.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in Institution.

Application may be made to either of the undersig members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS, } Philada.
SAMUEL BETTLE, Jr. }

DIED, in Trenton, N. Jersey, on the 29th of Eigh month, 1855, JAMES KAIGHN, formerly of Kaighn's Po aged 73 years. Although from early life shut out fr the world with much bodily suffering, yet at times dence was afforded, that through the mercy of his ly Father in Christ Jesus, he was made meet for kingdom of heaven. Blessed are the dead who di the Lord from henceforth.

——, in this city, on Fifth-day evening, the 6th i ELIZABETH, widow of the late John Brooks, in the 7 year of her age, a member of the Western Dist Monthly Meeting.

The Land of Silence.

(Continued from page 2.)

ut we now have to speak of another branch ur subject, in the sayings and doings of Mas- e, one of the *few* famous deaf-mutes. The f Massieu presents a bright picture of one who, pite of very formidable disadvantages, ma- d by resoluteness of purpose and intensity of to achieve fame as an original thinker and us. It was more than an ordinary task to ve this; and the possession of great perse- nce, considerable originality, and a memory r more than common power we freely accord m. But whether the records on which his rests are altogether trustworthy is a ques- which after some further remark, we must to our readers' own consideration.

t was anxious," says the author of 'La Cor- e de Fleurs,' "to have some details of the hood of Massieu; he brought to me soon af- he following sketch, which is entirely com- d by himself." In giving our readers a short ant of Massieu's life, we shall chiefly rely on words of this reputed autobiography, com- ing as we proceed in the narrative. "I was in a hovel at Semens, in the department of ironde; my father died in January, 1791, nother still lives. In my country we were eaf mutes of the same paternal family, three and three girls.* Until the age of thirteen and nine months I remained in the country, e I never received any instruction."

due time he escapes from this bondage of rance, and was informed that he should go to eaux, "where," he says, "we visited the Sicard." His after progress was most rapid. egan by forming letters; "in many days" he write some words. In three months he write many words; in six months phrases. year he wrote well. In a year and nine his he wrote better, and answered well to ions proposed to him. After being for three and a half with the Abbé, he set out for , where a six months' residence made him ne of the "entendans-parlans."

thin a few years from being a savage youth

n 1833, the London Deaf and Dumb School pub- a most valuable statistical document, from which ears that in 20 families containing 159 children were 90 deaf-mutes; being an average of more t to each family. Such cases as these *are found at instances to be the result of the intermarriage of usins and other near relatives.* A plain and direct t law is transgressed, and is instantly followed own peculiar punishment.

keeping his flocks in the pastures of the Gironde, "*he excelled most hearing persons* in the readiness, precision, and wisdom of his answers." Of these answers we select a few certainly most striking ones, but which yet to us appear to bear marks of *preparation*. Answers were given, it is said, on almost all subjects with equal readiness; and almost equal brilliancy to any chance questioner. But to this assertion is added a singular proviso; if the question did not present 'un intérêt piquant,' it produced an answer *more common than that of a man without any cultivation;* and that whoever wished to find him such as fame reported, must interrogate him on subjects of some depth." (*Orpen*, p. 194.)

It is difficult to understand how Massieu, having not long escaped from savage ignorance, and being still incapable of speech and hearing, was so peculiarly gifted as to answer some questions with a skill beyond that of ordinary educated mortals,—while to other queries his answers were those of a man utterly void of cultivation. It appears more than probable, that between the Abbé Sicard and his two pupils such philosophic questions as elicited the most striking answers were made topics of private discussion, and when propounded in public, drew forth replies apparently impromptu, but, in reality, well-considered, ready cut and dry; while ordinary common questions were left to take their chance—and very badly they fared. From accounts still in existence we select a few of these extraordinary answers.

"What is gratitude?" "Gratitude is the memory of the heart."—"What is hope?" "Hope is the blossom of happiness."—"What is the difference between hope and desire?" "Desire is a tree in leaf; hope is a tree in flower; and enjoyment is a tree in fruit."—"What is eternity?" "A day without yesterday or to-morrow,—a line that has no ends.'—"What is time?" "A line that has two ends; a path which begins in the cradle, and ends in the tomb."—"What is God?" "The necessary being, the sun of eternity, the mechanist of nature, the eye of justice, the watchmaker of the universe, the soul of world." Dr. Orpen tell us that the deceptive and acute question "*Does God reason?*" was then put to him by Sir Jas. Macintosh, and that without hesitation Massieu gave this admirable and lucid reply: *Man reasons because he doubts; he deliberates, he decides; God is omniscient; he knows all things; he never doubts; he therefore never reasons.*

Jean Massieu and Laurent Clere beyond all doubt possessed more than ordinary powers of mind; and these powers were skilfully awakened, and successfully trained into sharp and vivid life. But at the best, when compared with other educated men, their mental training must have been incomplete; and many a nook and corner in the mind of each must have remained to the very last in utter darkness. For one in this state of partial obscurity to be constantly giving utterance, *at a minute's notice*, to aphoristic morsels of concentrated wisdom, even on abstract and metaphysical subjects, exceeds, we imagine, the capacity of poor deaf and dumb humanity.

(To be continued.)

For "The Friend."

During the troubles which were multiplied in our land for several years preceding the Revolutionary war, the Society of Friends was subjected to close trials, from many of the members allowing themselves to be influenced by the spirit which was then rife, and failing to maintain the testimonies committed to it to uphold. Many turned their backs on their former friends and associates, joining with the multitude in the popular movements of the day, thereby greatly reducing the numbers of members, and bringing discouragement and suffering on those who remained faith ful at their posts. The following extract is from a letter written in the year 1765, by S. Fothergill to his beloved friend Israel Pemberton, of Philadelphia, and contains much from which we may draw instruction at the present day. Please let it appear in the Friend. * * *

"Dear friend, we are not strangers to the commotions of your land, the report whereof hath reached our ears, yea, and many of our hearts, whereby deep inward sympathy, as becomes brethren, has been raised, and a secret strong travail before the Lord of the whole earth, for the preservation of his family in this dispensation of the hour and power of darkness, which has come upon many amongst you, and is endeavouring to introduce ruin, and desolation, and every evil work. In such a season as this, it is next to impossible to stand neuter; the conflicting powers of light and darkness, according to their prevalence, enlist the spirits of the people under their respective banners; some to endeavour to build up and repair the breaches, and to be bound in heart to the holy testimony, and earnestly contend for the faith once delivered to the saints. Now, saith my soul, 'Peace be to thee, O Zion, and peace to thine helpers; and may these evermore remember, it is the Lamb and his followers which shall have the victory.' Though this expression may have become trite by frequent repetition, yet it is a great, instructive and important truth. Neither the most ardent zeal of the cherub or the seraph, nor the sagacity of the living creature, though full of eyes before and behind, nor the strength of the lion can overcome, unless the meekness, gentleness, and patience of the Lamb, suffering, yea slain, from the foundation of the world, have the ascendancy, and be diffused through all our labour. A vivacity of mind which is natural, and a solicitude of mind for the cause of Truth which is from a higher source, are, I believe, distinguishedly possessed by us both, and I feel, for myself, the absolute necessity of deep attention to His direction who has engaged me in his service, in order to experience him to put forth, having reduced the creaturely part into a humble dependence upon Him, whose is the power and the wisdom. We are now, my friend, arrived at a date of life when the *fierte* which attends youth may, by the laws of nature, be supposed to abate, and cool, and deliberative wisdom, confirmed by experience and long observation, take its place; and I hope we have not so lived and laboured, as to be destitute of a portion of Divine wisdom, to correct the mistakes and inadvertencies into which we may have been hurried in past time, which I acknowledge with regard to

myself have been various. Oh that our minds may sufficiently cleave unto that Hand of power, which will effectually convert us from every error in judgment and practice, and then properly enable us to strengthen our brethren. Dear friend, I beseech thee, by the mercies of God, whereof thou hast largely partaken, abide in the quiet habitation, whose safety and beauty thou hast often beheld, and desired thy portion in it. Let neither the commotions without, nor defection within, carry thee away from the quiet rest; a greater degree of fitness and wisdom to act rightly, when necessary in both, will be hereby attained. I feel inexpressibly a sympathy of spirit with Friends in your parts; the faithful and unfaithful are the companions of my mind almost incessantly; to the former, I wish that wisdom and knowledge may become the stability of their times; for the latter, that through the prudence, patience, tender compassion, and steadiness of the faithful, they may be restored upon the proper foundation, and the holy testimony preserved inviolate."

From the Edinburgh Review.

On the Fibrous Plants of India.

(Concluded from page 3.)

Of valuable Indian fibres suitable for cordage and for spinning, we have still to notice those which are obtained from plants belonging to the natural family of the nettles (*Urticeæ*). To this family the common hemp plant belongs; and some of the most valuable substitutes for our European hemp and flax are yielded by eastern plants belonging to the same family. Among these, the fibre known by the name of China grass, and in India as the Rheea and the Caloee or Ramee fibre, is the most valuable in the market, the most widely and extensively cultivated, and the most easy to be obtained in large supplies. It is the produce of the snowy nettle (*Boehmeria nivea*) called by the Chinese Chûmmâ. It seems to grow naturally over a large part of the East, and to be very generally cultivated or collected for its fibre.

"Dr. M'Gowan writes from Ningpo, that the 'Chû Mâ is found at the base of hills from Cochin China to the Yellow River, and from Chusan to the farthest west that researches can for the present extend.' We find that it is known in Celebes and Borneo, cultivated in Java and Sumatra, and many other of the islands of the East, where it seems to be known chiefly by the names *Rami* and *Caloee*. It is known in Siam and at Singapore; the string made of it is called *tali rami*, and the fishing-nets manufactured with it are conspicuous for their elegance and strength. Colonel Burney, in 1836, obtained it from Pivela and Youkyauk, in the Shan province of Ava, where it is called *Pan*, and where Mr. Landers afterwards found it. It has long been cultivated by fishermen in the Bengal districts of Rungpore and of Dinagepore, where it is called *Kunkhoora*. Colonel Jenkins first sent it from Cochin in 1836; and it is found in different parts of Assam, where it is called Rheea."

It is unnecessary for us to enter into the details regarding this plant and its fibre, which are contained in the work before us. By numerous testimonies, Indian and British, the author has shown in substance—

1st. That the Rheea fibre is stronger and more durable than hemp, while in fineness and beauty it is fitted to take the place of the highest-priced flax.

2nd. That it could, by easy and inexpensive means of encouragement, be produced in India and exported to this country in any required quantity.

3rd. That if brought to England at a moderate price it would find a large and ready demand.

4th. That the introduction of cheaper modes of extracting the fibre, such as we are now familiar with at home, would reduce the first cost in the Indian market at least one-half, while better roads would in an equal degree cheapen the cost of transit.

Our own impression is, that this Rheea fibre, like flax and cotton, might soon create for itself in this country an entirely distinct, highly valued, and nationally important branch of manufacture; that it might supersede not only pure hemp, but cotton and flax also, for many purposes and fabrics, thus establishing a new home-industry, providing a new variety of employment for our people, giving us greater independence as regards raw materials, and producing for us at the same time new articles of commercial interchange with the world at large. The economical history of the long-famed Chinese grass cloth, which is made from this fibre alone, goes far to justify these anticipations.

To supersede the coarser hemp which Russia sends us for the manufacture of ropes, India offers us what is called Bon Rheea, or Jungle Rheea, which Dr. Royle considers to be only a wild form of the snowy nettle, though possibly it may be another species. This plant grows wild and common in many places among the hills and forests, and is also cultivated largely by some of the hill tribes. Its fibre has been proved, in ropes, to be stronger than that of the best Petersburgh hemp, or than that of any other fibrous plant grown in India, with the exception of the common hemp grown at Kote Kangra, on the Himalayas, to which allusion has already been made. It would not be difficult either for the East India Company or for private mercantile agents, travelling among the people, to induce the natives of the provinces in which this wild plant most abounds to prepare it in any quantity for the market.

Dr. Royle mentions at least half a dozen other Indian nettles, some of them possessed of most formidable stinging properties, which are more or less extensively employed for the production of strong and durable fibres. But for an account of these we must refer the reader to the work itself. Of immediately available fibres, the growth of our Indian possessions, we have shown that there exists a great abundance, and that of others which in a few years may become important in Indian and British markets and manufactures, a still greater number is placed within our easy reach. There is no reason to despond, therefore, as to the final result of even prolonged hostilities with Northern Europe, in so far as the supply of raw fibrous materials for our looms and rope-yards is concerned. There is hope rather, that if sufficiently prolonged, they may in this sense be productive of great and permanent good, both to India and to ourselves. Emergencies like the present by awakening inquiry, discover dormant riches—by prompting to exertion, develope neglected resources and give new employment to idle and impoverished populations—by rousing governments they stimulate to the improvement of old, and the creation of new facilities for transit—by calling forth ingenuity and thoughtfulness on every hand, they overcome what had been regarded as great difficulties, and thus in the end not only replace scarcity by abundance, but permanently cheapen what before had always been comparatively dear, and render future scarcities impossible.

For pecuniary and other efforts to be made in the way of encouragement in India, present circumstances are peculiarly favourable. prices of fibrous materials are unusually and if the war be continued they are likely main so for an indefinite period. And should peace favour us by its happy return the withdrawal of money advances on the p British merchants will prevent the return of sian produce to its usual prices for some According to the united testimony of num Indian authorities similar advances of Er capital, judiciously made, would, in the int fill our markets with the numerous raw mat of Eastern growth. The political consequ of such a change would be most important even more durable that its immediate comm effect. The present war has interrupted th culiar commercial relations which had existe three centuries between Great Britain and R and its result will probably be to bring int market of Europe an abundant and econo substitute for the natural produce of Russi growth of our own dominions, stimulated by dom of trade and by the progress of India cilities of communication and the producti wealth.

From "Letters, &c., of John Barclay," of ham, England.—The following written 24th year of his age.

"I have had from one season to another, the present time, many teaching intimation timely warnings, from within and from wit that there is no trust to be had in length of nor dependence to be placed on health or stre or youth; no, nor yet on any services or suffe for Truth's sake; but only upon the Rock, Jesus, the Lamb slain from the foundation o world. To know *that* renewed in us, which ri gives an interest in His blood, and in the salv He purchased for us,—to feel the spring of in tal, immaculate life and goodness, bubbling u breaking forth in and over us,—to be as by hearing, knowing, and following the She of Israel, that we are His sheep,—to have a and satisfactory evidence, that we are more more coming out of the world's spirit, into t the weaned child,—becoming more and more rated from sin and self, more and more sea with and leavened into the nature of a ch God; this is sweet, and a safe spot, saith my for any poor mortal to be found in, when the mons may be sounded forth.

"The time is short," said the apostle; a remains for us all, whatever be our situation i life, or our station in the church, or our stat in a religious sense, to remember, that "the fas of this world passeth away." These things are mutable must pass away, and shall be as th they had not been; yet shall the righteous and be established when the earth is remove of its place, and the firmament swept away as a flood. Greatly do I desire to be found a those who stay themselves upon the living, et Almighty Father and Saviour; and to be in ingly concerned to pass the remainder of my in true filial fear and faithfulness."

First mo. 19, 1820.

Extract from Jaquiline Pascal's "Re tions for Children."—We try to impress on minds, that a mere wish to do right is nothi the sight of God, unless it be carried into tice at every opportunity, and that when we to die, a life spent in good intentions will no avail unless we have striven to execute since far from being rewarded for those i tions, we shall be punished for leaving ther done.

The Lakelets in Michigan.

he lakelets which abound in this State are
ithy the attention of the naturalist. One day
week, a man by the name of Briggs, while
ding sheep in one of a series of three, in the
nship of Scio in this county, was drowned.
had swam across it some forty rods, and upon
rning was probably seized with cramps, and
k near the middle. All efforts to recover the
dy being fruitless, — Harrington and Phil-
were sent for to search with their submarine
ror.

ccordingly, on Thursday last, they made
nerous descents, at various depths, discovering
t singular irregularities of bottom, and curious
nations. In some places the plummet will
ke bottom in a short distance. A few feet off,
n it goes to an almost unfathomable depth.
netimes upon arriving at what seemed to be
bottom, the diver's feet rest upon nothing,
down he goes into impenetrable darkness and
ft mass of mingled water and sediment, until
lence warns him against further progress.
own sixty-five feet from the surface went —
rington, in the vain search for solid bottom,
still his lead sank through "deep obscure."
one time the plummet will show a current
ch carries the line rapidly away from the per-
licular, again it swings around, indicating a
ling eddy.

his lake, or rather pond, is little known, many
residents not even knowing of its existence.
nan present among the spectators of the div-
operations, said that upon his first discovery
, a short time since, it abounded with the fish
ommon to our streams, of a large size, and so
e alarmed at the sight of man that they were
e caught by the simplest means, when within
h, almost by hand. As there is no inlet
which they could have entered the lake, how
e they there?

t the last accounts, the body of — Briggs
not yet been discovered.

From the Jonesville (Michigan) Independent, June 20.]

he above mention of our lakelets, reminds us
ome strange things we have observed about
e of the lakes in this county.

ne on — Delevan's farm, is entirely stocked
leeches. No fish ever live there. Others
nd in fish, yet having no outlet or inlet. A
nge occurrence happened at Baubice lake,
Hillsdale, a few years since.

ne morning the shore for miles was found
wn with dead white-fish, and those fish were
rved during the day to come up to the shore
die. None were seen alive after that day,
strangest of all, no white-fish were ever
wn to be in that lake or any other lakelet near
or has any appeared there since! How these
ever came there, and what caused their death,
puzzling question. Could they come by some
erranean current from the great lake? Do
currents undermine all Michigan? The
ect would be an interesting study for some
gist.—*Ypsilanti Sentinel.*

within him.

For "The Friend."

Providential and Maternal Care.

(Continued from page 412.)

Their meeting at Norwich began to be attended by informers, and the sufferings of Friends increased. While B. Bangs was at prayer on another occasion, the constables and informers came in, and took him before the mayor. When he returned from his worship, the sheriff and several aldermen came with him. "At his first appearance the mayor seemed rough; I said little to him, but he presently went up into his council chamber with his attendants, and sent for me, the constable and informers, to come up. He inquired of the constable where he found me, who told him at the Quaker's meeting. He inquired what I was doing, and the informers answered, 'Sir, he was speaking to the people.' Upon which the mayor asked me my name, which I told him; he then asked what trade I was of; I told him I was a shoemaker. 'Ah!' said he, 'these are brave times, when shoemakers, weavers and combers, set up to be preachers!' I told him I thought a shoemaker was not much inferior to a fisherman or a tentmaker, yet we find Christ called such, and made them able ministers, which I hoped he would not deny. 'Oh!' said he, 'they were moved to it by the spirit of God.' Yes, said I, and the same God yet is. 'Aye, but,' said he, 'that extraordinary way is not now to be expected.' I answered, that he now that hath not the spirit of Christ is none of his; and so many as are led by the Spirit of God, they are the sons of God. There was a Divine dread attended me upon this occasion, and I was sensible that the power of Truth was over all, through which I took the freedom to advise them, to take heed what they did, lest haply they should be found fighting against God. He, and those that were present, knew us to be an industrious and peaceable people, and to persecute us for our meeting together to worship God, which we looked upon to be our indispensable duty, and to impoverish us to gratify a parcel of indigent informers, I thought would not tend much to their honour. 'Why,' says the mayor, 'you can call them indigent informers, but you refuse to give persons their due titles.' I told him I thought he was mistaken, for we never refused to give persons their due titles, as mayor, alderman, sheriff, &c. 'Well,' said he, 'I am glad to hear it;' and then called to his servant to bring up a bottle of wine, which was done, and a glass being filled, he said to me, 'Here is to you, but you shall not drink,' and so gave it to the sheriff; and when the rest had drank, he said, 'However, I will give him a glass,' which I refused; he again desired me to take it, and I still refusing it, caused him to look a little blank. Upon this they all went down, and taking leave of the mayor, left me with him." The mayor made some apology for treating him as he had done, and sent with him several of his officers to defend him from any disturbance from the multitude in the street; and when they reached the Friend's door where he wished to go, they took leave of him in a friendly manner.

Having had a concern to hold a meeting at a little seaport called Cloy, not far from Wells, where but one Friend resided, he gave up to it, and a pretty large company convened, both of the town and country, and it was satisfactory, "for the Lord's blessed presence was amongst us, blessed be his name for it; when I had concluded in prayer, the old clerk said Amen, heartily." Two priests came to dispute with him, who were foiled in the conversation, and left him without gaining any advantage. The younger of the two, on parting, said, "I have observed that if once any come to be joined to your Society, they may as well wash a blackmoor white, or cleanse a leopard from his spots, as turn any of you from your persuasion." "I answered, we could get nothing that did us any good when amongst you, and having met with the Word of eternal life, whither should we go? There are many of you, continued I, that are men of learning, and good education, and did you wait to receive power from God, you might be serviceable and do good to the people. A young man sometime after told me, that my service at Cloy had such an effect, that some who had the opportunity of the meeting, and of hearing what passed with the clergy in the evening, were so thoroughly convinced, that they joined themselves to our Society; and the clerk, his father, not living long after, confessed to the Truth upon his dying bed."

In the year 1681 he performed a religious visit in some of the western parts of England, in the course of which, in a public meeting at the Isle of Purbeck, to which many people resorted, he had a serviceable opportunity to declare the Truth, and many things were convincingly opened, suitable to the states of several present. Our primitive Friends not only explained and enforced the doctrines of the gospel, but were qualified to speak to the conditions of the hearers, often to their astonishment, and convincement that their ministry was not of man, but by the revelation of Jesus Christ. "In this journey, I can truly say, a spring of Divine goodness did attend me, and the meetings through which I passed, were sensible partakers thereof, and comforted thereby." A baptising and heart-searching ministry will quicken the souls of people, and turn them to Christ within them, their Shepherd and Bishop.

After spending some time in following his business closely, and not feeling clear without giving up to a prospect of service in the north, which fell heavily upon him, he made preparation and set forward upon it. When at Northampton, he felt drawings in his mind to visit William Dewsbury, who was then a prisoner at Warwick, whom he was glad to see, and he took the visit very kindly. He went into Radnorshire, had a meeting at Welsh Pool and one at Ranmore, to which many substantial Friends belonged, but many of them moving into Pennsylvania, it was greatly lessened. "That night," he says, "I lodged with our ancient Friend, Thomas Briggs, often mentioned in George Fox's Journal,—and the good old man told me in the morning, he had been much concerned that night in praying to the Lord for the *whole society* of his people." The Apostle Peter, says, "The effectual, fervent prayer of a righteous man availeth much;" and Paul exhorts "that supplications, prayers, intercessions and giving of thanks be made for all men—that we may lead a *quiet and peaceable life* in all godliness and honesty; for this is *good* and *acceptable* in the sight of God our Saviour; *who will have all men* to be saved, and to come unto the knowledge of the Truth." The more the church is engaged in prayer, the more effectually will love and good will and gospel fellowship be promoted among the members.

In the year 1682 he visited Ireland, of which he says: "In this nation I travelled up and down in the work of the gospel, and had good service, many being convinced by means of my ministry. At Antrim, a place of great profession, I had a meeting in the evening, to which many came, and some with design to oppose me. The place was not large enough to hold the people, which occasioned those without to be very noisy and turbulent, some of the ruder sort pelting them with bits of dirt and turf, whilst I was preaching. I made a full stop, which occasioned a general

silence; and after a little time I said, I understand this is a place of great profession of religion; I am sorry to see so much irreligion as appears amongst you at this time, through your rude behaviour. It is not long since I came out of my native country, and I think it will not be long ere I return again, and then what shall I say of you, to your poor suffering brethren in England? I advised them, if they had any regard to the reputation of religion, to inquire after those that were the occasion of these disorders, for that such behaviour was base and scandalous. And I was moved to say, that the time draws nigh, that you will be blown away like the chaff from the summer threshing floor, and the place of your meeting will not be found. At this meeting a young man, a papist, was convinced, as were many more elsewhere in the north and other parts." He continued his travels several months, in the course of which, he says, "As I was going from Antrim to the Grange, I saw ten or twelve men upon the road, walking in a solitary manner, and it arose in my heart, these are sheep having no shepherd. When I came up to them I slackened my pace, and queried of them, what news? The men were startled at the question, and answered, 'we know of none;' continuing to go softly, I said, are ye going to a meeting? They answered, 'Our minister is silenced; for orders are come down, commanding all dissenters not to assemble; so now we have no teacher.' This brought to my remembrance what I had been concerned to deliver as above at Antrim, where I met with so much rudeness. I said, the hireling fleeth because he is an hireling, and careth not for the sheep, referring them to the text; further showing it is happy for those who are come to the knowledge of that Teacher who cannot be removed into a corner—God said he would teach his children himself—and the children of the Lord are taught of the Lord. You may read in the first epistle of John, 'The anointing which ye have received of him abideth in you, and ye need not that any man teach you, but as the same anointing teacheth you of all things.' And in Titus, 'The Grace of God which bringeth salvation, hath appeared unto all men, teaching us,' &c. Here I directed them to the great heavenly School-master, who said, 'Learn of me, for I am meek and lowly in heart; follow me and ye shall find rest unto your souls.' Thus I laboured to bring them from their hireling teachers, to the teaching of God and Christ in themselves, by which they might come to the knowledge of God, and walk in the ways of his salvation; 'for a manifestation of the spirit is given to every man to profit withal.' I advised them to turn their minds inward, and mind the secret operation of it, which checks and reproves for bad words and actions; and as they turned to it, they would find it would lead them into all truth, with many words to this effect. They were well pleased, declaring at parting, that they had never heard things so opened to them in their lives.

"Having cleared myself of what service lay upon me in this kingdom, I took leave of Friends in a very large and solemn meeting at Dublin, where the Lord's blessed presence and power crowned the assembly, to our mutual joy and satisfaction; it was indeed a very tendering opportunity, and in great unity we parted." Their fellowship stood in the Holy Spirit, their ministry was from the fresh openings of this spirit, and their doctrine was in accordance with the Holy Scriptures, confirmed by the Spirit which gave them forth, and by their experience of its regenerating power in their own hearts.

Soon after his return to England, he and Mary Lowe declared their intentions of marriage with each other, before Frandley Monthly Meeting, and on his arrival at Norwich, he laid his intentions before this Monthly Meeting, probably for the purpose of obtaining their certificate to Frandley. After this he travelled into Suffolk, and had meetings at Beecles and Aldborough, where, he says, "I formerly met with rough entertainment from a man, whose wife was sometime before convinced by me, and who had threatened to kill me if I came there again. Hearing I was to be at the meeting, he came in, greatly enraged, to revenge himself upon me. I was speaking when he came in, and making his way up to me, he pulled me down, and gave me several ill blows about my head and face, which raised swellings. In executing his fury upon me he fell down, but recovering himself, and attempting to pursue his revenge further upon me, a friend who had accompanied my honourable friend, Giles Barnardiston and me to the meeting, observing it, laid hold of him to prevent his doing any more mischief, and being a very strong man, held him so fast that he could not disengage himself; but desiring to be set at liberty, and promising to go away peaceably, the Friend let him go. In the meantime his wife went out of the meeting undiscovered by him, and not finding her, he came in again. I was then concerned in my testimony as before, but seeing the Friend standing up before me, he did not venture to come up to me, but after venting a volley of revengeful oaths against me, he withdrew; after which we had a peaceable, good meeting. The good woman lived not long after, through the horrid abuses he committed upon her; she kept steady to her testimony to the end, and was beloved by Friends and others who were acquainted with her."

At this day it would be thought a great outrage upon a religious assembly, for a person to assault a minister, or any other one in the meeting, with such violence and abusive language. Like the primitive Christians, Friends at that time maintained their religious principles, and their testimony to the duty of publicly offering worship to Almighty God, at the hazard of their lives, and the loss of their property. They counted nothing too dear to sacrifice in the discharge of their duty to Him, so "that they might finish their course with joy, and the ministry which they had received of the Lord Jesus, to testify the gospel of the Grace of God." They were blessed in their faithfulness by a growth and firm establishment in the eternal Truth, and they were made a blessing to thousands then, and to generations since.

He accomplished his marriage on the 3d of the 11th month, 1683. He and his wife went to a general meeting at Newtown; it being a suffering time for Friends in that county, Sir Philip Egerton and Captain Needham, two of the *justices of the peace*, came to break up the meeting. He says, "I was at prayer when they came in, and they stood awhile silent; then Needham stepped up to me and commanded silence, which I not observing, he first took my hat and threw it away, then got hold of my cravat and pulled it in pieces. I still continuing my address to Almighty God, for his divine presence was amongst us, he then struck me over my head with his cane, with such violence as to raise several great swellings on my head, and after that he kicked me down with his foot from off my knees. After this, Friends rising from their knees and putting on their hats, he broke several of their heads, so that the blood ran down. Then Sir Philip cried, 'Brother, brother, let us prosecute the law upon them, and not abuse them;' and my wife stood up and said, with a raised voice, 'Turks, Heathens, and Infidels, would scorn such practice.' Their rigorous proceedings were so noised about in that and neighbouring counties, that they were ashamed of the conduct, and came no more to break up our meetings." In this way and at this price, have the liberties we enjoy been purchased for us. At what ground, can it be supposed, that the various religious scruples and testimonies, which they maintained before the world, under cruel sufferings, are now to lose their importance, and that society built up by a Divine hand for a glorious purpose, has lost its use, and will become extinct? If they were to be brought from the east and from the west, to sit down with Abraham, Isaac and Jacob, though children of the kingdom should be cast out, because of their rejection of the Son of God, he that enlightened our forefathers, and broke the bands by which they were held in bondage to forms and ceremonies, will, we believe, visit others from generation to generation, by the same Divine light, and those who yield to his power will be gathered into the same sheep-fold, to proclaim the same unchangeable doctrines of the gospel, and be made instrumental to bring other sheep to the same Shepherd and Bishop of souls—although many birthright members, despising the simplicity of their fathers' religion, may be cut off and lose the name and character of Friends.

"In the spring of 1683 I found it upon my mind to visit Friends in Lancashire, &c., and coming to Penrith, I heard that our friend Thomas Wilson lay dangerously ill; so I left my horse at Penrith, and walked to pay him a visit, and found him in a very weak condition. After a short stay I was moved in spirit to supplicate the Lord on his behalf, and I received a gracious answer that he would be restored again to health; upon which I desired him not to be discouraged, for he should do well; and I told him I believed in a short time I should see him again in Cheshire; and it was not long before it came to pass."

(To be continued.)

Selected.

CURE FOR REPINING.

Wouldst thou from sorrow find a sweet relief?
Or is thy heart oppressed with woes untold?
Balm wouldst thou gather for corroding grief?
Pour blessings round thee like a shower of gold:
'Tis when the rose is wrapp'd in many a fold
Close to its heart, the worm is wasting there
Its life and beauty; not when all unroll'd,
Leaf after leaf, its bosom, rich and fair,
Breathes freely its perfumes throughout the ambient air.
Wake! thou that sleepest in enchanted bowers,
Lest these lost years should haunt thee on the night
When death is waiting for thy number'd hours,
To take their swift and everlasting flight;
Wake, ere the earthborn charm unnerve thee quite,
And be thy thoughts to work divine address'd;
Do something—do it soon—with all thy might;
An angel's wing would droop if long at rest.

Some high or humble enterprise of good
Contemplate till it shall possess thy mind,
Become thy study, pastime, rest and food,
And kindle in thy heart a flame refined;
Pray Heaven with firmness thy whole soul to bind
To this thy purpose—to begin, pursue,
With thoughts all fixed and feelings purely kind,
Strength to complete, and with delight review,
And grace to give the praise where all is ever due.

No good of worth sublime will Heaven permit
To light on man as from the passing air;
The lamp of genius, tho' by nature lit,
If not protected, pruned and fed with care,
Soon dies, or runs to waste with fitful glare;
And learning is a plant that spreads and towers
Slow as Columbia's aloe proudly rare,
That, mid gay thousands, with the sun and showers
Of half a century, grows alone before it flowers.

Has immortality of name been given
To them that idly worship hills and groves,
And burn sweet incense to the queen of heaven?
Did Newton arn from fancy, as it roves,

measure worlds, and follow where each moves?
l Howard gain renown that shall not cease,
wanderings wild that nature's pilgrim loves?
did Paul gain heaven's glory and its peace,
musing o'er the bright and tranquil isles of Greece?

ware lest those, *from sloth that would appear*
t lowliness of mind, with joy proclaim
y want of worth; a change thou couldst not hear
om other lips, without a blush of shame,
pride indignant; then be thine the blame,
d make thyself of worth; and thus enlist
e smiles of all the good, the dear to fame;
s infamy to die and not be miss'd,
let all soon forget that thou didst e'er exist.

use to some work of high and holy love,
d thou an angel's happiness shalt know,—
alt bless the earth while in the world above;
e good begun by thee shall onward flow
many a branching stream, and wider grow;
e seed that, in these few and fleeting hours,
y hands unsparing and unwearied sow,
all deck thy grave with amaranthine flowers,
d yield their fruit divine in heaven's immortal bowers.

Selected.

What matters whether pain or pleasures fill
The swelling heart one little moment here?
From both alike how vain is every thrill,
While an untried eternity is near!
Think not of rest, fond man, in life's career,
The joys and grief that meet thee, dash aside
Like bubbles, and thy bark right onward steer
Through calm and tempest, 'till it cross the tide;
Shoot into port in triumph, or serenely glide.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

WILLIAM WATSON.

(Continued from page 6.)

th and burial no records have been preserved.
e signed the remarks prefixed to the First
onthly Meeting book of Chesterfield in 1683,
d was one of the ministers who testified against
orge Keith. He attended the General Meeting
ministers, First month, in 1702, which is the
t trace I find of him.

MAHLON STACY.

Edward Byllinge purchased of Lord Berkeley,
e right held by him under a deed of sale from
e Duke of York of the western half of the pro-
nce of New Jersey. The deed was made by
rkeley to John Fenwick, who was to hold the
d half province on behalf of Edward Byllinge
d his assigns. A difficulty afterwards arose
tween Fenwick and Byllinge which was com-
omised, and the one-tenth of the land being di-
ded off and apportioned to the said Fenwick, the
lance was due to Byllinge. By this time Byl-
ge was much in debt, and he conveyed to his
editors or the principal part of them, the resi-
e of the province, as in lieu of their claims.
mong those who thus as it were without their
ll, became large landholders, was Mahlon Sta-
, a member of the Society of Friends. He
s a tanner by trade, and resided at Handsworth
the county of York. He and four of his fel-
w members, all principal creditors of Byllinge,
d one-tenth of West Jersey assigned them in
yment of debts due them, amounting to £3,500.
In the concessions and agreements of the pro-
ietors, freeholders, and inhabitants of the pro-
nce of West New Jersey, signed "the third day
the month, commonly called March, in the
ar of our Lord one thousand six hundred seven-
six," it is said that when the land is divided
o tenths or shares, that the said Friends of
rkshire, shall have free liberty to make choice of any one they please. The concessions also provide for the fulfilment of a contract made by Wm. Penn, &c., as trustee for Byllinge, to the same Yorkshire Friends, "wherein they grant unto the said persons, certain privileges for a town to be built, whereby they have liberty to choose their own magistrates, and officers for executing the laws according to the concessions within the said town!"

The land chosen by the commissioners, appointed by the Yorkshire Friends, was from the Falls of the Delaware, downward. The town of Burlington was laid out by agreement, in which one-half belonged to the Yorkshire tenth and one-half to a tenth purchased by Friends of London. The country in 1677 began to draw many settlers, and in the Eighth month 1678, Mahlon Stacy, with "his wife, children, and several servant men and women," took passage at Hull in the good ship "the Shield," Daniel Towes commander, for the Delaware River. They were accompanied by many other intended settlers, and had a prosperous voyage. As the vessel sailed up the Delaware, the shore was so bold at Coaquanock, where Philadelphia now stands, that the ship safely moored where part of her rigging brushed the overhanging trees. One of the passengers remarked, it was a fine spot for a town. With a fresh favourable gale, "the Shield" was borne onward to the little village of Burlington, which was peeping out from the ancient forest. This was the first ship that had reached so high a point on the Delaware. It was sometime in the Tenth month old style, corresponding to the Twelfth month of the new, that "the Shield" "dropped anchor," and "moored to a tree." The next morning the river was frozen,—and so intense was the cold, that the people from the shore came to the ship on the ice.

Mahlon Stacy settled near the Falls of the Delaware, now called Trenton, where in a year or two he built a mill. He was a man of much enterprise, and in 1679 with some others, purchased a vessel which was put into the Barbadoes trade, and proved a profitable investment. Many strange and injurious reports were fabricated and circulated in England concerning the new colony, and some of those who had endeavoured to persuade their friends not to remove thither, were not slow in sending such reports to the new settlers. Mahlon Stacy's brother, Revell having forwarded him such accounts, he thus wrote in reply:—Fourth month 26th, 1680.

"But now, a word or two of those strange reports you have of us and of our country. I affirm they are not true, and fear they were spoken from a spirit of envy. It is a country that produces all things for the support and sustenance of man, in a plentiful manner. If it were not so, I should be ashamed of what I have before written. But I can stand, having truth on my side, against and before the face of all gainsayers and evil spies. I have travelled through most of the places that are settled, and some that are not, and in every place I find the country very apt to answer the expectation of the diligent: I have seen orchards laden with fruit to admiration,—their very limbs torn to pieces with the weight, and most delicious to the taste, and lovely to behold. I have seen an apple-tree from a pippin kernel, yield a barrel of curious cider;—and peaches in such plenty, that some people took their carts a peach gathering. I could not but smile at the conceit of it. They are a very delicate fruit, and hang almost like our onions that are tied on ropes. I have seen and known this summer, forty bushels of bold wheat of one bushel sown. Many more instances I could bring, which would be too tedious here to mention. We have from the time called May to Michaelmas, great store of very good wild fruits, as strawberries, cranberries, and huckleberries, which are like our bilberries in England, but far sweeter. They are very wholesome fruits. The cranberries much like cherries for colour and bigness, which may be kept till fruit come in again. An excellent sauce is made of them for venison, turkeys and great fowl, and they are better to make tarts than either gooseberries or cherries. We have them brought to our houses by the Indians in great plenty. My brother Robert* had as many cherries this year as would have loaded several carts. It is my judgment by what I have observed, that fruit trees in this country destroy themselves by the very weight of their fruit. As for venison and fowls, we have great plenty. We have brought home to our houses by the Indians, seven or eight fat bucks of a day: and sometimes put by as many, having no occasion for them; and fish in their season very plenteous. My cousin Revell† and I, with some of my men, went last Third month, [Fifth month new style] into the river to catch herrings, for at that time they came in great shoals into the shallows. We had neither rod nor net; but after the Indian fashion made a round pinfold, about two yards over, and a foot high, but left a gap for the fish to go in at, and made a bush to lay in the gap to keep the fish in. When that was done, we took two long birches and tied their tops together, and went about a stone's cast above our said pinfold. Then hauling these birch boughs down the stream, we drove thousands before us, and so many got into our trap as it would hold. Then we began to haul them on shore as fast as three or four of us could, by two or three at a time. After this manner in half an hour we could have filled a three bushel sack of as good and large herring as ever I saw. As to beef and pork, there is a great plenty of it, and cheap;—and also good sheep. The common grass of this country feeds beef very fat. I have killed two this year, and therefore I have reason to know it. Beside, I have seen this [last] fall, in Burlington killed, eight or nine fat oxen and cows on a market day, and all very fat. Though I speak of herrings only, lest any should think we have little other sorts, we have great plenty of most sorts of fish that ever I saw in England;—beside several other sorts that are not known there, as rock, catfish, shad, sheeps-head, sturgeon; and fowls as plenty—ducks, geese, turkeys, pheasants, partridges, and many other sorts. Indeed, the country, take it as a wilderness, is a brave country,—though no place will please all. Some will be ready to say, he writes of conveniences, but *not* of inconveniences. In answer to these, I honestly declare, there is some barren land, as, I suppose, there is in most places of the world, and more wood than some would have upon their land; neither will the country produce corn without labour,—nor is cattle to be got without something to buy them;—nor bread with idleness;—else it would be a brave country indeed. I question not, but all then would give it a good word. For my part, I like it so well, I never had the least thought of returning to England, except on account of trade. MAHLON STACY."

On the same date Mahlon wrote to William Cook of Sheffield, and others.

"This is a most brave place. Whatever envy or evil spies may speak of it, I could wish you

* Robert Stacey came to West-Jersey in 1677.

† Thomas Revell who came over with Mahlon Stacy in the "Shield."

all here. Burlington will be a place of trade quickly, for here is way for trade. I, with eight more, last winter, bought a good ketch of fifty tons, freighted her out at our own charge, and sent her to Barbadoes, and so to sail to Saltertugas, to take in part of her lading in salt, and the rest in Barbadoes goods as she came back. Which said voyage she hath accomplished very well, and now rides before Burlington, discharging her lading, and so to go to the West Indies again. We intend to freight her out with our own corn. We have wanted nothing since we came hither, but the company of our good friends and acquaintances. All our people are very well, and in a hopeful way to live much better than ever they did; and not only so, but to provide well for their posterity. They improve their lands and have good crops. If our friends and countrymen come, they will find better reception by far, than we had at first, before the country was settled as now it is. I know not one among the people that desires to be in England again; I mean since settled. I wonder at our Yorkshire people, that they had rather live in servitude, and work hard all the year, and not be three pence the better at the year's end, than to stir out of the chimney-corner and transport themselves to a place where, with the like pains, in two or three years they might know better things.

"I never repented my coming hither.—I live as well to my content, and in as great plenty as ever I did, and in a far more likely way to get an estate. MAHLON STACY."

"From the Falls of Delaware, in West-New Jersey, the 26th of the Fourth month, 1680."

(To be continued.)

The Red Sea.

This large body of water, which separates the shores of Asia from those of Africa, is about fourteen hundred miles in length and nearly two hundred in average breadth. It derives its name from quantities of slimy, red, colouring matter, which at certain seasons of the year colour its waters and are washed up along its beaches, and which have been pronounced by Dr. Ehrenberg to be composed of an infinite number of very delicate vegetables. This discolouration of the waters is by no means peculiar to the Red Sea. The warm waters of the Pacific Ocean swarm with nascent organisms, sometimes animal and sometimes vegetable, which colour its surface crimson, brown, black, or white, according to their own hues. These patches of coloured water often extend, especially in the Indian Ocean, as far as the eye can reach. Along the coast of China, yellowish spots are not uncommon, and the Yellow Sea derives its name from the frequency of the yellowish patches in that locality. The average depth of the Red Sea is about five hundred feet. Sudden changes of wind and violent gales render its navigation difficult. Nevertheless, in past years, before the discovery of the passage around the Cape of Good Hope, it was the principal route of traffic between Europe and the East, and even now it is important as a part of the direct route between Europe and India.

Lieutenant Maury, in an account of the currents of the ocean, says that there is a perpetual current rushing from the Indian Ocean into the Red Sea. This current is peculiar, inasmuch as while the bottom of it is probably a water level, the surface is an inclined plane, *running down hill*. The causes which render the surface of the sea lower as it becomes more distant from the straits, are these: The sea is in a rainless and riverless district; its shores are burning sands; the evaporation is ceaseless, and none of the vapours which the scorching winds that blow over it carry away, are returned to it in other forms. When we consider how dry and hot the winds are, which blow upon the sea, we may suppose the daily evaporation to be immense—probably not less than an inch. Calling it, however, half an inch only, if we suppose the velocity of the current to average twenty miles a day, it would take the water fifty days to arrive at a distance of one thousand miles from the mouth, and by that time it would have lost by evaporation fifty half inches, or one inch more than two feet. It would be twenty-five inches lower than the waves which are just entering the straits, and which have lost nothing by evaporation.

The salt, of course, cannot evaporate, and therefore the water becomes salter in proportion, and heavier, as its freshness is evaporated. One would think, at first glance, that the eventual result would be either that this heavier and salter water would deposit its surplus in the shape of crystals, and thus gradually make the bottom of the Red Sea a salt bed, or that it would extract all the salt from the ocean to make the Red Sea brine—neither of which processes is in reality going on. The truth is that there is a constant under or outer current as there is from the Mediterranean through the Straits of Gibralter, and that this heavy water, or brine, is continually flowing out of the Straits of Babelmandel, beneath the current of fresher and lighter water from the sea, which is as continually flowing in. If there were no waters constantly rushing out of the Red Sea, and if the evaporation was sufficient to carry away all the surplus water, leaving the salt behind, in one hundred years the Red Sea would become a mass of solid rock salt.—*Boston Journal.*

For "The Friend."

I was particularly struck with the remarks of B. Bangs in the last number of the Friend, under the head of "Providential and Maternal care." He says, "I began to be concerned to appear in public, and there was a tender care in the Elders over me, who would often be dropping some seasonable caution to me, by which I was greatly benefited." I thought what a favour it was to have rightly concerned elders, who knew how to feed the flock; but is it not to be feared that there is a great lack of such at this day? It seems to me that in many places the Church mourns for the want of these; and the query arises, why is it so? Is it through an unwillingness on the part of those who might be as fathers and mothers in the church, to go down into baptism and unto death, that they may be rightly qualified to lay judgment to the line and justice to the plummet? And why is it that in some places there is such a backwardness on the part of those who are placed as watchmen and watchwomen, either to advise or admonish? are they not sufficiently acquainted with the right way themselves to discern when a brother or sister is off the right ground, or going beyond their gift? Oh! that the Lord would anoint the eyes of such afresh with the eye-salve of the kingdom, that there might be a discerning between thing and thing. And Oh! that that love did more abound in our hearts, towards one another, that would make us willing, if we saw a brother or sister that was getting out of their proper place, to impart counsel in the ability given, and, if need be, admonish them in the fear of the Lord. If our hearts were rightly imbued with this love, which is of the Father, we would have no disposition to make unkind remarks one of another, but we would be concerned for one another's welfare as for our own. The Elders would have a tender care over those who were young in the ministry, and they would often be dropping some seasonable caution to such, b which they might be greatly benefited. O! that a would be willing to receive counsel and submit t the reproofs of the righteous, and especially w who are young in religious experience; let us n behave ourselves proudly against the ancient The Psalmist says, chap. cxli, ver. 5, "Let th righteous smite; it shall be a kindness: and l him reprove me; it shall be an excellent oi which shall not break my head." We see wha condescension was here manifested by one whos the Most-High had raised up to be King over hi people Israel; and it does behoove us, dear youn Friends everywhere, to put away all self-right cousness, which is as filthy rags, and to walk i all lowliness and humility. Let us not suffer ou hearts to be lifted up, neither let us be cast down below hope, for "Greater is He that is in us tha he that is in the world." The Captain of ou salvation was never foiled in battle, and if w keep near to him he will keep near to us. And those who are thus concerned will, I believe, wit ness the fulfilment of the promise, "Lo, I am with you always, even unto the end of the world."

Chester Co., Ninth month 8th, 1855.

For "The Friend."

Why are Apples Scarce.

Judging from the reasons given in the Friend, I should hardly suppose the author of it to be a practical farmer, for what little experience I have had, and what I have noticed in experiments made by others, the knowledge the author has obtained on the subject of Fruit can hardly be practical. I have known an orchard for eight years, in my neighbourhood, in quite a poor gravelly loam, which has each year yielded a tolerable crop of apples, without scarcely any manuring; while mine own which has had pretty good attention, and the land well manured, yields not half so much; and there are many instances of the kind in different parts of the country. Therefore it cannot be attributed to the neglect of the farmer in improving his land. If this is the cause of the scarcity of fruit, how is it that some kind, which formerly flourished so well, are now almost extinct? You may get thrifty looking trees of some kinds, from the nurseries, which some years ago flourished as well as any, and plant them in the best of land, and bestow every attention upon them, and yet you cannot bring the fruit to perfection. Why is this? There are many book farmers, as I would call them, in different parts of the country, who think they must find out the cause of the failure of any crop, so to work they go—in the first place to find out what the different kinds of vegetables and fruits are composed of; secondly, to analyze the soil, and see what properties it lacks of growing such and such things; and then they can cause the earth to bring forth to their hand whatsoever they will, and I give them credit for their labours herein. But for all this, we may certainly see the great decrease of fruits and vegetables of different kinds, both in quality and quantity, in proportion to the number of acres tilled. Years back, say twenty-five or thirty, whoever had a fruit tree, of almost any kind, looked yearly for fruit thereon, and found it, without one-half the labour now bestowed. AN OBSERVER.

True gospel ministry may not inaptly be represented as a coin of pure gold from the heavenly treasury, of great value, having on one side the memorable words of our blessed Lord, *Without me ye can do nothing;* and on the other, Jonah's commission, *Preach the preaching that I bid thee.* —*John Stickland.*

George the third, (who, whatever his faults were, had the merit of being the first moral man that had sat on the British throne for more than a century) said when Bishop Watson published his "Apology for the Bible," "Apology! I did not know that the Bible needed an apology."

THE FRIEND.

NINTH MONTH 22, 1855.

Inquiry having been made by some of our readers respecting the proceedings of Dublin Yearly Meeting, in reference to the separation from Ohio Yearly Meeting, we deem it better, though it may seem out of season, to publish the principal part of the account given in the British Friend of the transactions of that meeting at its last session: the omission to publish it at the time the number containing the account was received, arose from the space occupied in our columns by the narrative of the proceedings of London Yearly Meeting, and the document connected therewith; afterward it was overlooked.

Second-day Morning, 30th of Fourth Month.—The Meeting for Discipline met as usual at ten o'clock. Thomas W. Jacob, the clerk of last year, read the opening minute. Report was then made by Joshua Wm. Strangman, that the Meeting of Elders and that of Ministers and Elders, were held us usual on the previous Seventh-day, and adjourned to such time as the Yearly Meeting should direct. Certificates of ministers from England were then read. . . . Epistles from all the American Yearly Meetings were then read, except Ohio, from which two epistles were received, both purporting to be from the Yearly Meeting of that State; these, together with sundry documents of explanation, were referred to a committee then appointed, for consideration, to be reported on at a future sitting.

Afternoon.—The representatives reported that they had agreed to recommend Thomas White Jacob as clerk, and Benjamin Grubb and Henry Russell as assistants. Some documents sent from the Meeting for Sufferings were then read, and the meeting shortly afterwards adjourned, in order that the committee to prepare answers to American epistles might meet.

Third-day Morning.—After a few words in the line of the ministry from William Green, the first query was read, when many Friends expressed their concern that so many who attended meetings on First-day morning, should absent themselves from those held in the middle of the week, and from meetings for discipline.

A Friend said, that during a very considerable portion of his life, the attendance of mid-week meetings was effected with very considerable pecuniary sacrifice; but that if Friends would make arrangements to devote from two to three, or even four hours of the best part of the day to the service of their Lord, they would find a blessing to rest on this performance of their reasonable duty. Several Friends said that they thought their younger Friends would take more interest in meetings for discipline, if they were put on such appointments as many of them are very suitable for. Several Friends thought that in some Monthly Meetings, there is too much of a disposition to have the business done by only a very few of their members.

The second query drew forth many remarks, respecting an over engrossment with trade, which prevented a growth in the Truth. Friends were reminded that the children of many who had been careful to lay up store of this world's treasure, did not follow in the footsteps of their parents, but that their riches had proved a snare to them.

On the reading of the fourth query, many remarks were made respecting the grammatical use of the plain language. Fears were expressed that the question respecting the reading of the Scriptures was not generally understood; it referred more particularly to private, and not family reading; and advice was given that family reading should be conducted in a reverent solid manner, and should not degenerate into a mere form. The question of religious instruction then occupied a good deal of time in discussion, but did not result in anything definite.

Afternoon.—The remaining queries were read. There was an exception to that respecting bearing arms and the militia, as a friend in Ulster had, in his capacity of magistrate, administered a military oath to a recruit. The answers to the queries from Leinster had appended to them a request from one of its Monthly Meetings, for permission to erect grave-stones in the burial grounds belonging to them. The Quarterly Meeting referred it to the Yearly Meeting, which, after a good deal of discussion, came to no decision, and the matter stands over till next year. There was considerable difference of opinion on the subject, but the discussion was very interesting.

At the subsequent sittings of the Yearly Meeting the school reports were read as usual; that from Mountmellick was particularly encouraging, although the boys are about to be transferred to the school at Newtown. Read also replies to epistles from America, &c., excepting Ohio, which was deferred till next year, and the meeting concluded, after a lengthened sitting, on Seventh day morning.

In our last number we gave a narrative of the "Wheeler Slave Case" and the process by which P. Williamson was adjudged to be guilty of constructive "contempt" of Court, and committed to prison therefor by Judge Kane. The whole evidence adduced, must leave, we think, no doubt on the mind of any unprejudiced person, that whatever technical defect there may be in the return to the writ of "habeas corpus," it was the intention of the respondent to give a truthful statement of the facts, so far as he was concerned. When it was found that Judge Kane had taken umbrage at the introduction of the words "or at any other time," the attorney for P. Williamson offered to amend the return. This, however, was refused by the Judge, on the ground of the offer being too late, and that the relator must pay the penalty. The writ issued is therefore, in the eye of the law, still unanswered; and as the reply made, cannot be amended, nor is it in the power of P. Williamson to produce in Court the three persons named in the writ, were he so inclined, it is difficult to see how Judge Kane expects him to meet the point at issue.

In the mean time he is kept close prisoner, and has been so for two months, without trial, without any means of redress, and solely on the judgment or will of the person towards whom the "contempt" is supposed to have been offered. We apprehend, a more arbitrary proceeding has never occurred in the annals of our State. Judge Knox gives a decided opinion that the whole course of Judge Kane has been illegal, and that in the attempt to bring the case within the jurisdiction of the District Court of the United States, the Judge has usurped powers which are nowhere delegated to him; and the facts and reasoning, upon which this opinion is founded, appears to us to be conclusive. The whole proceeding goes to show, what has been exhibited on more than one occasion before this, that there is a strong disposition in the District Court of the United States for the Eastern District of Pennsylvania, to do what it can to gratify the arrogant and vindictive spirit of the slaveholders, to set itself against the efforts made to rescue the people of colour from the grasp of the slave hunters, and to multiply difficulties in the way of those who interest themselves in their defence. This case is one which interests every citizen of Pennsylvania, as it would seem to show that any one of them, by want of a strict conformity to the legal technicalities so rigorously exacted by the Judges of the United States Courts, may be subjected to heavy punishment, without the power of obtaining trial, and beyond the reach of the Courts of the State to afford protection or redress.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 1st inst.

The War in the Crimea.—Since the battle of the Tchernaya the opposing armies have relapsed into a state of comparative inaction. There is, however, a horrible waste of human life and health constantly going on in both camps. In the absence of any great battles, the Russian shells and night sorties, exposure, and the pernicious life of the camp, sweep away multitudes of unhappy creatures. The Allied army is supposed to sustain, from these causes, a daily average loss of six hundred men in killed, wounded, and sick. General Pelissier states the loss of the French troops in the battle of the Tchernaya to be 1552 men. That of the Russians was much greater, but the estimate of 3000 killed and 5000 wounded, is probably an exaggeration. The Russians were daily expecting the arrival of General Parmitine, with 9000 cavalry, 3000 infantry, and 160 guns. On the 27th ult., Gortschakoff telegraphed, "Affairs are unchanged, but the fire of the Allies is occasionally very strong."

Omar Pacha definitely takes command in Asia, and would leave on the 21st for Trebizond. Osman Pacha has command of the second division, and troops will be conveyed in English steamers to Trebizond.

We have no reliable intelligence from Kars or Ezeroum.

The Russians have re-established communications between Genitchi and Arabat.

THE BALTIC.—The Allied fleet had retired from before Cronstadt and taken up another position. The London Times complains with much severity of its non-effectiveness.

FRANCE.—Queen Victoria had returned to England. The Kings of Sardinia, Wurtemberg, and Bavaria, were expected in Paris. The crops throughout France were said to be satisfactory. The harvest in Algeria had been excellent.

GREAT BRITAIN.—It is supposed that the grain crops will fully equal the average of former years. In Ireland, especially, there was a prospect of an excellent yield. The export of iron north of Dunkirk had been prohibited, and a bond is required whenever exported.

Liverpool Market.—The week's sales of cotton were 51,000 bales, at former prices. *Breadstuffs.*—Wheat dull, prices unchanged. There was a speculative demand for corn, and a slight advance in price. *Iron.*—Welsh Rails on board are quoted at £8 5s. to £8 10s. Pig 80s. *London Money Market.*—The bullion in the Bank of England had decreased £570,000. Consols 91.

Diplomacy.—The Prussian Cabinet has recently replied to Count Buol's circular, to the effect that Prussia is disinclined to make any change in her policy in regard to the Eastern question, because she is unable to see what practical guarantee the often-mentioned four points can afford for its settlement; further, that Prussia cannot consent to bind herself to these four points while the parties principally concerned reserve to themselves the right of going beyond them.

Count Nesselrode had addressed another letter to the Russian Ambassador in Berlin, in which he says the Czar is willing to make honourable terms of peace.

AUSTRALIA.—Sidney dates to Sixth mo. 9th. The yield of gold continued steady. Flour had largely advanced, and was now selling at £18 and £20 per ton. There had been serious collisions at the mines between the Irish and people of other nations. The military had been called in to restore order. The speech of the Governor-General at the opening of the Legislative Coun-

cil, urged the attention of that body to the subjects of education, municipal organization, the government of the gold-fields, and intercommunication throughout the colony, by roads and railroads, &c.

CHILI.—Valparaiso dates to Seventh mo. 30. Trade was active at this port, and flour in great demand for Australia, at $11.50 and $12 per bbl. The question of establishing banks of issues in the Republic, was under consideration in the Chilian Congress.

PARAGUAY.—The quarrel with Brazil has been settled, and a treaty of commerce and navigation concluded. The difficulty with the United States would probably be settled amicably. It is supposed that Uraguay would soon be annexed to Brazil.

UNITED STATES.—*Cotton Crop.*—The Charleston Courier contains the yearly statement of the crop of the United States. The total is estimated at 2,855,729 bales, showing a decrease, as compared with last year, of 73,410 bales. The exports to foreign ports for the year is stated at 2,241,924 bales. And the quantity consumed by and in the hands of manufacturers in the States north of Virginia, 598,292 bales. The southern ports divide the receipts as follows: New Orleans, 1,231,844; Charleston, 498,557; Mobile, 453,347; Savannah, 375,353. The ports of Florida 136,597, Texas 80,737. The stock on hand Ninth mo. 1, in southern ports, 76,814 bales; in northern ports, 65,976 bales.

The Behring Straits Surveying Expedition.—The Navy Department has received despatches from Lieut. John Rodgers, commanding this expedition. His ship (the Vincennes) arrived at Petropaulowski on the 8th of Seventh mo. last, from Hakodadi, Japan; and the Fennimore Cooper, Acting Lieut. Commander Wm. Gibson, (one of the ships of the expedition,) on the 9th. All was well with the expedition and those engaged on it.

Immigration.—The number of foreigners landed in the United States during two quarters of the present year, is 106,515. In the corresponding period last year the number was 199,299.

The Indians.—The latest news from Omaha, Nebraska, represents the Sioux on their borders as all quiet and peaceably disposed. One of their most warlike bands recently sent in a delegation of their chiefs to Col. Montgomery, to assure him of their friendship and of their desire to cultivate amicable relations with the whites.

New Orleans.—The health of the city continues to improve. Sales of flour on the 11th inst. at $7. Wheat $1.30, corn 68 and 70.

Rafts on the Mississippi.—The Davenport (Iowa) Courier says, that timber and lumber rafts of great size daily pass that city on their way to a southern market, from the Upper Mississippi. They come from the tributaries of the Mississippi, especially from the St. Croix, the Wisconsin, and the St. Peter or Minnesota rivers. Some of these rafts are worth about $10,000 each.

Pennsylvania Coal Trade.—The Lehigh and Schuylkill regions had last week sent to market the present season, 3,300,099 tons, being 351,350 tons more than in the same time last year. The net profits of the Reading Railroad, for the last nine months, are stated at $1,745,200.

Richmond, Va.—The exports of flour from Richmond to Rio Janeiro and Rio Grande, have latterly been very large. The trade with Brazil appears to be an increasing one.

Boston.—The population, as ascertained by a recent census, is 163,000. It is however estimated that Boston business men, with their families, numbering 50,000, reside in the neighbouring towns.

Norfolk, Va.—The mortality from yellow fever is still heavy, but the new cases are decreasing. Since the disease broke out, fully 1200 persons have died. At Portsmouth the disease is believed to be abating.

Philadelphia.—Interments last week 192, of whom 65 were adults.

Miscellaneous.—Empty Honours Refused.—Ex-President Fillmore, it is said, has declined the honour of a Doctorate of Laws from the University of Oxford, which Lord Palmerston and others were desirous to have conferred upon him.

Dr. Cone.—This distinguished Baptist minister, who recently died in New York, was formerly a theatre actor, and his last appearance on the stage was on the terrible night of the destruction of the Richmond theatre in 1811, when the Governor of Virginia and a great many other prominent citizens perished in the flames.

Coal in Michigan.—A Coal Company has been organized in Michigan, and thirteen hundred acres of land, comprising the beds, have been purchased. One of the beds is upon the Central Railroad, another on the Detroit and Milwaukie Railway, and the third on the Detroit and Lancaster Plank Road.

Peppermint in Michigan.—The Detroit (Mich.) Democrat says: "There is more peppermint grown in St. Joseph county, Michigan, than in any other locality in the Union. It is the staple product of one town. The oil is extracted and sold at $4.50 per pound. An acre will yield from fifteen to twenty pounds."

A Monster Cucumber.—There is now growing, says the Lowell (Mass.) Journal, in the garden of Mr. Pindar, in this city, a cucumber measuring 48 inches in length, and over 12 inches in circumference at the largest part!

Extra Corn.—A few days since, John Hawkins, of Upper Darby, exhibited on 'Change two stalks of white corn, grown upon his farm, one of which had six and the other three ears. It attracted much attention.

Important Fact Ascertained.—W. Garbutt, a well known farmer and miller of Monroe county, N. Y., has proved, by careful experiments, that "grown" wheat retains all its vitality, and is as good as the best for seed. This was doubted, and farmers in western New York were going to heavy expenses to procure wheat, entirely free from the "sprout" for seed.

Tennessee Wheat.—The yield of the late harvest is said to have been unusually fine, and large shipments of grain have been made to points below. During the Eighth month, about 150,000 bushels were sent forward by railroad from Chattanooga alone.

Zante Currants.—This staple of the Island of Zante has again failed, the crop of this season being very poor. It is stated that the olive crop was promising, and that there would probably be 50,000 bushels procured for exportation, which would be a great relief to the famished population of the Island.

RECEIPTS.

Received from Asa Garrettson, agent, O., $2, to 26, vol. 29, for Milton Patterson, $2, vol. 28, for Jos. Gibbons, $2, vol. 29; from Jehu Fawcett, agent, O., for Robt. Miller, N. H. Armstrong, Jas. H. Dean, R. Boon, Z. French, J. H. Stanley, W. Atkinson, Wm. F. Fawcett, $2 each, vol. 28, for Reb. Woolman, Joshua Stafford, Barton Dean, Amos Fawcett, R. McBride, David Painter, C. J. Hayes, $2 each, vol. 29, for Thos. Y. French, $4, vol. 28 and 29, Dan'l Stratton, $4, vol. 28, and 29, for Abm. Bonsall, $2, to 26, vol. 29, for D. Whinery, $2, to 21, vol. 28, for Jacob Barber, 25 cts., to 40, vol. 28; from G. Mitchener, agent, O., for Jos. Doudna, $2, vol. 28; from J. Thistlewaite, N. Y., $2, to 17, vol. 29; from Ann Sheppard, per N. K., $2, vol. 28; from S. B. Smith, agent, O., for Saml. Smith, R. Holloway, Jos. Wilson, $2 each, vol. 28, for Geo. Walker, $5, to 52, vol. 27; from Israel Hall, Ind., $2, vol. 28; from J. F. Hall, N. Y., $2, vol. 29, for Richard Marriott, $2, vol. 29; from Geo. F. Read, agent, Mass., for Nath. Page, $2, vol. 28, for Josh. Buxton, N. Thayer, each $2, vol. 29; from Wm. Foulke, agent, O., for Marvin Gifford, $2, vol. 27, for Edwin (Saml.) Hollingsworth, $2, vol. 29, for T. Llewelyn $2, vol. 29.

WEST-TOWN SCHOOL.

The Committee to superintend the Boarding-School at West-Town, will meet in Philadelphia on Sixth-day the 5th of next month, at 7 o'clock P. M. The Committee on Instruction, and that on Admission, meet on the same day; the former at 4 o'clock, and the latter at 5 o'clock, P. M.

The Visiting Committee attend the semi-annual examination of the schools, commencing on Third-day morning, and closing on Fifth-day afternoon of the same week.

THOMAS KIMBER, Clerk.

Philadelphia, Ninth mo. 22, 1855.

MARY HODGSON, JR., No. 94 N. TENTH STREET, is prepared to accommodate with board, a limited number of such pupils as are educated in her school; where they would receive instruction in the usual English branches, including French and Drawing, and enjoy the comforts and privileges of a home. Particular attention is paid to the morals, habits, and studies of those who compose her family.

History of the Life of THOMAS ELLWOOD, written by himself—new edition. For sale at Friends' Book Store, No. 84 Arch street, and at the office of THE FRIEND, No. 50 North Fourth street.

A few Friends can be accommodated with board in a Friend's family. Apply at this office, or at Friends' Book Store, No. 84 Arch street.

WANTED.

A Female Teacher in the family of a Friend, nea Coatesville. One who can teach the Latin languag preferred.

WANTED.

A competent (male or female) Teacher for the school under the care of Nottingham Preparative Meeting o Friends.

Address, Lloyd Balderston, Port Deposit, Cecil Co., Md Ninth Mo. 4th, 1855.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in this Institution.

Application may be made to either of the undersigned, members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS, } Philada.
SAMUEL BETTLE, Jr. }

DIED, on the 4th of the Seventh mo., at his residence in Harford Co., Maryland, THOMAS WORTHINGTON, M. D., a member of Deer-Creek Monthly Meeting, in the 69th year of his age. He bore the sufferings of a protracted illness with resignation to the Divine will, saying that he did not desire to be released until the appointed time. A short time previous to the close, on being queried with as to the state of his feelings, he replied with emphasis, "When I am weak, then am I strong;" 2 Cor. xii. 10. The abiding sweetness of his spirit, the many happy expressions which he uttered, his unwavering trust in the power and mercy of his Redeemer, and the unclouded serenity that marked the closing scene, all leave to his surviving relatives and friends, a comfortable assurance that he has been permitted to enter into eternal rest.

——, on the 30th ult., AMELIA, daughter of O. and P. H. Mitchell, aged 21 years. She was a member of Philadelphia Monthly Meeting, and from her earliest years much attached to the principles of Friends. She was a constant reader of the Holy Scriptures; striving that her daily life should exemplify the spirit of their teaching. Her acts of kindness, and the unassuming manner in which they were performed, endeared her to the hearts of all who knew her. During an illness of several months, she bore her sufferings with that cheerful serenity, which, more unmistakably than words, gives assurance of inward peace. She spoke often of her sister's illness, saying, "I felt more anxiety for her recovery than I have for my own."

——, at Sewickly, Westmoreland Co., Pa., on the 16th of Seventh mo., in the 72d year of her age, DEBORAH, wife of Samuel M'Grew. She was a member of Sewickly Preparative and Providence Monthly Meetings. She bore a protracted illness with becoming patience, and we humbly hope that our loss is her eternal gain.

——, at the residence of her son, near Woodbury, N. J., on the 14th inst., in the 65th year of her age, REBECCA PIKE, widow of Stephen Pike, formerly of Burlington, and daughter of the late Thomas Scattergood of this City. She was a valuable member and overseer of Woodbury Monthly Meeting, and was concerned faithfully to support the doctrines and testimonies of our Religious Society. The ornament of a meek and quiet spirit may be truly said to have been hers, for she was a striking example through life, of cheerfulness, gentleness, and christian forbearance. During her last illness she was unable to express much, but the entire resignation to the will of her Heavenly Father which marked her actions, whilst the frail tabernacle was wearing out, gave to her family and friends a consoling evidence, that through the mercy of him whom she had long loved, "her robes had been washed and made white in the blood of the Lamb."

——, at Muncy, Lycoming, Co. Pa., the 25th of Eighth mo. last, MARTHA H. ECROYD, daughter of Henry and Catharine W. Ecroyd, aged 26 years. Her illness was long and very severe, but borne with much patience and resignation; and her friends have the consoling belief, that through the mercies of God in Christ Jesus, her purified spirit is united to that company, who came out of great tribulation and have washed their robes and made them white, in the blood of the Lamb.

PRINTED BY KITE & WALTON,

No. 3 Ranstead Place, Fourth above Chestnut street.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXIX. SEVENTH-DAY, NINTH MONTH 29, 1855. NO. 3.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Edinburgh Review.

The Land of Silence.

(Continued from page 9.)

Let us now turn to a school of deaf and dumb children in full work, and judge from existing evidence with what success the deaf-mute is trained to think, to utter his thoughts, to understand, if he hear, vocal utterance of others and reply to it, in short, *to hear and to speak*. We will, therefore, visit the school in the Old Kent Road, probably the largest in the world; containing accommodation for three hundred poor children of both sexes. All the pupils who are capable of receiving such instruction, are taught to speak artificially, and thus enabled, in many instances, to be understood by those in constant intercourse with them. They receive daily instruction in the Scriptures and the Catechism, and by degrees learn to read the Bible and Prayer-book with sufficient ease to take part in the church service. The ordinary routine of the school includes reading, arithmetic (which the deaf and dumb readily master), writing, the outlines of British history and geography; while such pupils as show taste for the art, are taught drawing.

We begin by observing that the deaf and dumb as a class are generally counted inferior in moral and intellectual perceptions to those who "cæteris paribus" do not labour under the same defect. Childishness and credulity characterise the deaf-mute far into youth, if not to mature age. Neither his love nor hatred, though passionate, appears to be very lasting, his gratitude deep, or his resentment bitter; but on the other hand, his affections are easily moved, and his mental powers, when once fairly at work, quickly interested in any new thought rightly brought before him. He cannot receive from his teacher the fullest supplement of knowledge, he will readily receive what he can.

Let us walk into the schoolroom, and judge for ourselves what is going on. Some two hundred children are at work; the boys and girls (in opposite divisions of the same room) being seated in rages of parallel desks, as in an ordinary national school. Some are at work with slate and pencil, some with reading and spelling-books, and others with slips of paper, on which apparently syllables or short words are written. So far, all appears unusual, and there is even the same buzzing noise at work as in ordinary schools. But it is not the well-known hum of whisper in the class, of sly talk in corners, or of suppressed laughter. The sounds, whatever they be, are not clearly articulate. This cloud of subdued, vague voices is not only the usual concomitant of the pupils *at work*. At a signal from one of the teachers the whole two hundred woke up into a sudden Babel of bewildering, moaning sounds, each repeating his modicum of words, syllables, or letters. But all are at work. There is a look of intelligence in most of the faces, a degree of smartness and subdued sharpness and cunning, for which it is difficult to account. Above all, a ray not so much of sadness as of frozen-up, statue-like life, that looks as if waiting to be thawed by some enchanter's rod into full and conscious vitality. At first, it is difficult to decide wherein or to what exact degree the deficiency exists; but that 'out of the golden harmony' of nature's powers' some vital third or fifth has been taken, is at once apparent; the very vagueness and uncertainty adding keenness to the sense of the loss.

Let us take up the slate of this quiet, placid-looking, white-haired boy, and glance at what he has been writing. It is an account of a visit to his mother. "I went to my mother's," he writes, "on Tuesday, and she was very glad to see me; and she told me to help her to wash the dishes; and after she poured some hot water on the dishes, I washed the dishes for my mother; and after I had washed the dishes," &c., &c., and so on for some twenty lines. Not much of the model skilfulness and cold propriety of the letters before cited from printed Reports, but simple direct proof that the child's mind (ætat. 14) was at work, and that after three years and a half training, he was beginning to obtain command over words, and learning to express his own not very profound but natural thoughts. The writing is good for a boy of his age—clear, even, and distinct; the spelling moderately, not too perfectly, correct. It has been rather a slow and difficult half-hour's task; but has served to exercise the memory, the power of expression, and of writing down his own thoughts.

One of the teachers is a deaf-mute; formerly a pupil of the school. The superintendent beckons to him, and with his lips utters, *in dumb show*, the question, "How long have you been a inmate of the school?" Mark how intently the deaf-mute watches the speaker's lips, and how instantaneously comes the reply in dumb show, indistinctly audible, "Seventeen years." He is then asked what he has been teaching his class, and at once answers, "Writing from dictation." Even *we* could catch the words of this reply. The whole matter seems a marvel; but clear proof of its reality and truth is before us. There stands the man himself: deaf, yet able to understand what is said to him; dumb, and yet able to give intelligible answers to what is asked. What can be more convincing?

How such an amount of education is ever attained, it is difficult to describe within our present limits. We will, however, endeavour most briefly to sketch the process. When a deaf and dumb boy enters the school, he is rarely able to communicate with others but by a few of the commonest and simplest manual signs. He is unconscious of all sound uttered by others, as well as by himself. Nothing but an inarticulate moaning bubble ever escapes his lips; and at first, even this power is not always possessed. He, however, soon begins to communicate with and to understand his companions by signs, and ere long, by watching them, or perhaps by *their* individual teaching, also learns in some measure to understand and to communicate with his teacher. The power soonest awakened in him—as in the child possessed of all his senses—is that of imitation. He cannot, indeed, hear the words which his companions utter, but he is conscious, he feels, that their lips, mouths, and tongues have some definite object in moving; that that object is understood not only by the scholars themselves, but the teacher, in whom they seem to produce corresponding motions for a similar object, in turn understood by those about him. At this crisis—eagerly watched for by the teacher—instruction really begins. The learner has set before him a card having on it the printed or written forms of the vowels A E I O U; "and at these he is made to look for a minute or two; when, if of acute intellect, he will look up, as if asking what to do next." Then the sound—say of A—is slowly, fully, and sharply pronounced, and the learner made to observe with his eye, *and feel with his hand*, the exact position and motion of the external organs of speech, and to feel the astriction of the muscles of the throat, carefully noting the difference *to be felt there* between *sound and silence*. After having thus mastered, one by one, the vowel sounds of Ah, Ee, Ii, Oo, Uu, &c., the pupil soon passes on to the simplest forms of combination with "the powers of the consonants," as Ba, Be, Bo, &c., &c. The succeeding steps of progress can be easily imagined. Almost every deaf-mute is found at first capable of uttering *some* moaning noise; and this faculty is by degrees turned to account, until it results in the actual power of uttering intelligible sounds and words. It is true that this power of utterance differs widely in extent and quality. In some cases it is harsh, noisy, and jarring to the very end; in others soft, and though without modulation, not unpleasant to the ear; but in all cases, we believe wholly inaudible to the utterer. When once this power of *seeing sounds*, by reading them on the lips of those gifted with speech, is acquired, the art of writing, which has hitherto been quietly practised as mere copying, is readily and effectively turned to account. Deafness offers no impediment to this operation, and the pupil, therefore, wisely employs all his leisure while learning to pronounce letters and words in writing them on slate or paper. So that speaking and writing go hand in hand. Of arithmetic we need but remark that it is taught in almost the usual manner,—when once the powers of the mind are awake, and the pupil has mastered the common signs of intelligent communication.

(To be concluded.)

Escape from Death.—Almost every person can recollect narrow escapes from death, or severe bodily injuries, in one form or another; and probably our escapes from unseen dangers are more than those we have seen.

At a meeting of ministers, one of the fathers spoke with deep emotion of a narrow escape on his way. "Just as I came to the top of a long and

steep hill," said he, "which I had often descended without any fear or accident, the hold-back of the harness broke, which brought the carriage down upon the horse, and frightened him so that he started to run with full speed, and I expected nothing but to be dashed to pieces. But it was so ordered that I kept him in the road, and checked him before coming to another hill, without being thrown out or upset; and here I am, in the midst of you, without having experienced any harm."

He was listened to with affectionate interest. Every one felt that it was a narrow, providential escape, and all were ready to unite with him in thanksgivings to God for the deliverance.

But what was their suprise, when another of their body rose and remarked, that it certainly was a striking example of divine protection, which should be devoutly acknowledged in prayer; but he had one to mention, which he thought had still higher claims to their gratitude. Every one eagerly listened. What could it be? "I came," said he, "on the same road as my brother, and when I got to the top of the same hill, I began to descend, and my harness did *not* break, and my horse did *not* run, and I felt no alarm, and came on all the way in perfect safety, and without a moment's fear. And now, brethren, I appeal to you, which of us has the most reason to be thankful for divine protection, our highly esteemed father and brother who so narrowly escaped, or myself who saw and felt no danger? We are both here, we are *all* here to-day alike living and well. He alone has suffered any alarm; and while he may well feel that it becomes him to call upon his soul and all that is within him to bless God for his sparing mercies, have not we additional reasons for thanksgiving?"

While God's hand forces itself visibly, as it were upon our attention in all our deliverances from imminent danger, how apt we are to forget that there are a thousand dangers unseen as well as seen, and that without divine protection we could not be safe a moment, at home or abroad, going out or coming in. If when some great danger has been escaped, we are bound fervently to acknowledge that Providence which watched over and delivered us, how much more do we owe to our divine Protector, for his hourly, daily, weekly, and monthly care over us, by day and by night, when no ambush springs up in our path, and no plague comes nigh our dwellings.

Epistle of George Fox.

Friends and brethren,—Who have received the peaceable Truth, let the fruits of its peaceableness and of your quiet spirit appear in all your meetings and in all your words and actions; for He that inhabits eternity dwells with a humble heart, he gives grace to the humble, and resisteth the proud. Heaven is his throne, and the earth ye walk upon is his footstool; happy are ye that see and know Him, that is invisible. And now, Friends, let all things be done in your meetings and otherwise, in love, without strife or vain glory. For love fulfills the law, love overcomes and edifies the body of Christ. There is neither self nor envy in love, neither is it puffed up; but abides and bears all things. See that this love of God have the sway in you all and over you all. Christ saith "blessed are the poor in spirit; for their's is the kingdom of Heaven. Blessed are they that mourn; for they shall be comforted. Blessed are the meek; for they shall inherit the Earth. Blessed are they that do hunger and thirst after righteousness; for they shall be filled. Blessed are the mereiful for they shall obtain mercy. Blessed are the pure in heart; for they shall see God. Blessed are the peace-makers, for they shall be called the children of God. Blessed are they that are persecuted for righteousness' sake; for theirs is the kingdom of Heaven. Blessed are ye when men shall revile you, and persecute you, and shall say all manner of evil against you, falsely for my sake. Rejoice and be exceeding glad; for great is your reward in Heaven; for so persecuted they the prophets which were before you."

Now Friends here is a great deal in these words; and all must be in these estates and conditions, if they have these blessings. The children of God are peace-makers, and strive to make peace in the Truth; and to live in peace with all men, if it be possible. So live in peace and good will to all men; which good will is both for their sanctification and salvation. And Friends, consider the wisdom of God, which is from above, is pure, peaceable, gentle and easy to be entreated, full of mercy and good fruits, without partiality and without hypocricy. Dear Friends, let this pure, peaceable, gentle, wisdom, that is from above, that is easy to be entreated, and is full of many and good fruits, be exercised and practised in all the true Churches of Christ, so that wisdom may be justified of her children. For the works of the flesh or fleshly spirit, are hatred, variance, wrath, strife, envyings, drunkenness, revellings, adultery, fornication, lasciviousness, uncleanness, &c., and they which do such things, shall not inherit the kingdom of God. But the fruits of the Spirit of God, are love, joy, peace, long suffering, gentleness, goodness, faith, meekness, temperance, &c. So, Dear Friends and Brethren, strive to exceed one another, and all people upon the earth, in humility, meekness, gentleness, temperance, love, patience, pureness, and in mercy; then ye will show forth the fruits of the Spirit of God, and of his heavenly wisdom that is from above. In this, Wisdom will be justified of her children; ye will be the salt of the earth, the light of the world set upon a hill, that cannot be hid; and your moderation will appear to all men. Be ye just and righteous, faithful and true in all your words, dealings, and conversations, so that ye may answer the Truth in all people; for Christ saith, his Father is glorified by such as bring forth fruits, where many do see their good works; for he that doeth righteousness is accepted with God. And he that dwells in love, dwells in God; for love is his habitation. Let that be the habitation of every one that hath received the Truth; for if it be not, such do not dwell in God, let them profess what they will. Therefore my desire is, that all you who have received Christ, the Seed, which bruises the serpent's head, may walk in Him, your sanctuary, life, and salvation, your rest and peace. Amen. G. F.

London, the Fourteenth of the 6th month, 1683.

From "The Leisure Hour."

GALVANOPLASTY.

Every one knows the eastern tale of a certain king and his court, who strove to exhaust the power of a complaisant fairy by requiring her to perform feats continually increasing in difficulty. The same may be said to pass now between human industry and electricity. This mysterious agent, this genius of the thunderbolt, whom the orientals, why, I know not, represent as a being of extremely diminutive size, seems to have overpassed the limits of the wildest human requirements, and given far more than the most exacting spirit ever dreamed of demanding. In the Milesian school of Thales, six centuries before our era, it was remarked that a bit of yellow amber, called *electron*, being rubbed, drew light bodies towards it, as the loadstone attracts iron; and from the time of Thales to that of Descartes, numerous theo were promulgated to explain the phenomenon.

Towards the middle of the seventeenth centu Otto of Guericke, the inventor of the pneuma machine, constructed an electrical apparatus means of a globe of sulphur, as large as a chi head, mounted on an axis. This globe, in revo ing, rubbed against an elastic cushion, and p duced electric sparks. From that epoch, phil phers began to question nature through experien Laying aside the sterile theories which, dur more than two thousand years, had enchained enervated the human mind, they renounced guessing at the causes of phenomena, and c tented themselves with determining what the p nomena really were.

What then were the answers of the electri agent to the questions of experimental scienc Is lightning electricity? Yes, for with artifi electric batteries the same effects on animal are produced, as by the action of thunder-clou Yes, for electricity may be drawn from the s the air, and the earth, and employed as an art cial battery. These facts led Franklin to the u ful invention of the lightning conductor.

"Eripuit cœlo fulmen, sceptrum que tyrannis."

"He wrested from the skies Heaven's forked brand, And tore the sceptre from the tyrant's hand."

Or, to give a burlesque paraphrase :—

"He with a kite brought lightning from the sky, And like a kite he peck'd king George's eye."

The physical philosopher, Charles, has f quently appeased storms by sending to the clou a kite attached to a metallic thread, which c ducts silently downwards the fluid lightning. the Conservatory of Arts, in Paris, may be se the varnished stool which supports the metal string: the wood is scorched by the lightnin which fell over it like a cascade of fire. The ph siological effects of electricity are very remarkab Without speaking of the shock of the Leyden j and the sensation caused by sparks, it is certa that all animal organization, as to sensibility, n tion, the digestive functions, nutrition, the dev lopment of the organs, etc., is under the empire the electricity of the living being.

When Volta had invented the apparatus whi bears the name of the voltaic pile, Aldini, t nephew of Galvani, who was the first to obser the facts which led Volta to his great discover tried its action on animals which had been kille and on criminals who had been executed. T head of a bull, detached from the body and plac on a table, when excited by the electrical curre opened its eyes, rolled them furiously, inflated nostrils and shook its ears, as if the animal we alive and prepared for combat. On another tab the plunges of a dead horse were near hurting t spectators, and did break the apparatus placed ne the animal.

Afterwards, in England, some physiologists pu chased from a criminal condemned to death h own body (strange bargain!) in order to test t animal electric theories, and also with the charit ble intention of (if possible) recalling the hang man to life. The result was terrific. The corp did not return to life, but a violent and convulsi respiration was produced, the eyes opened, the li were convulsed, and the face of the assassin, longer obeying any directing instinct, present such strange contortions of physiognomy, that on of the spectators fainted with horror, and remain for several days in a species of bewildermer Fuseli, Reau, Talma, in their mimicry of crimin passions, fell far short of this fearful reality.

Lightning and electricity sometimes set on f

fices and combustible substances which come in lir way; it was, therefore, sought to produce t by the electric agent. The following was one the many experiments tried. Solder metallic es to both extremities of a pile, then bring the er ends of those wires into contact, so that an trical current may pass from one to the other; n place any, even the most insoluble body, in midst of the flame surrounding the meeting ls of the wires, and it will speedily become ld. Refractive metals, minerals otherwise inible, earths, flints, nothing can resist the action such a furnace.

From the brilliant fugitive light of lightning, l of electric sparks, philosophers were led to k in electricity a constant and useful light. The ceding arrangement, slightly modified, succeedto admiration in producing the desired effect. o pieces of charcoal placed at the point of conct of the soldered wires, become ignited, and ne with a light fully as dazzling as that of the . It was attempted to substitute this light for t of gas in shops, public rooms, etc., but it was nd unsuitable on account of its overwhelming lliancy hurting the eyes. It is, however, conntly employed in the service of the huge miscopes usually called solar.

With the voltaic pile a strong motive power has n obtained, able to impel vessels on the water, l to work machinery on land. Voltaic electri- also acts on the magnetic needle. Under its uence the loadstone accomplishes so many wons that it well deserves its ancient name, "the ne of Hercules."

We may imagine that one day it was said to the tric current, "Don't you think you could tra- as a courier from Paris to Marseilles on meic wires?" Before the word "Marseilles" could l be uttered, the answer had already reached extremity of France. Ariel, who boasted that could "put a girdle round the earth in forty nutes," was a laggard when compared with the tric telegraph. How true were the memorable rds of Napoleon I.: "The sovereigns who pre- ed me never understood that in modern times power of science makes part of the science of wer."

Modern physics have established the fact that globe is one grand electric machine, whose rents direct the magnetic needle, which in its n serves as a guide to navigators. Chemistry es to electricity so many compositions and deapositions, so many various molecular actions, many metals produced for the first time, that, a word, the most comprehensive chemical theory hat of the electrical properties of the primitive ments of simple or compound bodies. Light- g and electricity draw with them a small quan- y of matter, divided into excessively minute ctions. With these they *coat*, so to speak, the lies with which they come in contact. I have n specimens of coarse marble or compact limene, forming the pointed summits of some proontories in the bay of Cannes, in Provence, and ich, struck repeatedly by lightning, are covered h a layer of silver equal in thickness to a five ne piece. The art of electro-plating in gold and ver, coming every day into more general use, es its origin to the enlightened observations of de Larive, of Geneva.

Galvanoplasty is the latest adaptation of this ocess. The idea occurred to M. Jacobi, of St. tersburg, that electricity might be made to bear ng the metals, such as copper, silver, or gold, ntained in a chemical bath, and to deposit them great thickness on a sculptured plate, in order take off a faithful impression, a regular metallic uld. By this process an engraved plate, a medal, a cup of Benvenuto Cellini can be reproduced without any other agent than electricity and time. The great merit of the antique bronzes is the lightness and extreme tenuity of the sculptured metal. These are much more eminently the characteristics of M. Jacobi's metallico-electric sculptures, produced simply by electricity taking up the metal in a chemical bath, and then depositing it in an even layer on the exterior or interior of any mould whatever. It is, in a word, the art of carving, modelling, and moulding by electricity.

(To be concluded.)

For "The Friend."

RETIREMENT.

The advantage, and even necessity, of often abstracting the mind from worldly thoughts, pursuits, and pleasures, have ever been acknowledged, and the practice thereof observed, by the humble seeking soul, with whom the desire for true peace and tranquillity has prevailed over every inferior consideration; and to this interesting subject, the following remarks seem peculiarly pertinent.

"The wisdom that teaches us to avoid the snares of the world, is not to be acquired by the incessant pursuit of entertainments. An uninterrupted course of dissipation stifles every virtuous sentiment.

"Solitude, when it has ripened and preserved the tender and humane feelings of the heart, and created in the mind a salutary distrust of our vain reason, and boasted abilities, may be considered to have brought us *nearer* to God. Humility is the first lesson we learn from reflection, and *self* distrust the first proof we give of having obtained a knowledge of ourselves. The wise man, in the midst of the most tumultuous pleasures, frequently retires within himself, and silently compares what he *might* do with what he *is* doing. The word solitude does not necessarily import a total retreat from the world and its concerns; but is that state in which the mind voluntarily surrenders itself to its own reflections, and a person may be frequently solitary without being alone.

"Mental pleasures are within the reach of all who, free, tranquil, and affectionate, are contented within themselves, and at peace with their fellow-creatures. Happy are they who know the advantages of a religious retirement, of a holy rest in which the virtues rivet themselves more closely to the soul, and in which every man, when he is on the bed of death, devoutly wishes he had lived.

"The self-examination which retirement imposes, teaches us, by exhibiting to our view, our own defects, to do justice to the superior merit of others."

It is a serious reflection, that no sooner do those, who have attained to the love and advantage of *frequent religious retirement*, in which they have been secretly and eminently qualified for usefulness in the church, and in the world, begin to relax from the performance of this important and indispensable duty, seeking the favour, and notice of their fellows, and allowing their minds to be betrayed into a love for a reciprocity of flattering attentions, than they begin to dwindle and fall from that holy fervour of spirit, from that clearness of vision and judgment —unto which, through humble attention to the leadings of the Holy Spirit, they had been exalted, to the rejoicing of those whose hearts were bound with them in "the unity of the Spirit, and the bond of peace," to the law and the testimony of Truth, to follow and uphold, according to the ability vouchsafed. "They that wait upon the Lord shall renew their strength," while "they that turn aside to lying vanities, forsake their own mercies."

Sheep-Shearing in Spain.—We make the following extract from the forthcoming agricultural report on the sheep husbandry of Spain:

"The season for sheep-shearing in Spain like the harvest and the vintage in corn and wine countries, is a time of great festivity and rejoicing, both to the proprietor and the workmen. A multitude of shearers, washers, and other attendants, are fed upon the flesh of the culled sheep, and it would seem that the slaughter occasioned by this season of feasting would be sufficient to consume the whole flock.

"The operation of shearing commences on the first of Fifth month, provided the weather be fair; for if the wool be not quite dry, the fleeces, which are closely piled upon one another as soon as taken off, would ferment and rot. It is for this reason that the business is performed in large spacious buildings called 'esquileos,' which are usually so arranged as to receive entire flocks of twenty, forty, and even sixty thousand sheep; and, beside, the constitutions of the ewes are such that, if they were exposed immediately after shearing, to the air of a bleak, stormy night, they would all perish.

"A certain number of sheep are led into the great shelter-house, built in the form of a parallelogram, four or five hundred feet long and one hundred wide, where they remain during the day. As many sheep as it is judged can be dispatched by the shearmen the next day, are driven into a long, narrow passage, called 'sudadero,' or sweating place, where they remain all night, crowded as closely as possible together, in order that they may profusely sweat, which is to soften the wool for the shears, and as the shepherd says, 'to oil their edges.'

"By degrees, the next morning, the sheep are led into the spacious shearing room which joins the sweating place. As fast as they are sheared the shepherd carries them off to be marked with tar, which usually consists of the first letter of the name of the proprietor, and each sub-division is denoted by the part of the sheep on which this letter is placed; and as this operation is necessarily performed upon one at a time, it gives a fair opportunity to cull out for the butchery all the sheep of the flock which have lost their teeth.

"The sheep that have been shorn are allowed to go to the fields if the weather be fine, in order to feed during the day, and in the evening they return to the yard in front of the shearing house to pass the night, and, if the weather be cold or cloudy, they are sheltered within. Thus they are brought by degrees to endure the open air, and their first day's journey from the esquileos to the mountains is short."—*Late Paper.*

A Monster Railway along the whole course of the Mississippi river from New Orleans to the Falls of St Anthony, is spoken of by the Dubuque Tribune as being in process of construction. From New Orleans to Memphis the road lies east of the river, and is in the hands of three distinct companies, having been in progress three years, and being now nearly finished. The distance is 390 miles. At Memphis it crosses to the Arkansas side of the river, and traverses that State seventy miles, a company being organized for the construction of that link. From the Arkansas boundary to the city of St. Louis it is called the St. Louis and Iron Mountain Railroad, and is in charge of a company which has purchased 9000 tons of rails, and is making preparations to run an engine on it this year. From St. Louis to St. Charles, Mo., it is called the North Missouri Railroad, twenty miles of which are finished. From thence to Keokuk, Iowa, it is called

the Mississippi Valley Railroad North, and a company has been organized to build the line one hundred and forty miles. From thence to St. Anthony, Minnesota, companies are already chartered to build the road. When finished, as all these various divisions will be at no distant day, the road will be the longest in the world. Our country is fast multiplying such immense chains of iron roads, among which we may mention those from New York to Rock Island, from Philadelphia to St. Louis, from Charleston to Memphis, from Boston to Buffalo, from Mobile to Chicago, and from Boston, by way of N. York, Philadelphia, Baltimore, Washington, Petersburg, Richmond, etc., to Wilmington, N. C.

Letter of Richard Shackleton.

Thou knowest, my dear friend, that religious growth does not consist in writing and speaking on religious subjects: it consists in the Divine life prevailing in our minds. Poverty of spirit is the plain, decent, every-day clothing which properly belongs to, and becomes the Christian man. This clothing makes us appear comely in the sight of the Master and of spiritual men. When His followers patiently wear this garment, and keep it unspotted from the world, in his own time (which they will find to be the best) he will array them with the robes of righteousness, and garments of praise. But then they must be stripped again of these, which are the Lord's ornaments, and possessing their souls in patience, must contentedly put on their old raiments, the ordinary livery of the Master's servants. Hence is seen the propriety of that expression of his to his disciples;—"The poor ye have always with you, but me ye have not always." Had there not been a word on this solemn subject in thy letter, it would have been very welcome to me, because I know thy time to mention that subject is not always ready. What I was desirous of was, that, whether absent or present, there might still be kept open a door of free communication of sentiments on these matters between us, by which some good might, and I think no evil could, enter. I can say of a truth that fervent and renewed have been my desires and petitions on thy behalf, since I wrote last, and I trust thy conflicts and besetments, thy sense of thy own weakness, and of thy lack of best wisdom, thy indisposition of body, thy feebleness of mind, will all work together for good. Certainly the good will of the Almighty Benefactor is towards thee, and good and gracious are his designs upon thee. Else, why should my poor spirit be so often dipped into sympathy with thee, and such petitions be formed in travail in the deeps, on thy account? Oh! be faithful to the discoveries of the light which maketh manifest, and to the requirings of duty in the day of small things, and great will be thy peace, and glorious thy reward; such as "Eye hath not seen, nor ear heard, nor hath it entered, or can enter, into the heart of the natural man to conceive." Do not be restless, uneasy and impatient, to quit thy place of probation and present trial; but rather use the more diligence (in proportion to the dangers and difficulties of thy situation) in seeking for inward strength and wisdom to be enabled to acquit thyself acceptably in the sight of heaven. Remember wherever we are, it is by the appointment, or permission of All-wise Providence, who sees both us and our engagements. It is not the way to gather strength of mind, to endeavour to fly in our own wills, from the field of labour and battle. Let us stand our ground, keep close to the standard of Truth; if we cannot put an enemy to flight, let us however not flinch ourselves, but openly declare and show on what side we are; on the side of Him who was never foiled in battle. Thus, dear friend, thou wilt grow stronger and stronger, and feel "The peace which passeth all (rational) understanding," to flow as a mighty stream in thy soul, bearing down before it all the little, trifling, hindering things, and thou wilt be able (as thou art faithful and obedient) to encounter things of greater moment and difficulty, with honour and success. So in the love of our Holy Head, I affectionately salute thee, and commit thee, with my own soul, to his divine protection.

Waste of Life in this War.—"The prodigious loss of life, says a cotemporary journal, which hostilities have occasioned during the sixteen months since the war was declared, begins to call forth remark from the European press. The progress of enlightenment and of science does not seem, from the calculations made, to have rendered war less bloody than of yore, nor to have diminished the aggregate of losses by exposure and disease.

"Since the declaration of war by Turkey, in the autumn of 1853, the loss to that empire is estimated at 130,000 men. The French have, since their arrival in the Crimea, lost 70,000, dead or invalided; while the British have suffered to the extent of 30,000. The loss of the Russians is variously estimated from 250,000 to 300,000. Austria, too, though not at war, has suffered immensely by diminution of force in the unhealthy localities where she has been obliged to place her armies. Taking also into account the mortality on board the ships, and of labourers of different kinds attached to the armies, of whom there are thousands in the Crimea, it may be asserted that from 600,000 to 700,000 men have perished, or become invalided, since the commencement of the war. What the amount of mortality will be when the operations shall be conducted on a larger scale,—when bloody battles shall be fought in the open field, and gigantic contests shall decide the issue of campaigns,—remains hidden in the future. The wars of the French republic and empire cost Europe 6,000,000 of men; but, if we may judge from the past eighteen months, the present struggle is destined to exceed all that has gone before it in the wide-spread destruction which it will cause."

It is impossible, during the progress of any war, to get a reliable approximation to the full loss of life; but we doubt whether the foregoing conjectures will not be found to be within the truth. Russia does not let the world know what she suffers; but we now and then get a passing glimpse behind a curtain. A high Russian officer not long since from Sebastopol, reported to Paskiewitch at Warsaw, a sad account of its condition, General Gortschakoff complaining that promised reinforcements of troops, and supplies of provisions were delayed. "These reinforcements, in crossing the Ared steppes, were decimated by disease on their march; and the remainder, on arriving at Sebastopol, only served to fill the hospitals. Simpheropol and Bakshiserai are so full of sick, that it has been found necessary to establish ambulances under tents. The mortality, owing to the extreme heat, is described as frightful. The town of Sebastopol is said to be in a desperate state—not a house but has suffered from the shot and shell of the allies. The Russian army at Sebastopol has been weakened by 10,000 men in the affairs of the 7th and 18th of June, without reckoning those who have died of cholera and other diseases. It is supposed that the garrison will blow up all the public buildings, and leave to the assailants only a heap of ruins."—*Advocate of Peace.*

For "The Friend

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned mem of the Yearly Meeting of Philadelphia.

MAHLON STACY.

(Continued from page 14.)

Mahlon Stacy being a man of large property enterprise and good abilities, was much regard in the community, and of course had a large sh of public business to attend to. As one of commissioners for settling and regulating lands a member of the Assembly, as a councillor, an justice of the peace, he had a heavy weight responsibility resting upon him. Although th occupied with the business of others, he was unmindful of his own, and particularly of necessity of making his own calling and elect sure, by faith in, and obedience to, the Lord sus Christ. We shall not follow him in his p lic life, only saying that he devoted much of time in the faithful performance of the vari duties devolving upon him.

We find him in the Yearly Meeting, in 16 appointed with some other Friends of extens influence, to see if arrangements could be m for the establishment of a Yearly Meeting of the Friends on the American continent. He v one who signed the testimony against Geo Keith. At what time Mahlon Stacy was called the work of the ministry, we know not, but he w member of the Meeting of Ministers, early in 16 We find little mention of his gospel labours, h we have evidence that in his own family, his r gious travail and exercise was effectual for preservation of his children. We have alre given a sketch of the life of his daughter, Sa Kirkbride, who, through faithful obedience to h God and her father's God, was enabled to die holy resignation, yea, rather in christian joy.

He was employed in the Yearly Meeting business, and in the General Meeting of Ministe and appears to have been earnest and active in path of duty until near his close. His death t place, say his Friends of Chesterfield Month Meeting, on the "3d of Second month, 1704."

SAMUEL ANDREWS.

Samuel Andrews, of whom a short biographi sketch has been given, was a minister of Chest field, and deceased Seventh mo. 19th, 1693.

ANTHONY MORRIS.

Anthony Morris, of whom we have given a li resided during his minority in London, as appe by the following brief letter, dated Sixth mo. 1 1707, and addressed to Henry Goldney:

"I am glad to hear thou art a serviceable m in the church of Christ, having had some kno ledge of thee, when thou wast a 'Prentice. H many of the young men that were then in Lond near about our age, and seemed hopeful, the gra enemy hath been too strong for, causing some err on the right hand, some on the left, some run too fast, and others to fall short, over whom have often lamented. The Lord, if it be his w protect us, and preserve us to the end of our da is the humble petition of thy friend and broth in the unchangeable Truth, A. MORRIS."

GEORGE DEACON.

This Friend was born in England, in the ye 1643. He was one of the early purchasers o portion of West Jersey, signing the "Conc sions" in 1676. He sailed from London, in t ship called the *Willing Mind*, which reach Elsinbury, at the mouth of Salem Creek, in t Ninth month, 1677. In that neighbourhood, settled with his family. He was chosen a me

r of Assembly in 1682, and one of the justices the peace for Salem. He was one of the coun- of the proprietors for many years.

He was a representative to the Yearly Meeting om Gloucester and Salem in 1691, and was at e Yearly Meeting in 1692, signing the testimony ainst George Keith. In 1693 he was again a presentative for Gloucester and Salem, and must ve removed to Burlington either towards the ose of 1693, or beginning of 1694, as he repre- nted that meeting in the Yearly Meeting the tter year.

The proprietors of West Jersey were not con- nted with the right to the land derived through e Duke of York; they made compensation for ery portion to the Indians. We find that about e year 1703 they made a new purchase of lands cated above the Falls of Delaware. It would ppear from the record of the council, that George eacon was a diligent attender of its meetings. is consistent, christian conduct won the esteem all, and Governor Hunter characterized him in 719, "the good old man, George Deacon."

We find no account of the public or private bours of George Deacon after the year 1719. He as growing in years, and his labours in the minis- y were probably much confined to the city of urlington. The Monthly Meeting of Burling- n, in preparing a list of ministers who had de- ased subsequent to the year 1720, say, "George eacon, of Burlington, departed this life in the ifth month, 1725, in the 82d year of his age."

JOHN ROUTLEDGE.

Of this Friend I find no trace until the year 707, when he was a representative to the Yearly eeting, from Bucks Quarterly Meeting. From he year 1709, until the time of his death, he is ten mentioned, being generally a representative the Meeting of Ministers and the Yearly Meet- g. The following short memorial from Wrights- wn meeting concerning him, gives but little ac- unt of this religious services:—"John Routledge as a lively minister of the gospel, and travelled broad in the service of Truth. Divers Friends yet ving have a lively remembrance of his services in he church of Christ." His death took place about he close of the Fourth month, 1725.

Thomas Chalkley, under date of the Fourth onth, 1725, says, "In this month I was at Mid- letown, in Bucks county, at the burial of my ear and intimate Friend, John Routledge, who ed very suddenly, at which were above one thou- nd people. He was well beloved among his eighbours, and was a serviceable man, where he ved. I admired to see such a number of people llected upon so short a notice, he dying one day the afternoon, and being buried the day follow- g. Divers testimonies were borne concerning he wonderful works and ways of God. It was a lid bowing time, wherein many hearts were oken and melted into tenderness."

JANE BREINTNALL.

Jane Blanchard was born in Old England, as ppears, in Hampshire, in the year 1656. She was onvinced of Friends' principles in early life, and the year 1682, feeling a desire to settle in Penn- lvania, she applied to a Monthly Meeting at Ring- ood, in Hampshire, for a certificate of removal. fter considering the matter, the Monthly Meet- g gave her one bearing date the 11th of the leventh month, 1682. It was no light matter or a religious young woman, scarce 26 years of ge, to leave the land of her birth-place to settle a new country. We know not whether any lation or connection accompanied her, but the reserving presence of her heavenly Father was a light to her path, and strength to her not only in her voyage, but afterwards in the varied trials of her day.

On the 6th day of the Tenth month, 1683, she was married, in Philadelphia, to David Breintnall, a Friend, who had removed thither from Breach Meeting, in Derbyshire. Jane Breintnall was soon much employed in meetings for discipline, and was an improving woman. Her husband also was considered a substantial Friend. At what time Jane first opened her mouth in the ministry, we have no information, but we have abundant evidence after 1700, that her Divine Master led her to many of the surrounding meetings to labour in his service.

She visited, with the sanction and unity of her Friends, the meetings of her own Yearly Meeting, but does not appear to have travelled out of its limits. In the year 1702, she, with two of her sisters in the ministry, informed the Seventh-day Meeting of Ministers of her prospect of visiting Friends in Chester county, New Castle county, and then over the river to those about Salem. The meeting expresses unity, and "desires the Lord may be with them." In the year 1704, she visited meetings "in the upper side of the province of New Jersey."

It is needless to point out the various meetings she attended, of which we have a record left; it is enough to say, she appears to have been diligently occupied, when her own health, and her husband's health permitted her, in visiting the churches, as her heavenly Guide led her.

She had many domestic trials to fit her for usefulness. Some of her children did not walk in the footsteps of their parents, finding the cross of Christ too mortifying to the worldly mind. Her husband too became very feeble of body, probably through paralysis, and, in his weakness, was bent on taking a voyage to his native country, in expectation of restoring his health. It did not seem to be in the way of her duty to accompany him, and she was without doubt much tried about it. Her family, in Philadelphia, demanded her care, and she knew that for ministers of the gospel to travel where they would be thrown much in the way of attending meetings, without a special religious concern, was rather hazardous.

In the Fourth month, 1708, David Breintnall being once more able to get to his Monthly Meeting, informed his Friends of his intention "of taking a voyage to England, for the recovery of his health," and requested a certificate. A committee was appointed to make inquiry concerning him, and particularly how his family were satisfied with his proposed voyage. At the next Monthly Meeting, held Fifth mo. 30, 1708, a certificate was brought by the committee, "and after a great deal of good advice and counsel given him, and the danger of the voyage, and the exercise he might meet withal therein, considering his incapacity to help himself, yet, nevertheless, as he seems to be inclined to undertake the said voyage, his certificate was signed in condescension."

Notwithstanding the fears of his Friends, the voyage to Europe appears at least to have been attended with no ill consequence. His health gradually improved, and he lived for nearly a quarter of a century, useful in religious Society, and in the family circle. His faithful wife continued her labours for the good of others, until about the close of the Fourth month, 1725, when an attack of paralysis released her from public service. Thomas Chalkley, after mentioning that he, on the 9th of Fifth month, was at the General Meeting at Germantown, which was large and good, adds, "Next day I went to visit Jane Breintnall, who was seized with the palsy, and the Lord was pleased to comfort us together, as she expressed, to our mutual satisfaction."

She did not long survive the attack; her Friends say, she "departed this life the 25th of the Sixth month, 1725; aged 69 years. She was endued with a gift in the ministry, in the exercise whereof her service was acceptable, and to edification."

(To be continued.)

For "The Friend."

A SONNET OF GRATITUDE.

I thank thee that I live! that in these limbs,
Nothing is wanting to make life a joy;
That I can hear sweet sounds; that nothing dims
These eyes from witnessing thy hand in all
Around, from mighty suns to insects small.
My food is relished by my hands employ;
Soft sleep refreshment brings, and I can give
Utterance to all I feel, fear, hope, conceive.
Friends dear are mine, and one who with me shares
Sorrow and bliss, and offers for me prayers.
Me wandering in the world, with voice, small, sweet,
And still, thou warned'st, and led'st me along
By gentle steps; and thou didst set my feet
Upon a rock, and in my mouth a song
Putest of praise to Thee, for all thou dost,
But for thy glorious good presence most.

Selected.

THE LAND WHICH NO MORTAL MAY KNOW.

Though earth has full many a beautiful spot,
As the poet or painter may show,
Yet more lovely and beautiful, holy and bright
To the hopes of the heart, and the spirit's glad sight,
Is the Land which no mortal may know.

There, the pale orb of night, or the fountain of day,
No beauty nor splendor bestow,
But the presence of Him, the unchanging I Am,
And the holy, the pure, the immaculate Lamb,
Light the Land which no mortal may know.

There the crystalline streams, bursting forth from that throne,
Flow on, and forever will flow,
Its waves as they roll, are with melody rife,
And its waters are sparkling in beauty and life,
In the Land which no mortal may know.

And there on its margin, with leaves ever green,
With leaves healing sickness and woe,
The fair tree of life, in its glory and pride,
Is fed by the deep, inexhaustible tide,
Of the Land which no mortal may know.

There, too, are the loved, whom we mourned on this earth,
With whose mem'ries our bosoms yet glow,
Their relics we gave to the place of the dead,
But their glorified spirits before us are fled,
To the Land which no mortal may know.

Oh! who but must pine, in this dark vale of tears,
From its clouds and its shadows to go,
To walk in the light of the mansions above,
And to share in the peace, and the joy, and the love,
Of the Land which no mortal may know.

Bernard Barton.

Selected.

THE CHRISTIAN'S DEATH.

Lift not thou the wailing voice,
Weep not, 'tis a Christian dieth,—
Up, where blessed saints rejoice,
Ransom'd now, the spirit flieth;
High, in heaven's own light, she dwelleth,
Full the song of triumph swelleth;
Freed from earth, and earthy failing,
Lift for her no voice of wailing!

Pour not thou the bitter tear;
Heaven its book of comfort opeth;
Bids thee sorrow not, nor fear,
But, as one who always hopeth,
Humbly here in faith relying,
Peacefully in Jesus dying,
Heavenly joy her eye is flushing,—
Why should thine with tears be gushing?

They who die in Christ are blessed,—
Ours be, then, no thought of grieving!

Sweetly with their God they rest,
All their toils and troubles leaving;
So be ours the faith that saveth,
Hope that every trial braveth,
Love that to the end endureth,
And, through Christ, the crown secureth.

For "The Friend."

Restoration through Obedience to the Truth.

However valuable the principles and the constitutional regulations of a religious society may be, or the amount of respect which the members may profess for them, they will be of little benefit to them without a practical support. To eulogise the acknowledged tenets, while they are not lived up to, and their efficacy proved in regulating the passions and the affections, under the power of Divine grace, can do little in advancing the cause of Christ. In civil and religious society, strength and encouragement to do right are greatly promoted by the example and the spirit of devoted men, harmoniously drawing together. This unity depends much upon the love and respect men feel and show for one another, as well as for the cause they advocate. Where disunion takes place, the support of right principles and the right object, is very likely to be defeated; we see this in civil government as well as in the visible church. The political divisions in our own country have created great distraction, so that many upright men are thrown into difficulty to decide of whom they shall make choice to entrust the government with, by which the happiness and the prosperity of the inhabitants are endangered. We also perceive that discord has crept into the various religious denominations, splitting them into parties, and creating bitterness of feeling, and, perhaps, enmity towards each other, of which our own Society, at this day, is not clear. Is not this disagreement attributable to the want of the life of religion, and the consequent desire of men to accomplish their own purposes, in their own unsubdued wills, without regard to the government of the Lord Jesus Christ as the Head of his church, or the religious concern of conscientious members?

At the rise of the Society, not only the pure principles of the gospel, as set forth in the Holy Scriptures, were clearly held forth and preached to the world by Friends, but they also lived and walked in the Spirit. It was the Holy Spirit which gave them an understanding of those unchangeable doctrines, and true faith in our Lord Jesus Christ. They had the same living experience in themselves, according to their measures, of which the Apostle John bore testimony: "We know that the Son of God is come, and hath given us an understanding, that we may know him that is true; and we are in Him that is true, even in his Son Jesus Christ. This is the true God and eternal life." They were regenerated men and women; grafted into Christ, the true and living Vine, by the baptism of his Holy Spirit. Hereby they were made partakers of that life which is hid with Christ in God, and of that saving knowledge of which he spoke in his prayer to the Almighty Father: "And this is life eternal, that they might know thee, the only true God, and Jesus Christ whom thou hast sent." They were not mere professionalists of the Christian religion, but were living witnesses of the mercy and goodness of the Lord Jesus, in saving them from their sins by his power inwardly revealed in their hearts. This enabled them to bear a true testimony to the purity and the holiness, and the victory over sin, which the original believers in Christ bore—"We know that whosoever is born of God sinneth not; but he that is begotten of God, keepeth himself, and that wicked one toucheth him not." In constant watchfulness and prayer, relying on the Holy Spirit to keep them from temptation, could they only know this preservation from evil. The fruits of the Spirit were manifest in their daily deportment, their gravity, their adherence to all the Christian testimonies laid down in the New Testament, or growing out of the requisitions of the Spirit of Christ, in conformity therewith.

This made them a spiritually-minded, humble-hearted, and plain people, in manners, language, and dress. The love of God shed abroad in their hearts, led them to love Him above all, and their neighbour as themselves. In this pure love they were united to one another; and when one member suffered, others suffered with it; or when one was honoured, the rest rejoiced with it. Thus they were made a strength and encouragement to each other, in the performance of their respective duties, ministering, as members of the body of Christ, life and comfort to each other. There was no jar or contention, or division, among the Friends who thus kept their places in the Truth; but peace and love, and a harmonious walking in it; and they were lights in the world, a city set on a hill, that could not be hid; others beholding their good works, were often drawn to follow the same Divine guide, and adopt the principles of Truth as opened by it to them. These results were not only experienced by the first Friends, though perhaps under the fiery edge of persecution in a greater degree, but they have been the fruits brought forth by the faithful followers of Christ among us, in every generation since; and had all kept under his divine government, no schism could have befallen us, but we should have been as a united "army with banners," going on conquering and to conquer in the Lamb's war; and the glory and the influence of the militant church would have been felt and spread, far more extensively and effectually than it now is.

What a weight of responsibility attaches to every member of a society, so highly favoured with the inshinings of the Divine light, and the knowledge of the precious doctrines of the gospel, and the church government and organization pertaining thereto, as we have been favoured with! But in our present state, may not a language similar to that addressed to a church formerly, be in measure applicable to us? "O foolish Galatians, who hath bewitched you, that ye should not obey the Truth, before whose eyes Jesus Christ has been evidently set forth, crucified among you? Are ye so foolish; having begun in the Spirit, are ye now made perfect by the flesh?" Has not the love of the world, the love of ease, and the pride of life, bewitched many, and enticed them away from following the Saviour in the path of self denial and the daily cross, by which their vision has become clouded, their discernment dimmed, and the way opened for the evil seedsman to sow seeds of false doctrine, and thereby persuade them, that an easier path to the everlasting kingdom is now to be found, than that of dying daily, bearing the yoke of Christ, and learning of him.

When suffering has been withdrawn, some, finding a burthen removed, have taken their flight as on the Sabbath day, and let go that spiritual exercise and obedience to the Truth, which is essential to the life of a Christian, and have indulged in temporal enjoyments and the pursuit of wealth. And when new doctrines are presented, congenial with their desires, being off the watch, they find it easier to accept and plead for them and their authors, than to stand their ground against their baleful influence. Preservation in the path which the redeemed walk in, must be fervently sought after individually; and under whatever trials or temptations we may be placed, as we labour to keep our habitation in the Truth, the declaration made to the apostle, when he besought the Lo thrice, that the thorn in the flesh, the messen of Satan, might depart from him, will be appli ble to every sincere, obedient soul: "My grace sufficient for thee, for my strength is made p fect in weakness." It does not appear that thorn in the flesh was removed, and yet the ap tle, who fought the good fight and kept the fai was preserved unto the end; and Divine gr will now as effectually guard us against the mac nations of the wicked one, as the Lord is sou unto. But if we put our trust in any thing the Lord alone, for our defence against error, for the restoration of the Society to its primiti brightness, we shall assuredly be disappoint Satan will continue to assail us powerfully a effectually, if we leave the watch-tower, and se to scatter us, and defeat, if possible, the object our being raised up as a people for the Lor glory, in advancing the kingdom of the Redeem in the earth. Nothing less than an individual turn to the Lord, humbled under a sense of backslidings, and the conviction that we cann save ourselves, nor by our strength, or wisdo recover the blessed fellowship and harmony whic in times past, have been our rejoicing, will p pare us to know Him to arise and deliver us fr the bondage which the Society is now so genera held in. If our prayers are put up in this hu bled state, as the children of Israel many tim applied to Him for deliverance from their pressors, we have strong ground to believe, th He who is a God of mercy, hearing prayer, w turn away our captivity as he did for them, a once more unite us together in upholding the de trines and testimonies of Truth, and reward with the incomes of true peace. On one occasi the prophet addressed them with this language "O Israel, return unto the Lord thy God; for th hast fallen by thine iniquity. Take with y words and turn to the Lord: say unto him, Ta away all iniquity, and receive us graciously; will we render the calves of our lips." And answers, "I will heal their backslidings, I w love them freely; for mine anger is turned aw from him. I will be as the dew unto Israel; shall grow as the lily, and cast forth his roots Lebanon. His branches shall spread, and beauty shall be as the olive tree, and his smell Lebanon." What a happy change for us wo this be! and if all were given up to His will, a really desirous it should take place, he wo bring it about by his wonder-working power.

Ultimate Benefits of Droughts.

And the modes in which they act to improve land.

It may be a consolation to those who have felt th influence of the late long and protracted dry we ther, to know that droughts are one of the natu causes to restore the constituents of crops, and novate cultivated soils. The diminution of t mineral matter of cultivated soils takes place fr two causes:—

1. The quantity of mineral matter carried off crops, and not returned to the soil in manure.

2. The mineral matter carried off by rain-wa to the sea, by means of fresh water streams.

These two causes, always in operation, a counteracted by nothing, would in time render t earth a barren waste, in which no verdure wou quicken, and no solitary plant take root. A tional system of agriculture would obviate the fi cause of sterility, by always restoring to the s an equivalent for that which is taken off by t crops; but as this is not done in all cases, P vidence has provided a way of its own to counter the thriftlessness of man by instituting droughts proper periods, to bring up from the deep parts of t

rth food, on which plants might feed when rains ould again fall. The manner in which droughts ercise their beneficial influence is as follows :— During dry weather a continual evaporation of ater takes place from the surface of the earth, hich is not supplied by any from the clouds. The evaporation from the surface creates vacuum o far as water is concerned) which is at once filled the water rising up from the subsoil of the land ; e water from the subsoil is replaced from the xt strata below, and in this manner the circula- n of water in the earth is the reverse to that hich takes place in wet weather. This progress the surface of the water in the earth manifests elf strikingly in the drying up of springs, and rivers and streams which are supported by rings. It is not however, only the water which brought to the surface of the earth, but also all at which the water holds in solution. These sub- ances are salts of lime and magnesia of potash d soda, and indeed whatever the subsoil or deep rata of the earth may contain.

The water on reaching the surface of the soil is vaporated, and leaves behind the mineral salts, hich I will here enumerate, viz. : Lime, as air- acked lime ; magnesia, as air-slacked magnesia ; osphate of lime, or bone earth ; sulphate of lime, plaster of Paris ; carbonate of potash, and soda, th silicate of potash and soda, and also chloride sodium or common salt : all indispensable to e growth and production of plants which are ed for food. Pure rain-water *as it falls*, would ssolve but a *very* small proportion of some of ese substances, but when it becomes soaked into e earth, it there becomes stongly imbued with car- onic acid from the decomposition of vegetable atter in the soil, and thus acquires the property readily dissolving minerals on which before it uld have very little influence.

I was first led to the consideration of the above bjects by finding on re-examination of a soil hich I analyzed three or four years ago, a larger antity of a particular mineral substance than I first found. As none had been applied in the eantime, the thing was difficult of explanation, ntil I remembered the late long and protracted rought. I then also remembered that in Zaca- cas, and several other provinces of South America, da was obtained from the bottom of ponds, which ere dried in the dry, and again filled up in the iny season. As the above explanation depended n the principles of natural philosophy, I at once stituted several experiments to prove its truth. Into a glass cylinder was placed a small quantity chloride of barium, in solution ; this was then fill- with a dry soil, and for a long time exposed to e direct rays of the sun on the surface. The il on the surface of the cylinder was now treated ith sulphuric acid, and gave a copious precipitate sulphate of baryta.

The experiment was varied by substituting loride of lime, sulphate of soda, and carbonate potash, for the chloride of barium, and on the oper re-agents being applied in every instance, the esence of those substance was detected in *large* antities on the surface of the soil in the cylinder.

Here, then, was proof positive and direct, by ain experiments in chemistry and natural philo- phy, of the agency, the ultimate, beneficial gency, of droughts.

We see, therefore, in this, that even those things hich we look upon as evils, by Providence are made essings in disguise, and that we should not mur- ur even when dry seasons afflict us, for they too e for our good. The early and the later rain may roduce at once abundant crops, but dry weather also a beneficial dispensation of Providence in inging to the surface food for future crops, which otherwise would be forever useless. Seasonable weather is good for the present, but droughts renew the store-houses of plants in the soil, and furnish an abundant supply of nutriment for future crops.

James Higgins,
State Agricultural Chemist.

The Northwest Passage.—In the midst of the all-engrossing topics which have occupied the time of the British House of Commons lately, the justice of rewarding Capt. McClure for his discovery of a Northwest passage, formed the subject of a short discussion. The readers of the Globe will readily call to mind the facts connected with this case Capt. McClure, in command of the Investigator, left England in company with Capt. Collinson, of the Enterprise, in January, 1850, with the special design of searching for Sir John Franklin. When off Cape Horn, the two ships parted company, the Investigator pursuing her course, and in due time entering Behring's Straits. After encountering many difficulties, he at length passed up Prince of Wales strait, and finally, by means of a sledge, reached Banks' Land, a short distance south of Melville Island, discovered long before by Parry, and visited by many worthy successors, from the east. He was thus the first to pass the entire length of the continent, although, it is to be regretted that the Investigator had to be left behind in Mercy Bay, where she still lies, if not long ago ground to powder by the "icy fingers" of the North. Although failing in the special object he had in view, and even although, for all practical purposes, the Northwest passage might as well be amongst the things yet hid from man, still Capt. McClure is well entitled to reward. Had he performed the same gallant exploit between 1745 and 1828, he might have claimed the Parliamentary reward of £20,000 for the solution of the Northwest problem, as it was called. Sir Edward Parry received knighthood and £5,000 for making 110° west longitude in 1819 ; and a long list of names might be mentioned, each having acquired the appendage of a Sir, for Arctic and Antarctic expeditions. There was perfect unanimity in the House as to the propriety of appointing a committee to examine into Capt. McClure's claim, and, we doubt not, the reward bestowed will be commensurate with his achievement.

In connection with this subject, we may notice that on the 21st of Sixth month last, the Arctic veteran, Capt. Penny, left Aberdeen, Scotland, on board the Lady Franklin, along with the Sophia, Martin, and a crew of 45 men, bound for Hogarth's Sound, Arctic Regions, where, if necessary, they will winter. The gallant commander, it is stated in a local paper, appeared in excellent health and spirits, and was accompanied out of the bay by a party of the Directors of the Aberdeen Arctic Company, who gave their enterprising official a most hearty farewell.—*Toronto Globe.*

Seeing the Lions.—Formerly there was a menagerie in the Tower of London, in which lions were kept ; it was discontinued about forty years ago. During those times of comparative simplicity, when a stranger visited the metropolis for the first time, it was usual to take him to the Tower and show him the lions as one of the chief sights ; and on the stranger's return to the country, it was usual to ask him whether he had seen the lions. Now-a-days, when a Londoner visits the country for the first time, he is taken by his friends to see the most remarkable objects of the place, which by analogy are called "the lions." One constantly hears the expression, "we have been lionizing," or, "seeing the lions ;" but thousands who make use of it are ignorant of its origin. It originated as above.

THE FRIEND.

NINTH MONTH 29, 1855.

Slavery, its encroachments and its aggressions, are more seriously affecting the public mind than at any former period of our history. It has become the absorbing subject in almost every political organization ; and however much some may affect to thrust it aside, or ignore its importance, a fearful contest has begun, and is gradually drawing to an issue, that shall determine whether this dreadful system is to be put down, and the power of the government lodged in the hands of the vast majority in the free States, or continue as it has so long done, to monopolize and to prostitute that power, for its own support and extension. The two principles of freedom and slavery are each year being brought more and more directly in opposition to each other, and the supporters of each are continually labouring to bring their respective forces into the field, and so array them, that the battle shall be fought on the one great question, irrespective of all minor issues. While we fervently desire that when such a crisis may arrive, it may result in the triumph of truth and justice, and the overthrow of the monster evil that is now preying on the vitals of our country, we nevertheless cannot but see that the introduction of this exciting subject into the political arena, has awakened passions, and is embittering feelings, the most fearful, in the unregenerate heart of man. Well will it be for all those who profess to believe that the servants of Christ may not fight—and well will it be for our beloved country too—should they be found watching against the assaults or the leavening of the evil spirit which stimulates some who are ostensibly marshalled on the side of right and freedom, and which is altogether at variance with the meekness and gentleness required by the gospel. Shrewd, but unprincipled politicians, are glad to avail themselves of any feeling that may extensively prevail, in order to secure their own selfish ends, and it requires no little care in times of general excitement, or we may be betrayed by our eagerness to secure a desired end, into giving our strength to support bad men, or carry out measures that are radically wrong, and will lead to strife and bloodshed.

From information given in some of the public papers in Southern States, it is evident that many of their inhabitants seriously feel the position they occupy, and that the evils of slavery are becoming more and more hard to bear, as the voice of the free States and of the whole christian world, is more loudly raised against it. In two of those States, propositions for ameliorating the condition of slaves, by legislative enactment, have been made and are entertained ; while in Kentucky, a convention has been called of those favourable to adopting means for effecting gradual emancipation. In the mean time, instances are frequently occurring, of individuals voluntarily liberating their slaves and making provision for their commencing to live as free men and women. We have noticed several accounts of such cases, and we take the following from one of our exchange papers :

It gives us pleasure to state that many Southern men are manumitting their slaves. Many of them seem disposed, also, to give this degraded race a start in the world, by means of which they may secure a comfortable livelihood for themselves and their families. We note the following as among the encouraging signs of the times. The last number of the Ironton Spirit of the Times says :

"Dr. P. C. Holt, of Union county, Ky., about 150 miles below Louisville, has emancipated his slaves, twenty-two in number. Last week he brought eleven of them to this place. Employment has been furnished them at Olive Furnace, by —— Peters. The remaining

ones are expected here soon. Of those that came, there are five married men, whose wives are slaves, held by different masters. Dr. Holt, we are informed, offered a full price for the purchase of those wretched persons, to enable them to go with their husbands and fathers to a land of freedom, but their *humane* masters refused to sell them for even a full equivalent. In the preparation for exodus, one case of peculiar cruelty occurred. Some days before they left, the wife of one of the men that came, was purposely sent off some forty miles, to prevent her husband from taking a last farewell; and when he inquired for her, he was informed that she would soon be sold, to go south. The other four took leave of their wives and children, with the expectation never to see them again. Dr. Holt has voluntarily relinquished his title to more than $15,000 worth of *available property* in Kentucky. Not only that, but he is devoting his time and money to their wants."

May the blessing of heaven attend him, and may others, similarly situated, imitate his self-denying example. The Cincinnati Herald of Freedom of the 30th ult. says:

"*Manumitted.*—The persons of whom we spoke last week, under this head, are from Natchez, Mississippi. Their names are John Pickering, Charles Courtlouth, and William Foobs. They are all relations. J. Pickering has nine children, who, with his wife, will all be free. The name of their owner is Young. They are about to purchase land in Obio, to settle on.

"*Another Still.*—An elderly coloured lady arrived here on First-day afternoon, from New Orleans. She was sent here to obtain free papers by her owner, a coloured man. He has, we are informed, set several persons, whom he has purchased, at liberty."

The same paper has also the following paragraph:

"*Emancipated.*—We have a letter from a friend in Chillicothe, informing us that a large party of emancipated slaves from North Carolina passed through that town recently, on their way to Logan county, where they design settling."

Let the good work go on, until slavery shall be an unknown institution—an obsolete idea.

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to the 8th inst.—The cotton market was dull, and prices from 1-16 to ⅛d. lower. Sales of the week, 56,000 bales. The stock of American in port, was 345,000 bales. Flour was steady at from 40*s.* to 42*s.* 6*d.* In relation to the harvest in Great Britain, it is said, on the whole there can be no question of its generally satisfactory character. It was, however, believed that a part of the supply of breadstuffs must come from America. The London money market was more stringent. The Bank had advanced its rate of interest, from 3½ to 4 per cent. Consols, 90¾. The iron market was buoyant, and the demand active. There was nothing new from Sebastopol. Preparations for winter were being made by the allied armies. Stores and sheds were being erected as rapidly as possible, and two new lines of railway were to be constructed, in order to facilitate the transport of supplies to all parts of their extended lines. The difficulty of maintaining such great numbers of men during another winter, was acknowledged in England, and a great deal of suffering was expected; but it was believed that the prospect for the Russians was much more gloomy, as everything required for their support had to be sent a vast distance over land. The Russians were threatening another attack on the Tchernaya; hence the allied army was kept continually on the alert, and parties remained constantly under arms. Nearly every night there were skirmishes between the advanced posts of the hostile armies.

The War in Asia.—The news from Asia Minor is reported to be more favourable for the Turks. The Russians had withdrawn from the vicinity of Erzeroum, and had failed in a partial attack on the Turkish entrenchments at Kars. The Ottoman army in the Crimea was to embark for Asia Minor, except one division now before Sebastopol. Letters say that Omar Pacha will not go to Kars, but will move on to Teflis with the two-fold object of menacing the communication of the Russians with Georgia, and cutting off their retreat, and also of presenting an opportunity to the Circassians and other mountain tribes to join him.

ITALY.—The Pope is founding a College at Rome for the education of English clergy. Cholera still rages in Central Italy. In Northern Italy it prevails, though somewhat abated in violence. The deaths in Florence numbered about eighty a day. The government had made an effort to prevent the fatiguing street processions, but without success, as the priests persisted in maintaining their efficacy.

AUSTRIA.—The harvest is reported to be barely an average one, while in many parts of Germany it has fallen short.

MEXICO.—Dates from the city of Mexico to the 1st. inst. Carrera, the provisional President, had introduced some important reforms. He has re-established commercial communication; granted unlimited freedom to the press; abolished the title of serene highness; recalled all exiles; deprived the commanding generals of authority over the revenues; has prohibited the detention of correspondence, and re-established mails. He has convoked the Constituent Congress conformably to the law of 1841, and invited the revolutionary chiefs to meet on the 16th of Ninth month, in the town of Dolores, to deliberate in relation to the new organization of the government. He, however, has many enemies, and it is doubted whether the leaders of the revolution can agree on any plan that will ensure public tranquillity. The Federative form of government seems to be that favoured by the mass of the people. At the last accounts, Gen. Santa Anna and family were waiting at Puerto Principe, for the means of continuing their journey to Carthagena.

UNITED STATES.—*Yellow Fever at the South.*—The deaths in New Orleans during the week ending the 16th inst. numbered 282, including 150 from fever. The mortality in that city, from yellow fever, since the commencement of its ravages the present year, had been 2355. At last dates, the disease was increasing at Vicksburg, Natchez, Canton, and nearly all points on the Mississippi, Washita, and Black Rivers. In Canton, with a population of 388 persons, there had been 107 new cases and 29 deaths in one day. The accounts from Norfolk and Portsmouth, Va., continue of a gloomy character, there being but little diminution in the mortality.

The Indians.—Recent accounts from Nebraska state, that a party of government surveyors under Col. Manners, had been attacked and dispersed by a band of Pawnee Loups. There had also been difficulties with some of the Sioux, and a Captain Gibson had been killed by them. General Harney left Fort Kearney on the 4th ult., with 1300 men, making forced marches, to accomplish some purpose against the Indians as yet unknown.

Kansas.—The free State party in Kansas have nominated Governor Reeder for delegate to Congress. Governor Shannon is acceptable to the pro-slavery men; they believe he will employ his influence to promote their objects. The free State party declare that the people of Kansas owe no allegiance or obedience to the enactments of the late spurious legislature, and that its acts have no validity or abiding force.

Boston.—The assessor's report gives the valuation of property in this wealthy city, at $242,349,200, showing an increase over the valuation of last year of $15,336,000.

Philadelphia.—Mortality last week, 76 adults and 129 children; total, 205.

New York.—The official report of the Comptroller shows that the valuation of real and personal estate in the city of New York, is $486,998,278.

Miscellaneous.—*The Cod Fisheries.*—The Newburyport (Mass.) Herald states that all the vessels of the Labrador fleet have arrived home. The catch has been rather more than an average. Not a man has been lost in the fleet, and no vessel has sustained any material damage.

Escape of Slaves.—The Louisville (Ky.) Courier says, that at least one slave per day effects his escape on the cars of the New Albany and Salem (Indiana) Railroad.

Advance of Libratility.—David Salomons, a Jew, being senior Alderman below the chair, will be Lord Mayor of London for the next year. No opposition is expected. He will be the first Jew who has filled that office.

Reported Indian Battle.—The St. Paul's (Minnesota) Democrat of the 6th instant, states, that there has been a bloody battle between the Sioux and Half-breed Chippewas, in which nineteen Sioux were killed, and about sixty wounded, and several of the Chippewas also killed and wounded.

A Legal Murder.—A correspondent of the New Orleans (La.) Delta states, that on Sixth-day, Eighth mo. 24th, the boy Frank was hanged for the murder of J. J. Weems, at Alexandria, La. The day before the execution, some gentlemen went to his cell to tell him he would be hanged on the morrow, and found him *playing marbles* in his cell. He is said to have been only *ten* years old.

Increased Tobacco Crop.—The Virginia tobacco crop will, this season, it is said, much exceed the crop of last year. The inspections thus far show an excess of 9000 hhds. over the corresponding period of last year.

Salt Making in Texas.—A very superior quality of salt is now manufactured by solar evaporation, near Corpus Christi, Texas.

Railroads and Peaches.—An extensive fruit-dealer of Alton, Illinois, recently received an order from I York for twenty-four boxes of the best peaches t procured in the market. They were accordingly s ped, and came through uninjured.

Emancipation in Kentucky.—The Newport (Ky.) Ne at the suggestion of a number of prominent slaveh ers in Kentucky, proposes that a Convention be hel Frankfort, to adopt a plan for the gradual abolitio slavery in that State.

Corn in Indiana.—The Lafayette (Ia.) Courier s that contracts have already been made for la amounts of corn, to be delivered during the winter, previous to the opening of the canals in spring, *twenty cents* a bushel.

Pennsylvania Iron.—It is said that Pennsylvania p produces as much iron as was manufactured in all Gr Britain thirty years ago.

British Steamships.—The total number, at the beg ning of the present year, was 1480. They averag about 200 tons each, exclusive of engine space.

The Farmers' High School of Pennsylvania.—The Tr tees of this Institution met at Harrisburg on the 1 inst., and decided to accept the offer of James Irvin Centre, who presented to the Board two hundred ac of most fertile and highly improved land, leases also t hundred more, and the county has raised and off more than ten thousand dollars in money. Very libe offers were made from some other counties. This teresting Institution seems likely to commence its o rations under auspicious circumstances.

Ice from Lake Michigan.—The Chicago (Ill.) Tribu learns that a Boston company have made arrangeme to go largely into the ice trade in that city—doing th packing at Lake Zurich, in Lake county, Illinois. T ice will be of the greatest possible purity.

Violent Storm.—On the 18th inst., Lake Michigan w visited by a gale of unusual violence. The steamb Sebastopol was wrecked near Milwaukie, and tota lost with a cargo, valued at $100,000. Six persons we lost in the boat. The steamboat Baltimore was su near Sheboygan; passengers all saved. The propel Oriental, a schooner, and probably other vessels we also wrecked.

RECEIPTS.

Received from C. Bracken, agt., O., for R. Conro $2, vol. 28; from T. C. Hopkins, Md., $2, vol. 28; fr Joel Evans, agt., Pa., for E. Sowers, E. Harrison, T. Palmer, and S. H. Pratt, $2 each, vol. 28; from H. Post, N. Y., $2, vol. 29; from Augustus Smith, N. $2, vol. 28; from Josh. Maule, agt., O., for Jesse R berts, $4, vols. 27 and 28, for Israel Steer and Jam Steer, $2 each, vol. 29, for Dani. Atkinson, $2, to vol. 29, for Benj. Bundy, $2, vol. 28; from Aaron Cha man, O., $2, vol. 28; from G. Michener, agt., for J. Doudnee, $2, vol. 28; for Isaac Walker, $3, to 52, v 29; from S. Hobson, agt., O., for E. Dean and Cal Fowler, $2 each, vol. 29.

WEST-TOWN SCHOOL.

The Committee to superintend the Boarding-Scho at West-Town, will meet in Philadelphia on Sixth-d the 5th of next month, at 7 o'clock P. M. The Commi tee on Instruction, and that on Admission, meet on t same day; the former at 4 o'clock, and the latter at o'clock, P. M.

The Visiting Committee attend the semi-annual e amination of the schools, commencing on Third-d morning, and closing on Fifth-day afternoon of the sam week.

THOMAS KIMBER, Clerk.
Philadelphia, Ninth mo. 22, 1855.

History of the Life of THOMAS ELLWOOD, writte by himself—new edition. For sale at Friends' Boo Store, No. 84 Arch street, and at the office of TH FRIEND, No. 50 North Fourth street.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in th Institution.

Application may be made to either of the undersigne members of the Committee.

VOL. XXIX. SEVENTH-DAY, TENTH MONTH 6, 1855. NO. 4.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Edinburgh Review.

The Land of Silence.

(Concluded from page 17.)

Great use is made of pictures, when the pupil once able to write down the name of an object, pressed to him in the usual way by vowel sounds d consonant powers, which make up the words. course, when he has made sufficient progress give utterance to his own thoughts, to receive e uttered or written expression of his teachers, e step from the simple picture of some common miliar object to that of a more remote or diffi- lt one is soon taken. Thus to a limited degree, acquaintance is opened with very many sub- cts, the nature, properties, or qualities of which n be represented by visible outline; and even some which cannot be thus represented. But e acquisition of every new word must, until after ig training, still involve a separate and com- te act of the mind; and, therefore, be a task difficulty. Few words can be caught up, as by e ordinary child, by imitation; still fewer form- by analogy or comparison, but at the seasons of rect instruction. And if it be so with the ac- isition of single, individual words, how vast ust be the labour and arduous the task of ac- iring but a fair knowledge of an ordinary mo- rn language, is at once apparent. The whole ocess of educating the deaf-mute is a slow and ngthy one. The teacher who succeeds in it, at- ns success only after years of diligent and pa- nt toil. The blind boy *may* learn his letters in week, and be a basket-maker in a month; but th the deaf-mute no such immediate fruit can expected. The harvest is not reaped until per- ps more than one cold and barren winter has agged its slow length away. Spring comes with tle sign of life; and summer with but scanty ssom. Yet, autumn comes at last, and the uit is worth waiting for.

But a class before us is about to have a lesson dictation, and we are asked to choose a sentence om an ordinary reading book. We select this ort one,—"*I met a lad with a hawk*," for a les- n in signs to be translated into words written the slate. A hand held up by the teacher at ice commands silence and attention. Every eye is stantly fixed on him *to see* what he will say. The st word *I*, is at once understood, as the teacher uches his own breast with his fore-finger. *Met* is xpressed by the two fists being extended, held for moment apart, and then suddenly brought to- ether. The first finger of the right hand held up, presents *a*, while *lad* is symbolized by the teach- 's pointing to himself with outstretched retro- verted finger, and then suddenly bringing the hand to a dead stop below the chin, showing that a human being is meant, not exceeding that certain definite height. (At this sign several of the boys wrote down boy, or youth, but by far the greater number *vocalised* and wrote down *lad*.) The preposition *with* is simply expressed by two fingers of the right hand, *close together*, extended horizontally in the air, and then moved to and fro, as if being used in some operation of cutting or scraping, and was instantly written down. *A* is despatched as before. *Hawk* is now the sole remaining word, and clearly the most difficult. We watch, therefore, with some interest to see how it will be expressed and understood. The teacher's first step is to give an idea of the curved beak of a bird of prey by placing the fore-finger in a bent position by the side of his own nose. This appears to be realised at once. He then raises both his hands, extended horizontally with open palms downwards, in front of him, to about his own height, and after moving them in a tremulous way, as a hawk would her wings in moving over her prey, suddenly brings them swiftly down on the desk before him, as if clutching at some small object beneath. Many at once *exclaim*, "more suo," the word *eagle*, which is rejected; then a solitary voice whispers *kite*, and at last several conclude it must be *hawk*.

Thus ended the lesson, and our readers can now in a measure judge for themselves of one chief mode in which instruction of all kinds may be conveyed even to deaf-mutes. The writing was good, and the spelling in most cases *sufficiently* accurate; affording plain proof that the lesson was received and fairly understood.

From a general consideration of the whole question we have good ground for believing that the scheme of education marked out in this institution is completely fulfilled. We believe also that this education is not surpassed throughout Great Britain, in similar schools; and that the attainments of deaf-mutes cannot be expected, under the ordinary time training, to exceed this standard. Individual cases of higher cultivation no doubt are to be found. We are ourselves aware of more than one,—a barrister who at this very time is in active practice as a chamber counsel; a merchant who conducts a large business with skill and efficiency; and a gentleman who has rendered important services in the department of the Admiralty. But we regard these as exceptional cases of real genius in men, who, in spite of all difficulties, and in almost any station of life, would, by sheer industry and power of mind, have made themselves a name.

So far, therefore, the educational state of the deaf and dumb may be regarded as satisfactory.

But there still remains one point to be noticed in this and other similar institutions, which we cannot understand,—*the entire absence of active industrial work*. In spite of all existing differences of opinion among the teachers of deaf-mutes as to the precise period for beginning to learn a trade,—whether before or after leaving the school,—it is incontrovertibly true that where the body and the mind are together exercised and refreshed by due change of employment, both mental and bodily toil are crowned with more frequent and sure success. The healthy tone and activity of mind is closely and vitally connected with tone and vigour of body. We would not for a moment depreciate the value of the "mens sana," but we would desire it for all practical purposes, "in corpore sano." To this it may be replied, "how would such sedentary occupations as shoemaking, basket-making, &c., furnish the requisite degree of stimulus and activity?" But change of work from eternal slates, pencils, spelling books and grammar lessons, if but to the tapping of a shoe, the weaving of a door-mat, or the elaboration of a withy basket, must act healthily and beneficially on the tone and vigour of the body. It may involve no great amount of exercise to comb three square feet of oakum, but the change of room, the changes of faces about the worker, and of substance before his eyes, will at least bring change of thought. And at any rate, fingers, hands, arms, and legs must be more or less in motion; and mere motion must tend somewhat to life and briskness of blood and spirits. The deaf-mute who works eight hours per diem at the school-room desk, would work with double spirit and equal success if he devoted three out of the eight to mending his Sunday shoes, or the fabrication of an osier basket. We can see no just reason why his education as a craftsman should not at least begin ere he leave the school; why he should be too clumsy to use a saw, or too awkward to hammer on a lapstone. In the list of pupils sent out from the Doncaster schools there are many who have practised trades and occupations of various kinds with success; such as shoemakers, gardeners, bookbinders, labourers, printers, joiners, and tailors. We urge it on four grounds,—health of body, vigour of mind, profit to the Institution, and pleasure to the pupil. The deaf-mute has few means of actual amusement. Monotony pervades most of his daily tasks. Industrial work, if well managed, will afford him both entertainment and instruction.

In conclusion, we have but to remark that much yet remains to be accomplished for the deaf and dumb in Great Britain; not so much in the extent to which their education is to be carried, as in the means of instruction actually placed within their reach. Of the few schools which now exist, many need enlargement, increase of funds, and more perfect operation. New schools are greatly needed in several parts of the country. It is supposed that upwards of 17,000 deaf-mutes are now to be found in Great Britain and Ireland; a large proportion of whom are still uneducated. Our present schools will accommodate at most but 1400, not much more than one-twelfth part of a class of unfortunate beings whose need of education is most urgent, and whose claims upon our pity are strong and just. That this necessity may be relieved, and the claims allowed and satisfied, there must be not only larger contributions on the part of the public, but fuller co-operation among the founders and managers of existing schools. Great and broad principles of method must be laid down, fairly and heartily adhered to by all, and so by common experience and judgment moulded and expanded into a scheme as catholic in its nature as its success.

For "The Friend."

The Madeira Exiles.

It will be recollected, that several years since a large number of persons arrived in this country, who had been banished from their native Island of Madeira by the Roman Catholic authorities, on account of their refusing to conform to some of the superstitious practices of the Romish church. The firm adherence of these poor people to their religious principles, under persecution and severe trial, occasioned much sympathy to be felt for them at the time, and it is truly gratifying to learn that they have at last found comfortable homes, and are generally prosperous in their circumstances. A correspondent of the St. Louis Republican, writing from Springfield, Ill., gives the following account:

"In a short ramble on the outskirts of this city last evening, I was struck with the large number of small, neat and comfortably appearing cottage-houses, in several clusters. They were the dwellings of the Portuguese emigrants. You will recollect that, five years since, some three hundred and fifty Portuguese emigrants—originally from Madeira, later from Trinidad—reached this city, under the care of the Presbyterian Mission Society of New York.

"Many of them had been rich, and were exiles from Madeira on account of their religious (Protestant) opinions. They had been reduced to poverty—were compelled to emigrate to the British Island of Trinidad—there, in suffering, applied to their Christian friends in New York—were brought thither, and afterwards sent to this city. A great portion of them remained here, some went to Jacksonville and others to Waverly. They were without means, and were sustained for some time by the kindly assistance of our citizens, until they had, to some extent, learned our habits, and were enabled to support themselves by their industry; and they never refused honorable and laborious employments.

"These Portuguese are essentially a different race from Germans, Irish, Scotch or Americans. They are very industrious, very prudent, making a five cent piece go as far as possible in the procurement of the necessaries of life. We never see them at the police court. Crime is not charged upon them. They are unobtrusive in their manners, strict in their attendance at church, where they appear dressed with scrupulous neatness. They are willing and desirous at all times to labour, but at the largest prices they can obtain. The result of all is, that, in their unpretending condition, they are a highly prosperous people.

"Most of those with families now own lots and houses. They have built, also, a very respectable church. They occasionally make remittances to their distressed friends yet remaining upon the Island of Madeira. Indeed, they are a prosperous people, and show what can be done here by a virtuous class of labourers, who are willing to labour, indulge in no idleness, are prudent, and use all the savings that they can possibly make to secure them the comforts of 'homesteads.'

"The Portuguese yet remain a distinct people. The older ones, unable to speak our language, will keep up this distinction while they live. Gradually, and at a distant day, they will be mixed among us—absorbed in our population."

Flacourt, in his history of Madagascar, gives the following sublime prayer of one of the people we call savages:—"O, Eternal have mercy upon me, because I am passing away. O, Infinite, because I am weak. O, Sovereign of life, because I am in darkness. Oh, All Bounteous, because I am poor. O, All Sufficient, because I am nothing."

The Victories of Love.

Love is represented as the fulfilling of the law—a creature's perfection. All other graces, all divine dispensations contribute to this, and are lost in it as in a heaven. It expels the dross of our nature; it overcomes sorrow; it is the full joy of our Lord.

Let us contemplate its capacities and resources as applied to the experience of life. Property and business may fail, and still the eye of hope may fix itself on other objects, and confidence may strengthen itself in other schemes; but when death enters into our family, and loved ones are missing from our sight, though God may have made their bed in sickness, and established their hope in death, nothing can relieve us but trust and love. Philosophy and pleasure do but intrude upon and aggravate our grief. But love, the light of God, may chase away the gloom of this hour, and start up in the soul trusts, which give the victory over ourselves. The harp of the spirit, though its cords be torn, never yields such sweet notes, such swelling harmony, as when the world can draw no music from it.

How often do we see strokes fall on the heart, which it would be but mockery for man to attempt to relieve, and which yet served to unlock the treasures of that heart, and reveal a sweetness to it which it had not known before. See that mother. She loves and mourns as none but a mother can. Behold the greatness and the sweetness of her grief! Her child is dead, and she says, "It is well with me, and it is well with my child. It is well because God has taken him; he has said, 'Of such is the kingdom of heaven,'—that he doth not willingly afflict; and I know it must be well." Can there be any greatness greater than this? Did ever any prince at the head of invincible armies win a victory like it? Her heart is in heaviness and her home is desolated; but she has been to her heavenly Father, and unbosomed her griefs before him. There is peace on her saddened countenance, peace in her gentle words; the peace of God has come down, and is filling her trusting soul. How sweet and soft is her sorrow, and how it softens and awes without agitating others!

It is related that on a small, and rocky, and almost inaccessible island, is the residence of a poor widow. The passage of the place is exceedingly dangerous to vessels, and her cottage is called the "Light-house," from the fact that she uniformly keeps a lamp burning in her little window at night. Early and late she may be seen trimming her lamp with oil, lest some misguided bark may perish through her neglect. For this she asks no reward. But her kindness stops not here. When any vessel is wrecked, she rests not till the chilled mariners come ashore to share her little board, and be warmed by her glowing fire. This poor woman in her younger, perhaps not happier days, though happy they must have been, for sorrow cannot lodge in such a heart, witnessed her husband struggling with the waves and swallowed up by the remorseless billows—

"In sight of home and friends who thronged to save."

This directed her benevolence towards those who brave the dangers of the deep; this prompted her present devoted and solitary life, in which her only, her sufficient enjoyment is in doing good. Sweet and blessed fruit of bereavement! What beauty is here! a loveliness I would little speak of, but more revere! a flower crushed indeed, yet sending forth its fragrance to all around! Truly, as the sun seems greatest in its lowest estate, so did sorrow enlarge her heart, and make her appear the more noble the lower it brought her down. We cannot think she was unhappy, th there was a remembered grief in her heart grieved heart may be a richly stored one. W charity abounds misery cannot.

"Such are the tender woes of love,
Fost'ring the heart they bend."

The sorrow that deepens not love, and run off with it, must ever flood the spirit and be down. Our best and sweetest life, that whic live in the good of others, is richly stocked charities. The life which we live in ourse that which depends on our stores, is master of chaff and smoke, when they are taken a and destitute of that last relieving accommoda a resigned splrit. The young man whom J told to sell all his goods, and give to the poor, he should have treasure in heaven, should be t enriched—"was sad at that saying." He un stood not the riches of love, which never feel self so wealthy as when it has expended al obedience to the commands it honours; neve well furnished against want and sorrow, as w best assured of the approbation of its object. that we are creatures, we see how poor we be, having nothing laid up in the Creator. Sel ness is poverty; it is the most utter destitutio a human being. It can bring nothing to hi lief; it adds soreness to his sorrows; it shar his pains; it aggravates all the losses he is l to endure, and when goaded to extremes, o turns destroyer and strikes its last blows on l self. It gives us nothing to rest in or fly t trouble; it turns our affections on ourselves, on self, as the sap of a tree descending out of son from its heavenward branches, and mak not only its life useless, but its growth do ward.

If there is any thing about us which g hearts will reverence, it is our grief on the los of those we love. It is a condition in which we s to be smitten by a Divine hand, and thus m sacred. It is a grief, too, which greatly enric the heart, when rightly borne. There may be rebellion of the will, the sweetest sentiments wards God and our fellow-beings may be deepe and still the desolation caused in the treasu sympathies and hopes of the heart gives a r colour to the entire scene of life. The dear af tions which grow out of the consanguinities connections of life, next to those we owe to G are the most sacred of our being; and if the ho and revelations of a future state did not come our aid, our grief would be immoderate and inc solable, when these relations are broken death.

But we are not left to sorrow in darkn Death is as the foreshadowing in life. We that we may die no more. So short too is life here, a mortal life at best, and so endless the life on which we enter at death, an immor life, that the consideration may well moderate sorrow at parting. All who live must be se rated by the great appointment, and if the cha is their gain, we poorly commend our love them, more poorly our love to Christ, who ca to redeem them and us, for the end of taking to his rest, if we refuse to be comforted. Yes is selfish to dwell on our griefs, as though so strange thing had happened to us, as though th were too important to be relieved, or it were a tue to sink under them. I would revere all gr of this kind; yet I would say there is such thing as a will of cherishing it, which makes rather killing than improving in its effect. T may be done under a conceit of duty or gratitu to the dead. It may be done as a sacrifice what we deem is expected of us, or as a thing

ging in the eyes of others. But that bereavement seems rather sanctified which saddens not the heart over-much, and softens without withering it; which refuses no comfort or improvement we can profitably receive, and imposes no restraints on the rising hopes of the heart; which, in short, goes its way and is lost in an overgrowth of kind and grateful affections.—*Herman Hooker.*

From "The Leisure Hour."

GALVANOPLASTY

(Concluded from page 19.)

Let us enter the workshop of M. Coblentz, in the Rue Charlot in Paris. It is a miserable-looking den, in which a series of dirty buckets, filled with a metallic fluid, subjected to the action of Voltaic piles, work silently at their artistic labour, whose elements are borrowed from the science of electricity. The labour consists in filling the buckets with fluid, and in keeping together the plates of copper and zinc which constitute the active part of the process. You turn your eyes from the operations of these unconscious artisans, and in a neighbouring hall, filled with thousands of the objects produced, you will find much to excite your admiration. There are bronzes of astonishing lightness, and in beautiful relief. There are the great state seals for the reign of Napoleon I., reproduced in silver, with all that fineness of artistic engraving which renders the medals and the coins of the present day almost impossible to be counterfeited. There are ornaments carved in bas-relievo with a grace and beauty which would have seemed fabulous to those who lived before 1850. One has only to bring to M. Coblentz a model in wax, plaster, earthen-ware, armorial bearings, the impress of a seal, or any other object, natural or artificial, and he will return you an exquisite metallic fac-simile. By this same process, flowers, fruits, even anatomical specimens, and objects of natural history, have been (if I may coin a verb) *fac-similized* in metal. At the war-office there has lately been established a workshop for the galvanoplastic reproduction of the copper-plates of the map of France, in order both to reduce the size, and to render additions and corrections possible; for if a defective portion in a galvanoplastic plate be removed, it can easily be produced anew by the metallic bath.

Galvanoplasty is to sculpture and engraving what photography is to painting. To equal photographic proof with the hand would require years of industry, and a consummate knowledge of art. But the same way, to reproduce, otherwise than by galvanoplasty, a statuette or a bas-relief, with the precision and fidelity of the electric agent, would require more than the talent of a first-rate artist.

Let us now turn to the galvanoplasty of nature. The whole entire globe, with its magnetized atmosphere, its solid continents, its internal nucleus in a state of igneous fusion, and the electrical reactions which are its consequences, is, in fact, a regular electrical machine or pile, having its currents directed from east to west, as indicated by its action on the needle of the mariner's compass, which it directs north and south. These currents circulate incessantly beneath the soil, and traverse all the materials of which the crust of the earth is composed, opening for themselves a path whose direction, and especially the quantity of the fluid, depend on the state and composition of the soil. These electric currents, however weak they may be, draw off at length the metallic portions of the soil, and bear them along as far as the first obstacle they meet, or diminution of strength which they experience. Then they leave them, and there is formed a deposit or vein of metal. This principally takes place in the great fissures or crevices of the soil, filled by heaped-up fragments which has fallen from above, or by lava which has bubbled up from the interior nucleus. These are the veins which the miner explores by means of subterranean galleries, cut through that portion of the soil which has been impregnated with metallic substances, either in their pure and native state, as gold and mercury, or in an oxydized or earthy condition, as iron, copper, zinc, etc.

A beautiful experiment, first tried, I believe, by Mr. Cross, shows this process clearly. You place on a platform a large mass of moist potter's clay, blended with any species of metallic particles of extreme minuteness, and under the earthy form of a metallic oxide. You divide the mass of clay in two, by means of some cutting instrument, such as the blade of a large knife or of a sabre: you then bring together, until they touch, the two portions momentarily separated. Then, by sending an electrical current through the whole mass, there becomes formed in the cleft a metallic deposit, a vein in miniature, revealing to us the secret of nature's treasures laid up in the vast fissures of the primitive and secondary strata.

M. Becquerel has tried with electricity the argentiferous soils of France and of other countries, and the question of the electrical extraction of the precious metals by a voltaic current, which bears it along, is completely solved in a scientific point of view. It remains to be considered under an economical aspect. I remember perfectly to have seen enormous ingots, formed of silver, drawn thus from metalliferous soils. This silver was of extreme purity. Nature has then her interior galvanoplasty, as she has, according to an an ancient crystallographer, her subterraneous geometry: "*Natura geometriam exercet in visceribus terra.*"

It is not easy to conceive how so impalpable an agent as the electrical current can carry along with it metallic particles, in order to abandon them whenever any obstacle impedes their progress. It is thus that a torrent rolls stones and sand along its channel, in order to deposit them in the plain. In physical experiments may be remarked numerous instances of matter transported by the electric current. Thus, take two vessels half filled with water, and establish a communication between them by a simple wetted electrical wire; one of the vessels will empty its contents into the other by a mysterious process. The saltness of water even can thus be sent from one vase into another; and you can even cause to pass innocuously through a substance a body which, if not conducted by electricity, would act violently upon it. All the admirable mechanism of nutrition, secretion, digestion in living beings, is founded on electrical movements; and this is so certain, that in animals whose nerves communicating with the stomach have been severed, digestion has been re-established by replacing the missing portions of nerve by a metallic plate or wire, which restores the electrical communication. It has been frequently remarked that the power of the great Creator is most vividly displayed in the smallest objects of nature. For those who know how to observe, what can be a more striking evidence of the might of a Divine directing hand than these grand silent operations, fulfilling their end without effort, without resistance, without shock—producing, developing, nourishing, and preserving the living being? while when man wishes to command the elements by opposing them one against the other, fire, water, wind, steam, hammers and levers—a host of natural and of artificial powers—hiss, growl and roar with a thousand inharmonious voices, ever ready to escape from the empire and the sway of mere *human* intelligence.

If you plant in the ground, at a certain distance apart, two large metallic plates united by a long metallic wire stretched in the air, this wire is passed through by an almost continuous current. As the currents of the terrestrial globe go from east to west, we might expect that the metallic deposits of nature would principally occur along the chains of mountains or the fissures in the soil running from north to south, and which would naturally impede the passage of the electric currents moving from east to west. Such is in effect the auriferous chain of the Ural, which separates Europe from Asia. It appears very probable that the same holds good with the mountains of California and Australia; but sufficient observations have not yet been made to establish its certainty.

In the galvanoplasty of nature, we ask whence come these metals—that native gold which the earth contains in considerable masses. *Nuggets* have been found worth more than four thousand pounds. Physically speaking, nothing is produced, and nothing is destroyed. All the great forces of nature, mechanical, physical, chemical, vegetable, and animal, which pervade the entire globe, can neither produce nor annihilate a single particle of matter; but these forces can move, unite, and condense the metallic particles disseminated through the soil, and *galvanoplastize* them into a piece of pure gold, or *nugget.*

M. Sage, professor of chemistry at the French mint, has discovered the existence of gold in the soil surrounding Paris. Trees, shrubs, and especially the vine, take up from the soil nutritive juices which become incorporated with their stems and bark. In burning vine branches, all the carbonic particles disappear, and nothing remains but a trifling residuum of ashes. By collecting a sufficient quantity of these ashes, and subjecting them to chemical processes, a small quantity of gold appears. By this process, M. Sage collected sufficient to coin four or five twenty franc pieces. We may remark that, in an utilitarian point of view, this beautiful experiment was by no means successful. The price of fabrication, including everything, amounted to upwards of one hundred francs for each piece. Thus, the expense was five times as great as the value. This recalls a saying current in Spanish America; "The first man who discovers a silver mine loses his fortune; if it be a gold mine, he dies in the poor-house."

Galvanoplasty, born as it were yesterday, amongst the electric sciences, every day augments its theoretical and practical domain. The science considered complete to-day, ceases to be so to-morrow. What would the artists who lived before 1840 have said, if they had been shown a bronze statue obtained without fusion and marked with incredible fineness of detail?

In the above explanation of some of the effects of electricity, we have not even mentioned the aurora borealis and the electric currents of the sun and moon, which have a sensible effect on the magnetic needle. Other phenomena of electricity have also been observed in the planets. Thus our picture is very incomplete, and yet, two centuries ago, the name even of this vast science had no existence! Why is the domain of electricity so vast? Because, through its mechanical, physical, chemical and physiological properties, the electrical agent reigns in reality over all nature.

To Drive away Rats.—A few drops of creosote on brown paper, put in the holes of rats, will drive them away.

Selected.

I love (and I have cause to love) the Earth;
She is my Maker's creature; therefore good;
She is my mother, for she gave me birth:
She is my tender nurse; she gives me food;
But what 's a creature, Lord, compared with Thee,
Or what 's my mother or my nurse to me?

I love the Air; her dainty sweets refresh
My drooping soul, and to new sweets invite me;
Her shrill-mouthed choir sustain me with their flesh,
And with their Polyphonian notes delight me;
But what's the air, or the sweets that she
Can bless my soul withal, compared with *Thee?*

I love the Sea; she is my fellow-creature,
My careful purveyor; she provides me store:
She walls me round; she makes my diet greater;
She wafts my treasures from a foreign shore:
But, Lord of oceans when compared with Thee,
What is the ocean or her wealth to me?

To Heaven's high city I direct my journey,
Whose spangled suburbs entertain mine eye;
Mine eye, by contemplations great attorney,
Transcends the crystal pavement of the sky:
But, what is Heaven, Great God, compared with Thee?
Without Thy presence, heaven's no heaven to me.

The highest honors that the world can boast,
Are subjects far too low for my desire;
The highest beams of glory are, at most,
But dying sparkles of thy living fire:
The brightest flames that earth can kindle, be
But nightly glow-worms if compared with Thee.

Without Thy presence, wealth is bags of cares;
Wisdom but folly; joy disquiet—sadness;
Friendship is treason, and delights are snares;
Pleasures but pain, and mirth but pleasing madness;
Without Thee, Lord, things be not what they be,
Nor have they being when compared with Thee.

In having all things, and not Thee, what have I?
Not having Thee, what have my labours got?
Let me enjoy but Thee, what farther crave I?
And having Thee alone, what have I not?
I wish not sea nor land; nor would I be
Possessed of heaven—heaven unpossessed of Thee.

Selected.

THE STORMY PETREL.

This is the bird that sweeps o'er the sea—
Fearless and rapid and strong is he;
He never forsakes the billowy roar,
To dwell in calm on the tranquil shore,
Save when his mate from the tempest's shocks
Protects her young in the splinter'd rocks.

Birds of the sea, they rejoice in storms;
On the top of the wave you may see their forms
They run and dive, and they whirl and fly,
When the glittering foam-spray breaks on high;
And against the force of the strongest gale,
Like phantom ships they soar and sail.

All over the ocean, far from land,
When the storm-king rises dark and grand,
The mariner sees the petrel meet
The fathomless waves with steady feet,
And a tireless wing and a dauntless breast,
Without a home or a hope of rest.

So, mid the contest and toil of life,
My soul! when the billows of rage and strife
Are tossing high, and the heavenly blue
Is shrouded by vapours of sombre hue—
Like the petrel wheeling o'er foam and spray,
Onward and upward pursue thy way.

Park Benjamin.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 21.)

DAVID JONES.

One of the first Friends appointed to the station of elder in Haverford Mouthly Meeting, was David Jones. We know little of his history, except as it may be read in the appointments which he received in religious Society. These indicate him to have been exemplary in life, and judicious in judgment. His memorial says, "he conducted faithfully, and was approved of; in good esteem and beloved by Friends in general to his dying day, which was the 27th of the Sixth month, 1725, and was buried at Friends' burying ground, at Merion."

THOMAS LIGHTFOOT.

Thomas Lightfoot was born in or about the year 1644. There were at least two families of the name of Lightfoot convinced of the Truth promulgated by George Fox, very early after he was sent forth to preach the spirituality of the gospel of Christ Jesus, in primitive purity and power. John Lightfoot, of Skipwith in Yorkshire, and Thomas Lightfoot, of Cambridgeshire, were the heads of these two families, and both of them were called to suffer persecution. Thomas Lightfoot, of Cambridgeshire, received a gift in the ministry, travelled with George Whitehead in the Ninth month, 1654, and in 1655 suffered imprisonment for denying the Scripture to be rightly called "the Word of God." This title, he believed properly belonged to the Lord Jesus Christ, and to him only. For declaring this sound scripture doctrine, some of the high professors at Cambridge, whom he had rebuked for hypocrisy, not only had him put into bonds, but used endeavours to have him tried for blaspheny to the hazard of his life. But, in the language of Besse, "God preserved him."

Thomas Lightfoot, the subject of this memoir, removed to Ireland, where we find him, and his wife, Mary, living at Benown, near Moate, Leinster Province, in 1680. We have little trace of Thomas Lightfoot until the Eleventh mo., 1712, when we find him in company with Jacob Fuller, visiting Benjamin Holme and Benjamin Parvin, who were imprisoned at Longford, in Longford county, Ireland. He was then an aged and experienced minister of the gospel.

Benjamin Holme had been committed to prison by Benjamin Span, a justice of the peace, and priest of Longford, because he came with an intent of holding a meeting at that place, and because the priest could not answer his arguments in favour of toleration. The priest, in his case, acted as constable, assisting the gaoler, who, being accidentally at hand, he ordered to take Benjamin Holme into custody. Benjamin Parvin, Jacob Fuller, and Thomas Lightfoot, after their friend was imprisoned, walked towards the inn, where they had put up their horses, and the priest throwing himself in their way, addressed them in very abusive language, bidding them get out of the town, and calling them "runagate dogs." He continued repeating these epithets until Benjamin Parvin told him he gave his tongue too much liberty in calling them dogs; they were not dogs, but men. And again he told him they were not dogs, but men and Christians. "Show your baptism," then said the priest. "I hope," rejoined Benjamin, "we shall show a Christian spirit in the town of Longford, and I desire all this company to observe that thou art baptized with a foul spirit; for 'tis a foul spirit that calls men and Christians, dogs." The priest at this called for the constable; but he, not being within hearing, he himself seized Benjamin Parvin, and, taking the unresisting Friend to the gaoler, bade him "put him to the other rogue in the dungeon." The prisoner's account says, "We sat together in great peace and sweetness for about six hours, and then the gaoler took us into a room above stairs, where several friendly people came to see us." The priest, knowing that his actions that day had been not only contrary to justice but to law, sent a discharge for them, if they would only promise to come again, nor hold any meeting in or near Longford. They declined liberty on such terms, saying, "No true minister of Christ was his Master, but must answer the requirings of that had called him to his work and service." Being locked up in their room for the night, they lay on the hard boards, having no bed. The next day a friendly merchant sent them a bed. As they had been committed without a mittimus, Benjamin Parvin told the gaoler they could not legally be detained more than twenty-four hours. The gaoler at this went to the justice, who drew out a mittimus. The prisoners, on obtaining a sight of it, found it charged them with coming "in contempt of the Queen's authority, by force and arms, and in a hostile manner, to the terrifying of the Queen's peaceable subjects, to hold a Quaker's meeting in the borough of Longford." The prisoners, after reading it, told the gaoler it was false. They had brought no arms, but what they had there in person, and moreover told him that it was not to but the priest, who had contemned the Queen's authority. That when they had plead the Queen's toleration, he had, in the open street, before a crowd of people, denied that either man or woman in England or Ireland could grant a toleration or liberty of conscience. They added, they hoped if they came before an indifferent judge, it would be found to be the priest, who did contemn the Queen's authority. "But," said the gaoler, "Sir, you will not tell that before the judge." "Yes," they replied, "and hope to prove it by many witnesses that were by when he said it many times over." The gaoler immediately went to the priest-justice, and told him what the prisoners had said. "I wish I had never seem them," was the priest's answer.

Thomas Lightfoot and Jacob Fuller, that evening after visiting the prisoners, called on the priest, who was much subdued, and treated them civilly. He, however, spoke abusively of the two Friends he had treated so wrongfully, yet he soon sent an order for their release. In a few months afterwards, early in the year 1713. Thomas Lightfoot and Benjamin Holme went over into England, on their way to London Yearly Meeting. We find no trace of Thomas Lightfoot after this until Ninth mo. 10th, 1715, when we find him attending the Half-year's Meeting at Dublin, and signing an address to the Duke of Grafton and Earl Galway, Lord Justices and Chief Governors of Ireland.

His children were now grown up, and some of them married. Michael, in the year 1712, had removed with his wife and children to Pennsylvania, and purchased land in Chester county, in a district which was soon called New Garden, after the meeting they had left in Ireland. They attended Kennett meeting, until the Third month of the following year when Chester Quarterly Meeting allowed them a meeting at New Garden on First and Fifth days, to be held at the house of John Miller. At the Quarterly Meeting, in the Sixth month, the same year, they had liberty to build a meeting-house, "not to exceed a mile from Michael Lightfoot's." At the Quarterly Meeting in the Twelfth month, a youth's meeting was granted to Friends at New Garden, to be held twice a year. From these indications, it is plain that our Irish Friends, who settled New Garden, were a meeting-loving people. They were also a increasing people.

Thomas Lightfoot, now grown aged, felt drawings in his mind to remove with his unmarried family to America. In the year 1716, he left his old residence at Benown, and took passage for Philadelphia. He reached the Delaware in the

attend the Yearly Meeting for Pennsylvania and ew Jersey, held that year at Burlington. On irst-day, the 16th of the Seventh month, he, with s old Friend, Benjamin Holme, attended at the new meeting-house" there. Of this meeting, and eir services therein, we have this record,—"The ndering power, and bowing presence of the Lord as over the meeting, and living testimonies were orne to the comfort and satisfaction of the faithll, which we hope will not be forgotten." Of the early Meeting, Benjamin Holme writes, "There as a great appearance of Friends; the meeting eld part of five days, in which that Divine pow-, which is the crown and glory of our meetings, as largely manifested."

(To be continued.)

Epistle of George Fox.

My dear friends in the Lord Jesus Christ:—ll you that are gathered in His holy name know, at your meetings for worship, your Quarterly nd other meetings, are set up by the power and pirit of the Lord God, and witnessed by his pirit and power in your hearts; and by the Spirit nd power of the Lord God, they are established you, and in the power and Spirit of the Lord od you are established in them. The Lord God ath with his Spirit sealed to you, that your eetings are of his ordering and gathering, and e hath owned them by honouring you with his lessed presence in them; and you have had great xperience of his furnishing you with his wisdom, fe, and power, and heavenly riches, from his easure and fountain, by which many thanks and raises have been returned in your meetings to is holy, glorious name. He hath sealed your eetings by his Spirit to you, and that your athering together hath been by the Lord, to hrist his Son, and in his name; and not by me. o the Lord hath the glory and praise of them nd in them, who hath upheld you and them by he arm of his power, against all opposers and acksliders, and their slanderous books and ongues. For the Lord's power and seed doth eign over them all, in which he doth preserve is sons and daughters to his glory, by his eternal rm and power, in his work and service; as a willng people in the day of his power, without being eary or fainting, but strong in the Lord, and aliant for his glorious name and precious truth, nd his pure religion; that ye may serve the ord in Christ Jesus, your Rock and Foundation, n your age and generation. Amen.

G. F.

London, the 3d of Eleventh month, 1686-7.

Apples as an Article of Food.—Besides conaining a large amount of sugar, mucilage, and ther nutriment matter, apples contain vegetable cids, aromatic qualities, &c., which act powerfully n the capacity of refrigerants, tonics, and antieptics; and when freely used at the season of nellow ripeness, they prevent debility, indigesion, and avert, without doubt, many of the "ills which flesh are heir to." The operatives of Cornwall, England, consider ripe apples nearly as nourishing as bread, and far more so than potatoes. In the year 1801—which was a year of much scarcity—apples, instead of being converted into cider, were sold to the poor; and the labourers asserted that they could "stand their work" on baked apples, without meat; whereas a potatoe diet required either meat or some other substantial nutriment. The French and Germans use apples extensively, as do the inhabitants of all European nations. The labourers depend upon them as an article of food, and frequently make a dinner of sliced apples and bread. There is no fruit cooked in as many different ways in our country as apples; nor is there any fruit whose value, as an article of nutriment, is as great, and so little appreciated.—*Albany Journal.*

Winged Tortoise—A letter from Paris states that the existence of that curious phenomenon, the winged tortoise, has at length been fully established. Two of these curious creatures have been received from Surinam and are at present in the possession of M. De Caillard. They evidently belong to some hitherto undescribed species of coleoptera, the shell being divided by an apparent or false suture, and the sides presenting projections which resemble feet.

THE FRIEND.

TENTH MONTH 6, 1855.

"Some account of a communication by Caleb Pennock," was received two or three weeks ago; but as the "communication" appeared in our columns on a previous occasion, we have thought it not necessary to republish it.

The minutes of the Yearly Meeting of Friends, recently held at Mount Pleasant, Ohio, have been received, and will be found in our columns. We have been particularly gratified in reading them, indicating as we think they do, that the Son of peace was present with our Friends, clothing their spirit with a solid concern for each other's welfare, and for the encouragement of the members in the subordinate branches, in upholding faithfully in life and conversation, all our christian principles and testimonies. The general prevalence of love and unity referred to in the minutes, is cause of comfort to every true-hearted Friend, who will also fervently desire that it may continue to increase, binding all together in the bond of true peace.

The Yearly Meeting in Ohio has been greatly misrepresented, and their opponents have spoken of the Friends composing it in a disparaging manner, as being an insignificant and divided body, unworthy of respect and regard; but their deliberations and conclusions bear the marks of the direction of Divine wisdom and of freedom from party spirit, manifesting that their main object is the right support of the blessed cause of Truth and righteousness, for which Friends were originally gathered by the Lord, to be a people. We think the manner in which they submitted to the injustice of being deprived of the use of their meeting-house at such times as the Yearly Meeting has usually occupied it, and making changes in the times of holding their meetings rather than come into collision with those who have separated from them, shows the spirit of true Quakerism; and we have unshaken faith, that as they continue to suffer with patience and meekness the trials to which they are now subjected, earnestly seeking for Divine wisdom and strength to walk consistent with our high profession, and to conduct the affairs of the church, in time it will be indisputably evident, which is the rightful claimant to whom the living child belongs.

The Yearly Meeting appears to embrace as members about double the number of the seceders, having six Quarterly Meetings, in two of which—the large Quarters of Stillwater and Pennsville—no separation has taken place, though a committee of the meeting of which J. Binns is clerk, strove hard to effect it in the Monthly Meetings of the latter. We are informed that the number which has gone with the Separatists in Salem Quarter, is quite small, while in Springfield Quarter the larger body has joined with them; but the number of Friends in the latter meeting, who maintain their allegiance to the Yearly Meeting, is greater than that of the seceders in Salem; so that taking the two Quarterly Meetings together, we suppose, from the statement we have received, that Friends and the seceders are about equal in numbers. In Short Creek Quarter, we understand, about one half have left Friends, and in Red Stone rather more than one half remain with them.

Another evidence of the comparative numbers of the two bodies, is furnished by the number of children of a suitable age to go to school, reported to each. To the meeting of the Separatists there were 649 children reported, while to the regular Yearly Meeting there are 1283 reported, which number, they say, does not embrace any of the children of those who have left them: whether the 649 includes any of the children of those who have not gone with the Separatists, we have no means of knowing. The number reported to Ohio Yearly Meeting, is but about one hundred less than was reported from the subordinate meeting to Philadelphia Yearly Meeting, last year.

The number of schools under the care of Friends, is perhaps as great as the scattered condition of the Society there will at present admit; but we should be glad could they make provision for placing all their children in schools, taught by consistent members. The guarded, religious education of the children of Friends at home, as well as at school, is always a subject of deep interest; but, when as now efforts are making by the diffusion of books and papers, containing representations calculated to mislead, and while captivating the young and inexperienced to vitiate their religious belief, Friends have need to set a double watch around their tender offspring to defend them from the injurious consequences of these efforts to disseminate error. They should be careful to discountenance the perusal of all those pernicious publications, and living under daily watchfulness in the Divine fear, conscientiously striving to act up to their profession on all occasions, their example and religious exercise will have a preserving influence on their children.

The day calls for renewed vigilance in the performance of our religious duties, a constant recurrence in practice to the great doctrine of our profession, the immediate guidance and help of the Holy Spirit, in order that we may walk worthy of our high calling, and that the precious cause of Truth may not be permitted to fall from our hands; and we fully unite in the desire, that the afflictions the Society is now enduring, may bring the members nearer to the adorable Head of the Church, and unite in love all those who are sincerely engaged to uphold the doctrines of the gospel as set forth by George Fox, Robert Barclay, and others of our early Friends, in whatever circumstances they may be placed.

MINUTES.

At Ohio Yearly Meeting of Friends, held at Mount Pleasant on the 3d, and by adjournments there to the 6th of the Ninth month inclusive, 1855.

Reports were received from all the Quarterly Meetings, by which it appears that the following Friends have been appointed their Representatives to this Meeting: viz.† * * * *

They were all present and answered to the call of their names except one, his absence being on account of indisposition.

The following Friends are appointed to examine

† We have omitted the names on committees, &c.—*Ed. Friend.*

the treasurer's account, report the state thereof to a future sitting, what sum may be needful to raise, the present year, and the name of a Friend to be appointed Treasurer, viz.: * * *

The Representatives from the Quarterly Meetings are desired to confer together, and if way opens, propose the name of a Friend to serve the Meeting as Clerk, and one to assist him, the present year; and also the names of two Friends to serve as Messengers to the Women's Meeting.

Then adjourned to the 10th hour to-morrow morning.

Third-day Morning, 10 *o'clock*.—The Meeting assembled in the meeting-house yard, finding the house occupied by those who seceded from this meeting last year.

Nathan Hall, on behalf of the Representatives, reported that having conferred together, they had agreed to propose that Benjamin Hoyle serve the Meeting as Clerk the present year, and Robert H. Smith, as Assistant, which was satisfactory to the Meeting, and they were appointed to those stations.

Nathan P. Hall and Samuel Hollingsworth, were proposed to serve as Messengers to the Women's Meeting, which being approved, they were appointed to the service.

Then adjourned to 2 o'clock this afternoon.

At the hour adjourned to, the Meeting again convened.

An Epistle from the Yearly Meeting of Philadelphia was read, to our edification and comfort.

* * * * * were appointed to prepare essays of Epistles, as way opens, to other Yearly Meetings, and produce them to a future sitting.

The consideration of the State of Society was now taken up, by reading the Queries, and the answers thereto from the Quarterly Meetings. Suitable counsel was administered, and Friends were encouraged to greater faithfulness in their respective allotments in the church and in their own families. Parents were impressively reminded of the obligations resting on them in the right training of their beloved offspring, in life and conversation, consistent with our Christian profession. And it is the fervent concern of this Meeting, that those placed in the very responsible stations above alluded to, may be diligent and constant in the daily collecting of their families for the reading a portion of the Holy Scriptures, with their minds reverently turned unto the Lord. In these opportunities, brief as they might be, we believe the aspirations of parents would often be unto Him that His gracious promise might be realized. "I will pour my spirit upon thy seed, and my blessing upon thine offspring."

It has been refreshing and comforting to be informed by the several Quarterly Meetings, that love so generally prevails among our members, as becomes our Christian profession.

We desire to feel thankful for this evidence of the continued regard of the Head of the Church, and to encourage our dear friends to cherish this feeling towards their brethren and sisters. We entertain the hope that the trials which have been permitted to come upon us, will, as they are patiently endured, prove the means of uniting the members of the militant Church more closely to her glorified Head, and be numbered among the "all things that work together for good."

* * * * * *

Esther Richards, an elder and member of Elk-Run Particular, and Middleton Monthly Meeting, departed this life on the 22d of the Fifth month last, in the 89th year of her age.

Ruth Grave, a Minister and member of Westland Monthly and Particular meeting, departed this life the 24th of the Fourth month last, aged 89 years.

The following Friends were appointed to confer with a committee of women Friends, in taking into consideration the propriety of making a more convenient arrangement in the times of holding our Quarterly Meetings; and also, on account of the interruptions experienced in our meeting together the present year, occasioned by the occupancy of the house by those who seceded last year, they are desired to consider whether a more suitable time can be proposed for the assembling of this meeting in future; and report to another sitting; viz: * * * * *

Then adjourned to 2 o'clock to-morrow.

Fourth-day Afternoon—Met agreeably to adjournment.

The Clerk of this Meeting informed that a few lines had been received by him from Joseph Thorp, the Clerk of London Yearly Meeting, making reference to an accompanying document of that Meeting, but which was neither under cover of the envelope, nor accompanying it; should it come to hand, it is to be given in charge of the Meeting for Sufferings.

He also informed that the Epistle addressed to New York Yearly Meeting last year, had been returned.

Two communications were received, purporting to be from Baltimore Yearly Meeting—one signed by Richard H. Thomas, declining further correspondence with this Meeting. The other from those Friends who remained after the separation, accompanied by a minute, inviting this Meeting, if way should open for it, to appoint a committee to sit with them, and advise them in their stripped condition. And although this Meeting feels much sympathy with them in their tried situation, yet no way opens now to take further action in the case.

In thus reading both these communications, and making the members of this Meeting acquainted with all the circumstances of the case, it may be observed, that it has been in accordance with the usage of this Meeting since 1829, when, at that time, two communications were received, claiming the character of Baltimore Yearly Meeting. The one now received signed R. H. Thomas, together with a communication of like import from Indiana Yearly Meeting, was directed to be placed with the Meeting for Sufferings.

The minutes of the Meeting for Sufferings were read and its proceedings approved.

The following minute was received from the Meeting for Sufferings—it is referred for consideration to next year.

"Several of the members of this Meeting have for some time past failed to attend it. The Clerk is directed to furnish the Yearly Meeting with the information.

"Ninth month, 1st.

The Committee to settle with the Treasurer made the following report, which was adopted:

"We, the Committee to settle with the Treasurer and make out an apportionment amongst the Quarters, report, we have attended to the service, and find a ballance in his hands of $273,38, and propose to raise $200 for the use of the Yearly Meeting the present year; and that Nathan P. Hall be continued Treasurer. * * *

The following report was received from the committee appointed yesterday to the service, which being satisfactory to the meeting, it is adopted. The regular sessions of the Meeting for Sufferings are appointed to be held at Mount Pleasant, at 3 o'clock on the day preceding Short-creek Quarterly Meeting in the Fifth month, and at the same hour on the seventh-day preceding the sitting of this Yearly Meeting.

REPORT. "The Joint-Committee of men and women Friends, appointed to consider the p priety of changing the time of holding the Qu terly Meetings, &c., nearly all met, and united in proposing that the time of holding t Yearly Meeting be changed, to meet in futu on the first First-day in the Tenth month, Mount Pleasant. The meetings for worship begin at the tenth hour in the morning, and three in the afternoon. The Meeting of Min ters and Elders on the day preceding, at the ten hour. The Meeting for Discipline on Second-d at the tenth hour.

"That Redstone Quarterly Meeting be held the Eighth month at Westland, and at Providen in the Second, Fifth, and Eleventh months, sixth-day preceding the first seventh-day in t month, at the 11th hour; the Meeting of Min ters and Elders at 9 o'clock in the morning of t same day. That Springfield Quarterly Meeting held on Fourth-day preceding the second Sevent day in the Second, Fifth, Eighth and Eleven months, at the eleventh hour; the Meeting f Ministers and Elders at 3 o'clock the d preceding. And that Short-creek Quarterly Me ing be held on Fifth-day preceding the thi Seventh-day in the Second, Fifth, Eighth a Eleventh months; the Meeting of Ministers a Elders the day preceding—both at the eleven hour.*

The Friends appointed to attend the openi of Pennsville Quarterly Meeting, reported th some of their number attended, and that it w held as directed by this meeting.

The Quarterly Meetings all report, that fun have been raised as directed last year for the ben fit of Indian civilization; but the channel bei now closed for applying it, by the late action Indiana Yearly Meeting, the Friends having char of it are desired to place it in the hands of Nath Hall, who shall hold the same, subject to th meeting's direction, until it shall be duly appris by the Quarterly Meetings of the manner th may wish it disposed of.

The Boarding School Committee made t following report, which was adopted, and t Friend proposed was added to the committee; a the following were released from the comm tee, viz. * * * *

"From the Minutes of the Acting Committee, find that the amount received for board and tu tion for session commencing the 2nd of Ten month, 1854, for an average of about 71 pupi was $2975 7

Meetings for worship have been regularly held the Institution to a good degree of satisfaction.

The committee taking into consideration the hange made last year, by the addition of two eeks to the vacation at the close of the sumer session, are united in proposing to the Yearly eeting, that the winter session in future shall mmence after an interval of four weeks from e close of the summer session, and consist of weeks, agreeably to the former arrangement.

The committee unite in proposing to the Yearly eeting the appointment of Robert H. Smith as member of the committee."

Nathan Hall and Robert H. Smith are appointed have 300 copies of the minutes of this meetg printed for the use of subordinate meetings, d divide them among the Quarters, and defray e expense by a draft on the Treasurer.

It is concluded that this meeting shall assemle in Short-creek meeting-house at the tenth hour -morrow, in the capacity of a meeting for divine rship.

Then adjourned to 2 o'clock to-morrow afternon.

Fifth of the week and sixth of the month. At e time adjourned to, the meeting again assembled. The committee appointed last year to visit and sist subordinate meetings, made the following port. It is continued to the service another year, d desired to extend their visit to our subordinate eetings generally, in order to encourage them as ility may be given, in the support of our religis testimonies, and in the wholesome exercise of r Christian discipline. And such adjournments those meetings as may be deemed needful by e committee to suit their convenience, is reommended to be made. And John Patton, Elisha ollingsworth, Ellwood Dean and William Foulke, e added to the committee.

"We, the committee appointed to visit and sist subordinate meetings, Report, that most of r number attended four of the Quarterly Meetgs, being those within the limits of which separation occurred; and a part of our number attended arly all the Monthly Meetings constituting em. The following meetings have been discontued on account of it, to wit:

Monthly Meetings.

MARLBOROUGH AND REDSTONE.

Preparative Meetings.	*Meetings for Worship.*
MOUNT PLEASANT,	CROSS CREEK,
CROSS CREEK,	MOUNT PLEASANT,
WEST GROVE,	WEST GROVE,
FREE PORT,	LEXINGTON,
MARLBOROUGH,	AUGUSTA,
AUGUSTA,	SALINVILLE.
LEXINGTON.	

Within the limits of two of the Quarterly Meetings and eight of the Monthly Meetings, no separation has taken place."

By reports received from the Quarterly Meetings, it appears that there have been thirty-two schools conducted under the care of Friends.

There are 1283 children of suitable age to go to school.

512 have been attending Friends' schools.

476 have been attending District schools.

200 have been attending other schools, and receiving education at home.

85 not receiving education the past year.

The above account does not include those who have seceded from this meeting. One of the Quarterly Meetings does not distinctly describe the character of the schools attended.

Our Quarterly and Monthly Meetings are again affectionately desired not to relax in their concern and labours in promoting the guarded education of the youth of our Society, as heretofore advised by this meeting; and make report next year.

Taking into consideration that John Street and Jacob Holloway, two of the trustees appointed to hold, for the use of this meeting, the title and deeds for the Yearly Meeting house, and premises and lots of ground appertaining; and also for the Boarding-school house and lands and other appurtenances, purchased for its use, being removed by death—this meeting now instructs and directs Benjamin Hoyle and Henry Crew, the survivors of them, to make and execute good and sufficient deeds, according to law, to George Gilbert, Nathan Hall, Jehu Fawcett, Asa Garrettson, Robert Ellyson, and John Patton, to hold *in trust* for the use of the religious Society of Friends of this Yearly Meeting; and to be subject to the future direction of this meeting. Joshua Maule, Robert H. Smith, and James W. McGrew, are appointed to see that these directions are complied with. Any further attention that may be needful in carrying out these instructions is intrusted with our Meeting for Sufferings, which is authorised to perform any other act necessary in the premises for the full and complete execution of the trust.

In consequence of the assembling of this meeting next year one month later than heretofore, it may be needful to make some little change in the summer and winter sessions of the Boarding-school next year; the care of arranging it is left with the committee having charge of that concern.

James H. Dean is appointed correspondent for New Garden Monthly Meeting: address Salem, Columbia Co., Ohio.

Robert Ellyson, for Upper Springfield Monthly Meeting: address East Westville, Mahoning Co., O.

Nathan P. Hall, for Short-creek Monthly Meeting: address Mount Pleasant, Jefferson Co., Ohio.

Amos Cope, for Providence Monthly Meeting, in place of Jesse Couldron, released: address Redstone, Fayette Co., Pennsylvania.

Essays of Epistles were produced to Dublin and Philadelphia Yearly Meetings, which were approved, directed to be signed by the clerk, and placed with the correspondents for forwarding.

Having finished the business that has been before us the present year in love and brotherly condescension, and under the solemnizing influence of the Spirit of Truth, now again at the close mercifully spread over us; under feelings of desire for each other's preservation in it, the meeting concludes to meet again, if the Lord permit, at the time agreed on next year.

BENJAMIN HOYLE, Clerk.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 16th ult.—There was great rejoicing throughout Great Britain and France, on account of the destruction of the south part of Sebastopol, leading to the expectation that the Russians would be soon compelled to abandon totally this famous strong hold which they have defended with such remarkable courage and obstinacy for the past year. From the despatches of the allied commanders, it appears that on the 8th of Ninth month, being about twelve months since the landing in the Crimea, and three hundred and sixteen days since the opening of the siege batteries, a final and victorious assault was made on the Malakoff. The assault was preceded by a terrific bombardment of three days' continuance, and a despatch from Gortschakoff saying, "Our works suffer," prepared the public for the result. On the 8th, at noon the whole disposable force of the besieging armies moved forward in a four fold attack. The extreme right of the French attack was directed against the little Redan, which they carried, but which they had to abandon in consequence of the fierce charge made by the Russians. The second and principal assault of the French was against the Malakoff, which, after six repulses, they carried by storm, and decided the fate of the day. A third attack made by the British against the great Redan completely failed, for, although they succeeded in gaining temporary possession of the salient angle of the work, they were speedily driven back. The fourth portion of the assault was made by the French, under De Salles, against the central battery, but also failed. The slaughter was terrific, and is estimated at 2,000 English, 15,000 French, and as many Russians, making the aggregate upwards of thirty thousand men. These numbers are, however, conjectural, the loss actually sustained by the respective armies, not being known. The French were the greatest sufferers, several of their Generals and a host of officers being among the slain. During the night succeeding the assault, the Russians evacuated the entire south side, first blowing up the defences, sinking all the ships, firing the town, and leaving nothing but smouldering ruins. Gortschakoff, in a despatch, dated the night of the 9th, says, "Our brave troops, who resisted to the last extremity, are now crossing over to the northern side of Sebastopol. The enemy found nothing in the southern part, but blood stained ruins. On the 9th of September, the passage to the northern part was accomplished, with the loss of 100 men. We left, I regret to say, 500 men grievously wounded on the southern side." The Russians had long since made preparations by mining, for making the destruction as complete as possible, whenever the position became no longer tenable. They had also constructed a bridge across the harbour, to facilitate the transfer of their troops and stores. The bridge was destroyed as soon as the garrison effected its passage. The allies had not yet ventured to occupy the ground abandoned by the Russians. Pelissier says, "The explosion of mines successively, and on different points, makes it our duty to defer an entrance into the place, which presents the spectacle of an immense furnace. Prince Gortschakoff being closely pressed by our fire, has demanded an armistice to carry off his wounded." The defences to which the Russians have retreated, are said to be strong, but not equal to those they have been compelled to abandon. It was uncertain whether they would attempt to hold them longer than was required to enable the Russian forces to effect a safe withdrawal from the Crimea. The utmost efforts of the allied Generals, it was supposed, would be put forth to cut off the anticipated retreat, and effect the capture or destruction of the Russian army. It is reported that instructions have been sent to the allied Generals, in the event of Gortschakoff seeking to capitulate, to demand that Russia shall surrender at discretion all the troops, stores and fortified places, including Odessa. More troops have been ordered to proceed immediately, from France to the Crimea. Pelissier has been created a Marshal of France, and Paris completely illuminated on account of the victory. A grand national *te Deum* was celebrated at the church of Notre Dame, the Emperor attending in person. Queen Victoria has sent an address of thanks to her army, and directs General Simpson to congratulate Marshal Pelissier on his brilliant victory. The Times suggests the celebration of a day of national

thanksgiving, on account of the fall of Sebastopol. A despatch from the sea of Azoff states, that the allies were doing immense damage to the Russian vessels and merchandize along the coast. Forty-three fishing establishments, 127 boats, several thousand nets, tar, salt and barrels without number, had been destroyed. Only four fisheries escaped in consequence of the shallowness of the water, preventing the approach of the ships of war. These proceedings seem to be viewed as matter of exultation rather than shame, and the destruction of the business of the poor fishermen in the distant sea of Azoff, affords satisfaction to the citizens of London and Paris. The spirit of war is truly as base and mean, as it is savage and unchristian.

FRANCE.—On the evening of the 7th, an attempt was made to assassinate the Emperor, as he was about proceeding to the Italian opera. It was made by firing two pistols into the carriage, in which the Emperor was supposed to be. No one was hurt. The attempt was made by a young man, named Bellemare, a native of Rouen. He is of notoriously bad character, and is said to be partially insane. He was instantly taken into custody. A lamentable accident occurred on the 11th, on the Versailles Railroad, in consequence of a passenger train coming in collision with a luggage train. About 15 persons were killed, and thirty wounded.

GREAT BRITAIN.—The weather has been favourable, and the crop accounts satisfactory. The Bank of England had advanced its minimum rate of discount to 4½ per cent., and a further advance to 5 per cent. was expected. The Liverpool cotton market, in consequence of the stringency of the money market, and another advance in the bank rate of discount, had been rather inactive, and prices were barely maintained. The sales of the week reached 46,000 bales, of which speculators took about 6,000 bales. Breadstuffs generally were dull, but prices had undergone no material change. Wheat was quoted 1d. higher. Consols closed at 90 5-16 a 90¼.

MEXICO.—Dates from the city of Mexico to the 19th ult. General Carrera had abdicated, and a Council had been appointed, in which the garrison was represented. Generals Alvarez and Comonfort were shortly expected to reach Mexico. A state of anarchy was feared.

UNITED STATES.—*The Indians.*—On the 3d of last month, the U. S. troops, under General Harney's command, surprised an encampment of Brule Sioux Indians, near the North Fork of the Platte river. The fight and chase lasted for two or three hours, at the end of which time there were no Indians to be seen, except the prisoners, and the dead bodies scattered around. About 85 Indians were killed, including their chief, and between 60 and 70, mostly women and children, taken prisoners. A large number of horses and mules were taken from the Indians, with wagon loads of new lodges and other property. Six soldiers were killed, and six wounded.

New Mexico.—Santa Fe dates to Ninth mo. 1st have been received. The Indian relations in New Mexico are more favourable, and the mail party met with but few Indians, and these manifested a friendly disposition. Col. Sumner had left Fort Leavenworth on the 20th for the Plains, with seven companies of U. S. troops.

New Jersey.—The recent census of this State shows a population of 569,499, being an increase of 80,166 over that of the year 1850. The increase has been chiefly in the northern counties. There are 151,522 children, between the ages of 5 and 16 years, 77,364 of whom are boys and 74,158 girls. The entire population consists of 282,702 males and 286,797 females. The coloured residents number 24,053, and 103,202 are persons of foreign birth. Among the documents relating to early colonial history published by the State of New York, is a census of the province of New Jersey taken in the year 1726. At that time, New Jersey contained a total of 32,442 persons, of whom 15,737 were white males, 14,124 white females, and 2581 negroes.

The Yellow Fever.—A great improvement has taken place in the health of Norfolk and Portsmouth. But few persons are now attacked with the disease. At New Orleans, the deaths for the week ending Ninth mo. 23d, were 214, including 89 from fever. It is no longer considered epidemic there. Many towns and settlements along the Mississippi and some of its southern branches, are suffering severely from the pestilence.

The Public Schools of Boston.—The Boston Transcript gives the following information respecting the public schools of that city. "We learn that during the last financial year, the payments on account of the public schools, amounted to 22.50 per cent. of the whole ordinary expenditures of the city. The cost of carrying on the public schools, viz. One High, one Latin, one Normal, 18 Grammar, and 196 Primary, including the repairs of the houses, salaries, furniture, fuel, and all incidental expenses of the same, amounted to $389,135 64. The number of pupils was 23,739; and the total expense for each scholar was $12.25. Of this sum $9.39 was required for the salary of the teachers, and $2.86 for incidental expenses.

New York.—Six members of the city government, three of whom are aldermen and three councilmen, have been indicted by the Grand Jury on charges of malfeasance in office, or official corruption. They are charged with taking or demanding bribes on various occasions. Interments last week, 355.

Philadelphia.—Mortality last week, 169.

California.—On the 30th, the steamship Star of the West arrived at New York, with California dates to the 5th ult., 650 passengers and $1,150,000 in gold. The wheat crop is said to be short in quantity, and inferior in quality. The shock of an earthquake was felt along the California coast, on the 21st of Eighth mo. At San Francisco, it was very severe. Difficulties had occurred on the Rogue river, between the Indians and the U. S. troops that accompanied General Palmer, Superintendent of Indian affairs in Oregon. Three whites and two Indians were killed. Great excitement prevailed, and troops were ordered from Fort Oxford.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXIX. SEVENTH-DAY, TENTH MONTH 13, 1855. NO. 5.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

From the Penny Magazine.

On the Nature of Consumption.

The pulmonary organs have been divided by anatomists into three distinct textures, which may be individually or collectively the seat of disease. In the first place, branches of the windpipe perforate the lungs in every direction, and these as well as the windpipe are lined throughout by a delicate membrane similar to the lining of the mouth and nostrils; inflammation of this membrane constitutes *catarrh* or *common cold*. Secondly, the outside of each lung is covered by a still more delicate membrane, thin and transparent like "silver" paper, called the pleura; inflammation of this membrane constitutes *pleurisy*. Thirdly, there is a texture contained between the internal and external membranes just described, which consists of the vessels and other proper substance of the lungs; inflammation of this intervening texture is what is known in technical language by the name of *inflammation of the lungs*. *Consumption* is a disease of a nature quite apart from that of ordinary inflammation.

No class of diseases have afforded, under certain circumstances, more difficulty in their discrimination than those of the chest. The various inflammatory attacks when they existed in a severe degree, have been at times confounded with each other; and the protracted effects of inflammation in the living body, are still frequently mistaken by the public for the presence of consumption. A patient may have violent cough, frequent expectoration of purulent matter, shortness of breath, disease of pain or oppression in the chest, wasting of the flesh, hectic fever, and yet all these symptoms may be the consequence of an extensive and long continued attack of catarrh; or this (and it is less rarely occurs) with the effects of a dangerous pleurisy, or of inflammation of the proper substance of the lungs. The difficulty experienced in attempting to discriminate these diseases is explained in the fact that they have many symptoms in common. Every severe derangement of the lungs and their connexions is sure to be accompanied with cough, shortness of breath, and one or more of the other symptoms enumerated above. The difficulty of discrimination is further accounted for in the peculiar *position* of the lungs. As the lungs are contained within a bony case formed by the ribs, we are unable, when any portion of their structure is changed by disease, to ascertain either by our sight or our touch the exact character and seat of the morbid change, and, as we have no other means of forming an opinion, we are obliged to depend on the external symptoms, which may, as has been previously observed, occasionally deceive us.

Until the year 1816, indeed, no better way had been discovered of discriminating pulmonary diseases; but at this period, Dr. Lœnnec, an eminent physician of Paris, hit upon a new method. It consisted in applying *the ear* to the purposes of discrimination, and the originality and strangeness of the discovery excited great surprise and no little incredulity amongst the profession of the day. Dr. Lœnnec was led to enter on this new path by a very simple circumstance. By bringing his ear near to the chest of a patient, he observed that certain sounds were emitted from the chest during the act of breathing. Following up the hint, he constructed an instrument on the principle of an ear-trumpet, that the sounds might be heard the more distinctly, and with this instrument, called a stethoscope, he commenced a series of observations. These observations, after having been prosecuted with astonishing assiduity for several years, ended in Lœnnec's giving publicity to the fruits of his labours. Their general result showed that the lungs when in a healthy state always emit during respiration sounds of a peculiar character; and in the progress of their diseases that they emit sounds of a different description, each disease, singular to say, having its own variety of sounds. This, the acoustic mode of discrimination, has since had an extended trial, and its claims to utility are now recognized by professional men in various parts of the world.

The inflammatory diseases of the chest are as curable as inflammation in other parts of the body; but the consumptive disease is one of the most intractable with which we are acquainted. Conscientious medical men at once admit that patients in whom consumption has been established rarely recover; yet there are quacks who pretend to be able to cure every instance, and, what is still more to be regretted, such persons have often succeeded in bringing over a portion of the public to believe in their pretensions. It is not difficult, however, to account for this apparent success. An affectionate mother for instance, who has delicate female children, is exceedingly apt, should any of them become subject to cough, to take alarm, and to immediately conclude that the cough is a sign of the commencement of consumption. If, while under this impression, the mother obtains the opinion of a quack, she is certain to have her suspicions corroborated. The child is then submitted to his treatment, and though the complaint be a common cold or any other complaint equally curable, he will publish the case, as soon as recovery comes about, as a cure of consumption, and the mother who was at first deceived by her own affectionate solicitude, and afterwards duped by the cunning of the imposter, will voluntarily attest his certificate of skill. This is a fair sample of the manner in which quackery secures its advocates and its victims. On the list of the honourable practitioner we never find these "surprising cures." No, when he is consulted in such cases, he assures the mother that her impressions are groundless, prescribes for the patient, and, when the affection is removed, the only credit *he* claims or receives is the credit of having subdued a catarrh, or other result of common inflammatory action.

Although the nicest judgment of the scientific physician be occasionally required to discriminate consumption in the living body, from the chronic effects of pectoral inflammation, there is no difficulty in their discrimination when we come to examine the contents of the chest after death. In an examination of a consumptive patient after death, the lungs are found in a state which cannot be produced by any other known disease. Were the public in possession of any rational conception of this state, it would effectually shield them from the designs of those unprincipled persons who pretend to have a specific for its removal. In the language of medicine the lungs of consumptive patients are said to contain *tubercles* or *small tumors*, and we shall presently lay before the reader a sketch of the progress of these extraordinary and destructive bodies.

The seeds of the disease, which will eventually establish consumption, may be deposited in his lungs a considerable time before the patient is aware of any alteration in his general health. He may be engaged for weeks in the routine of business or of pleasure, previous to his receiving any warning of the pulmonary danger, unless, perhaps, in a trifling irritation about the top of the windpipe, accompanied by a dry tickling cough. A sight of the lungs, during this early stage, can be obtained only in case the patient be destroyed by the inroad of some other disease, or by an accident. Then, on opening the chest, the following appearances present themselves.

In the upper half of both lungs, great numbers of roundish bodies, somewhat resembling small pearls, are seen scattered. They are of a pale grey colour, and vary in size from that of a millet to that of a hempseed. They feel hard, and adhere to the substance of the lungs, in which they are set after the manner of currants in the surface of a pudding. These are the remarkable bodies called tubercles. Their structure is altogether foreign to the healthy structure of the lungs; but the functional or organic change of the latter, which must necessarily precede their formation, is not as yet clearly explained. In the obscurity of their origin, they resemble certain plants that suddenly spring up in places where their species were previously unknown. It is certain, however, that the elements of tubercles are not derived from the atmosphere, for they are often found in parts of the human frame, such as the bones, to which the atmospheric air cannot gain admission.

This early stage, we have remarked, may or may not be attended with slight external symptoms. The tubercles are too small and too slow in their growth, to disturb as yet, in any marked degree, the vital functions of the surrounding parts. The substance of the lungs quietly yields to their pressure, and the respiration is not sensibly affected by their morbid encroachment. But, once created, tubercles will, in a longer or shorter time, proceed through their accustomed course. Their progress may be conveniently divided into three stages, of which two stages remain to be described.

In the first stage, the tubercles had attained the size of millet and of hempseeds. In the second

stage, they continue to increase in size, and, drawing nearer to each other, they appear arranged into irregular groups. A yellow speck soon becomes developed in the centre of each tubercle, and, extending itself slowly, encroaches on the grey structure, of which the tubercle seemed originally composed, until the grey colour completely disappears in the yellow. Individually the size of the tumors may now be included between that of a pea and a filbert. Their structure is still firm, and several may be seen either coalescing or united into one mass.

The third stage is at hand. The groups of tubercles are united into homogenous masses, generally equal in size, or rather larger than a walnut. The structure of each mass becomes gradually softer and moister, and if pressed between the fingers at this time, it feels greasy like new cheese.

Continuing to soften, it gradually passes from the solid to the fluid state. The fluid first forms in the centre of the mass, and its quantity steadily augments until the solid portions of the tubercles are completely broken down. In a short time, these fluid tubercles burst into the air tubes, and are expectorated in a violent fit of coughing, leaving hollow ulcers in the substance of the lungs.

This is the history of genuine consumption, or the tubercular disease of which more than a fourth of the inhabitants of Great Britain are said to perish. Commencing, as we have seen, in small hard grains, the tubercles gradually increase in size, and change their colour from grey to yellow. They then unite into irregular masses. The centres of these masses becomes soft, and afterwards fluid. The fluidity eventually involves the whole mass, and this is the final transformation which tubercles undergo before they burst into the air tubes and are expectorated. The constitution of the patient generally begins to suffer in the second stage. In the third stage the symptoms are still more severe. Harassing cough has then set in, and fever, with copious night-sweats, &c. A temporary relief may succeed to the expectoration of the first fluid tubercles; but new crops will continue to form and go through the same process, until the lungs of the patient are no longer capable of sustaining life, and his body is reduced to almost the figure of a skeleton.

Cost of Bombardment.—Every shell thrown by the Allies upon Sebastopol, is said to cost $125. We know not how near this estimate is to the truth; but, assuming it as the basis of calculation, we reach some startling conclusions. In thirteen days, no less than 780,000 shells and balls were thrown, and at $135 each, if they were all shells, that cost would be a little more than $115,000,000! This seems hardly possible; but the expense at the lowest estimate, must be enormous. The balls thrown in thirteen days are supposed to have weighed more than 35,000,000 pounds, which would cost, at the rate of pig iron even in England, nearly half a million dollars; while the expense for powder alone—about five million pounds—would be three quarters of a million. The cannon balls, if rolled into rail bars weighing sixty pounds to the yard, would make a single track railway from New York to Albany, 160 miles.—*Advocate of Peace.*

Mosquitoes.—At a late meeting of the Boston Natural History Society, Dr. Durkee made some remarks upon the mosquito. Among other things, he stated that he had satisfied himself, from repeated examination with the microscope, that the male mosquito has no sting, and cannot draw blood, the female alone being endowed with that organ.

From the Journal of George Fox.

Another paper I wrote there concerning the Stone spoken of by Daniel, chap. ii., which became a great mountain, and filled the whole earth; showing "that thereby was set forth the kingdom and power of Christ."

When Christ, the Stone that became a great mountain, and filled the whole earth, had broken to pieces the head of gold, and the breast of silver, and the belly of brass, and the legs of iron, and the feet part iron, part clay, (which were the four monarchies, to wit, the Babylonian and Mede, the Persian, the Grecian, and the Roman,) and had ended the outward Jews' typical kingdom; Daniel saith, "In the days of these kings, shall the God of heaven set up a kingdom, which shall never be destroyed." Dan. ii. 44. Christ said, "All power is given unto me in heaven and in earth." Matt. xxviii. 18. And, "My kingdom is not of this world." John xviii. 36. "Christ is the image of the invisible God, the first-born of every creature. For by him were all things created, that are in heaven, and that are in earth, visible and invisible, whether they be thrones, or dominions, or principalities, or powers; all things were created by him, and for him; and he is before all things, and by him all things consist." Col. i. 15—17. Here ye may see, all things consist by Jesus Christ, and all things were created by Christ, and for him, whether they be things in heaven, or things in earth, visible or invisible, they were created by him, and for him; yea, thrones, dominions, principalities and powers, these were all created by him, and for him. So, Christ is "King of kings, and Lord of lords." Rev. xix. 16. And the "Prince of the kings of the earth." Chap. i. 5. Out of his mouth goeth a sharp sword, with which he shall smite the nations, and he shall rule them with a rod of iron; as the vessel of a potter, shall they be dashed in pieces, who do not obey Him, the King of kings, and Lord of lords. This is Christ, who said, "I am Alpha and Omega, the beginning and the ending, the first and the last;" so he is over all nations, and above them all. We must understand this rod of iron, by which Christ rules the nations, is a figurative speech of Christ, who is ascended into heaven, and is at the right hand of God. All power in heaven and in earth, is given unto him, and all things were created by him, and for him; so then they are Christ's, and he hath power over all things, for all are his. So, as the Scripture saith, "By me kings reign, and princes decree justice." Prov. viii 15. But if they abuse his power, and do not do justice, as is decreed by Christ, the King of kings, and Lord of lords, the first and the last, they must feel and know the weight of his rod of iron, by which he will rule such as abuse his power. That is decreed by Him, who hath all power in heaven and in earth given to him, and rules in the kingdoms of men.

Kingston, the Eleventh month, 1687.

The Camel.

Over the arid and thirsty deserts of Asia and Africa, the camel affords to man the only means of intercourse between one country and another. The camel has been created with an especial adaptation to the regions wherein it has contributed to the comfort, and even to the very existence of man, from the earliest ages. It is constituted to endure the severest hardships with little physical inconvenience. Its feet are formed to tread lightly upon a dry and shifting soil; its nostrils have the capacity of closing, so as to shut out the driving sand, when the whirlwind scatters it over the desert; it is provided with a peculiar apparatus for retaining water in its stomach, so that it can march from well to well without great inconvenience, although they be several hundred miles apart. And thus, when a company of eastern merchants cross from Aleppo to Bussora, over the plain of sand which offers no refreshment to the exhausted senses, the whole journey being about eight hundred miles, the camel of the heavy caravan moves cheerfully along, with a burden of six or seven hundred weight, at the rate of twenty miles a day; while those of greater speed, that carry a man, without much other load, go forward at double that pace and daily distance. Patient under his duties, he kneels down at the command of his driver, and rises up cheerfully with his load; he requires no whip or spur during his monotonous march; but, like many other animals, he feels an evident pleasure in musical sounds; and therefore, when fatigue comes upon him, the driver sings some cheering snatch of his Arabian melodies, and the delighted creature toils forward with a brisker step, till the hour of rest arrives, when he again kneels down, to have his load removed for a little while; and if the stock of food be not exhausted, he is further rewarded with a few mouthfuls of the cake of barley, which he carries for the sustenance of his master and himself. Under a burning sun, upon an arid soil, enduring great fatigue, sometimes entirely without food for days, and seldom completely slaking his thirst more than once during a progress of several hundred miles, the camel is patient, and apparently happy. He ordinarily lives to a great age, and is seldom visited by any disease.

Camels are of two species. That with one hump is the Arabian camel, and is usually called the dromedary. The species with two humps is the Bactrian camel. The Asiatics and Africans distinguish as dromedaries those camels which are used for riding. There is no essential difference in the species, but only in the breed. The camel of the heavy caravan, the baggage camel, may be compared to the dray-horse; the dromedary to the hunter, and, in some instances, to the race-horse. Messengers on dromedaries, according to Burckhardt, have gone from Daraou to Berber in eight days, while he was twenty-two days with the caravan on the same journey. Mr. Jackson, in his account of the Empire of Morocco, tells a romantic story of a swift dromedary, whose natural pace was accelerated in an extraordinary manner by the enthusiasm of his rider: "Talking with an Arab of Suse, on the subject of these fleet camels, and the desert horse, he assured me that he knew a young man who was passionately fond of a lovely girl, whom nothing would satisfy but some oranges these were not to be procured at Mogadore, and as the lady wanted the best fruit, nothing less than Morocco oranges would satisfy her. The Arab mounted his heirie at dawn of day, went to Marocco (about one hundred miles from Mogadore), purchased the oranges, and returned the night after the gates were shut, but sent the oranges to the lady by a guard of one of the batteries."

The training of the camels to bear burthens, in the countries of the East, has not been *minutely* described by any traveller. M. Brue, who, at the latter part of the seventeenth century, had the management of the affairs of a French commercial company at Senegal, says, "soon after a camel is born, the Moors tie his feet under his belly, and having thrown a large cloth over his back, put heavy stones at each corner of the cloth, which rests on the ground. They in this manner accustom him to receive the heaviest loads." Both ancient and modern authors agree tolerably well in their accounts of the load which a camel can

arry. Sandys, in his Travels in the Holy Land ays, "six hundred weight is the ordinary load, et will he carry a thousand." The caravans are istinguished as *light* or *heavy*, according to the ad which the camels bear. The average load of he heavy, or slow-going camel, as stated by Major ennell, who investigated their rate of travelling ith great accuracy, is from 500 to 600lbs. urckhardt says, that his luggage and provisions eighing only 2 cwt., and his camel being capable f carrying 6 cwt., he sold him, contracting for he transport of his luggage across the desert. he camel sometimes carries large panniers, filled ith heavy goods; sometimes bales are strapped n his back, fastened either with cordage made of he palm-tree, or leathern thongs; and sometimes wo, or more, will bear a sort of litter, in which omen and children ride with considerable ase.

The expense of maintaining these valuable reatures is remarkably little: a cake of barley, a w dates, a handful of beans, will suffice, in addi- on to the hard and prickly shrubs which they nd in every district but the very wildest of the esert. They are particularly fond of those vege- able productions which other animals would never uch, such as plants which are like spears and aggers, in comparison with the needles of the nistle, and which often pierce the incautious raveller's boot. He might wish such thorns radicated from the earth, if he did not behold o camel contentedly browsing upon them; for o thus learns that Providence has made nothing a vain. Their teeth are peculiarly adapted for uch diet. Differing from all other ruminating ibes, they have two strong cutting teeth in the pper jaw; and of the six grinding teeth, one on ach side, in the same jaw, has a crooked form: heir canine teeth, of which they have two in each aw, are very strong; and in the lower jaw the wo external cutting teeth have a pointed form, nd the foremost of the grinders is also pointed nd crooked. They are thus provided with a ost formidable apparatus for cutting and tearing he hardest vegetable substance. But the camel , at the same time, organized so as to graze upon he finest herbage, and browse upon the most deli- ate leaves; for his upper lip being divided, he is nabled to nip off the tender shoots, and turn hem into his mouth with the greatest facility. Whether the sustenance, therefore, which he nds, be of the coarsest or the softest kind, he is qually prepared to be satisfied with and to en- oy it.

A Remarkable Man.—The Boston (Mass.) imes says, "There is a man residing in this city, ho came here twenty-years ago from England, nd brought with him some three hundred guineas f his own hard earning, with which he commenced usiness as a grocer on a small scale. Little by ttle he increased his trade, and at the present me he is probably worth more than any other an in Massachusetts in the same line of business. During the period of twenty-three years, he never ave a note of hand or took one; he never sued a an, and never was sued himself, nor ever called o the witness stand in any court during the whole eriod. He never was naturalized, and of course ever voted, although he has paid thousands of ollars for State and county taxes. He has been nown to buy a cargo of West India goods amount- ng to $90,000, for which he paid cash on delivery. He never deals in or drinks intoxicating liquors; ever gives a dollar for a charitable purpose where e thinks his name will appear in the newspapers, lthough he has distributed thousands to the dis- ress of his fellow-men.

The Bees of the Bible.

1. They are very numerous. Reference is made to them in almost every part of the sacred volume. Sometimes something of a swarm is found together. But generally they are referred to singly, and one after another.

2. They differ from all other kind of Bees, in that not one of them ever stings. Most bees are armed and wax valiant in fight, and can do great harm to people, even to cause the death of those they sting. But the Bible Bees never harmed a mortal. Indeed, they have prevented an incredible amount of harm to their owners. In fact, if if they were properly cultivated, so that they should every where abound, and were to be in possession of every individual, it is believed that the greatest part of the wrong, and harm, and violence, and falsehood, and misery in the world would immediately cease. That is very strange. But the Bees are certainly most wonderful peacemakers, and most wonderful agents in putting an end to all kinds of human woe. It is not doubted by those best acquainted with them, that if a family possessed a whole swarm, that is as many as the Bible recommends, that family would be one of the happiest on earth, even though they had not a dollar in the world, and knew not where they should get their next meal.

So that these Bees are a marvel in that they not only do not sting people themselves, but destroy all other kind of stings. They have been known to destroy completely the sting of remorse, the sting of anger, the sting of malice, the sting of slander, the sting of discontent, the sting of despair, &c.

3. These Bees produce a vast amount of honey. Even a solitary one of them has been known to produce sweetness enough to last a family a twelve-month and more. And the sweetness was a thousand times sweeter than that of honey or the honey-comb of other bees, and was more to be desired than gold yea, than much fine gold. Indeed, we have known a whole neighborhood sweetened throughout and in the happiest manner, by only a few of these Bees. There was honey in every heart there and honey on every lip. And

4. Which leads me to say the honey of these Bees never cloys the appetite or causes loathing, even by the most abundant use, as other honey does. In fact, the more people eat of it, the more they can, and the more they do; and though vast numbers have used this honey in the freest manner, yet those who have used the most of it have been the farthest from being sick. Indeed, these persons have enjoyed the very best of health. And this kind of honey can be recommended to any mortal that is sick, as of vast value, and with just as much propriety to all the well, in the certainty that even they shall be better.

My readers, by this time, may like to get a sight of these Bible bees. We take great pleasure in giving them the opportunity. There is such a swarm of them that we have not time to exhibit them all, and give only a few specimens:—

Be ye kindly affectioned one towards another.
Be sober and watch unto prayer.
Be content with such things as ye have.
Be strong in the Lord.
Be courteous.
Be not wise in your own conceits.
Be not unmindful to entertain strangers.
Be not children in understanding.
Be followers of God, as dear children.

It should also be said that these Bees are very fond of each other's company, so that if a man gets possession of one of them, that one is very sure to call the whole swarm—the one putting many more in his possession. That is, let a man Be a follower of God, or Be sober and watch unto prayer, and he very soon will be the owner of those beautiful and valuable creatures. And it is just as true that if he should ill-use one of them, say the first of the two last named, so that it should sicken or die, the whole swarm would sicken or die too. So that owners must be very careful of the life and health of each one of them.

It certainly cannot but interest my readers that any man can make this valuable acquisition without it costing him a penny in money. Indeed, they cannot be bought at any price in silver or gold; yet any man may have a whole swarm if he will set his heart—his whole heart—earnestly upon the matter. For it is gratifying for us to say, that news has been received, and in which the fullest confidence may be placed, to this amount, "Ask, and ye shall receive." "Ho! every one that thirsteth, and he that hath no money, come!"—*Pascal.*

Mediterranean Electric Telegraph Company.—The Mediterranean Electric Telegraph Company is on the point of despatching their cable, which is shortly to complete the telegraph communication between London and Algiers. It will be remembered that last year 110 miles of cable were sent out from England, and laid down between Spezzia and the most northern point of Corsica. For this section of the line 90 miles of cable, weighing eight tons to the mile, and containing six insulated wires were required; the remainder was taken to the straits between Corsica and Sardinia, and twelve miles were laid down there, the communication having meantime been completed along the Island of Corsica by land. The remainder, which had been sent out to secure a sufficient quantity, was then brought home (in length about eight miles) and spliced to the cable just about to be sent out. The communication being now complete from London to Cagliari in the south of Sardinia, and the line from Algiers to Cape Bonan, on the African coast, having been opened last January, nothing is now wanted to complete the work and come under the guarantee mentioned above than a submarine cable from Cape Spartiveuto, adjoining Cagliari to Bonan. This is the cable now lying coiled in the hold of the ship Result, 1700 tons register, belonging to —— Green, of Blackwall, and commanded by —— Knoll, the same gentleman who conducted the previous operation so successfully.

This cable is the largest and the heaviest, besides being the longest, ever laid down. It is 150 miles long, each mile weighing 8 tons, and the whole cable weighing 1200 tons. This is exclusive of 12 miles of lighter cable, sent with it to avoid all chance of deficiency. Its stowage demands the greatest care, owing to the enormous weight, and the circumstance that it is all in one piece. Seventy-one miles of it have been put in the lower hold, forty-two miles on the orlop deck, thirty miles in 'tween decks, seven miles in the after hold, and the twelve spare miles of what is called small cable, although it weighs five tons to the mile, is also on 'tween decks, and every one of these portions has to be shored at very short intervals, to prevent the movement of the cable. Altogether, the weight which will be sent in this vessel will be 1960 tons—a weight which Captain Kell informed us with pride, only made her draw 22 feet 5 inches of water. In laying down the last portion of the cable, that between Spezzia and Corsica, it took five days, including the stoppage that had to take place in cutting the cable, and going round to lay the short lengths between Corsica and Sardinia. It is expected that the present cable will be laid down in four days.

The Mediterranean Telegraph Company anticipate that in two years and a half they will have a

direct communication with Bombay, and thence by telegraphs already at work in the presidencies of Calcutta; and they consider this line they are just about to complete as only the preliminary step to this result. Their proposed line, joining the one at present open to Cagliari at Cape Spartivento, will first be taken to Malta, and thence direct under the Mediterranean to Alexandria. This will be an immense distance; 984 miles of submarine cable, without a station; from Alexandria to Suez, by land, 248 miles; another submarine cable under the Red Sea to Aden, with two stations, Cosiri and Liddah, 1552 miles, and from Aden to Bombay, with stations at the Kooria Moorta Islands and Rasal-had, 1000 miles.

When this undertaking is completed, the communication with Calcutta, which now takes an average of thirty-six days, will be reduced to a few minutes. Professor Faraday, about two years ago, called the attention of telegraph companies to the fact that there was great difficulty in sending any communication through a greater length of wire than 300 miles; but some time since —— Brett has been experimenting, with a view to overcome this difficulty, and has perfectly succeeded in doing so. By connecting each individual wire in this coil of six, and also those belonging to another cable intended for an American company, he was enabled to experiment on a length of 1250 miles with perfect success, and he has prepared a new instrument for use with wires of great length.—*London Daily News.*

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

THOMAS LIGHTFOOT.

(Continued from page 29.)

Thomas Lightfoot took up his abode at New Garden, and presented his certificate to Newark Monthly Meeting, of which New Garden and Kennet were then branches. The minute made on the occasion, narrates that he produced a certificate from Moate Monthly Meeting, West Meath county, Ireland, which certificate informs "that he is in unity with them, and hath a concern for the promotion of Truth, and that he hath been helpful amongst them in the discipline of the church." It also certifies that he had a "public testimony for the Truth," and was diligent in keeping to meetings when at home, attending provincial and national meetings." The certificate also mentions that his son-in-law Joseph Wiley, who, with his family, had accompanied Thomas to America, was also in unity with Moate Monthly Meeting. Of Abigail Wiley, the wife of this Joseph, we shall have occasion to speak hereafter.

Thomas Lightfoot was soon employed in religious service, and in the business of the meetings for discipline he belonged to. In 1717, he was a representative to the Yearly Meeting, and was one appointed to draft an epistle to London Yearly Meeting. The epistle from the latter meeting for 1716, had been received and read, together with several minutes on the concerns, which had engaged its attention. These had been very satisfactory to honest Friends in Philadelphia, to hear, and a portion of them will doubtless prove edifying now. From the epistle we extract the following:

"It is our hearty desire that you may be preserved a zealous people for the honour of God, and the promotion of his Truth, being more and more instrumental in his hand for the carrying on the great work of reformation he has begun on the earth. May you be exemplary in all manner of godly conversation both before the heathen and others among whom you dwell,—that many may have cause to bless the Lord on your behalf. We have herewith sent you our printed epistle and several minutes in writing, by which you may see we have had a good and comfortable Yearly Meeting the affairs of which were carried on in much love and unity, and there was a great concern in the minds of Friends, for the promotion of Truth, and that the testimony thereof may be kept up in all its branches, that our offspring may be preserved out of the many evils that abound in the world, and may be kept out of pride, and from running into the vain and foolish fashions and customs that too many amongst us are ready to follow, which often lead to greater evils. It is our tender advice that parents be good examples to their children, training them up in the way of Truth, and endeavouring early to implant good principles on their young and tender minds,—as much as may be restraining them from running into such things that tend to their hurt, and to the reproach of our holy profession. It ought to be the particular care of all those who take upon them the management of the affairs of Truth in all the churches of Christ, to rule well in their own houses, having their children in subjection with all gravity; 'for if a man knows not how to rule his own house, how shall he take care of the church of God?' Dear Friends, the good education of our children, and their succeeding us in bearing a noble testimony for God and his Truth from one generation to another, following the footsteps of our worthy ancient Friends, who are gone to rest, is of so great a moment that we ought to prefer it before all outward concerns. Our hearty desires are, that the God of all our mercies may endue you with wisdom and understanding to direct you therein, and in all other things to tend to his honour, and the welfare of yourselves and posterity."

This epistle was signed by George Whitehead and many more of the valuable Friends, who were at the time in London. The minutes adopted by the Yearly Meeting, and sent down as rules for subordinate meetings, were these three:

First. "This meeting being informed that Friends in some places have gone into the vain and empty customs of erecting monuments over the dead bodies of Friends, by stones, inscriptions, tombstones, &c., and being very desirous Friends should keep to a commendable plainness and simplicity in this, as well as other respect, it is therefore the advice of this meeting, that all such monuments as are already in being over the dead bodies of Friends, should be removed as much as may be with discretion and conveniency, and that none be anywhere made or set up by or over the dead bodies of Friends or others in Friends' burying places for time to come."

Second. "According to the primitive innocency and simplicity of Friends, it is the advice of this meeting, that no Friends imitate the world in any distinction of habit or otherwise, as marks or tokens of mourning for the dead."

Third. "That care be taken by Friends in the education of their youth, and otherwise; that they avoid all unbecoming gestures, cringings, bowings, and ceremonies in salutation, contrary to our ancient plainness and simplicity."

The first minute is interesting at this time, when many bodies of professing Friends are making discipline to sanction and encourage the erecting tombstones over the remains of the dead. The records of different Yearly Meetings show, that some professing our name, had caused tombstones to be erected in our grounds in early times, but that it was contrary to the sense of the solid substantial body of Society, which was grieved at t tendency to what they deemed in some sort ide try, and endeavoured to counteract it by kind vices and pointed directions. We find some p fessing advocates of Quakerism in the pres day, defending the ground from which this p pable departure from primitive principle sprin and holding up the practice of such, as would submit to the judgment of the body in anci times, as a sanctioning precedent for modern i tation. Among those who were gathered un the ministry of George Fox, and his spiritua illuminated fellow-labourers in the gospel of Chri there were soon found some, who abode not fai ful to that, of which they had been convinc The actions of such backsliders from the Tru whether they were the hat-wearing in time prayer of the followers of Perrot, the disciplin opposing of the disciples of Wilkinson and Sto the ranting-howlings of the Pearsons, the sup stition, pride, or loving-idolatry of the erectors tombstones in grave-yards, the ease-loving, or difference of the neglectors of family disciplin and parental restraint, form no example for t imitation of those who are genuine Quakers. T legitimate spiritual descendants of the worthi who testified alike against all these backslide will find themselves united with their ancesto in all their testimonies against error, and in su port of the Truth.

The foregoing minutes of London Yearly Me ing were grateful to the faithful members in Ph ladelphia, who had succeeded, as appears by ports from the Quarterly Meetings, in clearin their grave-yards almost entirely of those marks degeneracy, and of what they well call "vani and superstition." They recorded the substan of the minutes, and add, they were "kindly r ceived."

The epistle in reply states, that the minut were "read in much love, greatly to our co fort." After an earnest expression of unity in t concerns set forth in the epistle received, the remarks are added, "For the increase of our co fort, and confirming our hope, that Sion w yet shine, we may say we find by the accoun brought in that the endeavours of honest Frien are not slack to preserve discipline, and encoura godliness, sobriety and virtue. As we find the is some convincement in many places, and a gre increase of young people, so there seems to l occasion for increasing and enlarging our meetin houses in several places, and although some, b their disobedience and wrong liberty, give troub and raise our concern, yet there are many ve hopeful among them, and a general concern is the minds of Friends, for the encouragement the one, and reclaiming the other."

We cannot follow Thomas Lightfoot in all h religious services, but find that amongst his oth labours he was engaged in visiting the membe of his own Monthly Meeting. In the Yearl Meeting of 1718, he, with a number of Friend were appointed to revise the discipline. The commenced their labour at the time of the Gener Spring Meeting, held in Philadelphia, in the Fir month, 1719. The work was completed before th Yearly Meeting of that year, wherein the disc pline as revised was read and approved.

In the year 1721, Thomas Lightfoot, in com pany with Thomas Chalkley and William Brow visited some meetings within Maryland Yearl Meeting. Their principal concern was to atten a meeting at Bush River, of which Thomas Chalk ley writes, "A good meeting it was."

In the Yearly Meeting, Thomas Lightfoot wa appointed with two other Friends, to prepar an epistle "to the Quarterly and Monthly Mee

's of Friends in Pennsylvania, and East and est Jersey." The epistle, with the exception two or three paragraphs added after its first ding in the Yearly Meeting, was probably pre- red by him. The following are the opening ssages:

"Dearly beloved Friends, Brethren and Sisters, In the love of our heavenly Father that has en plentifully shed abroad in our hearts, and in living sense of the weighty power, and spring of vine life in Jesus Christ our Lord, this meeting rly salutes you; fervently desiring that grace, rcy and peace in our blessed Head, may be ltiplied in his churches everywhere.

"By these we signify that we have had a large, eet and satisfactory meeting; the Lord, in his finite love and goodness, having been pleased to his clouds with rain, and to let it fall upon his ritage. We have received comfortable accounts m the several Quarterly Meetings, that love d unity is on the main preserved and maintained ong Friends, and that the discipline of the urch is put in practice.

"Dear Friends, the Lord hath been pleased in infinite love to raise many up as testimony arers against the corrupt and vicious customs, actices and vain fashions of this wicked world. t us be very watchful and careful of the right ining and educating our children, in the nur- e and admonition of the Lord, and in all plain- ss, both of speech and apparel, as hath been peatedly advised ever since we were a people. hat so our children may in sincerity walk in the eps of the righteous, who are gone before them, d follow them as they have followed Christ, and e Lord may have faithful servants amongst us m generation to generation."

The epistle then gives excellent advice respect- g marriages, and the avoiding strong drink. It pecially warns Friends from taking drams, the quency of taking which insensibly steals upon e unwary. After showing how the man is de- aded by intoxication, becoming noisy and im- udent, reference is made to the different car- ge of the true Christian. "The awful, prudent d watchful conduct of our Friends in early days, d, and such always will, preach loudly, and ex- nd silently to the notice of many."

Advice is then given to "induce a religious servance of contracts, bargains and promises, hich we earnestly desire may not be unadvisedly ade nor unjustly broken or avoided by fraud or ceit." Friends are then advised to make their lls whilst in health, to continue the ancient use certificates, to keep the authority of all meet- gs in the wisdom of God, and unity of his blessed irit, that poor Friends be helped and not al- wed to look for relief to people of other profes- ons, and that no Friend "suffer romances, play- oks, or other vain and idle pamphlets in their uses or families, which tend to corrupt the inds of youth, but instead thereof that they ex- e them to the reading of the Holy Scriptures, d other good and religious books."

(To be concluded.)

The Ship Canal, uniting the Atlantic and Pa-ific.—The cost of uniting the Atlantic and Pacific eans, by a ship canal, through the Atrato route, cently surveyed, is estimated at $150,000,000. his route enters the Atrato river on the Atlantic de, about 150 miles below Aspinwall; passes up e river 62 miles, to its junction with the Truando, llows the Truando 38 miles, after which it makes direct cut to the Pacific, a further distance of 25 iles, making the whole canal 125 miles in length. he river Atrato is 300 miles in length, a very large, oad stream, with sufficient water to float a navy. It discharges its waters by nine separate channels into the Atlantic at the Bay of Candelaria, which would form a fine harbour on the Atlantic side. It is proposed to block up seven of these mouths, so as to force the waters of the river into two principal channels. The remainder of the 62 miles, averages about 75 feet in depth, the deepest soundings being 120 feet, and the shallowest 58 feet. It ranges in width from one quarter of a mile to two miles, averaging nearly one mile. The Truando is to be dredged in a deepening channel, as it is ascended, so as to make its waters flow back, carrying with them an additional volume from the main river, which is to form the supply for the cutting to the Pacific. On leaving the Truando, there is a straight cut of 25 miles to the Pacific, through solid rock, three miles of which will have to be tunnelled. On reaching the Pacific, a natural basin called Kelley's Inlet, can be deepened into a very good harbour, while all along the Pacific coast there are fine anchorage grounds. The western termination of the route is in latitude 6 deg., 57 min., 30 sec. North. The canal is to be 300 feet wide and 30 feet deep. The parties engaged in the enterprise, gentlemen of New York, intend to ask our government to authorize an official survey to confirm the results of the private survey.—*Ledger.*

For "The Friend."

The following graphic description of a scene which many of the readers of "The Friend" will recognize, is offered for publication, if the editor thinks it suitable for that paper. The responsibility of making it public is assumed, without the knowledge of the author.

A RHAPSODY ABOUT A WATERFALL.

Wild mountain river! rushing down
Thy rocky bed from steep to steep,
And lifting up thy amber crown
Of triumph, at thy grandest leap;
Showers of glittering diamonds on
Thy falling robes of snowy foam,—
What pen or pencil can express
Thy ever varying loveliness!
Or of thy wondrous pathway tell,
Through mountain gorge, and wooded dell!—
Now race thy floods in tumult down,
And now meandering, they roam
The widening channel o'er,
The limpid waves revealing,
A levelled rocky floor;
Into quiet bays then stealing,
With a weedy margin dallying;—
To another shelving verge,
Then all thy forces rallying,
Down with rebounding surge
They plunge into the abysm.
With sullen hollow boom,
Resounds the echoing chasm
Like a wail for thy fearful doom—
Yet throwing up thy wreaths of spray,
To catch a glancing sunlight ray,
That a rainbow arch may glow
Like smiles of hope upon thy brow.—
Here, a refluent billow,
With graceful, easy swell,
As the lithe serpent's motion,
Or lulling heave of ocean,
Makes a rolling crystal pillow
Where the Halcyon might dwell:—
There an eddying whirl
Plays mad pranks with drift-wood;
With plunge and toss and twirl,
As suits the varying mood
Of the ever restless flood.
Then urging on its downward course
The torrent gains a mightier force:
Now the hurrying waters press
Between their adamantine walls,
Inky black, and fathomless—
Like death's cold current deep and drear,
Yet as the living waters clear:—
Here, laughing in their sunlit sheen,
There, darkling down the dim ravine.
Thus thy linked waterfalls
Each to each resounding calls;
With various tones, yet all sublime,
And mingling in one glorious chime.

In strange accord the scene around
Makes all things seem enchanted ground:
Such as in the olden time
Would ring in some old poet's rhyme,
As sporting Naiads chosen haunts,
Or scene of wood-elve's moonlight dance.
This bold majestic masonry
Of rocks, thy floods have blindly wrought
In forms of wondrous symmetry:
A theatre—where wanteth not
The rounded tower or column,
Or arches grand and solemn;
The graded stair, and corridor,
Or yet the even paved floor;
(As of some citadel o'erthrown—
The hoary ruins widely strown.)
And hanging from their frowning brows
A fringe-like tracery of boughs;
Trees, from the upright strained and torn,
The lofty cornice to adorn;
Long plumes of fern and hair-bells blue
Inwoven with the velvet moss,
Have lent their grace of form and hue
The mural chasm to emboss—
A brooklet's silver thread is seen
Here spilling o'er the dizzy steep
Scattering rain-drops in its leap,
Like crystals on the living green.
Climb we o'er the steep to rove!—
Amid a stately hemlock grove,
Colossal shafts that wave on high
Their dark green crests right gallantly;
Trees haply with the hills coeval,
And patriarchs of these woods primeval.
From the brink a downward glance—
There the golden waterfalls
Are leaping down their shadowy halls,
In their grand and brilliant dance!
A narrow arch of bluest sky
Is smiling o'er their revelry
Between the opening chasm walls.
Oh beauty, rare and magical,
How does thy spell each sense enthrall!
Then speed thee on enchanting river!
Rushing down thy steeps forever:
Ever ringing to the sky,
Thy notes of heaven-taught minstrelsy.

For "The Friend."

Providential and Maternal Care.

(Concluded from page 12.)

In 1688, our Friend removed to Stockport, and in this and the next year, he remained pretty much at home. In the latter part of 1690, he set out with a concern to visit Friends at London, where he staid some time; and, proceeding thence for the west, was occupied till the following spring in religious services in many places, when he returned to his residence in Stockport. His memorandums appear to have been closed with the preceding account, after which his travels were much limited to the Circular Meetings, and to the Quarterly and Monthly Meetings of which he was a member. His Friends testify that "he was an elder worthy of double honour, having obtained a good report, not seeking glory of men, nor lording it over God's heritage, but as an ensample to the flock, not forward to appear in public service; in doctrine sound, clear, instructive and uncorrupted; his openings were fresh and lively, and his manner of expression excellent. He delighted much to wait in silence for the pure openings of the Word of life, whereby he became strong in the Lord, and in the power of his might, sounding forth the word of reconciliation by Christ our Lord, and salvation through his eternal Spirit; and was often fervent in prayer and supplication, and drawn forth in a sweet and heavenly manner, to the joy of the sincere in heart. He was signally qualified in our Monthly and Quarterly Meetings to speak a word in season for the promotion of peace, good order and discipline in the church. In his private

capacity his countenance was solid, his deportment grave, but intermixed with a familiar manner of expression, that rendered his company pleasant to all with whom he conversed. Even when old age and infirmities attended, his understanding was clear, and many sweet and heavenly expressions dropped from him, concerning the largeness of the love of God to his soul. He often said to this purpose, that his work was finished, and he was freely resigned, feeling nothing but peace from the Lord upon his spirit. As he lived, so he died, a servant of the Lord and his people, on the 6th day of the Twelfth month, and was buried on the 9th of the same, in Friends' burying ground at Stockport, in the year 1741, in the ninetieth year of his age, and was a minister about sixty-five years."

What a dignified character did the Truth make this Friend, cast out upon the world, almost in childhood, and for several years having none to extend immediate care for his everlasting welfare; and what a glorious end did he come to, after having filled up the measure of affliction and suffering, in faithfully following the Lamb of God whithersoever he led him. No worldly fame, or honour, or wealth, is worth being put in competition with such an inheritance. May the Lord in mercy look down with compassion on the destitute, and on those who are surrounded with abundance of outward means, and by his everlasting power, and mercy and love compel them to come into his kingdom, and employ them in spreading the government and cause of the Son of God.

Religious Destitution in South America.—G. D. Carrow, Methodist minister at Buenos Ayres, says, "After passing the town of San Jose de Flores, there is not, with the single exception of the little Scotch chapel lately completed, one building devoted to the public worship of God, on the long line of country stretching from a point within two leagues of the gates of this city to the base of the Andes, a distance of at least six hundred miles. You may easily judge what must be the moral character of a population utterly destitute of religious privileges. The natives retain a few of the Roman Catholic rites, but are in a state of the most deplorable ignorance; and without check of any kind upon their inclinations, they are living in a state of nature. Excepting the confused notions they have of the existence of one God, there is not, I verily believe, on all the African continent, a tribe or nation in a more abject state of heathenism than are the mixed race of men inhabiting these old grounds of the Spanish conquerors."—*Presbyterian.*

Pumpkins and Squashes of American Origin.—Dr Harris, of Harvard University, says: "Accident led me, some four years ago, to undertake the investigation of the history of squashes and pumpkins, which has led to quite interesting results. Most of the older and well-known species and varieties were by modern botanists supposed to have come originally from Asia, and particularly from India. This I have proved to be an error, and have shown that these fruits were wholly unknown to the ancients, no mention being made of them in the Scriptures, nor by Greek and Latin authors; the writers of the middle ages, while they describe or take note of other cucurbitaceous plants, entirely omit pumpkins and squashes; and these did not begin to be known and noticed in Europe till after the discovery of America. Early voyagers found them in the West Indies, Peru, Florida, and even on the coast of New England, where they were cultivated by our Indians before any settlements were made here by the Europeans. The old botanists who flourished during the first century after the discovery of the New World, or the West Indies, began to describe them for the first time, and give to them specific names, indicating the Indian (American) origin. Here arose the mistake of modern botanists in referring these plants to the East Indies and to Asia. From a study of the history of the plant, I went next to a study of the species with particular reference to their botanical characters, and to this end have been cultivating and examining, every year, all the kinds accessible to me. I think I have established the facts that all the fruits known by the names of 'pumpkins' and 'squashes' are of American origin; that there are three distinct groups of them—the first including summer squashes and pumpkins, with deep, five-furrowed fruit stems; and the third, the winter pumpkins and squashes, with short, cylindrical and longitudinally wrinkled (but not five furrowed) fruit stems. The last group was, probaly, originally confined to tropical and sub-tropical parts of the western side of this continent, from California to Chili. The most esteemed varieties now cultivated in New England belong to this group, and the best of them are the 'autumnal marrow' and 'acorn squashes.'"

For "The Friend."

Guidance of the Spirit in Support of Church Order.

The support and right administration of the discipline and order which Christ has ordained in and for his church, has been regarded by substantial Friends, as indispensable to the health of the members, and a duty which they have felt incumbent on them. Some have been peculiarly qualified by the spirit of Truth, for maintaining church government, and their clear understanding and firmness in the meekness of wisdom, for the support of the discipline, has been a blessing to the members of the meeting to which they belonged. Young persons have been instructed by their example and counsel, and have been enlisted in the same cause, so that they have become "helps in government," a strength to their older friends, on whom the weight of the ark rested; and when these have been removed by death, it has been placed on the shoulders of a succession prepared in the school of Christ, and thus the light and glory of the militant church under its blessed Head, has been shed on one generation after another. True Quakerism has been sustained, its principles and testimonies upheld, by the men and women who have thus conscientiously adhered to the order and the discipline of our religious society.

After making a visit to the Friends on Long Island in 1725, Thomas Chalkley wrote an epistle to the Quarterly Meeting of Flushing, in which he says: "Now that which is on my mind to your Quarterly Meeting, is after this manner, concerning the government of the church of Christ, of which church he is the Holy Head and law giver; therefore we are to seek and wait for counsel and wisdom from him, in all our Monthly and Quarterly Meetings, for the well ordering of our little society, which is growing and increasing in the earth, and also in your island, notwithstanding the invidious attempts of some men of corrupt minds; and it *will grow and increase more and more, as we keep our places, our heavenly places in Christ Jesus.* Dear Friends, the good order of Truth, and government of Christ in his church, *is a great help to us and our children, when carried on in Christ's Spirit;* pray observe or mind that. For if our order and church government be carried on in the spirit of man, as he is mere man, though he is ever so crafty, or cunning, it will do more hurt than good in the church of Christ. Christ's spirit must govern Christ's church; and when and where that is over all, then and there Christ's church and kingdom exalted, of whose kingdom and peace there wil no end; and happy will all those be, whose is in it.

Moses, the man of God, governed in the Jew church in the spirit of God; and when he fo the work too heavy for him, the Lord put spirit on seventy more, who were help-meets the government; so that it was God's spirit governed; while that ruled, all was well; but w they went from that, they fell into error and obedience. At length the Messiah came; and governed his own little flock himself; and w he ascended up on high, he promised his sp should be with and in his church forever, and their holy guide into all truth, in which he wo also comfort them. Christ fulfilled this his mise; for when his disciples waited at Jerusal to be endued with power from on high, accord to the advice of their Lord, they were filled w the gift and grace of the Holy spirit; and wh the brethren and elders met together about affairs and government of the church, they g forth rules and orders from that general meet to the particular ones; and the Holy Ghost sided amongst them, which they signified to other meetings, saying, 'It seemed good to Holy Ghost and to us, to put you in mind of su and such things.' And while this Holy Ghost, Spirit, governed in the primitive Christian chur all was well; God and Christ were glorified, a his church and people edified; but by going fr that the apostacy came in.

Wherefore dear friends, keep close to the Spir power, light, and divine life of Christ Jesus, your Monthly, and Quarterly Meetings, for t government of the church, as well as in yo meetings for the worship of Almighty God; for we go from that, he will go from us. The tes mony of Jesus, in the spirit of prophecy, opens me after this manner: that *if our society kee and lives up to the spirit and truth of Chri which hath been manifested to our forefathe and to us also in this age, the great Lord of will prosper his work in our hands, and bl both us and our children, as we and they he therein.* And as we have kept close to this o heavenly guide, how hath the Lord sweetly ma fested his *love and power* to us in our meetin for the well-ordering of our society; which ma times hath filled our hearts with pure praises, a holy thanksgiving, to the high and lofty One w inhabits eternity, and dwells in the highe heavens, and is light forever; to whom, with t Lamb of God, who takes away the sins of th world, I recommend you, my dear and well-b loved friends, brethren and sisters in Christ, wi my own soul. T. CHALKLEY."

The fundamental cause of the degenerac which, it is to be feared, has overspread hundre in our once greatly favoured society, is the reje tion of the immediate government of the Ho Spirit, first, in their individual capacity, takir the direction of themselves into their own hand "and hewing out to themselves cisterns, broke cisterns, that can hold no water;" in the secon place, managing the affairs of the society accor ing to their own policy, not waiting upon the Lo for the leadings and putting forth of his spirit, ar thereby "changed their glory for that which do not profit." It was not so in the primitive churc Speaking of the diversities of gifts dispensed the different members, the apostle says, "all the worketh that one and the self-same spirit, dividi to every man severally as he will." "For b one spirit are we all *baptized into one bod* whether Jews or Gentiles, bond or free, and ha been all made to drink unto *one* spirit." Aft

:ribing the members constituting the body, showing the harmony that is to subsist among hm, he says, "God hath tempered the body together, having given more abundant honour to t part which lacked, that there should be no ism in the body; but that the members should re the same care one for another. And whether member suffer, all the members suffer sh it; or one member be honoured, all the mbers rejoice with it." This was the heavenly mony and fellowship, which the apostle labourto bring the Corinthians into. Now no Christ- is profess more fully than we do, that the fulment of these scriptures is to be constantly ght after, and may be obtained—that Christ is head, and if we are his disciples we are bapd by his spirit, and made members of the one ly, in which there is to be no schism. And if are thus baptized, and do drink into this one rit, we shall yield to its divine government, l be constrained to labour to keep one another the unity and communion of the Holy Ghost, l to draw others into it. In a steadfast adrence to the discipline of the church, under the idance of this divine Spirit, we shall feel bound testify against error, and to maintain the preus doctrines and testimonies of the gospel as y have been committed to our forefathers and the faithful members of the society from its . Our deportment before the world, and our ard to the reputation and rights of each other, st be consistent with our faith, if we support principles as they ought to be. The apostle nted out to the Philippians, the importance of s consistency: "Only let your conversation be it becometh the gospel of Christ; that whether lome and see you or else be absent, I may hear your affairs, that ye stand fast in one spirit, h one mind, striving together for the faith of gospel; and in nothing terrified by your adsaries; which is to them an evident token of rdition, but to you of salvation, and that of God. r unto you it is given in the behalf of Christ, only to believe on Him, but also to suffer for s sake." This is as essential for us as it was the church in that day.

THE FRIEND.

TENTH MONTH 13, 1855.

It is now fully ascertained, that the yield of ins of different kinds throughout the United tes, is fully up to the average crop, and as a ch larger breadth of land was sown than ordiry, the amount of cereals in the country is much ater than will be required for the sustenance of inhabitants. The long-suffering mercy of our avenly Father in so bountifully providing for wants of his dependent but forgetful creatures, ls for a grateful return, in a closer observance his will, and a renewed endeavour to live conmable thereto. Last year the withholding of n, until the earth was parched, and its fruits hered and died, forced upon all, some consideion of the helplessness of man, and the sufferg to which we would soon be reduced, notwithnding all our boasted power and ingenuity, uld He see fit for the chastisement of our sins shut up his tender mercy, and no longer comnd the earth to yield her increase. The shadow want fell upon some parts of the land, and the crease of price in the necessaries of life, brought nt and distress into the abodes of the poor, while ny who could not be classed with them, were rdly pressed to make the means at their comnd, supply the food and clothing indispensable for themselves and their families. But it is to be feared, that this gentle warning is too much unheeded, and that, with the return of an abundant harvest, there is no more disposition than before in the multitude, to remember and honour the bountiful Giver, or to walk in the ways of his requiring. Is there not therefore reason to apprehend, that other and severer punishment may yet be meted out to us, in order that the people may learn righteousness while the judgments of the Lord are in the land?

There is a deficiency of near twenty million of bushels of grain in France, and the harvest has been hardly an average one in many parts of Germany, so that all that can be spared from the United States, will be wanted to feed the multitudes in Europe. This deficiency of breadstuffs, together with the dreadful losses and misery attendant on the war, must needs bring sorrow and suffering into thousands of families, and, we should hope, would incline the hearts of all connected with the governments of the belligerent courts, to seek reconciliation, in order to put a stop as speedily as possible to the manifold evils of their present irrational contest.

In the meantime the demand from abroad, must keep up the prices of flour, corn, &c., in this country, and there is reason to fear the coming winter will give rise to scenes of distress, similar to those which were witnessed in our large cities last year. There will certainly be sufficient want to call forth the sympathy and the benevolence of all who have the means and the hearts to give.

Notwithstanding the wealthy harvest that has been housed, the price of flour has fallen comparatively but little, and the tendency is rather upwards.

From one of our exchanges we take the following extracts, showing the range of prices of flour in this country, for the last sixty years.

"In 1796, flour sold in our market at $15. High figures ruled, with occasional fluctuations, up to 1801, when sales were made at $11.25. From this period until 1805, the range was from $6.50 to $7.50. In 1805 sales were making for a short time at $15, and from this period until 1810, flour was selling at $6 to $8.25, excepting 1810, when $11 to $12 were obtained. From 1812, and during the war, sales were made at $7.75 to $10.50: and $11 was the highest figures obtainable in 1813. In 1817, $14.25 was the highest price obtained, and in 1818, $10.75. From that period up to 1836, prices ruled comparatively low, not rising above $9, and falling as low, in 1826, as $4.50.

"For a short period, during the years of 1846 and 1847, while the great famine prevailed in Ireland, prices reached as high as $9.87½.

"In 1835, sales were making at $11 to $11.75 per barrel. In 1838 prices fell to $8 and $8.75, and from that on to 1853, they again ruled low, with generally an abundant supply. The lowest figures, in 1840, were $4.25, and in 1843, $3.75. From this on for several years, prices were not much above $6.12½, nor below $4. In 1854, or since the war in Europe, there has been generally a good demand, with occasional fluctuations. In the spring of 1855, sales were making at $8.50 to $9. Since then, there has been a general advance, and active demand, until it reached $10.87, which is the highest price obtained since 1837."

SUMMARY OF EVENTS.

EUROPE.—News from England to Ninth month 22d. No intelligence of moment had been received from the Crimea, since that announcing the destruction of the south side of Sebastopol. So far as appears, there had been entire inaction in the camp of the allies, for ten days succeeding that event, and the Russians had not been molested in their occupation of the north side. No statements had been received in England of the actual losses sustained by the assailants, in the late great struggle. A Russian account says, that the garrison lost 2500 men on the last day of the bombardment, and that the loss on the day of the final assault did not exceed that number. Gen. Pelissier telegraphs that he found in Sebastopol 4000 cannon, 50,000 cannon balls, and, notwithstanding the explosions, large stores of gunpowder. It is also stated that some of the forts were left uninjured, and that part of these have been since destroyed by the allies. It was reported that the Emperor of Russia accompanied by the three Grand Dukes, had left St. Petersburg, for Moscow and the Crimea. Troops are being hurried to the Crimea, from France. The numerous transports assembled at Marseilles and Toulon, had been ordered to proceed direct to their destination, without stopping at Constantinople.

Western Europe begins to feel symptoms of pressure in its monetary and commercial relations.

The deficiency in the wheat harvest of France, is estimated at about 18 millions of bushels; or one-twelfth of the whole. The wheat crop in England, is said to be rather beyond an average.

AUSTRIA.—So soon as the Emperor received the tidings of the capture of Sebastopol, he ordered his representatives at the English and French courts to present his warmest congratulations to Queen Victoria and the Emperor Napoleon. The cholera prevails in Vienna, and other parts of the Empire.

RUSSIA.—The Emperor states that he is firmly resolved to accept no conditions of peace whatever, which should be derogatory to Russia as a great power. In St. Petersburg, salt and other foreign commodities had reached enormous prices. For the staple products of flax, hemp, linseed and other raw materials, there were no purchasers. Many more troops had been ordered to the Crimea. There is said to be great difficulty in providing the forces in that quarter with provisions and supplies, on account of the great distance overland, by which they must be sent. The German papers, however, assert that the Russian army is still abundantly supplied with food. The harvest has been plentiful in Russia.

Liverpool Market.—The cotton market has been dull, and prices have given way from ⅛ to ¼d. The stock in port was 547,000 bales, of which 340,000 were American. The flour market was firm, with an upward tendency. Western flour was quoted at 38*s.* to 39*s.* Southern, 38 to 40*s.* Consols, 90¼.

SPAIN.—Prosperity appears to be reviving in Spain despite, the late troubles. The good effects attending the recent energetic action respecting the church property, have already manifested themselves. The sales of the real estate, &c., belonging to the church, had been well attended, and much larger prices had been obtained than was anticipated.

HOLLAND.—The opening of the Dutch Chambers took place at the Hague on the 17th. The King, who was accompanied by Prince Frederick of the Netherlands, read a speech, in which he announced that the relations of Holland with other powers were distinguished by sentiments of friendship and good will, and that a strict neutrality would be continued during the present war.

ITALY.—The cholera has been committing terrible ravages in Florence. No less than 11,000 persons, it is stated, were carried off by it, in the course of the Eighth month. The usual population of the city is 100,000, but it had been reduced to 60,000 by death and removal.

SOUTH AFRICA.—Capetown dates to Eighth month 15th have been received. The papers state that the efforts for the cultivation of sugar at Natel have met with the most complete success. Commercial affairs are more promising than for years past. The country is now perfectly quiet.

BRITISH INDIA.—A formidable insurrection had broken out in Northern India, among the Santhalls. The insurgents had about 30,000 men in the field, which, divided into bands, were ravaging the country to the south-eastward. There was no doubt of their defeat and dispersion, as soon as the regular forces could be brought to bear upon them. No adequate motive for the outbreak is known, beyond the usual hatred of an oppressed people to their oppressors.

UNITED STATES.—The amount in the U. S. Treasury, on the 30th ult., subject to draft, was $21,769,000.

Massachusetts.—By the late census, it appears that the cities and towns have increased largely since 1850. The population of Lowell is 37,533, an increase of 4170; that of Charlestown 21,742, an increase of 4526; Cambridge has 20,473, an increase in five years of about 33 per cent.; Taunton 13,750, an increase of 3307; Fall River has 12,680 inhabitants, including 50 coloured persons and 7 Indians.

Philadelphia.—The law of the state for restraining the sale of intoxicating drinks, went into operation on the 1st instant, but as yet has been little regarded by the thousands of venders and tavern-keepers on whom it was intended to operate. They have formed what is called a liquor league, in order to sustain each other in opposition to the law. Some arrests of offenders have

been made, and the parties held to appear at the present term of the Court. It will probably soon be decided whether the law can be enforced. Some effectual remedy for the evils of intemperance, is greatly needed in this city. *Weather Statistics.*—The average temperature of the Ninth month was 67½ degrees, which is 2° below the Ninth month of last year, and 2° higher than the average of the last thirty years. The highest was 91° on the 12th, and the lowest 47° on the 20th. The amount of rain, 4 inches. At Paoli, the average temperature was 65½°, and the amount of rain 2.87 inches. Mortality last week, 174.

Utah.—Accounts have been received from Salt Lake City, to Eighth mo. 15th. The injuries inflicted by the grasshoppers, do not appear to be so serious or general as was feared. The wheat and oats are deficient, but the corn and potatoes promised well. Salt is now gathered in immense quantities from large lakes, which, during high water, form part of Great Salt Lake. After the water recedes, the salt remains on the ground from three to six inches deep, at a distance of two miles from the lake. The salt is clean, white and coarse.

Indian Battle.—A letter in the St. Peter's Minnesota Courier, dated Northern West Port, Redwood states that a desperate battle was fought on the 21st ult., between the Chippewa and Sioux Indians, in which 77 Sioux were killed and 17 wounded. Only 4 Chippewas were killed.

Schuylkill County.—A fire damp explosion occurred in one of the mines on the 5th inst., by which two persons were killed, and another much injured. Our anthracite mines have hitherto suffered but little from fire damp.

Miscellaneous.—Tunnelling Chicago River.—The Chicago (Ill.) Tunnel Company have employed Edwin H. Tracey, of New York, to superintend the prosecution of their work, and intend to commence operating forthwith.

A New Shot Tower—Two hundred feet in height, and constructed entirely of iron, is about being built on Centre street, New York. It is to be sufficiently strong to bear a weight of five tons at the extreme top.

A Waterspout of a destructive character occurred near Massling, in Germany, on the 5th of Ninth mo. Bridges, mills and houses were destroyed. There were from 70 to 80 persons missing, and 40 persons had already been found drowned.

A Scientific Veteran.—The venerable Alexander Humboldt celebrated his eighty-sixth birthday on the 14th, ultimo, in the full enjoyment of all his intellectual powers.

A Record of Horrors.—From Lloyd's forthcoming Steamboat Directory, says the Cincinnati Gazette, we learn that since the application of steam on the Western waters, there have been 39,672 lives lost by steamboat disasters, 381 boats and cargoes lost, and seventy boats seriously injured, amounting in the aggregate to the enormous sum of $67,000,000.

Curious Discovery.—Berthollet, a young French chemist, has made the discovery, that alcohol can be procured directly from olefiant gas, which can be extracted in large quantities from coal.

Rapid Growth of Chicago.—Two thousand seven hundred new buildings have been or are being erected in Chicago, Illinois, during the present season.

The Crimea.—Previous to the present desolating invasion, this peninsula had a population of about 200,000. It contains upwards of nine thousand square miles, being larger than the State of Massachusetts. The climate is mild, and the soil mostly fertile.

A Relic of the Past.—A man, who was recently digging a cellar at Portage Lake, Michigan, found a mass of copper, weighing 1276 pounds, which bears evident traces of having been beaten and worked, until the rock was entirely separated, leaving the pure mass of copper. There are no indications of copper in the vicinity where this mass was found.

Pure Native Iron, the existence of which the scientific world has been disposed to doubt, has recently been found in Liberia.

An Ancient Grape Vine.—One of the curiosities of Paris, is the enormous vine which ornaments the court of a house in the Rue des Malais St. Germaine. It is said to have been planted by Racine, and supposing that he did it in the last year of his life, the vine must be now about 156 years of age, as that celebrated writer died in 1669. It is this year in a flourishing condition, and covered with fruit.

Provisions and Ammunition.—It is said that the belligerents have been and still are drawing very large supplies of provisions and ammunition from the United States. The thing has been managed very quietly, but every powder mill in the United States has been for months constantly and most fully employed, and that article has been sent by whole cargoes to Europe. Saltpetre has become very scarce, in consequence of the excessive consumption for making gunpowder.

A Remunerative Railroad.—The receipts of the Galena and Chicago (Ill.) railroad have been over $1,200,000 for the past six months—enough, after allowing 50 per cent. running expenses, to pay a half-yearly dividend of 11 per cent. on the cost of the road, $500,000. The length of the road is 221 miles.

The Pope is suffering from an incurable disease, and it is said Louis Napoleon has his eye upon the Papal chair for his cousin, Lucien Bonaparte, son of Charles Louis Bonaparte, who is to be made a Cardinal.

Great Sale of Wool.—Five hundred thousand pounds of wool were recently sold in Troy, N. Y., by Hebrington & Warren, to an Eastern merchant, for $200,000.

RECEIPTS.

Received from W. B. Oliver, agt., Mass., for N. Breed, $2, vol. 28, for Y. Meaden, $2, vol. 29, for A. Keene, $2.12, to 3, vol. 29; from John Embree, per G. B. Allen, $2, vol. 29; from Sarah Rhoads, $2, vol. 29; from A. Dirkin, Eng., 10s., and for Jonathan Harris, Jonathan Harris, jr., Jos. Harris, 10s. each, vol. 29, Wm. Wilson, 10s. to 42, vol. 29; from G. M. Eddy, agt., $2, M. Eddy, T. K. Wilbur, Benj. Tucker, $2 each, vol. 29, for Gideon Wilbur, S. and J. Tucker, $2 each, vol. 28; per J. Penrose, O., from Thos. Plummer, M. Gifford, Richard Penrose, $2 each, vol. 28; from John Burgess, $2, vol. 29; from Dr. J. Huestis, agt., O., $2, vol. 29, for Elijah Hiatt, $2, vol. 29; from Geo. Harrison, agt., Manchester, Eng., £12 13s.

An adjourned Meeting of "The Association of Friends for the Free Instruction of Adult Coloured Persons," will be held on Sixth-day evening, Tenth month 19th, 1855, at 8 o'clock, in the third story room of Friends' Bookstore, No. 84 Arch street.

A general attendance of the members, is particularly requested, and other Friends, who feel an interest in the object of the Association, are also invited.

CHARLES J. ALLEN, Sec'ry.

WEST-TOWN BOARDING-SCHOOL.

The winter session of the School will commence on Second-day, the 5th of Eleventh month next. The pupils will be conveyed from the city, by railroad, to West Chester, where conveyances will be in waiting to take them to the School, on the arrival of the morning and afternoon cars, on Second-day, the 5th, and Third-day, the 6th of Eleventh month. The children will get their baggage the day after their arrival. The cars leave the depot, south side of Market street, above Eighteenth, (formerly Schuylkill Fifth street,) at half past 7 o'clock, A. M., and at half past 3 o'clock, P. M. The agent of the school will be at the railroad depot on Second and Third-day *afternoons*, and will furnish pupils with tickets, and accompany them to West Chester. Those who go by the *morning* train will be furnished with tickets by a person in attendance. To those who procure tickets as directed, the fare from Philadelphia to the School, including baggage, will be one dollar, which will be charged at the School. All baggage should be distinctly marked West-town, and with the name of the owner, and should be sent directly to the depot.

The West-town office is at Friends' Bookstore, No. 84 Arch street, where all small packages for the pupils left before 12 o'clock *on Sixth-days*, will be forwarded. *All letters* for the pupils and others at the School, should be sent by *mail*, directed to *West-town Boarding-School, West Chester P. O., Chester Co., Pa.* Packages should be distinctly marked and put up in a secure manner, so that their contents will not be liable to be lost by handling. The stage will leave West Chester for the School, during the *winter session*, on Second, Fourth, and Seventh-days, on the arrival of the *morning* cars from the city, and from the School to West Chester on the same days, to meet the morning cars for Philadelphia. The fare for each passenger to and from West Chester by the stage, will be 25 cents. When special conveyances at other times are provided at the School, an extra charge will be made.

West-town, Tenth mo., 2d, 1855.

INDIAN CIVILIZATION.

A man Friend is wanted to assist on the farm at Tunessassah, and to aid in carrying out the concern for the improvement of the Indians.

Application may be made to JOSEPH ELKINTON, 377 S. Second street.
THOMAS EVANS, 180 Arch street.

Philad., Tenth mo., 1855.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in the Institution.

Application may be made to either of the undersigned members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS, } Philada.
SAMUEL BETTLE, JR. }

MARRIED, at Friends' Meeting, Frankford, on Fifth day, the 4th inst., WILLIAM BIRDSALL, of New York, to MARTHA S. NEWBOLD, of the former place.

DIED, on the 11th of the Ninth month, 1855, SAMUEL HILLMAN; a member and minister of the Northern District Monthly Meeting, Philadelphia, aged 61 years. Having been brought under religious exercise in the early years of her life, and yielding obedience to the gentle speaking voice of the Shepherd of Israel, she was enabled to make many sacrifices, and became an example to her young friends, of simplicity and consistent walking. Endued with a good understanding, sanctified the power of Divine grace, in process of time she became qualified to exercise a sound judgment in the affairs of the church, to the strengthening and comfort of the burden bearers, and in the right administration of the discipline. Believing it to be the design of our blessed Master, if she continued faithfully to follow the leadings to call her into the ministry, she was graciously humbled under a sense of the awfulness of the work, and passed through many deep baptisms, preparatory to entering thereon. She first appeared as a minister in the year 1830, while accompanying our late Friends George and Ann Jones, of England, in visiting some of the meetings in New Jersey. The gift committed to her was occupied with godly fear, and to the edification of the sincere-hearted, her communications being sound and clear in the doctrines of the gospel, as held by the religious Society of Friends. She was unmoved by the spirit of the errors attempted to be brought into the Society, for having experienced the work of sanctification, she knew the voice of her Saviour in whom she fully believed, and was enabled by Him to detect the fallacy of the pretended increase of light, that leads away from the faith of our forefathers in the Truth. In this line of the present day, she faithfully bore her part, although suffering from weakness and disease, she often endeavoured to cheer her friends to hold on their way without faltering, believing that the Lamb and his followers would finally have the victory. She travelled but seldom abroad in religious service, beyond the limits of her own Yearly Meeting, but frequently attended meetings in the neighbourhood of the city, to the satisfaction and encouragement of Friends. In the last two months of her life, feeling that there were some debts of this kind undischarged, she was drawn, in the openings of Truth, to attend several meetings, and to visit some individuals under affliction, which yielded her much peace, and in which there was an enlargement in the work of the gospel, which showed that her lamp was trimmed, and her vessel kept supplied with the heavenly oil. Her last sickness was short, being of but three days' continuance. She had long suffered from disease in the chest, which, with the weight of religious exercise she passed through, had undermined her health and greatly reduced her strength, so that her frail tabernacle soon sunk under the attack of which she died; yet her mind remained unclouded to the last, and being sustained by her divine Master, under much bodily suffering, she gave evidence that she was settled on the Rock of ages, the foundation of the righteous every generation. She had at different times expressed her belief, that her release was not far distant, and a few hours before the close, on its being remarked to her that she was about to enter into her heavenly rest, she replied, "Yes, I have loved my Saviour, and He does not desert me now." She thus laid down her life in peace, and, we believe, has her portion among the children of the first resurrection, the ransomed and redeemed out of every nation, who are forever praising and magnifying the Lord God, and the Lamb who has washed them, and made their garments white in his own precious blood.

——, on the 11th of Ninth month, after a few days illness, at the residence of his mother Tacy Hall, ROBERT HALL, an esteemed member of Somerset Monthly Meeting, Belmont Co., Ohio, in the 45th year of his age. This sudden removal from comparative health, has caused many of his friends deeply to mourn his loss, yet not without a comfortable belief that He who does all things well, hath in wisdom done this, and granted him an entrance into that kingdom of light, which he was so earnestly concerned to obtain.

THE FRIEND.

ostage to any part of Pennsylvania, for three months, aid in advance, three and a quarter cents; to any of the United States, for three months, if paid in ance, six and a-half cents.

For "The Friend."

The Gulf Stream.

The chapters on the Gulf Stream in Maury's ysical Geography of the Sea, are replete with erest, but as a whole, probably too much exled for the limited columns of "The Friend." s difficult to do justice to the author or his sub-, by any extracts, but it is believed the portions cted will be found to have sufficient value and rest to warrant their insertion.

There is a river in the ocean. In the severest ights it never fails, and in the mightiest floods ever overflows. Its banks and its bottom are old water, while its current is of warm. The f of Mexico is its fountain, and its mouth is in Arctic Seas. It is the Gulf Stream. There n the world no other such majestic flow of wa-. Its current is more rapid than the Mississi or the Amazon.

Its waters, as far out from the Gulf as the olina coasts, are of an indigo blue. They are listinctly marked, that their line of junction h the common sea-water may be traced by the Often one half of the vessel may be perted floating in Gulf Stream water, while the r half is in common water of the sea; so sharp he line, and such the want of affinity between e waters, and the reluctance, on the part of e of the Gulf Stream to mingle with the com- water of the sea.

What is the cause of the Gulf Stream has ys puzzled philosophers. Modern investiga- s and examinations are beginning to throw e light on the subject, though all is not yet r.

Early writers maintained that the Mississippi r was the father of the Gulf Stream. Its ds, they said, produce it; for its velocity, it held, could be computed by the rate of the ent of the river. Captain Livingston overed this hypothesis, by showing that the volume ater which the Mississippi river empties into Gulf of Mexico, is not equal to the one thou- lth part of that which escapes from it through Gulf Stream. Moreover, the water of the f Stream is salt—of the Mississippi, fresh; and e philosophers forgot that just as much salt as pes from the Gulf of Mexico through this am, must enter the Gulf through some other nel from the main ocean; for, if it did not, Gulf of Mexico, in process of time, unless it a salt bed at the bottom, or was fed with salt ngs below—neither of which is probable— ld become a fresh water basin. The above ed argument of Captain Livingston, however, was held to be conclusive; and upon the remains of the hypothesis which he had so completely overturned, he set up another, which, in turn, has been upset. In it he ascribed the velocity of the Gulf Stream as depending 'on the motion of the sun in the ecliptic, and the influence he has on the waters of the Atlantic.' But the opinion that came to be the most generally received and deep-rooted in the mind of sea-faring people, was the one repeated by Dr. Franklin, and which held that the Gulf Stream is the escaping of the waters that have been *forced* into the Caribbean Sea by the trade-winds, and that it is the pressure of those winds upon the water which forces up into that sea a head, as it were, for this stream. We know of instances in which waters have been accumulated on one side of a lake, or in one end of a canal, at the expense of the other. But they are rare, sudden, and partial, and for the most part confined to sheets of shoal water, where the ripples are proportionably great. As far as they go, the pressure of the trade-winds may *assist* to give the Gulf Stream its initial velocity, but is it of itself adequate to such an effect? To my mind the laws of Hydrostatics, as at present expounded, appear by no means to warrant the conclusion that it is, unless the aid of other agents also be brought to bear."

The author here enters into a careful examination of the phenomena and facts involved in the investigation, in order to demonstrate that the trade-winds are quite inadequate to the effect ascribed, and that winds have little to do with the general system of aqueous circulation in the ocean. He then proceeds to give his own views on the subject, only a portion of which are presented in these extracts. "When facts are wanting, it often happens that hypothesis will serve, in their stead, all the purposes of illustration. Let us, therefore, suppose a globe of the earth's size, having a solid nucleus, and covered all over with water two hundred fathoms deep; and that every source of heat and cause of radiation be removed, so that its fluid temperature becomes constant and uniform throughout. On such a globe, the equilibrium remaining undisturbed, there would be neither wind nor current.

"Let us now suppose that all the waters within the tropics, to the depth of one hundred fathoms, suddenly becomes oil. The aqueous equilibrium of the planet is thereby disturbed, and a general system of currents and counter-currents is immediately commenced—the oil, in an unbroken sheet on the surface, running toward the poles, and the water, in an under-current, towards the equator. The oil is supposed, as it reaches the polar basin, to be reconverted into water, and the water to become oil as it crosses Cancer and Capricorn, rising to the surface, and returning as before.

"Thus, *without wind*, we should have a perpetual and uniform systems of tropical and polar currents. In consequence of diurnal rotation of the planet on its axis, each particle of oil, were resistance small, would approach the poles on a spiral turning to the east, with a relative velocity greater and greater, until, finally, it would reach the pole and whirl about it at the rate of nearly a thousand miles the hour. Becoming water and losing its velocity, it would approach the tropics by a similar, but inverted spiral, turning toward the west. Owing to the principle here alluded to, all currents from the equator to the poles should have an eastward tendency, and all from the poles toward the equator a westward.

"Let us now suppose the solid nucleus of this hypothetical globe to assume the exact form and shape of the bottom of our seas, and in all respects, as to figure and size, to represent the shoals and islands of the sea, as well as the continents and coast lines of the earth. The uniform system of currents just described would now be interrupted by obstructions and local causes of various kinds, such as unusual depth of water, contour of shore lines, &c., and we should have at certain places currents greater in volume and velocity than at others. But still there would be a system of currents and counter currents to and from either pole and the equator. Now, do not the cold waters of the north, and the warm waters of the Gulf, made specifically lighter by tropical heat, which we see actually preserving such a system of counter currents, hold, at least in some degree, the relation of the supposed water and oil? In obedience to the laws here hinted at, there is a constant tendency of polar waters towards the tropics, and of tropical waters toward the poles. Captain Wilkes, of the United States Exploring Expedition, crossed one of these hyperborean under-currents two hundred miles in breadth at the equator.

"Assuming the maximum velocity of the Gulf Stream at five knots, and its depth and breadth in the Narrows of Bemini as before stated, (viz. 75 miles in width, and 200 fathoms in depth,) the vertical section across would present an area of two hundred millions of square feet moving at the rate of seven feet three inches per second. The difference of specific gravity between the volume of Gulf water that crosses this sectional line in one second, and an equal volume of water at the ocean temperature of the latitude, is fifteen millions of pounds. If these estimated dimensions (assumed merely for the purposes of illustration) be within limits, then the force per second operating here to propel the waters of the Gulf toward the pole, is the equilibrating tendency due to fifteen millions of pounds of water in the latitude of Bemini.

"In investigating the currents of the seas, such agencies should be taken into account. As a cause, I doubt whether this one is sufficient of itself to produce a stream of such great velocity, as that of the Gulf; for, assuming its estimated discharge to be correct, the proposition is almost susceptible of mathematical demonstration, that to overcome the resistance opposed in consequence of its velocity, would require a force at least sufficient to drive, at the rate of three miles the hour, ninety thousand millions of tons up an inclined plane, having an ascent of three inches to the mile, and supposing there to be no resistance from friction. Yet the very principle from which this agent is derived, is admitted to be one of the chief causes of those winds, which are said to be the sole cause of this current."

The reluctance of the Gulf Stream to mingle its waters with those of the ocean, is considered by

Maury to be probably due to its galvanic properties, higher temperature, and greater degree of saltness, all combined.

"Now, a greater density, implying of course a greater specific gravity, would serve, as well as a higher level, to impart an initial velocity, but with this difference: the heavier waters would, by reason of their greater pressure, be ejected through the most convenient aperture out into the ocean of lighter waters by a sort of *squirting* force. But what, it may be asked, should make the waters of the Mexican Gulf and Caribbean Sea salter than the waters of like temperature in those parts of the ocean through which the Gulf Stream flows? There are physical agents that are known to be at work in different parts of the ocean, the tendency of which is to make the waters in one part of the ocean salter and heavier, and in another part lighter and less salt than the average of sea-water. These agents are those employed by sea-shells in secreting solid matter for their structures, also of heat and radiation, evaporation and precipitation. In the trade-wind regions at sea, evaporation is generally in excess of precipitation, while in the extra-tropical regions the reverse is the case; that is, the clouds let down more water than the winds take up again; and these are the regions in which the Gulf Stream enters the Atlantic."

(To be continued.)

Epistle of George Fox.

To all the elect, faithful, called, and chosen of God, the flock and heritage of God, who have been acquainted with the dealings of the Lord, and have kept your habitations in his life, power, and truth, being built upon the holy, heavenly rock and foundation Christ Jesus, who was the foundation of the prophets and apostles, which foundation stands sure.

Many foundations have been laid since the apostles' days, by such as have gone from Christ, the true and sure foundation; but their foundations have proved rotten, and come to naught; and they themselves have come to loss. Many, since the day of Christ and the Truth hath appeared in this nation, have had some openings and sights, and come among us for a time; and then gone out from us again; these have been the comers and goers, like those in the apostles' days. Such had an outward profession of the Truth, and have gone from the true foundation, Christ Jesus, and so from the heavenly society, and unity of the saints in light. Then they set up foundations of their own, and having a form of godliness, but out of the power thereof, out of the order thereof, such have turned to janglings and vain disputings. This sort of spirit you have been acquainted with, who have kept your habitations in Christ Jesus, the first and the last. And you are not insensible of the scurrilous and filthy books of lies and defamations, which have been spread abroad in this nation, and beyond the seas, against the faithful. It is very well that the Lord hath suffered them to publish their own shame in print, that Truth's enemies may be discovered; that their fruits and spirits have appeared and manifested themselves both in print and otherwise. And I do believe, that the Lord will yet suffer this spirit so to publish its fruits, its shame and nakedness, to professor and profane, and to all sober, moderate, and innocent people, that its shame and nakedness shall more fully appear. Though for a time it hath been hid and covered with the fig-leaves of an outward profession, and sometimes with fawning and flattering words, as at other times it hath discovered itself by rough, lying, and defaming words; yet the Lord God will blast all such vain talkers, that do not walk in the order of life, truth, and the gospel. Therefore, ye that are faithful, stand fast in the liberty wherewith Christ hath made you free in his government. It is upon his shoulders; he bears it up; of the increase of it, and of its peace, there is no end. For all quarrelers against his order and government are not in him, nor in his heavenly, spiritual government and peace. Therefore, ye faithful ones, who have stood the trial through many persecutions, imprisonments, spoilings of goods; you know that there is a crown of glory laid up for you, You that suffer with Christ shall reign with him in his kingdom of glory; ye that die with Christ, shall live with him in eternal life, in the world that hath no end, who have gone through the sufferings without, and within, by false brethren, by comers and goers, that have caused the way of Truth to be evil spoken of, and have been the persecutors of the faithful, with their tongues; and by printing and publishing their lying and defaming books, against the faithful, these have stirred up the magistrates and priests, who were willing to get any occasion to speak evil of the right way, and precious Truth of Christ, by which his people are made free; it would have been better for such had they never been born. But God hath brought them to light, and their fruits and ravenous spirit are seen, savoured, and known; who are become Judases, and sons of perdition, to betray Christ, now within, (where he is made manifest,) to the priests and magistrates, and profane, as Judas betrayed Christ without to the priests and Pilate; though some of the magistrates and sober people see their envy and folly, and that they have more malice than matter against the faithful. But the Lord will consume this Judas, or son of perdition. The Lord will consume him with the Spirit of his mouth, and destroy him with the brightness of his coming. So let all the faithful look unto the Lord. And let that wicked son of perdition know, though he may be got as highly as Judas without, (who was partaker of the ministry with the apostles,) "the Lord will consume him with the Spirit of his mouth, and destroy him with the brightness of his coming." That is his portion. The brightness of the Lord will destroy him, and the Spirit of his mouth will consume him. And when he is destroyed and consumed, there will not be a son of perdition to betray Christ in his people, and his people that live and walk in Christ, who hath all power in heaven, (mark in heaven,) and in earth given to him; and with his holy and glorious power he limits and orders, so that nothing shall be done against his people, but what is suffered for their trial and their good, neither by apostates, persecutors with the tongues, Judases, sons of perdition to betray, or the outward powers to imprison, or spoil goods; all these are limited by Christ's power, who hath all power in heaven and in earth, given to him. Every one's faith is to stand in him and his power, and rejoice in his power, and see the increase of his righteous, holy, heavenly, spiritual, peaceable government, in which the glorious, holy order of life, is lived and walked in, by all his sons and daughters. In his Spirit is the holy unity and bond of peace; though ye be absent in body, one from another, yet all joying and rejoicing, being present in his Spirit, and beholding in the same Spirit, your spiritual order, unity and fellowship, and the steadfastness of your faith in Christ Jesus, who is steadfast forever, the first and the last, whose presence is among his people, and who is their Head. Here is heavenly Sion known, and heavenly Jerusalem, and the innumerable company of angels, (which are spirits,) and the spirits of the just men made perfect. Here is the general assembly, and a general, heavenly, holy, and spiritual joy and rejoicing, lauding and praising the Lord God mighty and the Lamb, that lives forever Amen. G. F.

London, the 14th of the
Eighth month, 1683.

Read this in your assemblies amongst the faithful.

Liberia.

Recent events in Liberia have tended to attract more than ordinary attention to that public. Among these, perhaps, the most important is the election of a new President. So much responsibility rests upon the chief executive of a young country, that the character of the individual is always looked to with great interest. It is not required that he should be a man of great genius, or remarkable qualities. In the case of a colony like that of Liberia, what is chiefly desirable is that the President should possess patriotism, integrity of purpose, prudence, and practical knowledge of his duties. With free institutions, a fertile soil, the incentive of active need, and a clear field for action, added to the absence of powerful neighbours, the people themselves will take care of their own interests, and furnish that material basis of prosperity upon which may be built an enduring empire.

Liberia has every thing in her favour, and though her progress may appear slow, yet from such small and insignificant beginnings often spring mighty States. Founded by the United States, and fostered by our capital and enterprise, she has received substantial aid and encouragement from some of the most powerful nations of Europe. She has furnished her with a regular mail steam communication. By several her independence has been formally recognized. Not one power wishes to interfere with her progress. All seem anxious to assist the republic, and to promote her prosperity.

Liberia had the good fortune to make choice at an excellent man for her first President. Roberts proved himself a statesman of superior administrative ability. He was every way fitted to supervise the organization of a new government and put the machinery in working order. Under his direction everything went on harmoniously and prosperously. The people of Liberia evinced their confidence by re-electing him for several successive terms. Most probably he would have been continued in his position had he not declined being again a candidate. During his administration, Liberia, besides becoming a settled and growing power, acquired for herself a name abroad, and marked out a distinct policy, which was pursued with vigour and effect. Commercial treaties were made with foreign states; education was fostered; a substantial basis of a national commerce was laid, and an equally sound basis of agriculture formed, calculated eventually to result in the production of large quantities of valuable exports. Trade was established with the vast and prolific interior, which must increase those exports, and at the same time extend the influence of the republic. All the native tribes within the territories of the government were rigorously kept in subjection. Many thousands of them abandoned their savage life, and became the pupils of civilization. According to reliable representations they are fond of the protection and peace thus afforded them, and make promising citizens. It is, perhaps, not generally known that at this time Liberia has more inhabitants than both Paraguay and Uruguay combined. Such is the case, and from that fact the reader may infer the rapidly growing importance of the republic. The territory has also been much increased by purchase, and by acquisition

er ways, and at this time covers about five hun-
l miles of sea coast.

Stephen A. Benson, the successor of — Roberts
President, is said to be a native of the country,
ugh born of parents who emigrated from the
ited States. — Roberts was a native of the
ier, and the fact of his successor in the high
ce of President being African by birth, is sig-
cant of the progress of the country. S. Ben-
has several times been Vice President, and a
mber of the legislature, so that he has all the
uisite experience and knowledge of political
irs. In fact, he has been bred in the Liberian
ool of politics, and therefore, if there is any-
ng original there, we shall see it. He is spoken
s having capacity sufficient to make a good exe-
ive officer. No doubt he will feel some ambi-
to distinguish his administration by acts
ich may be hereafter pointed to as evidence of
success, such as the extension of the area of
republic, and the founding of cities in the in-
or. As yet the revenues of Liberia are per-
s inadequate to the support of any considera-
maritime force, but if Benson has any execu-
ability, he will devote it to the task of pro-
ing increased means. This will be a work of
at difficulty, as the people are poor and their
merce limited.

Happily for the new President, if he has any
irations to make his administration distinguish-
events are throwing opportunities in his way.
the very outset a project has been started by
e of the American friends of Liberia to consoli-
e with it the British colony of Sierra Leone,
ich immediately joins it on the north, and the
ryland colony at the south, which, though com-
hended under the general name of Liberia, yet
intains a separate existence with an organized
ernment of its own. When the proposition
at first broached, the friends of the Maryland
ony appeared indisposed to favour it, but a better
ling has since been manifested; some difference
ms to prevail as to whether the two American
onies ought to have but one unitary consoli-
ed government, or form a federal union with
rra Leone, each maintaining its own local
ereignty. Either would answer well enough,
l the discussion of these details seems to augur
success of some scheme of union, so far as the
erican colonies are concerned. But it is more
btful whether Great Britain will consent to
t with Sierra Leone; for though it is of no
at value to her intrinsically, and has only been
ful as a naval depot in her operations against
slave trade, yet there are on the same section
he African coast, Senegambia, colonies owned
France and Portugal. The British have also
ther colony at the mouth of the Gambia river,
led Bathurst, and they may have ulterior views
that region inconsistent with the severance of
rra Leone. Still, the importance of the project
ders it worth an effort, as the British govern-
nt has manifested much interest in the pros-
ity of Liberia, and appeared willing to afford
the aid in its power. Should Sierra Leone be
ed to Liberia, the territory of the republic will
der upon the Portugese colony, which lies on
Rio Grande. Its neighbours then will be im-
tant, necessitating diplomatic intercourse with
courts of Portugal, France, and England.
e French colony of St. Louis occupies the most
mising position of any of the European settle-
nts. It is at the mouth of the river Senegal, a
ch larger and longer stream than any other on
coast of Senegambia or Liberia, which the
nch have recently navigated far into the inte-
r by means of large steamboats. The efforts
de in that quarter by the French, show that they have hopes of building up an important colony there. But the acquisition of more territory on the coast is a matter of minor interest compared with the enterprise which necessity has just started for the formation of settlements in the interior. Liberia has coast enough at present, but no back country of her own. The territory is only forty miles wide, and the colonists are all clustered upon or near the coast. It is believed that much of the sickness hitherto suffered by the emigrants has arisen from this cause, and that if there were places in the interior to which they could be sent, it would be a sanitary improvement. Already this idea has been acted upon, and vigorous efforts have been made to collect funds for the purpose. It is easy to see that from such a policy important consequences must ensue to the republic, resulting in the acquisition of territory in the interior and a rapid increase of the consequence and dignity of the nation.—*N. American.*

John Barclay, in the address with which he prefaces the Life of William Dewsbury by Edward Smith, has the following remarks; which may bring some encouragement to those who, though under much discouragement, are honestly striving to maintain the struggle for upholding and promoting primitive doctrine and primitive practice in our degenerate Society. A willingness to suffer for the Truth, under whatever disadvantageous circumstances we may appear to be placed, with a steady reliance on the immediate guidance of the Holy Spirit, and humble obedience to its requirements as made known in the heart; will undoubtedly in time extricate us from the difficulties and disorder, brought in by a departure from the faith and footsteps of our honorable predecessors. Please, if approved, insert the extract in "The Friend."

"I would fain express some of the warmth of desire, which has often pervaded my heart while engaged in revising these sheets, that the professing members of a church, so distinguished as ours has been by the protection and nurture of her Head and Husband, may be encouraged by observing how memorably He hath stood by her, and by all her simply obedient children whose souls have been true to Him:—He hath indeed borne them as on eagles' wings, He hath cherished them in his bosom. This small volume is but a single evidence, among very many that might be consulted by the inquiring mind, all proving that Divine support and strength which uniformly attended the uncompromising faithfulness of those, who have gone before us in this Christian path and warfare. And is not the same power ever near, to counsel and to help his dependent little ones in every age, to guide even into all truth, yea, to preserve them from the most specious devices of our soul's enemy? It is true, this cruel enemy and his instruments, would persuade us of this day, that such immediate guidance is dubious and uncertain, and that the way of the cross is too difficult and offensive to be trodden. But how shall any of us, who have tasted the loving-kindness and good presence of the Lord Jesus Christ revealed in us, for a moment listen to these suggestions? How shall we turn aside from following on to know Him in these his heavenly visitations? By these, he called and awakened us at the first, touching and drawing our hearts after himself; in this manner he brought us 'out of darkness into his marvellous light,' which we have indeed found to be the very 'light of life,' cheering and sustaining our drooping minds under every discouraging circumstance. Hitherto he hath helped us; we have found grace to help, sufficient grace, according to all our times of need; he hath strengthened with the might of his Spirit our inner man,—and just in proportion as we have patiently waited on him for the lifting up of his countenance upon us. Shall we then as individuals or as a people forego our privileges, shall we ever shift our ground, suffer our feet to be beguiled to backsliding, by in anywise accommodating ourselves to the low views and false faith which so evidently abound? Should we not rather be afresh incited by all that we read and hear, observe and undoubtedly feel, of the operation of the grace of Jesus Christ,—should we not be animated to a grateful surrender of soul unto Him, who hath wrought, and is still willing to work in and for us great deliverances, plenteous redemption! Should we not be hereby engaged to cleave the more closely unto Him, whose hand is not at all shortened, whose faithfulness hath not failed, and whose forbearances have been lengthened out, his mercies multiplied upon us!"

From "The Leisure Hour."

The Beaver in Canada.

To see the beaver to advantage, we must study his habits as he exists in North America, where his skin forms so important an article of commerce, and where he appears to be so much respected, that in Canada he figures in the national shield, as an emblem of industry and sagacity. The following notice, indeed, from the columns of a Canadian journal, would represent him as a sort of model lumberer or backswoodman, whose provident and temperate habits might with advantage be imitated by those settling on the banks of the St. Lawrence.

"One cannot fail to be struck with admiration and astonishment on visiting the haunts of the beaver, nor can we wonder that the red men should place him at the head of animal creaton, or make a Manitou of him, when Egypt, the mother of the arts, worshipped such stupid and disgusting deities. Whether you call it instinct, or whether it is to be called reason, one thing is certain, that if half of humanity were as intelligent, as provident, as laborious, and as harmless as the beaver, ours would be a very different world from what it is.

"The beaver is the original lumberman and the first of hydraulic engineers. Simple and unostentatious, his food is the bark of trees, and his dwelling—a mud cabin, the door of which is always open, but under water—conditions which secure retirement, and are favourable to cool contemplation. The single object of his existence being to secure bark enough for himself and family, one would suppose there would not be much difficulty in that; but as neither beaver nor any other animals, except man, are addicted to works of supererogation, we may be sure that the former in all his laborious arrangements—and those too which alter the face of nature to such an important degree—does no more than is absolutely necessary for him to do. Cast in an inhospitable climate, nearly the whole of his labour is for the purpose of laying in his necessary winter supplies, and water is the only medium by which he can procure and preserve these. Too highly civilized for a nomadic life, he builds permanently, and does not quit his habitation until driven from it, like other respectable emigrants, by stern necessity. We cannot better illustrate the habits of this interesting animal than by accompanying a beaver family, on some fine evening in May, in search of a new home. The papa beaver, with his sons and sons-in-law, wife, daughters and daughters-in-law, and it may be grandchildren, sallies forth 'prospecting' the country for a good location—that is, a stream of easy navigation, and having an abun-

dant supply of their favourite food, the silver birch and poplar, growing as near the river as possible. Having selected these 'limits,' the next step is to place their dwelling so as to command the greatest amount of food. For this purpose they go as far below the supplies as the character of the stream will permit. A pond of deep still water being an indispensable adjunct to their dwelling, this is obtained by the construction of a dam, and few engineers could select a site to produce the required result so efficiently and economically. The dam and dwelling are forthwith commenced, the materials employed in both being sticks, roots, mud and stones, the two former being dragged by the teeth, the latter carried between the fore paws and the chin. If the dam is extensive, whole trees are gnawed down, the largest of which are of the diameter of an ordinary stove pipe, the stump being left standing about eighteen inches above the ground, and pointed like a crayon. Those trees which stand upon the bank of the stream they contrive to drop into the water as cleverly as the most experienced woodman: those which are more distant, are cut up by their teeth into pieces, which can be dragged to the water. These trees and branches are floated down to the site of the dam, where they are dragged ashore and placed so that the tops shall be borne down by the current, and thus arrest the descending *detritus* and form a strong and tight dam. Critical parts are built up 'by hand,' the sticks and mud when placed receiving a smart blow from the beaver's tail, just as a bricklayer settles his work with the handle of his trowel. The habitation or hut of the beaver is almost bomb-proof; rising like a dome from the ground on the margin of the pond, and sometimes six or eight feet in thickness in the crown. The only entrance is from a level of three or four feet under the water of the pond. These precautions are necessary, because, like all enterprising animals, the beaver is not without enemies. The wolverine, who is as fond of beaver tail as an old nor'wester, would walk into his hut if he could only get there; but having the same distaste for water as the cat, he must forego the luxury. It is not, however, for safety that the beaver adopts the submarine communication with his dwelling, although it is for that he restricts himself to it. The same necessity which compels him to build a dam, and thus create a pond of water, obliges him to maintain communication with that pond when the ice is three feet thick upon its surface. Living upon the bark of trees, he is obliged to provide a comparatively great bulk for his winter's consumption; and he must secure it at the season when the new bark is formed, and before it commences to dry; he must also store it up where it will not become frozen or dried up. He could not reasonably be expected to build a frost-proof house large enough to contain his family supply; but if he did, it would wither and lose its nutriment: therefore he preserves it in water. But the most remarkable evidence of his instinct, sagacity, or reason, is one which I have not seen mentioned by naturalists. His pond we have seen must be deep, so that it will not freeze to the bottom, and so that he can communicate with his food and his dam, in case of any accidents to the latter requiring repairs: but how does he keep his food—which has been floated down to his pond—from floating, when in it, and thus becoming frozen in with the ice? I said, that in gnawing down a tree the top of the stump was left pointed like a crayon: the fallen tree has the same form, for the beaver cuts like the woodman, wide at the surface, and meeting in an angle in the centre, with this distinction—the four-legged animal does his work more uniformly, cutting equally all around the log; while the two-legged one cuts only from two opposite sides. Thus every stick of provender cut by the animal is pointed at both ends, and when brought opposite his dwelling he thrusts the pointed ends into the mud bottom of his pond sufficiently firm to prevent their being floated out, at the same time placing them in a position in which the water has the least lift upon them; while he carefully apportions his different lengths of timber to the different depths of water in his pond, so that the upper point of none of them shall approach near enough to the surface to be caught by the winter ice.

"When the family are in comfortable circumstances, the winter supply nicely cut and stored away, the dam tight, and no indications of a wolverine in the neighbourhood, the patriarch of the but takes out the youthful greenhorns to give them lessons in topographical engineering; and in order to try the strength of their tails encourages them to indulge in amateur damming. The beaver works always by night; and to 'work like a beaver,' is a significant term for a man who not only works earnestly and understandingly, but one who works late and early.

"From what has been said it will be readily seen that the maintenance of the dam is a matter of vital importance to the beaver. Some say that the pilot beaver sleeps with his tail in the water in order to be warned of the first mishap to the dam; but as there is no foundation for such a cool assertion, it may be set down as a very improbable tale. The Indians avail themselves of this well known solicitude to catch them: having broken the dam, the risk is immediately perceived by the lowering of the water in the hut, and the beaver, sallying forth to repair the breach, is slaughtered in the trenches.

"As the supply of food in the vicinity of the dam becomes diminished the beaver is obliged to go higher up the stream, and more distant from its banks, to procure his winter stores; and this necessity gives rise to fresh displays of his lumbering and engineering resources. In consequence of the distance, and the limited duration of the high water period favourable to transport, the wood is collected into a sort of raft, which, a lumberman asserts, is manned by the beaver and steered by its tail, in the same manner as Norway rats are known to cross streams of water. When the raft grounds, forthwith a temporary dam is thrown across the stream below the 'jam,' by which the waters are raised, and the raft floated off, and brought dawn to the dam, which is then torn suddenly away, and the small raft thereby flushed over the adjoining shallows."

Selected.

THE VISION OF GOD.

God! when I think upon thy name
No doubts before my spirits rise;
I hear all nature's voice proclaim
That thou art great, and good, and wise.
Yet would I, if it were thy will,
See thy bright image, brighter still.

The wandering eyes, the wandering ears,
The ill "sufficient to the day,"
(Thing of temptation and of tears;
Thine old inheritance of clay!)
On man's weak spirit fix their chain,
And drag him down to earth again.

Give me the strong realities
(I know not how to form the prayer)
Of angel's thoughts and angel's eyes!
Or if that be too high to dare,
O mould me to thy mighty will,
"To commune with thee, and be still."

If Israel longed to see thy face,
While roared the thunders of the law;
Shall we, who know thee, God of grace!
Shrink from thy countenance in awe?
While saints below and thrones above
Proclaim thy mightiest title, LOVE!

Impress thy image on my mind,
Let me but see thee as thou art;
If mortal eyes at best are blind,
Let me behold thee with my heart.
In mercy and in love be nigh,
O visit thou my mental eye!

But rest, thou ever-restless soul!
Thy feverish hours are flying fast;
The clouds before thee shall unroll,
The glorious vision shine at last;
And thou, without a shade between,
Shall see as thou thyself art seen.

Dr. Croly.

PETITION.

Oh, Thou! by whose Almighty nod the scale
Of empire rises, or alternate falls,
Send forth the saving virtues round the land,
In bright patrol; white peace and social love,
The tender looking charity, intent
On gentle deeds, and shedding tears through smil
Undaunted Truth, and dignity of mind:
Courage composed, and keen: sound temperanc
Healthful in heart and look, clear chastity,
With blushes reddening as she moves along,
Disordered at the deep regard she draws;
Rough industry; activity untired,
With copious life informed, and all awake;
While in the radiant front superior shines
That first parental virtue, public zeal;
Who throws o'er all an equal wide survey,
And, ever musing on the common weal,
Still labours glorious with some great design.

Thomson

The Colour and Luminosity of the Mediterranean.—"The usual tint of the Mediterranc Sea," says Rear-Admiral Smyth, "when und turbed by accidental or local causes, is a brig and deep blue; but in the Adriatic a green tir is prevalent; in the Levant basin it borders purple; while the Euxine often has the ds aspect from which it derives its modern appel tion. The clear ultramarine tint is the m general, and has been immemorially noticed, though the diaphanous translucence of the wa almost justifies those who assert that it has colour at all. But notwithstanding the fluid, wh undefiled by impurities, seems in small quantit to be perfectly colourless, yet in large masses assuredly exhibits tints of different intensiti That the sea has actually a fine blue colour at distance from the land cannot well be contradicte nor can such colour—however influential the s is known to be in shifting tints—be considered wholly due to reflection from the heavens, since is often of a deeper hue than that of the sky, bc from the interception of solar light by the clouc and the hues which they themselves take. Tl is difficult to account for satisfactorily, as no at lysis has yet detected a sufficient quantity colouring matter to tinge so immense a body water.

"The peculiar occasional luminosity of this s was particularly noticed by Pliny and many a cients, and, in common with that of other wate it has long been a subject of scientific inquir rational conjecture, and ignorant wondermen and it is really as difficult of a full solution as is superbly beautiful in effect. Every assignat cause has been advanced; putrescent fish, ele tricity, atomic friction, cosmical vortices, absor tion and emission of solar beams, and what nc have all and severally been brought forward, at after various tilts of discussion, laid aside agai But most naturalists now impute this phosphore cent appearance partly to the decomposition animal substances, and partly to the countle

riads of mollusca, crustacea, infusoria, and er animalcules which can voluntarily emit a minous brilliance, the chemical nature of which still unknown."

For "The Friend."

BIOGRAPHICAL SKETCHES,

Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

THOMAS LIGHTFOOT.

(Continued from page 37.)

In the year 1722, Thomas Lightfoot again engaged in religious service, in Maryland. He was companied by Daniel Worsley, who appears to ve been a fellow-labourer in the gospel. In the arly Meeting that year, he was again appointed draw up, with others, an epistle to Subordinate etings. A printed copy of this is before me. An epistle from our Yearly Meeting in Burlingn, for the Jerseys and Pennsylvania," and held adjournments, &c.

"To the Quarterly and Monthly Meetings of iends, belonging to the said Yearly Meeting, eeting:

"Dear and Well-beloved Friends,—In an humb sense of the loving kindness and manifold ercies of our heavenly Father, do we tenderly ute you, finding ourselves engaged to let you derstand, that his pure love overshadowed this r annual and solemn assembly, and was plentilly extended, not only for the encouragement of e faithful, the support and comfort of the afflict; but also for gathering in those that are not of is fold, and for bringing back again such as are ayed and straying from the flock of Christ.

"By accounts received from our respective narterly Meetings, we are informed, that love d unity is preserved amongst Friends, meetings nerally attended, and the discipline in good mea re practised. Also, by epistles from Long Island d Rhode Island, we have comfortable accounts the prosperity of Truth there. We understand our Friends, who have of late travelled these merican parts, in the work of the ministry, that ruth prevails, and the glory of this gospel day ines over many hearts, in divers places: which matter of joy to us. We are sensible, that herever the Lord is thus at work, the great ene y of souls will oppose and strive to hinder it, by awing some into an undue liberty, to gratify a rnal mind in sinful pleasures and vanities, others to an indifference or unconcernedness; which ates their care and diligence in the service and rship of God, and weakens endeavours to maintin good order and discipline in the church of rist. Where he cannot so prevail, he will try her ways to leaven people into the spirit of this rld, exalting self above that of God in them, aking a fair show in the flesh, and resting in a lendid profession and form of religion, short of e life, power and virtue of it.

"To avoid, therefore, the prevalence of these d all other evils, it is incumbent on those conrned, that with great contrition of spirit and dly sorrow for their offences, they most humbly d penitently prostrate themselves before God, ho, by the secret influence of his Holy Spirit, ill beget and raise in their souls earnest cries and pplications to him, for deliverance from sin and e guilt of it, and will also discover the most btile workings and snares of Satan, and give rength to withstand them. So a victory will be nown by faith in our Lord Jesus Christ, who will ot suffer any to be tempted above what they are ble; but will, with the temptation also, make a ay to escape, that they may be able to bear it.

"Where any are fallen into an indifferency concerning the service of God, we advise them speedily and strictly to examine the cause thereof, and see, whether in this day and place of ease and plenty, they do not take too much delight in the lawful enjoyments of this life; or, what is worse, the unlawful pleasures and gross evils which are too common in the world. If it appear so, we earnestly exhort all such to turn to the Lord whilst his love and merciful visitation is continued to them, otherwise their portion will be miserable.

"If any professing the Truth with us are elevated in their minds, or affect the friendship, gayety, grandure and glory of this world, we tenderly advise such to repent and humble themselves before the Lord, bearing in mind that complete pattern of humility and self-denial which our blessed Saviour hath left for our imitation, whose continual testimony was against the vain spirit of this world in all its appearances.

"As to such as assume a profession of the blessed Truth for worldly ends, or hold it in a formal outside manner, or deceive themselves by resting barely in the notion, hearing or tradition of it; we desire such to consider seriously, That God is not mocked, and that He has always declared an abhorrence of the hypocrite, and such as hold the Truth in unrighteousness; and that without a real change, they can never experience the life and virtue of religion, nor that new birth, without which none can see the kingdom of God; *who, according to his mercy, saveth us, by the washing of regeneration and renewing of the Holy Ghost.*"

The substance of last year's epistle being given; it then goes on.

"It is the sense and direction of this meeting, that if any, who profess themselves of our community, do join in marriage with one of another persuasion, or out of the approved way of Friends, having been first precautioned against it, such may and should be testified against, without farther dealing; unless they themselves condemn their proceedings, to the satisfaction of the Monthly Meeting to which they belong.

"Where any, so professing with us, do marry with those of different profession, having not had such precaution, they ought to be speedily dealt with, as in other cases of disorder; because we are sensible, that such mixed marriages are displeasing to God, and frequently introduce great confusion, by destroying the proper and joint authority of the heads of families, and abating of love between themselves, and duty from their children.

"And it is further advised by this meeting, that none of our religious persuasion should promote or assist any person towards their joining in marriage (either by virtue of the governor's license, or otherwise) before they are well satisfied of the parties' clearness, and that the consent of parents or guardians be first obtained; whereby divers abuses of that nature (which, for want of due care, too frequently happen) may be prevented, and a good conscience discharged towards God and our neighbour.

"And whereas there is an increase of people in these provinces and divers of our young men incline to trade abroad; we advise all such, first to apply to the Monthly Meetings for certificates, and to be careful and just in their dealings, and punctual in performing their promises; and, as much as may be, avoid bad company, *knowing* (as saith the Apostle) *that evil communication corrupts good manners.* And let a care be taken, when business calls into company, that the witness of Truth and a good conscience be minded and answered in all, that others seeing our good works, words and sober conversation, coupled with the fear of God, *may glorify our Father which is in heaven.*

"And whereas, when way was made for our worthy Friends the proprietors and owners of lands in these provinces, to make their first settlements, it pleased Almighty God by his overruling Providence. to influence the native Indians so as to make them helpful and serviceable to those early settlers, before they could raise stocks or provisions to sustain themselves and families: and it being soon observed, that those people, when they got rum or other strong liquors, set no bounds to themselves; but were apt to be abusive and sometimes destroyed one another, there came a religious care and concern upon Friends, both in their meetings and legislature, to prevent those abuses. Nevertheless some people, preferring their filthy lucre before the common good, continued in this evil practice, so that our Yearly Meeting, held in Philadelphia, in the year 1687, testified, that the practice of selling rum, or other strong liquors, to the Indians, directly or indirectly, or exchanging the same for any goods or merchandizes with them, (considering the abuse they make of it,) *is a thing displeasing to the Lord, a dishonour to Truth, and a grief to all good people.*

"And although this testimony hath been since renewed by several Yearly Meetings, it is yet too notorious, that the same hath not been duly observed by some persons: and therefore, it is become the weighty concern of this meeting, earnestly to recommend the said testimony to the strict observance of all Friends; and where any, under our profession, shall act contrary thereunto, let them be speedily dealt with and censured for such their evil practice.

"And now, Dear Friends, in the weighty sense and thankful acknowledgment of the Divine goodness extended to us, through our heavenly Head, Christ Jesus, whose power and refreshing presence hath influenced and overshadowed this our solemn assembly, we bid you farewell in the Lord."

Thomas Lightfoot was now appointed one of the committee to superintend the press, and his labours evince that although advancing in years, his faculties were bright, and that, in the view of his friends, his qualification for religious usefulness continued unabated.

Being appointed, in the Yearly Meeting of 1723, one of a committee to write an epistle to London, as also one to Subordinate Meetings, both were prepared. In that to London, they say,

"We find a concern for the promotion of love, unity and godly living, continues, and, we hope, increases, and that care is taken to maintain that good order and wholesome discipline, which the Lord hath led his people into, notwithstanding the difficulties which arise from perverse and libertine spirits, and the unrighteousness of such, who, in these times, find it easy, or perhaps of interest to assume our profession and those outward distinctions, which formerly and in other places were matter of strict self-denial. However, in this we have comfort that the Lord is pleased to work upon and raise up many to bear a faithful testimony against all sin, and unrighteousness however disguised, and to keep down that spirit which would plead for liberty."

(To be continued.)

The Bell-Boat off Absecom Shoals.—It is stated by several fishermen of Absecom, that one of the four clappers which are intended to strike the bell moored off the shoals, is still inoperative, and that the sound of the bell cannot be heard to *windward*, over fifty yards. A few days only have elapsed since the bell-boat was placed in her present position.

Sewage and Improved Agriculture.—Kingsley, the author of "Alton Locke," has remarked, in a beautiful article on marine life, that Nature is the best of scavengers, and the eldest philanthropist in the cause of sanatary reform. It is, in fact, a universal rule of her economy to make even evil useful in working out the good, for the pestiferous marsh yields the most luxuriant crops, and the foul carbonic acid which men exhale is the sustenance of plants.

We have been led to this reflection by the application which has been made, in Great Britain, of the refuse of sewers to the purposes of agriculture; and the wholesome imitation of Nature which it displays. Half a century ago, the idea suggested itself to a practical farmer, at Ashburton, England, that the sewage of towns might be beneficially employed to fertilize exhausted soils. The results even exceeded his expectations. Lands, which let at two pounds an acre, have been made so valuable by this process, that twelve pounds an acre are now obtained for them. In Scotland, similar experiments have led to equally surprising results. Poor, sandy soils, which once would have sold for half a crown an acre, yield, since they have been fertilized by sewage, an annual rent of from fifteen to twenty pounds an acre.

In view of these facts, a Mr Stothert proposes to construct works at London, by which the sewer drainage of that city, instead of being wasted as now, may be made available for agricultural purposes. He estimates the annual expense of collecting, mixing and distributing the sewage of that vast metropolis at about a million of dollars, while the annual receipts from farmers would be nearly twenty millions. Extravagant as this estimate appears at first sight, the facts warrant the conclusion that it is not excessive. The total amount of liquid sewage discharged from London daily is 150,000-000 gallons, equal to 500,000 tons, yielding five thousand tons of solid matter. This quantity is sufficient to fertilize ten millions of acres yearly. A company is already in existence, though working on a small scale, to furnish agriculturists with sewage matter; and as this company receives twenty dollars an acre, it is certainly within bounds to calculate on receiving half that sum. Even at this price, the manuring of lands by sewage would be cheaper than by guano, which is so extensively employed by British agriculturists. Mr Stothert's scheme, therefore, if Parliament can be induced to undertake it, will yield the most suprising results, even as a mere financial speculation.

We have no doubt, that, whether this reform is undertaken now, or postponed, the time will eventually come, when not only London, but every great city, will employ its sewage to fertilize the soil. The very principle, in fact, which teaches the scientific farmer to save the drainage of his stables and barn-yard, in order to enrich his fields with it, should lead great cities to economize their sewage matter, for it is but doing the same thing on a larger scale. At present, this refuse from towns taints the air, and pollutes the rivers into which it flows. But when the progress of civilization shall have worked this desirable reform this sewage matter will assist to cheapen bread by improving soils. It is strange, indeed, that this economical employment of the refuse of cities has not sooner been thought of, especially by nations boasting such progress in material civilization as do England and the United States.

In a word, and to return to the original thought, if we would advance, we should imitate nature more. Nature never wastes anything. She transmutes, but does not destroy, economizes, but does not squander. Great cities, when they come to be properly managed, will give back to the country as much as they take from it, instead of being, as now, constant drains upon its fertility.—*Ledger.*

If we would walk perfectly before God, we must endeavour to do common things, such as are of every day's occurrence and of small account in the eyes of the world, in a perfect manner. Some persons are so mentally constituted, that they could more easily undergo the sufferings of martyrdom, than properly regulate and control their feelings in their families during twenty-four hours. But the grace of God, if attended to, will regulate all things. Happy is he who strives to do the will of the Lord in little things as well as in great ones; and who can win the crown without going to the stake.

For "The Friend."

The following statistics, showing the enervating and deleterious effects of the use of tobacco on the human system, it is hoped, may have an effect to awaken in the minds of its friends, an inquiry into the *propriety* of giving their influence by example, in favour of the daily use of an article so destructive to the mental and bodily powers of man. We now, with some good reason, hope soon to see the good results of temperance in the community, in the disuse of that greatest destroyer of human happiness (in time of peace), ardent spirits, from the restraint upon it by the wholesome law of the land; and may we not hope, that the true friends of temperance (and those are they that are willing to deny themselves the use of every needless thing) will be not only *willing*, but *desirous* to disenthrall themselves from a practice next in power to that of ardent spirits in producing effects detrimental to health and happiness, for the sake of others, as well as the great benefit they may derive from it themselves?

Should the editor deem the notice worthy of insertion in "The Friend," he will thereby oblige a constant reader.

TOBACCO.

"In the United States, intelligent physicians have estimated that 26,000 die every year from the use of tobacco; and in Germany, where the streets, as well as the houses, are literally befogged with tobacco-smoke, the physicians have calculated that of all the deaths that occur between the ages of eighteen and thirty-five, one-half originate in the waste of the constitution by smoking.

"Tobacco exhausts and deranges the nervous powers, and produces a long train of nervous diseases. It is peculiarly calculated to produce diseases to which this age is liable; and especially those forms that go under the name of dispepsia, with all their kindred train of evils. It also exerts a disastrous influence upon the mind, and frequently produces an enfeebling of the memory, a confusion of ideas, irritability of temper, want of energy, an unsteadiness of purpose, melancholy, and sometimes insanity. These are the ultimate effects of the use of tobacco, and though one may not perceive them in his own case, we are assured that the tendency of the drug is always towards disease.—*The Advocate and Guardian.*

It is a great matter in the Christian life to know how to keep silence. Under oppositions, rebukes, injuries, it is better to say nothing than to say it in an excited or angry manner, even if the occasion should seem to justify a degree of anger. By remaining silent, the mind is enabled to collect itself, and to call upon God in secret aspirations of prayer. And thus we shall speak to the honour of our holy profession, as well as to the good of those who have injured us, *when we speak from God.*

The Tears of Oysters. Glancing round this s tomical workshop, (the oyster) we find, amor other things, some preparations showing the nat of pearls. Examine them, and we find that th are dark and dingy pearls, just as there are ha some and ugly men; the dark pearl being fo on the dark shell of the fish, the white brilliant upon the smooth inside shell. Going further the search, we find that the smooth, glitter lining upon which the fish moves, is known as *nacre*, and that it is produced by a portion of animal called the *mantle*, and, for explanatio sake, we may add that gourmands practically kn the mantle as the beard of the oyster. When l ing in its glossy house, should any foreign s stance find its way through the shell to disturb smoothness so essential to its ease, the fish co the offending substance with nacre, and a pearl thus formed. The pearl is, in fact, a little glo of the smooth, glossy substance yielded by t oyster's beard; yielded ordinarily to smooth narrow home to which his nature binds him, b yielded in round drops, real pearly tears, if he hurt. When a beauty glides among a throng her admirers, her hair clustering with pearls, s little thinks that her ornaments are products pain and diseased action, endured by the most u poetical of shell-fish.—*Leisure Hours.*

THE FRIEND.

TENTH MONTH 20, 1855.

The evident determination on the part of th United States Government and its officials, to u their power for the support and extension slavery, in whatever way and section of the cou try it can be enforced or covertly brought in, too apparent to be reasonably denied or doubte The most recent manifestation of this determin tion, is found in the decision given a few days ago Judge Kane of the United States District Cour on an application made thereto by Jane Johnso (one of the three persons claimed as slaves by Wheeler, and for obtaining possession of whom, writ of Habeas Corpus was served upon Passmo Williamson), praying "that the said Passmo Williamson may be discharged from his imprison ment."

Our readers will doubtless recollect the circun stances of the case under which P. Williamso was induced to act for the liberation of the thre individuals voluntarily brought by their alledge owner into the State of Pennsylvania, and als that for a constructive contempt of court, i making a return to the writ, he was sent to pri son, where he has been closely kept ever since now nearly three months. J. Johnson, in behal of herself and her two children, petitioned th court that the writ of Habeas Corpus directed t P. Williamson, be quashed, for the reasons, 1st that J. H. Wheeler "had no control over or righ to the possession" of herself or children at th time of issuing the writ; 2d, because the writ wa issued without her knowledge or consent; 3d, be cause that ever since they left J. H. Wheeler she and her children have not been detained o restrained of their liberty by P. Williamson, o any other person, and 4thly, because the writ o Habeas Corpus, which is intended solely to restor liberty to those who are unjustly deprived of it was in this case intended to reduce free persons t slavery.

Judge Kane, after affirming the power of th court to issue the writ, and reciting his version o the facts of the case, together with the construc

ns of law in different cases, which he says support his views of its application in the present se, finally refuses to allow the petition to be filed the court, on the ground that the petitioner has *Status* in Pennsylvania, is a person of whom e court knows nothing, one who is volunteering point out to the court, errors she supposes it is committed.

But it is to the doctrine avowed in the following extract from the printed decision of the Judge, at we allude, as manifesting a determination on e part of the General Government and its officials, to defend and extend the system of slavery. eferring to certain portions of his own decision, hen the case was previously adjudicated by him, says:

"This is all that I conceive it necessary to say of the ictly judicial action in that case. The opinions announced by the Judge upon other points, may perhaps regarded as merely *dicta*. But it had appeared from e defendant's declarations when upon the stand, that supposed —— Wheeler's slaves to have become free, d that this consideration justified his acting towards em as he had done. It seemed due to him that the urt, believing, as it did, those views to be incorrect, ould not withhold an expression of its dissent from em." Several succinct positions were accordingly asrted by the Judge, two of which may invite a few additional remarks at this time.

"I know of no statutes of Pennsylvania,' the Judge id, 'which affects to divest the rights of property of a izen of North Carolina, acquired and asserted under e laws of that State, because he has found it needful convenient to pass through the territory of Pennsylnia; and I am not aware that any such statute, if ch a one were shown, could be recognized as valid in Court of the United States.'

"The first of these propositions may be vindicated sily. By the common law, as it came to Pennsylvania, very was a familiar institution. Only six days after e first legislative assembly met in Philadelphia, and irteen days before the Great Charter was signed, the ouncil was engaged in discussing a law 'to prevent e escape of runaways;' and four days later it set jucially, William Penn himself presiding, to enforce a ntract for the sale of a slave. (1 vol. Colonial Record, 66.) The counties of Newcastle, Kent and Sussex, hich were at that time, and for many years after, anxed to Pennsylvania, and governed by the same law, ntinue to recognize slavery up to the present hour. survived in our own Commonwealth, as a legally proted institution, until long after the census of 40: so cautiously did the act of 1780, for its gradual olition among us, operate upon the vested interests our own slave owners.

"That act excepted from the operation of its provins the domestic slaves of delegates in Congress, of reign Ministers, of persons passing through, or *sojourning* in the State, and *not becoming residents* therein, provided ch slaves were not *detained* in the State longer than x months. The act of 1847 repealed so much of the t of 1780 as authorized masters and owners of slaves bring and *retain* their slaves within the Commonealth for period of six months, or for any period time whatever. But it did not affect to vary or reind the rights of slave owners *passing through* our territory. It applied to persons *resident* and persons *sojourning*, who brought and sought to *retain* their slaves re; for over such persons and their rights of property e State had lawful dominion: but it left the right of ansit for property and person, over which it had no risdiction, just as it was before, and as it stood under the Constitution of the United States and the Law Nations.

"This brings me to the second part of the position firmed in the court's opinion, namely, the right of a tizen of one State to pass freely with his slaves rough the territory of another State, in which the intution of slavery is not recognized.

"I need not say, that before the compact of union as formed between the States, each of them was an solutely sovereign and independent community: and at, except so far as their relations to each other and foreign nations have been qualified by the Federal onstitution, each of them remains so. As such, it is ound by that great moral code, which, because of its niversal obligation, is called the Law of Nations. What could not do if freed from federative restrictions, it annot do now: every restraint upon its policy, which ity to other States would in that case involve, binds it still, just as if the Union had been dissolved or had never been formed.

"All the statists unite in regarding the right of transit for person and property through the territory of a friendly State, as among those which cannot, under ordinary circumstances, be denied. Vattel, B. 2, ch. 10, § 132, 3, 4; Puffendorf, B. 3, ch. 3, § 5, 67; Rutherf. Inst. B. 2, ch. 9; 1 Kent Com. 33, 35. It is true that the right is not an unqualified one. The State may impose reasonable conditions upon its exercise, and exact guaranties against its abuse. But subject to these limitations, it is the right of every citizen of a friendly State.

"The right is the same, and admits just the same qualifications, as to person and to property. The same argument that denies the right of peacefully transmitting one's property through the territories of a State, refuses the right of passage to its owner. And the question, what is to be deemed property in such a case, refers itself necessarily to the law of the State from which the citizen brings it; a different test would sanction the confiscation of property at the will of the sovereign through whose territory it seeks to pass. If one State may decree that there shall be no property, no right of ownership in human beings, another, in a spirit of practical philanthropy only a little more energetic, may deny the protection of law to the products of slave labour; and a third may denounce a similar outlawry against all intoxicating liquids. And if the laws of a State can control the rights of property of strangers passing through its territory, then the sugar of New Orleans, the cotton of South China, the wines of Ohio, and the wares of New England may have their markets bounded by the States in which they are produced; and without any change of reasoning. New Jersey may refuse to citizens of Pennsylvania the right of passing along her railroads to New York. The doctrine is one that was exploded in Europe more than four hundred and fifty years ago, and finds now, or found very lately, its parting illustration in the politics of Japan.

"It was because, and only because, this right was acknowledged by all civilized nations, and had never been doubted among the american colonies—because the States, as all times tendered its hospitalities freely to the rest, cherishing that liberal commerce which makes a brotherhood of interest even among alien States; it was because of this, that no man in the convention or country thought of making the right to transit a subject of Constitutional guaranty. Everything in and about the Constitution implies it. It is found in the object, 'to establish a more perfect union,' in the denial to the States of the power to lay duties on imports, and in the reservation to Congress of the exclusive right to regulate commerce among the States.

"This last power of the general government according to the repeated and well considered decisions of the Supreme Court of the U. S., from *Gibbons* vs. *Ogden*, 9 Rep., to the passenger cases, 7 Howard, applies to intercourse as well as navigation, to the transportation of men as well as goods, of men who pass from State to State involuntarily, as men who pass voluntarily; and it excludes the right of any State to pass laws regulating, controlling, or *a fortiori*, prohibiting such intercourse or transportation. I do not quote the words of the eminent judges who have affirmed this exposition of the Constitution; but it is impossible to read their elaborate opinions, as they are found in the reports without recognizing this as the fixed law of the United States.

"It needs no reference to disputable annals to show that when the Constitution was formed in 1787, slaves were recognized as property throughout the United States. The Constitution made them a distinct element in the distribution of the representative power, and in the assessment of direct taxes. They were known and returned by the census three years afterwards, in sixteen out of the seventeen States then embraced in the Union; and as late as the year 1850 they were found in every State of the original thirteen. How is it possible, then, while we assert the binding force of the Constitution by claiming rights under it, to regard slave property as less effectively secured by the provisions of that instrument than any other property which is recognized as such by the law of the owner's domicil? How can it be, that a State may single out this one sort of property from among all the rest, and deny to it the right of passing over its soil—passing with its owner, parcel of his travelling equipment, as much so as the horse he rides on, his great coat, or his carpet bag.

"We revolt in Pennsylvania, and honestly, no doubt, at this association of men with things as the subject of property; for we have accustomed ourselves for some years, now nearly fifteen, to regard men as men, and things as things *sub modo*, however; for we distinguish against the negro as much as our forefathers did; and not, perhaps, with quite as much reason. They denied him civil rights, as a slave; we exclude him from political rights, though a freeman."

This we believe is the first time that the monstrous position has been assumed by any Judge of any of the United States Courts in any of the nominally free States, that human beings made slaves by the laws of one State, must be considered as property and nothing more, when brought into any other State for transportation; the latter being prevented by "the law of nations" from recognizing them as men entitled to any rights, and from forbidding their passage like any other chattels through its territories. For the first time it is declared that the free States have no more power to prevent slaveholders from driving their coffles of shackled men, women and children, through their midst, than they have to exclude cotton, sugar or rum; and that the opinion heretofore so generally and so warmly cherished, that the free States could at least free themselves from the crime and ignominy of having their soil polluted by the presence of the abominable system, is a delusion; their hands are tied by the "law of nations" so that they cannot loose themselves from "the peculiar institution," but must quietly submit, notwithstanding any laws they may pass or have passed to the contrary, to see their railroads, their canals and other highways, occupied, at the option of the slave-dealer, with his miserable victims, as he seeks a market for his human flesh; or by the master with his train of groaning slaves, as he travels back and forward in search of health or pleasure.

We would ask whether it is probable the United States Government would claim this right under "the law of nations" for the slaveholder travelling in Great Britain, France, or any of the great powers of Europe, and if it should, would not the demand be considered as an insult and promptly rejected? Will the free States submit to it?

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to the 29th ult.—*The War.*—Active operations have been resumed in the Crimea. Prince Gortschakoff telegraphs under date of the 23d, that the allies had landed 20,000 men at Eupatoria, and had 30,000 on the Russian flank. On the 22d the allies attacked the Russian infantry, and the latter retreated to the Heights over Rusta. Another despatch from Gortschakoff, dated the 26th, states that on the previous day, 33,000 of the allies had debouched from Eupatoria, and occupied the neighbouring villages on the left bank. Despatches from Sebastopol of the 16th announce that the Russians were fortifying themselves in the north part, and were constructing new batteries; and that the French were advancing cavalry and a column of infantry towards Backshi-serai, by the Baidar road. Sebastopol is to be razed, and the basins filled up. A fearful tempest had occurred at Sebastopol, with very heavy rains. Gortschakoff reported on the 17th, that the allies had attempted nothing up to that date on the north side, but were concentrating their forces between Balaklava and the Tchernaya, and constantly reconnoitering the left wing of the Russians from the Baider Valley. Letters from the camp mention that the allies were actively preparing for a campaign. The Russians continue to fire shells into Sebastopol from the north shore. Some of the guns send the shot entirely over the town, doing much damage to the advanced siege-works of the allies. From three to four hundred deserters, most of them Poles, had arrived at the allied camp. They reported that the Russian army was in a demoralized condition, and that such was the confusion in Sebastopol, from the first moment of the attack on the 8th, that the soldiers, already exhausted with fatigue, remained for 24 hours without provisions. A letter from Berlin, dated 23d, says, Various circumsances at St. Petersburg seem to indicate that Prince Gortschakoff will soon evacuate the forts to the north of Sebastopol, those forts being only stragetic points, but great preparations are making by the Russians for a winter campaign. The Russian treasury has received large sums of money through Berlin. English war material is constantly passing through Prussia for the army. The Grand Duke Constantine arrived at Nico-

laeff on the 20th, and it was said the Czar himself would shortly visit that place to superintend the winter Crimean campaign. A despatch from Vienna says, The Czar has arrived at Odessa, and held a council of war. Great uncertainty prevailed respecting the probable movements of the Russian army in the Crimea, and also as to its actual resources and condition, it is however surmised that its position is a highly critical one. It would seem that the allies were winding a net around Sebastopol, from which the Russians could only escape by a violent and desperate struggle. The losses sustained by the Russians during the final assault, and the three days' terrible bombardment which preceded it, are supposed by the allies to have reached 18,000 men. Pelissier reports the loss of the French on the 8th ult., at 7551 men, killed, wounded, and missing. Five French generals were killed, and ten wounded; 140 other officers were killed, 244 wounded, and 10 were missing.

The War in Asia.—The Russians have abandoned Erzeroum, but Kars is still invested, and the garrison are said to be reduced to extremities for want of provisions. Omar Pasha has left for Asia Minor, but without the troops he was to have taken with him. The Anglo-Turkish Contingent remains at Constantinople, and the Ottoman army remains in the Crimea.

AUSTRIA.—The Austrian government organ, at Vienna, states, referring to Russia and the allies, that the new state of things may give occasion for a diplomatic contest or a sanguinary strife between Russia and the Western Powers, but will in no way affect the mediatory attitude of Austria.

DENMARK.—The Representatives in session at Copenhagen, have definitely approved, by ten majority, all the proposed constitutional changes.

GREAT BRITAIN.—A part of the Baltic fleet had left for England. Most of the fleet is to winter at Kiel. The Bank of England had further advanced its minimum rate of interest to 5 per cent. English securities were depressed on account of the high rate of interest, and the scarcity of money on loan. Consols had fallen to $88\frac{1}{4}$. *Liverpool Market.*—The sales of cotton for the week were 36,000 bales; there had been a further decline of $\frac{1}{8}d.$ on nearly all kinds of American. The following are the quotations:—Fair Orleans, $6\frac{7}{8}d.$; Middling Orleans, $6\frac{1}{8}d.$; Fair Uplands, $6\frac{3}{8}d.$; Middling Uplands, $5\frac{7}{8}d.$; Middling Mobile, 6*d.* No material change had taken place in breadstuffs; the prices of flour were, Western Canal, 39*s.* to 42*s.*; Philadelphia and Baltimore, 40*s.* to 42*s.*; Genessee and Ohio, 42*s.* to 44*s.* There was less demand for iron, and prices were slightly giving away.

INDIA AND CHINA.—Dates from Hong Kong to Ninth mo. 10th, and from Calcutta to Eighth mo. 24th, had been received in England. The rebellion continued in Bengal, but the insurgents were beginning to give way. A force of 50,000 men had been assembled in the Hill district. Money was scarce in Bengal, and the bank had raised its rate of discount to 12 per cent. At Shanghai there was no prospect of new tea coming forward. Most of what has been received was old Congou, in bad condition. Silks are scarce and excessively dear. The pirates about Canton hold control of the coast for two thousand miles. In the tea districts of Hooman Aspacka the rebels were in great strength, and the trade of Canton was very much restricted.

SANDWICH ISLANDS.—Honolula papers to Eighth mo. 25th, had been received in San Francisco. There had been unusual volcanic activity, in Mauna Loa and its vicinity. On the night of Eighth mo. 11th, a new eruption or a new volcano made its appearance, near the summit of Mauna Loa, and on the 15th of Eighth mo., another eruption was witnessed on the plain, about equi distant from Mauna Loa and Mauna Kea, and at a point where one was never before known. The Hawaiian Legislature had recently been in session. The chief business was the discussion and passage of the annual Appropriation bill. The total amount appropriated was $447,933, for the usual expenses of the several departments of the government, and for public works and payment of certain claims.

UNITED STATES.—*Return of the Kane Expedition.*—On the 11th inst., the propeller Arctic and barque Release arrived at New York, having on board Dr. Kane and his party. These vessels left New York on the 30th of Fifth mo. last, under the command of Lieut. Hartstein, fort he special purpose of affording succour to the expedition. They went as far north as the ice would permit, and were twenty-eight days forcing through the ice back to Melville Bay. On the 13th of Ninth month, at Disco, on the coast of Greenland, they fell in with Dr. Kane and his associates. Dr. Kane had been compelled to abandon his vessel in the ice, and had made his way with his men through appalling difficulties and hardships over land, ice and water, for a distance of 1300 miles. In this journey they had to endure eighty-one days of constant exposure. Three men died; the remaining sixteen arrived at Greenland in vigorous health, except that some of them were badly frost-bitten. No trace was found of Sir John Franklin's party.

Shipwreck and Loss of Life.—On the 30th ult., the ship William Penn, of New Bedford, from the Chincha Islands, with a cargo of guano, was totally wrecked off the Hatteras Shoals. The captain's wife, seven seamen, and Dr. Bowline, who left the ship in the light boat, were picked up by a vessel, and brought to Savannah. The captain was rescued from the wreck on the 1st inst. Some of the crew who attempted to escape on a raft, are believed to have perished; if they have, the loss of life will amount to about fifteen persons in all.

New York.—The report of the City Inspector shows that the total number of deaths in the city of N. York, in 1854, was 28,568. Of these, 3243 were congenital, or the result of old age or casualties; 2509 were caused by cholera; 4156 by other diseases of the bowels; diseases of the respiratory organs, (exclusive of congestion,) 5436; fevers of all kinds, 1533; apoplexy and congestion, and inflammation of the brain, 1278; dropsy and water in the brain, 1365; small-pox, 611; marasmus, 1711; convulsions, mostly infantile, 2183. Of the whole number, 15,265 were males and 13,303 females. It is stated that the very large orders in the New York market for flour and grain, last week, were on British government account. The quantity required by the British, was 500,000 barrels. The corn and wheat were purchased principally for the French government. The sales of these articles, in three days, reached nearly three and a half millions of dollars. Interments last week, 386.

New Orleans.—The weather has become cool, and the city comparatively healthy; the mortality for the week ending the 29th ult., was 152, including 46 from yellow fever. The fever in the interior was abating.

Norfolk and Portsmouth.—The fever has nearly disappeared from both places.

Philadelphia.—Mortality last week, 164.

California.—Dates from San Francisco to Ninth mo. 20th. The Nicaragua steamer Uncle Sam arrived at San Francisco on the 14th. The cholera broke out in this vessel on her passage, and before she reached San Francisco, had carried off 106 passengers. Several others had subsequently died in the hospital, and 14 remained under treatment. The State election in California had resulted in favour of the Know Nothings. The accounts from the mines were favourable. The town of Grass Valley was totally destroyed by fire on the 14th ult., and a very destructive fire had occurred at Weaversville, Trinity county. There had been no further Indian disturbances. Trade was active in San Francisco. In consequence of large orders from Chili, domestic flour had advanced to $9 per barrel.

Miscellaneous.—African Exploration.—Dr. Barth, the African explorer, has returned to Europe, after an absence of five years, in the interior of Africa. During his absence he has made discoveries which have greatly increased our knowledge of Central Africa, and of the countries east and south-east of Lake Tsad, as far as the basin of the Nile. In his unparalleled journey to Timbuctoo, he discovered two large empires, Gando and Hamd-Allaki, of which not even the names were known previously, and gained a complete insight into the history and present state of Timbuctoo, its people and all the surrounding countries.

The Crimean War.—It appears from official returns that up to the 15th of Ninth month, there were shipped from Marseilles and Toulon, for the East, since the commencement of the war, 226,000 men, besides 45,000 from Algeria, Corsica and Italy.

Decrease in Population.—The town of Nantucket, Mass., which in the year 1840 had 9021 inhabitants, has now but 8074, according to the census just taken, being a decrease in fifteen years of 947.

A Suggestion.—A correspondent of the Builder suggests that the London houses should be roofed with thick glass, instead of slates, so that the top part of the houses might be formed into conservatories, smoking-rooms and observatories, instead of lumber rooms.

Longevity.—Elizabeth Randolph, believed to be the oldest inhabitant of Western Carolina, died in Yancey county on the 21st ult. The Asheville News says, she was born in 1747, and was at the time of her death in her one hundred and ninth year.

Emancipated.—Sixteen negroes were recently emancipated by Arthur Allen, of North Carolina. They have gone to Ohio.

New Sealing Ground.—A Nantucket (Mass.) whaler recently discovered an island in the South Pacific Ocean, about 250 miles south of Desolation Island, and took from it, in less than a week's time, four hundred barrels of sea elephants' oil. Two other ships are now preparing to return there, for the purpose of profiting this valuable discovery.

A Polar Coal Region.—E. Meriam, the Brooklyn teorologist, states that the Arctic Zone is not a bar waste. It will in time be found one of the richest neral districts of the globe. Coal is most abund there, as far north as beyond latitude 75. This fact ing established, we presume an Arctic Zone Coal Co pany will soon be one of the Wall street fancies.

Coal of Recent Formation.—At Haroe Island the Ar Expedition found coal apparently of recent formati The grain of the wood was still perceptible, and it v interspersed with small masses of a very pure re The supply was limited in depth only by the frost, was so loose that it could be shovelled up without d culty. It was found to burn well.

RECEIPTS.

Received from Chas. P. Dilworth, Pa., $2, vol. from Sarah Ashton, Pa., $2, vol. 29; from Joshua Evans, N. Y., $2, vol. 28.

Agent Appointed.—Lloyd Balderston, Port Deposit, 1

WEST-TOWN BOARDING-SCHOOL.

The winter session of the School will commence Second-day, the 5th of Eleventh month next. The pup will be conveyed from the city, by railroad, to W Chester, where conveyances will be in waiting to ta them to the School, on the arrival of the morning a afternoon cars, on Second-day, the 5th, and Third-d the 6th of Eleventh month. The children will get th baggage the day after their arrival. The cars leave t depot, south side of Market street, above Eighteen (formerly Schuylkill Fifth street,) at half past 7 o'clo A. M., and at half past 3 o'clock, P. M. The agent of t school will be at the railroad depot on Second a Third-day *afternoons*, and will furnish pupils with ticke and accompany them to West Chester. Those who by the *morning* train will be furnished with tickets a person in attendance. To those who procure tick as directed, the fare from Philadelphia to the Scho including baggage, will be one dollar, which will charged at the School. All baggage should be distinc marked West-town, and with the name of the own and should be sent directly to the depot.

The West-town office is at Friends' Bookstore, N 84 Arch street, where all small packages for the pup left before 12 o'clock *on Sixth-days*, will be forwarde *All letters* for the pupils and others at the School, shou be sent by *mail*, directed to *West-town Boarding-Scho West Chester P. O., Chester Co., Pa.* Packages shou be distinctly marked and put up in a secure manner, that their contents will not be liable to be lost by han ling. The stage will leave West Chester for the Scho during the *winter session*, on Second, Fourth, and Sevent days, on the arrival of the *morning* cars from the ci and from the School to West Chester on the same day to meet the morning cars for Philadelphia. The fa for each passenger to and from West Chester by t stage, will be 25 cents. When special conveyances other times are provided at the School, an extra char will be made.

West-town, Tenth mo., 2d, 1855.

INDIAN CIVILIZATION.

A man Friend is wanted to assist on the farm Tunessassah, and to aid in carrying out the conce for the improvement of the Indians.

Application may be made to JOSEPH ELKINTON, 377 S. Second stre
THOMAS EVANS, 180 Arch stre

Philad., Tenth mo., 1855.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in th Institution.

Application may be made to either of the undersigne members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS, SAMUEL BETTLE, Jr. } Philada.

MARRIED, on the 2d inst., at Friends' Meeting-hous Sixth street, JABEZ JENKINS, Jr., and MARGARET, daugh ter of Charles Williams, all of this city.

DIED, on the 5th of the Tenth month, 1855, in th eighty-fifth year of his age, ISRAEL COPE; a member the Monthly Meeting of Friends of Philadelphia.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXIX. SEVENTH-DAY, TENTH MONTH 27, 1855. NO. 7.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

The Gulf Stream.

(Continued from page 42.)

"Along the shores of India, where the experiments have been carefully made, the evaporation amounts to three-fourths of an inch daily. Suppose it in the trade-wind region of the Atlantic to amount to only half an inch, that would give an annual evaporation of say fifteen feet. In the process of evaporation from the sea, fresh water only is taken up; the salts are left behind. Now a layer of sea-water, fifteen feet deep, and as broad as the trade-wind belts of the Atlantic, and reaching across the ocean, contains an immense amount of salts. The great equatorial current which keeps from the shores of Africa, across the Atlantic, into the Caribbean Sea, is a surface current; and may it not bear into that sea a large portion of those waters that have satisfied the thirsty trade-winds with saltless vapour? If so, and it probably does—have we not detected here the footprints of an agent that does tend to make the waters of the Caribbean Sea salter, and therefore heavier than the average of sea-water?" "Now let we may form some idea as to the influence, which the salts left by the vapour that the trade-winds, north-east and south-east, take up from sea-water, is calculated to exert in creating currents, let us make a partial calculation to show how much of this vapour held in solution before it was given up, and, of course, while yet in the state of sea-water. The north-east trade-wind regions of the Atlantic embrace an area of at least three million square miles; and the yearly evaporation from it is, we will suppose, fifteen feet. The salt that is contained in a mass of sea-water, covering to the depth of fifteen feet an area of three million square miles in superficial extent, would be sufficient to cover the British Islands to the depth of thirteen feet. As this water supplies the trade-winds with vapour, it therefore becomes salter, and as it becomes salter, the forces of aggregation among its particles are increased, as we may infer from the fact that the waters of the Gulf Stream are reluctant to mix with those of the ocean."

"In the present state of our knowledge concerning this wonderful phenomenon—for the Gulf Stream is one of the most marvellous things in the ocean—we can do little more than conjecture. But we have two causes in operation which, we may safely assume, are among those concerned in producing the Gulf Stream. One of these is in the increased saltness of its water after the trade-winds have been supplied with vapour from it; and the other is in the diminished quantum of salt which the Baltic and the North Sea contain. The waters of the Baltic contain only about half as much salt as sea-water does generally.

"Now here we have, on one side, the Caribbean Sea and Gulf of Mexico, with their waters of brine; on the other, the Baltic and North Sea, with waters that are but little more than brackish. In one of these sea-basins the water is heavy; in the other, it is light. Between them the ocean intervenes; but water is bound to seek and to maintain its level; and here, therefore, we unmask one of the agents concerned in causing the Gulf Stream. What is the influence of this agent—that is, how great is it, and to what extent does it go—we cannot say; only it is at least one of the agents concerned."

"As to the temperature of the Gulf Stream, there is, in a winter's day, off Hatteras, and even as high up as the Grand Banks in mid ocean, a difference between its waters and those of the ocean, nearly of 20° and even 30°. Water, we know, expands by heat, and here the difference of temperature may more than compensate for the difference of saltness, and leave, therefore, the waters of the Gulf lighter, by reason of their warmth. Being lighter and adhesive, they should therefore occupy a higher level than those through which they flow. Assuming the depth off Hatteras to be one hundred and fourteen fathoms, and allowing the usual rates of expansion for sea-water, figures show that the middle or axis of the Gulf Stream there should be nearly two feet higher than the contiguous waters of the Atlantic. Hence, the surface of the stream should present a double inclined plane, from which the water would be running down on either side, as from the roof of a house. As this runs off at the top, the same weight of colder water runs in at the bottom, and so raises up the cold water bed of the Gulf Stream, and causes it to become shallower and shallower as it goes north. That the Gulf Stream is roof-shaped, causing the waters in its surface to flow off to either side from the middle, we have not only circumstantial evidence to show, but observations to prove." "In its course to the north, the Gulf Stream gradually trends more and more to the eastward, until it arrives off the Banks of Newfoundland, when its course becomes due east. These banks, it has been thought, deflect it from its proper course, and cause it to take this turn. Examination will prove, I think, that they are an effect, certainly not the cause. It is here that the frigid current already spoken of, with its icebergs from the north, are met and melted by the warm waters of the Gulf. Of course the loads of earth, stones, and gravel brought down by them, are here deposited. Captain Scoresby, far away in the north, counted five hundred icebergs setting out from the same vicinity, upon this cold current, for the south. Many of them, loaded with earth, have been seen aground on the Banks. This process of transferring deposits for these shoals, has been going on for ages; and with time, seems altogether adequate to the effect described.

"The deep sea soundings that have been made by vessels of the navy, tend to confirm this view as to the formation of these Banks. The greatest contrast in the bottom of the Atlantic is just to the south of these Banks. Nowhere in the open sea has the water been found to deepen so suddenly as here. Coming from the north, the bottom of the sea is shelving; but suddenly after passing these Banks, its depth increases by almost a precipitous descent for many thousand feet, thus indicating that the debris which forms the Grand Banks, comes from the north."

"Many philosophers have expressed the opinion—indeed, the belief is common among mariners—that the coasts of the United States and the shoals of Nantucket turn the Gulf Stream toward the east; but if the view I have been endeavouring to make clear be correct, and I think it is—it appears that the course of the Gulf Stream is fixed and prescribed by exactly the same laws that require the planets to revolve in orbits, the planes of which shall pass through the centre of the sun; and that, were the Nantucket Shoals not in existence, the course of the Gulf Stream in the main would be exactly as it is, and where it is. The Gulf Stream is bound over to the North Sea and Bay of Biscay partly for the reason, perhaps, that the waters there are lighter than those of the Mexican Gulf, and if the Shoals of Nantucket were not in existence, it could not pursue a more direct route. The Grand Banks, however, are encroaching; and cold currents from the north come down upon it: they may, and probably do, assist now and then to turn it aside." "But there are other forces operating upon the Gulf Stream. They are derived from the effect of changes in the waters of the whole ocean, as produced by changes in their temperature, from time to time. As the Gulf Stream leaves the coasts of the United States, it begins to vary its position according to the seasons; the limit of its northern edge, as it passes the meridian of Cape Race, being in winter about latitudes 40° to 41°, and in September, when the sea is hottest, about latitude 45° to 46°. The trough of the Gulf Stream, therefore, may be supposed to waver about in the ocean, not unlike a pennon in the breeze. Its head is confined between the shoals of the Bahamas and the Carolinas, but that part of it which stretches over toward the Grand Banks of Newfoundland, is, as the temperature of the waters of the ocean changes, first pressed down toward the south, and then again up toward the north, according to the season of the year."

"In winter, the volume of cold water on the American or left side of the stream, is greatly increased. It must have room, and gains it by pressing the warmer waters of the stream farther to the south or right. In September, the temperature of these cold waters is modified; there is not such an extent of them, and then the warmer waters, in turn, press them back, and so the pendulum-like motion is preserved."

"As a rule, the hottest water of the Gulf Stream is at or near the surface; and as the deep sea thermometer is sent down, it shows that these waters, though still far warmer than the water on either side at corresponding depths, gradually becomes less and less warm until the bottom of the current is reached. There is reason to believe that the warm waters of the Gulf Stream are nowhere permitted, in the oceanic economy, to touch

the bottom of the sea. There is everywhere a cushion of cool water between them and the solid parts of the earth's crust. This arrangement is suggestive, and strikingly beautiful. One of the benign offices of the Gulf Stream is to convey heat from the Gulf of Mexico, where otherwise it would become excessive, and to disperse it in regions beyond the Atlantic for the amelioration of the climates of the British Islands, and of all Western Europe. Now, cold water is one of the best non-conductors of heat, and if the warmer water of the Gulf Stream was sent across the Atlantic in contact with the solid crust of the earth —comparatively a good conductor of heat—instead of being sent across, as it is, in contact with a cold, non-conducting cushion of cool water to fend it from the bottom, all its heat would be lost in the first part of the way, and the soft climates of both France and England would be as that of Labrador, severe in the extreme, and ice bound."

(To be continued.)

Epistle of George Fox (1685.)

Having spent about a week in the country, I returned to London, where I continued about two months, visiting meetings, and labouring to get relief for Friends from their sufferings, which yet lay heavy upon them in many parts of the nation. Several papers also I wrote relating to the service of Truth, one of which was concerning order in the church of God, which some that were gone out of the unity of Friends much opposed. It was as follows:—

Among all societies, families or nations of people in the world, there exists some sort of order. There was the order of Aaron in the Old Testament, and the order of Melchizedek before that, after whose order Christ Jesus came, and he did not despise that order. God is a God of order in his whole creation, and in his church; and all believers in the light, the life in Christ, that pass from death to life, are in the order of the Holy Spirit, power, light, life, and government of Christ Jesus, of the increase whereof there is no end. This is a mystery to all those disorderly people, who have written and printed so much against the order which the Lord's power and Spirit hath brought forth among his people. And you that cry so much against order, is it not manifest that you are gone into a land of darkness, and of the shadow of death, into disorder, and where the light is as darkness? Is not this, your condition, scen by all them that live and walk in the Truth, whose conversations are according to the gospel of life and salvation?

The devil, Satan, dragon, the first and second beast, the whore and false prophets, and their worshippers and followers, are all out of the Truth, abode not in it, nor in the order of it; and the Truth is over them all. In Salem is God's tabernacle; and his tabernacle is in Shiloh; these are beyond the tabernacles of Ham. (Ps. lxxvi. and lxxviii.)

All the figures and shadows were and are comprehended in time; but Christ the substance is the beginning and the ending. And all trials, troubles, persecutions, and temptations, came up in time; but the Lord's power which is everlasting, is over all such things; in which is safety.

The black world of darkness lieth in wickedness; and by its wisdom knoweth not God, that made the world and all things therein; for the god of the world and prince of the air ruleth in the hearts of all that disobey the living God that made them. So the god of this wicked world hath blinded the eyes of the infidels or heathen; so that by their wisdom they know not the living God.

In the Old Testament, the Lord said, "With all thy offerings thou shalt offer salt." Lev. xi. 13. And Christ saith in his new convenant, "Every one shall be salted with fire, and every sacrifice shall be salted with salt. Salt is good; but if the salt have lost its saltness, wherewith will you season it? Have salt in yourselves; and have peace one with another." Mark ix. 49, 50.

We have received the earnest of the Spirit, which is the earnest of the inheritance that fadeth not away. For God poureth out of his Spirit, upon all flesh. It is God's Spirit which is above our natural spirit, by which alone we do not know God; for it is by the Spirit of God that we know the things of God. And the Spirit of God doth witness to our souls and spirits that this Spirit of God is the earnest of an eternal inheritance. "God opens his people's ears to discipline, and commands that they turn from iniquity. If they obey and serve him, they shall spend their days in prosperity, and their years in pleasure; but if they obey him not, they shall perish by the sword, and they shall die without knowledge." Job xxxvi. 10—12. So the disobedient that do not turn from their iniquity, have not this prosperity and pleasure, but die without the knowledge of God; and their ears are shut to this discipline, which God opens to his people. G. F.

From the Edinburgh Review.

The Chemistry of Common Life.

Turn now to the water we drink. In this admirable fluid, so clear, so bright, so grateful to the system, so healthful to the temperate, so necessary to all,—the delight of Grecian song,—the charm of the Eastern paradise,—of this fluid, lauded with justice by the physiologist, and worshipped, not unduly, by the total abstainer,—chemistry tells us that three-fourths of our apparently solid bodies consist, and that it forms nearly as large a proportion of all living vegetables during the height and vigour of their growth. In this fluid, looked upon as elementary till nearly our own times, modern research has taught us to see the result of a subtle union between the oxygen we have spoken of, and another gas, to which the name of hydrogen (water-former) has been given. Kindle this latter gas in the air, and it burns with a pale flame. Hold a cold bell glass over the flame, and its under surface will become bedewed with moisture, and drops of water will trickle down its sides. Collect this water and submit it to a current of electricity; the liquid will disappear, and in its stead the two gases oxygen and hydrogen will remain. These experiments prove, *first*, that while burning in the air, the hydrogen unites with the oxygen of the atmosphere and forms water; and, *second*, that the water thus formed consists of these two gaseous constituents only, compressed and bound together by some incomprehensible connexion, which it makes us no wiser to call *chemical combinatian*.

It is, indeed, incomprehensible how water, the enemy of fire, should itself consist of two gases, the one of which burns most readily, while the other is the great natural supporter of living fire. And it is equally strange that oxygen, so indispensable to animal life, should form eight-ninths by weight of a liquid in which few terrestrial animals can live for more than two or three seconds of time. By no known theory of physical or mechanical union can we satisfactorily explain how properties so new should be the result of such chemical combinations.

The chemical study of this water in its relations to animal and vegetable life presents new points of interest. The most important of its chemical properties are so familiar to us that we rarely think of them, and certainly do not sufficiently prize them. Pure water has neither taste, smell, nor pungency. It is neither sour like v gar, nor sweet like sugar, nor alkaline like s It irritates no nerve of sensation, even the delicate, nor is the tenderest part of the an frame disturbed by contact with this univ fluid. It is thus fitted to penetrate unfelt into subtlest tissues, and without causing the slig jar to flow along the finest, most sensitive, most hair-like vessels. It soothes and assu wherever it comes, lessening inflammation, lul pain, diluting unhealthy fluids within the b and washing morbid humors and waste mate from the sickly and changing frame.

Again, as a cooling agent water is equally valuable. In a dry and thirsty land we feel acknowledge the pleasure of bathing our he bodies in the sea or the running stream. But are less sensible how it watches over us, as it w every passing moment, dispelling each rising h and removing from the body every excess warmth which might disturb the equable work of its many parts. Do we eat inflammatory f or drink over-stimulating fluids, the excess bodily warmth produced converts a portion of ter into vapour, and the lungs throw it off the air. Do we by hard labour, or other u exertion, exalt the temperature of the body, same water again takes up the superfluous h and bathing in perspiration both skin and lu restrains within due bounds the growing inflam tion.

But more widely useful still in relation to ve table and animal life is the property which w possesses of dissolving and rendering fluid a l of usually solid bodies. Put sugar or salt i water, it disappears and becomes fluid and pe trative like water itself. The salt sea conta within its bosom many substances so dissolv the fluids that circulate through our veins chiefly water, holding various compound bo in solution; the moisture which the plant-r drinks in, carries with it into root, stem, and l many substances it has taken up from the s and the purest waters we consume for domes use are not free from foreign matters of mine and organic origin. In all this there is a purpo and good flows to all living things from this vent power of water.

It must suffice at present to mention one ge ral benefit. Into the composition of the plan variety of solid mineral substances enter, whic is the duty of the plant root to draw from the s In their solid form these substances could neit move freely through the soil nor find their w into the fine pores of the little rootlets. But solved in water they move as freely as the liq itself, and penetrate with it into the most delic tissues of plant or animal. Thus along the fin vessels they ascend through stem and twig a leaf, and distribute themselves wherever their p sence is required.

It is so also with the animal. Into all its par solid, saline, and mineral matters enter as a nec sary portion of their substance. These we int duce into the stomach along with our other fo but water must dissolve them there and make th fluid before they can find their way into the blo and be afterwards conveyed to the parts of t body where their several services are require And here comes into view a glimpse of wise be ficence in what at first sight appears only a fo of material evil. The impurities, as we call the of natural waters are often of real advantage those who drink them, supplying saline and mi ral matters in which the food is deficient, or whi the peculiar nature of the staple form of diet i given region renders grateful to the enfeebl

ne. The purest waters, therefore, are by no ans to be considered as everywhere and in all es the most wholesome. The natural waters of ry locality are more or less medicated, so to ak, and the constitutions of the inhabitants by g use become adapted to their peculiar quality, even their food is adjusted to it; so that to nge their wonted beverage even for one more e may sensibly affect the health, for years to ne, of large masses of people.

Look next at the food we eat. This is either egetable or of animal origin, and what modern mistry tells us regarding it is not only full of n uses and of deep personal interest to every of us, but is in itself truly marvellous. For, y, it abolishes the artificial distinction which re sense has long established between animal d and vegetable food. The bread we simply e is no longer quite different in use and qua- from the flesh meats on which learned cooks aust their culinary skill. In bread we actually the substance of beef, and in bread and butter ther form of that marbled flesh on which the of the epicure so placidly rests. In every iety of eatable plant there exists a portion of at chemists call gluten, which is nearly identi- with the muscular part of animal flesh, and a portion also of fat, which is absolutely iden- l with the fat of animals. How unphilosophi- and vain, therefore, the discipline which en- ns and makes a merit of abstaining from a sub- nce when obtained from the body of an animal, l yet allows the use of the same substance en obtained from a vegetable!

Again, it shows us how curiously and by what mirable contrivances this food is prepared for n. Of carbon and nitrogen, such as float in air, combined with the oxygen and hydrogen es already spoken of, the flesh and tissues of mals, and the solid portions of vegetables in at part consist. But of these only one, the rgen, serves directly as food either to animal to plant. The plant, as we have seen, sucks at times oxygen by its leaves, and some of this rgen, no doubt, contributes to the formation of growing substance. The animal, also, draws oxygen from the air by its lungs, and uses it ectly to build up the tissues of its body. Thus h animals and plants, to a certain small extent, d upon raw and unchanged oxygen. But nei- r plant nor animal can so consume or work up mentary or uncombined hydrogen, nitrogen, or bon.

And here, in pursuing further our inquiries in ard to the way in which they are respectively , a great difference at once presents itself be- en the plant and the animal; while, at the e time, a close and predetermined relation is n evidently to exist between them.

(To be continued.)

Selected.

The height and sum of religion is to bear the ge of Christ. But can those flatter themselves t they bear the Saviour's image, who are over- ne and rendered impatient by every trifling inci- nt of an adverse nature? O, remember that e life of Christ was from beginning to end a life trouble. He was often misunderstood and ill- ated by all classes; he was persecuted by the arisees; sold by the traitor whom he had osen as one of his disciples; reviled by the thief the cross; put to death. But he was far re desirous of the salvation and good of his ene- es, than he was of personal exemption from ir persecutions. "Father, forgive them; for y know not what they do," was his dying yer.

The Clouds Drop Down the Dew.—The following quotation from Dr. Wells on dew is highly instructive:—"I had often smiled in the pride of half-knowledge at the means frequently employed by gardeners to protect tender plants from cold, as it appeared to me impossible that a thin mat, or any such flimsy substance, could prevent them from attaining the temperature of the atmosphere, by which alone I thought them liable to be injured.

But when I had learned that bodies on the surface of the earth become, during a still and serene night, colder than the atmosphere, by radiating their heat to the heavens, I perceived immediately a just reason for the practice which I had before deemed useless. Being desirous, however, of acquiring some precise information on this subject, I fixed perpendicularly in the earth of a grass-plot four small sticks, and over their upper extremities, which were six inches above the grass, and formed the corners of a square, whose sides were two feet long, I drew tightly a very thin cambric handkerchief. In this disposition of things, therefore, nothing existed to prevent the free passage of air from the exposed grass to that which was sheltered except the four small sticks, and there was no substance to radiate downwards to the latter grass except the cambric handkerchief. The sheltered grass, however, was found nearly of the same temperature as the air, while the unsheltered was five degrees or more colder. One night the fully exposed grass was eleven degrees colder than the air, but the sheltered was only three degrees colder.

Hence we see the power of a very slight awning to avert or lessen the injurious coldness of the ground."—*Hunt's Elementary Physics—Bolin's Scientific Library.*

Many are the visited and called of the Lord, but few are his chosen. The reason, I believe, is, because all those who are visited are not faithful to the little discoveries which are made to them: some are too stubborn or cowardly to bear the cross, and others are too wise; and by their reasoning and comparing, instead of obedience to the convictions of grace, cause the eye which has in measure been opened to be closed again by the god of this world, and of the wisdom which is in it. If thou be determined, dear Friend, in good earnest to press forward, and endeavour to persevere to the end, (for running well for a time will stand us in little stead,) keep nothing alive which should be slain, give up cheerfully to the fire that chaffy combustible nature which is for the fire; and let the sword of the Spirit pierce and divide that which is for the sword; and as thou art faithful herein, thou wilt know by degrees judgment to be brought forth into victory, and thou shalt in due season feel that peace which passeth the understanding.—*Richard Shackleton.*

For "The Friend."

Perhaps, no discovery in mechanics, or combination of mechanical power, except that of Arkwright has done more for the manufacturing interests of this country, than those by which the finer kinds of carpeting, and other similar textures, are so beautifully wrought by power looms. The invention is purely American, (though it has been seized on by manufacturers in England, without acknowledgment or compensation to the originator,) and is the result of the remarkable powers of a comparatively young man, with but little school education, or opportunity of acquiring a knowledge of mechanics from books, and under other peculiarly unfavourable circumstances.

From an article under the heading of "Biography of Eminent Men," published in No. 9 of the 7th volume of "The Plough, Loom, and Anvil," we have made the following selections which we think will be found interesting to the readers of "The Friend," and introduce them to this great American inventor.

Erastus Brigham Bigelow.

The subject of this notice was born Fourth mo. 2d, 1814, in West Boylston, a small town of Massachusetts, seven miles north of Worcester. His father had a little farm, to the toils of which he added, with Yankee versatility, the business of a wheelwright and that of a chair-maker. The boy was sent, of course, to the district school. At the age of eight he asked his master to put him into arithmetic and writing, but he was pronounced too young for these high branches. He was not, however, to be headed off so. He took up Pike's Arithmetic at home, performed, unassisted, every question as far as the Rule of Three, and made a fair record of the whole. Who does not see in this a promising outset?

* * * * * *

John Temple, a neighbour of —— Bigelow, was a substantial farmer. He had noticed the lad's capacity, and sometimes jokingly asked him to come and live with him, and learn *his* occupation. Erastus regarded this proposition as a business matter. With him, an offer was an offer. Accordingly, one Second-day morning in early spring, this boy of ten years presented himself at John Temple's door and demanded employment. It was given him, with no expectation that he would continue through the day. He worked on, however, and at the end of the week suggested to J. T. that it would be proper to come to some understanding in regard to wages. On being asked his terms, he offered to work six months on condition of receiving at the close, a cosset lamb called "Dolly," to which he had taken a strong liking. The moderate demand was of course acceeded to. But scarcely had a month elapsed ere a difficulty arose. Dolly could not live without eating, and how was he to provide for her? His fellow labourers discovered the cause of his anxiety, and teasingly aggravated it. At length he proposed and effected an alteration in the contract. He relinquished his claim to Dolly, and J. T. agreed to furnish, instead, a pair of cow-hide boots, and sheep's gray cloth sufficient for a suit of clothes. The agreement was fully carried out on both sides. At the close of the period, an offer of four dollars a month for the ensuing summer was made and accepted. The kind-hearted man, at parting, gave the young farmer a silver dollar.

During the next two years he continued to work for J. Temple in the summer, and to attend school in winter. The farmer urged him to stay till he should be of age, and he offered to do so if, at the close of the term, he should receive in compensation a small outlying farm belonging to his employer. Fortunately, this offer was declined. It was an escape not unlike that of Daniel Webster from the clerkship of the county court.

In 1827, —— Bigelow removed to another part of the town, and engaged in the manufacture of cotton yarn. Erastus was set to work in the mill. So long as he found anything to study in the machinery and its working, he was interested; the occupation then became distasteful. While employed in this drudgery of tending spindles, he was busy in framing plans for the future. His grand desire was to obtain a liberal education. As his parents, from their limited circumstances, could not encourage him in this, he began to consider in what way he might accomplish the object himself. He already knew how to earn and to save. He had not only clothed himself by his toil, but to his first silver dollar had added several more. * * *

About this time he made his first invention. It was a hand-loom for weaving suspender webbing. It accomplished the object; but as the business would not justify the employment of an operative, he abandoned it, after realizing from it a few dollars. His next invention was of more importance. A ball of cotton cord, known in the market by the name of "piping cord," had been brought into the house for domestic use. On examination, he found it to be of yarn like that which he was spinning every day. On inquiry, he learned that it was made by hand, in the ordinary rope-walk. He was sure that it could be formed more expeditiously and cheaply by automatic machinery. In a few weeks he had matured the plan of a machine, and within two months he had it in successful operation. It worked well—earning for the youthful inventor in the course of a year about one hundred dollars. At length the article fell greatly in price, and the working of the machinery was abandoned.

These first developments of a peculiar genius were evidently called forth by his burning desire for an education. They were temporary expedients to enable him to pay his way. It should not be forgotten that they were the achievements of a lad only fourteen years of age. Having now by his industry and ingenuity acquired a small fund, he obtained parental consent to attend a neighbouring academy, at his own expense. This was in 1830. Here he entered on the study of Latin. His teacher was pleased, and wrote to the father, recommending a collegiate course for the boy. But to the cautious parent, a trade seemed safer and better. As the son preferred not to engage again in the dull employment of the spinning mill, the matter was compromised, and he was told that he might go to Boston and become a commission merchant, if he could.

To Boston accordingly he went. He carried no letters—knew no one. After a few inquiries from door to door, he found employment in the wholesale and retail dry-goods establishment of S. F. Morse & Co. * * * *

About this time a teacher of stenography came to Boston and gave lessons in the art. He drew much attention and formed large classes. Our young clerk shared in the general interest, but the cost of a course, (ten dollars,) was beyond his means. So he got some books and taught himself. He was surprised to find the art so simple. In a few days he could write with ease in short-hand. A new thought struck him. If *he* could learn stenography in this way so quickly and easily, why should not others—why should not many avail themselves of the useful, labour-saving process? The rareness of the acquirement must be owing to the expense. He would obviate that. He would write a book on short-hand, illustrated by plates, and filled with rules and examples. Energetic and industrious—to resolve, with him, was to act. In a short time his work—"The self-taught Stenographer"—was ready for the press. To prosecute this new enterprise, he relinquished his post behind the counter, much to the regret of his parents, who naturally questioned the expediency of the step, and to that of his employers, too, whom he had fully satisfied.

* * * * * *

[Having published his work, he entered into partnership with a young doctor, and they travelled over the country, trying to sell it, but the scheme failed.]

Behold him now at the age of eighteen. His little educational fund has vanished, all his schemes have failed, and he is four hundred dollars in debt. His father, in the meantime, had been extending and diversifying his business. He had formed a partnership with the celebrated "John Smith," and a new mill had been erected for their operations. As the old mill now stood idle, Erastus thought that he might turn it to some account. In this project he found a person willing to join him. John Munroe was the name of his second associate. Their business was the manufacture of twine. It was beginning to be moderately successful, when a disagreement between Smith and his partner put a stop to the operations of the younger firm.

* * * * * *

[He now took up the employment of itinerant writing-master, but was not content to remain at it. He returned home.]

His parents received him kindly, but could not suppress their anxiety concerning his future. In that humble family council many plans were started and rejected. At length, with unanimous approval, the youth resolves to become a physician. After a winter passed in classical studies at Leicester Academy, he entered his name as a student in medicine. This study he prosecuted with diligence for more than a year, being much interested in the science, but constantly annoyed by a sense of his imperfect literary preparation. Even then, could he but find the means, he would go back, to start anew and aright. Again the stimulus of this early and strong desire put him on the look-out for some source of pecuniary gain. With his mind in this state, he happened, while on a visit, to sleep under a knotted or Marseilles quilt. Years before he had seen similar fabrics woven by the slow and costly process of the hand-loom. Why—he now asked himself—could not a power-loom be made to weave them? It was not until a year afterwards that he set himself in earnest to solve this problem. Having suspended, for a time, his medical studies, he matured the plan of a loom. With some pecuniary aid he was enabled to construct the machine, which worked to the satisfaction of all.

But to prosecute the enterprise, capital must be had. In quest of this he went to Boston. A sample of the fabric was shown to Freeman, Cobb & Co., who were large importers of the article. Satisfied that it must succeed, they entered at once into an agreement, contracting to pay all expenses thus far incurred, to be at the cost of patents for this country and for England, and to erect and furnish a mill that should meet all probable demands of the market. In consideration of this contribution, the inventor was to receive, free of expense to himself, one-quarter of the profits. A brighter day had at length dawned on the struggling youth. He had reached the position so long sought. He could now secure a thorough education. Accordingly he renewed his studies under the care of a clergyman, who was in the habit of fitting young men for college. Must we state that even this fair prospect was soon clouded? Freeman, Cobb & Co. failed in business. The period was one of commercial depression, and was, therefore, no time to raise capital for new enterprise. To increase his embarrassments, his father had been unsuccessful in his affairs, and was now in declining health. His own position and his sense of filial duty, left him no alternative. The sternly-exacting present must be provided for. Postponing to an indefinite future his half-realized schemes and hopes, he once more relinquished his classical studies.

(To be continued.)

From age to age, throughout all ages, Divine love is that alone, in which dominion has been, is, and will be rightly conducted.

Selected.

LET THERE BE LIGHT.

Night, stern, eternal, and alone,
Girded with solemn silence round,
Majestic on his starless throne,
Sat brooding o'er the vast profound—
And there unbroken darkness lay,
Deeper than that which veils the tomb,
While circling ages wheel'd away
Unnoted mid the voiceless gloom.

Then moved upon the waveless deep
The quickening Spirit of the Lord,
And broken was its pulseless sleep
Before the Everlasting Word!
"Let there be light" and listening earth,
With tree, and plant, and flowery sod,
"In the beginning" sprang to birth,
Obedient to the voice of God.

Then, in his burning track, the sun
Trod onward to his joyous noon,
And in the heavens, one by one,
Clustered the stars around the moon—
In glory bathed, the radiant day
Wore like a king his crown of light—
And, girdled by the "Milky Way,"
How queenly look'd the star gemm'd night!

Bursting from choirs celestial rang,
Triumphantly the notes of song;
The morning-stars together sang
In concert with the heavenly throng,
And earth, enraptured, caught the strain
That thrill'd along her fields of air,
Till every mountain-top and plain
Flung back an answering echo there!

Creator! let thy Spirit shine
The darkness of our souls within,
And lead us by thy grace divine
From the forbidden paths of sin;
And may that voice which bade the earth
From Chaos and the realms of Night,
From doubt and darkness call us forth,
To God's own liberty and light!

Thus, made partakers of Thy love,
The baptism of the Spirit ours,
Our grateful hearts shall rise above,
Renew'd in purposes and powers;
And songs of joy again shall ring
Triumphant through the arch of heaven—
The glorious songs which angels sing,
Exulting over souls forgiven.

Selected.

HOPE.

There is a thought, can lift the soul
Above the narrow sphere that bounds it,
A star, that sheds its mild control
Brightest when grief's dark cloud surrounds it,
And pours a soft, pervading ray,
Life's ills can never chase away.

When earthly joys have left the breast;
As even the last fond hope it cherished
Of mortal bliss—too like the rest—
Beneath woes wilting touch has perished,
With fadeless lustre streams *that* light—
A halo on the brow of night.

And bitter were our sojourn here,
In this dark wilderness of sorrow,
Did not that rainbow beam appear—
The herald of a brighter morrow,
A friendly beacon from on high,
To guide us to Eternity,
To dwell forever with the blest,
In realms of everlasting rest.

For "The Friend."

I approve much of the occasional insertion i "The Friend" of George Fox's instructive epistle and hope they are read by the subscribers to th paper. Very little is doing by the Society t support its doctrines and testimonies, but muc by some to lay them waste. The tendency nov is to go back to the outside formal systems, and t rid professing Quakers of the restraints of th cross, and an unvarying adherence to the sin plicity which inward heart-changing christianit leads into. Silent meetings are irksome to th worldly professor and the lover of a round

as onable amusements, and the gaietics of a rich
der life. There will be no need of separation to
es n the society, in the late modifications in princi-
le and practice proposed for the adoption of Friends
reaccepied; we should soon be remodelled: as
on Barclay remarks, "the devil is striving to
li us upon a new foundation so gently, that we
ne hardly know it." In the interesting epistle
nted last week, George Fox says, "Many
od dations have been laid since the apostles'
las, by such as have gone from Christ, the true
n sure foundation, and their foundations have
ved rotten, and come to naught, and themselves
ne come to loss." The "comers and goers" he
ps of, have gone "from the heavenly society
n unity of the saints in light," "having a form
f odliness, but out of the power thereof, out of
h order thereof; such have turned to janglings
n vain disputings." So early in the society as
t hat period, he says, "And you are not insensi-
d of the scurrilous and filthy books of lies and
le mations, which have been spread abroad in
h nation, and beyond sea, against the faith-
h" "Though for a time this spirit hath been
n and covered with the fig-leaves of an outward
ofession, and sometimes with fawning and flat-
ing words, yet the Lord God will blast all such
ir talkers, that do not walk in the order of life,
rh, and the gospel." He encourages his faith-
n brethren, that "live and walk in Christ," to
ceive, that "with his holy and glorious power
e limits and orders; so that nothing shall be done
ginst his people, but what is suffered for their
rl and their good, neither by apostates, nor perse-
ors with the tongue; all these are limited by
Christ, who hath all power in heaven and earth
en to him. Every one's faith is to stand in
n and his power." The permitted afflictions of
s day, will be converted into blessings, if we
ture them in a true christian spirit, equally so
th those of former days. The great matter is to
er them, so as to experience them to drive us
rer to Christ, to put our trust in him, being
le sensible of our impotence, and the need we
re to pray for faith and patience, and that the
ld Almighty will undertake for us, defend his
n cause, and keep us from making shipwreck of
h and a good conscience.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

THOMAS LIGHTFOOT.

(Continued from page 45.)

The epistle from our Yearly Meeting held in Philadelphia, for Pennsylvania and the Jerseys, &c., in the 14th to the 18th day of the Seventh month, 1723.

"To the Quarterly and Monthly Meetings of friends, belonging to the said Yearly Meeting.

"Dear and Well-beloved Friends,—We tenderly salute you in the Lord, with love unfeigned, and tritily desiring the prosperity of Zion, and of the whole Israel of God, and church of Christ every where; and that you and all the assemblies of God's people may be truly comforted and refreshed in the living sense of his presence and unspeakable goodness, as we have been in a very eminent manner, at this our solemn assembly, for which we are deeply obliged to bless and praise the God of all our mercies, and be humbly thankful to him for the same.

"By accounts received from our respective quarterly Meetings, we are given to understand, that love and unity is in a good degree preserved amongst Friends, our meetings kept up and discipline put in practice. And by epistles from Long Island, Maryland, Virginia and South Carolina, we have comfortable accounts of the prosperity of Truth in those parts.

"Our last year's epistle being very weighty and more large than usual, it is earnestly desired that the contents of it may be again recommended by your Quarterly and Monthly Meetings, in order to a faithful observance thereof; and that the said several meetings do commit those, with the other epistles of this meeting, to the custody of some honest Friend to whom recourse may be had, as occasion requires, and be read in the meetings at suitable times where they may be a service.

"Whereas by the last year's epistle from London; it is advised 'that parents who have children to give in marriage may not make it their chief care to obtain for them large portions and settlements of marriage, but rather be careful that their children be joined in marriage with persons of religious inclinations, suitable disposition, temper, sobriety of manners and diligent in their business, which are things essentially necessary to a comfortable life in a married state, and carefully to guard against all mixt marriages and unequal yoking of their children therein.'

"And by the same epistle it is recommended, 'that such Friends as are concerned in the affairs of the church, at Quarterly, Monthly, or particular Meetings, be careful to act therein in the wisdom of God whereby they may be exemplary to the young, who may be esteemed members thereof and attend the same: and as such young persons are found to be qualified with a real sense of Truth on their spirits, and subjection thereunto, and thereby made capable to come up to a service in their respective meetings; Friends are desired to encourage and bring them forward therein, whereby they may be helpful to the ancients.'

"By the foregoing it may be observed how young people ought to be qualified to act in our meetings for discipline. Now that all our youth may be fitted for that service; it is the advice of this meeting, that parents and guardians watch over their children, and train them up in the fear of God, and bring them to meetings of worship, causing them to behave themselves orderly therein; and when they arrive to a capacity of acting in the affairs of Truth, let them be encouraged to come up in their respective services.

"And as to such young people as have been educated in the way of Truth, or make profession with us, if they do not continue in well doing, but frequent scandalous or tippling houses, and delight in vain and evil company and communication, or shall use gaming, or drink to excess or behave rudely, or such like enormities; or shall decline our plain manner of speech or imitate the vain antic modes and customs of the times, the men with their extravagant wigs, and hats set up in three corners, and the women in their immodest dresses and other indecencies mentioned in the epistle of Caution against Pride, &c. It is our advice and earnest desire, that parents and guardians, whilst such youth are under their tuition, do restrain them, and not indulge, nor maintain them in such pride and extravagancy. But if they will not be reformed; then the overseers or other Friends shall use their endeavours to reclaim them; and if they cannot prevail, let the offenders (after dealing and admonition) have notice to be at the next succeeding Monthly Meeting in order to be further dealt withal, in the wisdom of Truth, according to our discipline.

"It is also to be observed, that the God and fountain of all our mercies has opened, and is opening in divers of our young people, a Divine spring of living ministry, therefore our earnest desire is, that both ministers and elders may be as nursing-fathers and mothers to those that are young in the ministry; and with all care and diligence advise and admonish them; and if they see occasion, reprove them in a tender and christian spirit; observing the rules of our discipline and counsel of Friends in that respect; as also exhort them frequently to read the Holy Scriptures, and earnestly seek the mind of the Spirit of Truth to open the mysteries of those Holy Writings; and as they keep in true patience and submission to the will of God, and stand faithful and abide in the simplicity of the gospel, and be exercised in their proper gifts, keeping down to the openings of divine love and life in themselves, they will witness a gradual growth, and be contented to wait for it in the will of God, and not strive to extend their declarations further than they find the life and power of God to bear them up.

"And our further advice is to all our ministers, that they be conversant in reading the scriptures of Truth; and if any in the course of their ministry shall mis-quote, misapply, or draw unsound inferences, or wrong conclusions from the text, or otherwise misbehave themselves in point of conduct or conversation, let them be dealt with in love and tenderness by the overseers or elders where they live; and if they refuse to acknowledge and give satisfaction for their offences, let them be further dealt with in the wisdom of Truth, as the case may require.

"And it is our sense and judgment, that our directions here, as well as the advices formerly given to our ministers, ought not to be taken as if we designed to limit or quench the Spirit of Truth in them, no more than the holy apostles' counsel and cautions did in Timothy and Titus, when he directed them what they should teach, exhort and rebuke, and what they should not.

"And we further advise in tender love, that all Friends when they come to their religious worship may know a travail and right exercise of spirit, which will drive away all drowsiness and indisposition of mind; so will God have the worship of his own establishing, which is performed in spirit and truth, the rewards of which are life and peace: but those that give way to a heavy, sleepy spirit, are as spots and blemishes in our feasts of charity, and hindrances to the weak, as well as great weights and burthens to the faithful, and are giving renewed evidence against themselves, of their disregard to the worship of God, by doing his work negligently.

"And it is the sense and direction of this meeting, that all certificates for women Friends (after the usual inquiry made by the women) shall be drawn and approved by the men's meeting, on whose behalf their clerk shall sign such certificates, and then send the same to the women for their signing.

"Also we direct that every particular meeting, with the approbation of their Monthly Meeting, may appoint a Friend to draw all the marriage certificates that are to be made use of there, which certificates shall be written according to the form prescribed in our book of discipline, with the addition only of the words [with the Lord's assistance] in the promissory part thereof.

"For as much as we have accounts from divers places, that visiting families has proved beneficial, both to the visitors and visited, where Friends are in the practice of it; therefore we can do no less than earnestly recommend the said service to the general practice of Friends, both men and women, as the respective Monthly Meetings shall direct and appoint: and we desire, that none be discouraged, but seek the Lord for assistance, and they will feel love to flow towards God's people and children, and as they abide in that love, they

will witness a providential hand to direct and give them acceptance where they come.

"And it is our sense and judgment, that if any professing Truth shall apply to such person or persons, as by colour of any art or skill whatsoever, do, or shall pretend knowledge to discover things hiddenly transacted, or to tell where things lost or stolen may be found: or if any under our profession do or shall use or pretend to such art or skill, we do hereby, in a just abhorrence of such doings, direct that the offenders be speedily dealt with and brought under censure.

"And lastly we earnestly desire, that our discipline be strictly put in practice against tale-bearers and spreaders of false reports, and that care be taken speedily to end all differences among Friends. And that each Monthly Meeting, as often as there may be occasion, appoint at least two overseers for every particular meeting, who are to be diligent in putting our discipline and directions by epistles in practice, and make report of their proceedings when the meeting requires the same.

"And so dear Friends, we tenderly recommend you to God, desiring that his divine power and peaceable wisdom may rule and reign over all, and that therein all your affairs may be ordered to his glory and your comfort and peace in Christ Jesus. The God of peace be with you all, Amen."

About the close of the year 1723, Thomas Lightfoot was liberated by New Garden* Monthly Meeting, to visit Friends in New England. Having the unity, and a certificate from the General Meeting of ministers held on the 14th of the First month, 1724, he joined Benjamin Kidd, a Friend from England, then on a religious visit in America. They first attended the meetings throughout New Jersey. Toward the close of the Second month, Thomas Chalkley met them at Cohansie, at or near which place a fair was at that time of year held. Thomas says, "We had a meeting together at Cohansie, in which the people were exhorted to sobriety and just dealing. The contrary of both is too obvious at such times as fairs. There being divers people there from the fair, as well as others, the nature of Christ's work on the heart was somewhat spoken to, but it was not so open a meeting as some others, the people thereaway being too slack and dull as to religion. Next day we had a meeting at Alloway's Creek, where we all three had some pretty close work. From thence we went to the General Meeting at Salem, which was larger than common on account of the said Friend, Benjamin Kidd, being there; who in the love of Christ came from England to visit the churches in this part of the world."

Having finished the meetings in New Jersey, Thomas Lightfoot and Benjamin Kidd passed on into New England, where they were for two or three months busily occupied in their Master's service, to the relief of their own minds and the comfort of the Friends they visited. Having concluded that service, they returned to Burlington in time to attend the Yearly Meeting in the Seventh month.

The Meeting of Ministers held Seventh mo. 14, made this minute: "Our antient Friend Thomas Lightfoot produced sundry certificates from Friends in New England, Long Island, &c., showing their unity with his visit and service, which were read to the satisfaction of this meeting. Our said friend gave also some verbal account, tending to encourage his brethren in their service, adding some agreeable account of the service of his then companion, Benjamin Kidd."

*In the year 1718 New Garden and Nottingham had been allowed to hold a Monthly Meeting.

(To be continued.)

For "The Friend."

For the Children.

One of the most interesting objects to the experienced Christian, is the young convert, who has been enlightened to see the exceeding sinfulness of sin, and, through the extendings of Divine love, has yielded to deep and fervent desires to be brought out of it, into the purity of a child of God. Next to his own acceptance with the Lord, nothing animates him, like a tender child, in whose view the impure delights of the world have lost their attractions, and the absorbing wish is to receive power to forsake them, and to follow the Redeemer in the way of the cross. The sympathies of those who have contended with the mortifications of self-denial in openly confessing the Saviour before their companions, are powerfully awakened for such, and knowing the happiness of the victory and the peace that was their reward, their prayers are put up to their heavenly Father, that he would mightily defend these from the arch enemy, and bring them through their conflicts to his glory, and their establishment on the Rock of ages. When the older ones see that the plant of renown has taken root in the children, and is producing fruits of firmness and stability in confessing the Lord under all circumstances, and before every description of society they necessarily mingle with, it is a crown of rejoicing, and like the renewal of their life and vigour. They regard it as an evidence, that the Lord has not forgotten his heritage, but that as he visited them in their youth, he is continuing to lay his hand upon sons and daughters, to make them "lively stones" for his spiritual building, "an holy priesthood, to offer up spiritual sacrifices, acceptable to God by Jesus Christ."

Immortal souls are as precious as ever in his sight; and amid the commotions and divisions in religious Society, the Lord is drawing many, as into the wilderness, to come away from the follies of a vain and wicked world, and to bring them into communion with himself, that he may not only give them a clear sight of those things, which have formed a partition wall between Him and them, and forgive and blot out their transgressions; but also through his refining power, prepare them to be taken up as on Mount Zion, where he reveals in part even to children in religious experience, the beauty and the glory of his mystical body—the bride, the Lamb's wife. It is the highest honour and happiness conferred on man, to be thus noticed by the Lord of life and glory, washed by him in the laver of regeneration, and made a member of his militant church, by the renewing of the Holy Ghost, shed on obedient souls abundantly through their Lord and Saviour,—the Mediator of the New Covenant. Whatever may be the obstacles which Satan may strive to place in their way, or however their faith may be proved and reduced, and they be brought to fear at times that he will one day overpower them, their merciful Shepherd who trode the wine press alone, and is touched with a feeling of their infirmities, will guard them by night and by day, and will give them victory over all the cruel devices of the enemy, as they keep a single eye to Him, their Omnipotent defence. They may be tempted to think there are few who are faithfully serving God in this generation, and that they have not the same helps which many others have had, but let them remember, the work is to be accomplished in every one for himself, between the Lord and his soul, and that he who loved them and died for them, will not begin the work of salvation, to leave it unfinished if they do not desert him, but under every exigency, will supply all their needs. We would encourage these to keep the watch, relying on their dear Saviour, and he will keep and e them through every conflict, and finally n them helpers to others. The church has nee such helpers; especially when many are disp to shun the cross, turn their backs upon the fession of their fathers, and indulge themselve worldly ease, and pride, and sensual gratificat But what a contrast there is in the happines those who love and serve their Saviour, and emptiness of the votary to the world, who ha settlement on the true foundation, no substan peace, nor any ground for the hope of salvat through Christ. The evidence which the lif his followers conveys that their hearts are in l ven,—that the main object of their pursuit i daily preparation for those blessed abodes, an spread the Redeemer's kingdom by drawing ott into the same holy living,—carries conviction e into the heart of the worldling, of the superior of the true christian character, at the same ti it visits with condemnation the course of the bellious, and his recklessness of his own sal tion. But when these are brought to the verge time and the false delights which they have p sued, fade away, and they have nothing to sati the wants of the soul, we can hardly conceive o more pitiable object, than the man or woman t bereft of those gifts and graces, which dignify candidate for immortality, and give him the co soling hope of a glorious eternity through a c cified Saviour.

Every rational creature owes his time and talents to the service of his Maker, in the emplo ment of which, under the help and direction the grace of God, he will be enabled to work o his salvation with fear and trembling before hi and thus to produce the fruits of the Spirit to t glory of the great Husbandman. To these w be given gifts to occupy in the church, both i their own benefit, and for the edification or bui ing up of the body, by the effectual working the measure of Grace communicated to him a to her. It is in this way the members are fitte by the Holy Head for the different offices in t church, as ministers, elders, overseers, watchm and watchwomen upon the walls of Zion, to i struct and to warn one another of the devices Satan, to comfort and strengthen the weak, an to promote peace and love, and the unity of t Spirit, which is to subsist in the church of Chris Many who filled these stations, have been gather from their labours to their heavenly reward with a few years, and those who are still in a militar state, are secretly longing to see an increasin succession prepared by the Lord, to take th places vacated by the removal of those faithf servants of Christ.

Describing his condition in a fallen state, an the working of the grace of Christ Jesus to brin him out of it, George Whitehead says, "Thoug the Lord had raised good desires in me towar himself, that I might know true repentance unt life, yet these desires were often quenched, an my mind led away through an airy, light dispos tion, affecting music, vain mirth and other van ties. Howbeit the Lord was graciously please secretly to follow me with judgment and reproc in my very young years, and renewed desires i me after the right way. But I wanted to have stay to my mind, while a hearer of the priests an other professors, not knowing or following the light of Christ in me, which convinced and re proved me for the sins of my youth. The ligh shined in darkness, as in a dark place, and wa often clouded before it shone out of darkness. Th Spirit of the Lord moved upon the waters, ever when darkness was upon the face of the great deep before his works of old were wrought. And i

r to bring forth his works in the new creation, nake us new creatures in Christ Jesus, his it moves upon people's hearts, even when table as waters, and his light shines in them, ore they know God or Jesus Christ, in order give them the knowledge of the glory and er of God, and of his dear Son Jesus Christ.

After religious discourses with some young n soberly inclined, and when we had newly rd of a few people called Quakers, I was, after own seeking and wandering, desirous to go to eeting of theirs, which was at Captain Ward's, k place called Sunny-bank, near Grayig-Chapel. my first going to the said meeting, what was st observable to me was, when I came into the said eting, and sat down seriously among them, after ttle space of silence, a Friend spake a little le of the spiritual deliverances, travels, and gress of the Lord's people in his way and work, ding to Israel's deliverance out of Egypt, from ler Pharaoh and his task-masters. All which ought I easily understood allegorically or mysously as spiritualized; but there appeared to a great work of the power of the Lord in the eting, breaking the hearts of divers into great ow, weeping, and contrition of spirit, which I eved was a godly sorrow for sin, in order to eigned repentance. I was the more confirmed ein, seeing a young maid go mourning out of meeting, whom I seriously followed to observe sorrowful condition; and beholding her, being down on the ground, with her face towards the th, as if she regarded nobody present, she, urning bitterly, crying out, 'Lord, make me an; O Lord, make me clean.' This did far re tenderly and deeply affect my heart than it I had heard spoken, and more than all the aching that ever I had heard from man or men; was a certain testimony to me, the Spirit of Lord evidencing to my spirit, that it was a work of his power upon her heart, which also trated upon the hearts of others, causing both nbling, sorrow, and contrition, in order to bring n to true repentance, and amendment of life; so truly to experience the work of regenera- a and sanctification from sin and uncleanness; accordingly it proved so to many.—Glory to God forever. These things making deep im- ssion upon my mind, I was the more confirmed he belief I had before, that the Lord was at k among that *small despised people*, and that was about to gather and raise up a people unto aself, to worship in the Spirit and in the Truth, such he seeks to worship him acceptably; and t this his worship, is not in the dead, and empty ns set up in the will of man."

He who gathered this "small despised people," the searching, humbling power of his Divine ce, is as able now to contrite the spirits of his ldren's children, as in the beginning. And it been testified by many servants and hand- idens, who foresaw the degeneracy and the scat- ng which have overtaken many in this day, that ed would be preserved that should be accounted a generation, who should spread and flourish the Lord's time. Through mercy, there is not y a body of true Friends preserved, who are king to their Maker, the Holy One of Israel, help, but the Lord we believe is at work in hearts of many young people to add them to church, and make of them a band of valiant liers for his army.—May they give up all that requires, become partakers of the joys of his ly Spirit, and cheer the hearts of the fathers mothers in the view of their dedication to best of causes. They, like the apostle, have greater joy than to see the children walk in the ath.

THE FRIEND.

TENTH MONTH 27, 1855.

There are few problems more difficult to solve than that of administering to the wants of the needy, without creating undue dependence, destroying the feeling of self-respect, or encouraging idleness and improvidence among those, who have not virtue enough to stimulate them to struggle with the difficulties and privations of poverty. The subject has claimed the close attention of the political economist, and called into active experiment various plans suggested by the benevolent, or devised by those who have been mainly anxious to meet the indispensible demands at the least possible cost. But of the various schemes yet tried, none has been found so perfect, as to shut off all avenues to imposition and abuse, nor can we reasonably expect that such will be the case, while human nature remains what it is, and society is divided into the rich and the poor. It is right, however, to establish what guards we can, against encouraging vice or bestowing a bounty on indolence, while we are seeking to relieve the distresses of the poor and distributing the alms necessary for snatching the sick or helpless from threatened destruction. But it is necessary at the same time to be on the alert, lest we be betrayed into indifference relative to the wants and privations of the poor, by the frequent detection of imposition, or the reiterated importunities of the thriftless and prodigal, and our hearts become gradually shut against the feeling of commiseration and sympathy which we owe to our suffering fellow-creatures. "The poor ye have always with you" said our compassionate Saviour, and with their presence in the community, is the indissoluble obligation resting on all who are blessed with the means, to open their hearts to feel with and for them, and to make them partakers of a portion of the abundance of this worlds' goods, with which we may have been entrusted. If we fulfil this obligation according to our ability, and with a proper spirit, it will secure us an ample reward, whether we may have been always successful in guarding against imposture or not.

During the last winter there was extraordinary destitution, and consequent distress among the poorer classes in Philadelphia, as well as in most of the other large cities in our country. The high price of provisions, the absence of remunerating employment, and the crowding together of foreign immigrants in our courts and alleys, combined to increase largely the numbers of those who either chose, or were obliged to resort to the public bounty for support; and imposed a heavy tax on those who were able and willing to contribute for their relief. The demand was liberally responded to by the open-hearted in both town and country, and large sums of money were distributed or disbursed for the mitigation or removal of the apparent want or more concealed destitution which abounded on every side. There cannot be a doubt, that in the absence of systematic inspection into the real condition of the numerous applicants, and the impossibility, in consequence of the want of a proper concert among those who acted as almoners for the public, of detecting those who were indefatigable in urging their appeals at each source of supply, that a portion, perhaps not inconsiderable, of that which was intended for the help of the deserving poor alone, was worse than wasted on sturdy and clamorous beggars; and it may be that in some instances, the feeling of self-reliance and independence was impaired, where by more judicious management, help might have been extended without producing such effect. But granting this to have been the case, though it is to be deplored, and as we have before said, ought to be guarded against, so far as human wisdom and foresight can do so, yet it should not be allowed to dry up the sources of charity, or induce any to satisfy themselves when they know that "a brother or sister is naked or destitute of daily food" with saying, "depart in peace, be ye warmed and filled, notwithstanding give them not those things which are needful for the body." If the worthy, the deserving, and the grateful only, were the recipients of the bounty of Divine Providence, how many of us would be in the enjoyment of the blessings which render life comfortable and joyous?

We think the indications are, that the coming winter must bring with it a repetition of the same kind of difficulty and distress among the poorer classes as was witnessed in that of 1854-5, though perhaps not to the same extent. Though there are now *more* sources of profitable employment, the wages paid are not so high, and the prices of provisions of all kinds, keep much above what was the average rate a few years ago. Owing to the bad management of the financial affairs of our city, the funds usually appropriated for the use of the destitute poor appear to be nearly exhausted, at least are not available; and if no more certain or liberal provision should be made than is at present promised, a great proportion of the means necessary for the relief of the poor must be drawn from private charity. This will undoubtedly be felt, and will act very unequally; but we trust that the case, whatever may be its exigencies, will be met in the spirit of christian benevolence, and that each one will be found willing to do their part and contribute their share towards assisting their needy fellow citizens.

The plan and organization of the Union Benevolent Association, offer a means, which, we think, very effective for becoming acquainted with the wants of the poor, and the characters and habits of the applicants for assistance, and we know of no more trustworthy agent to which the application of funds derived from public beneficence, can be entrusted. We hope their appeal for help will be generally and liberally responded to.

We are aware that this is a subject that concerns our city readers more especially, but the general principles advanced are applicable to all, and we trust our distant subscribers will not be indifferent to the more circumscribed and local interests.

SUMMARY OF EVENTS.

EUROPE.—One week later from Liverpool. The chief item in the English news, is the advance in the rate of interest from 5 to 5½ per cent., made by the Bank on the 4th inst. The bullion in the Bank of England had been decreasing at an alarming rate for several weeks past—the Bank of France buying up all the specie it can. A large portion of the gold withdrawn was going to Russia. The Royal family and other wealthy Russians have had large investments in the British funds, which, since the war broke out, they have been from time to time disposing of and causing the proceeds to be sent them in gold. A good deal of commercial uneasiness has resulted, and consols had fallen to 87½. Trade in Manchester and the manufacturing districts, had been nearly suspended by the stringency of the money market. Deslisle, Janvrin and Deslisle, merchants and bankers of London, had failed; liabilities, £400,000. The revenue returns of the United Kingdom show an increase in the year of nearly eight and a half millions sterling, chiefly caused by the additional income tax. The 30th of Ninth month was observed throughout the kingdom as a day of thanksgiving for the successes of the allied arms. *Liverpool Market. Cotton* had further declined, and the market was dull; the quality of the new wheat did not promise well, and the

demand for old was active at full prices. American flour ranged from 40*s.* to 43*s.* 6*d.* per bbl.

FRANCE.—La Presse says that corn has at length reached its maximum price, and that the high quotations have brought offers of supply from all quarters. Large arrivals of foreign flour were shortly expected. The price of butchers' meat is to be fixed by the authorities, (by decree of the Prefect,) every fortnight. Measures are being taken by the authorities of the various departments for the relief of the poorer classes. A number of deaths from cholera had occurred at Paris, but the disease had not caused excitement or alarm.

SPAIN.—The Spanish patriotic party is said to be strongly opposed to the recent alliance with France and England. It is believed that on the vote for sending a Spanish contingent to the Crimea, the Cortes will decide adversely to the alliance, and that a *coup d'etat* will be attempted by the Anglo-French party. A crisis seems to be impending.

The War.—Telegraphic accounts from Vienna state that the allied fleets had left Sebastopol on some secret expedition. It was supposed that Nicolaieff or Odessa would be assailed by them. A letter from St. Petersburg states that the evening before the Emperor's departure for the South a grand council was held, at which it was decided to carry on the war with the utmost energy. The Emperor went from Moscow to Nicolaieff, the great Russian naval depot, on the Euxine, where, on the 23d ult., accompanied by the Grand Dukes, Constantine, Nicholas and Michael, he made an inspection of the troops, fortifications and dock-yards. The fortifications, it is stated, are to be greatly strengthened and extended. By telegraph we learn that the Czar has left Nicolaieff for the Crimea, his object in proceeding thither being doubtless to inspirit his forces by his presence. Various Russian and Prussian accounts state that the war is to be carried on with the greatest determination, and that the Crimea is to be defended to the last extremity. Gen. Mouravieff, now in Asia, will, it is intimated, take the place of Prince Gortschakoff, who is to become Minister of War. Moscow advices state that 193,000 men have been added to the military force of Russia. The Times' correspondent is not at all sanguine that the Russians will be forced to abandon their strong positions near Sebastopol, on the approach of winter. The last official despatches report the South side of Sebastopol to be occupied by detachments of French and English troops, who have had distinct quarters of the town assigned to them. Prince Gortschakoff, on the 23d ult., reported that 26,000 men had been landed at Eupatoria, and that on the 26th this force was increased to 33,000 men. He has since reported that "imposing masses" of the allied troops continue to threaten the left wing of the Russian army from the valley of Baidar, whilst a force amounting to between 30,000 and 40,000 men threaten the right wing of the Russians from Eupatoria. In a cavalry skirmish between the French and Russians near Eupatoria, the latter had 50 men killed, and lost 160 prisoners. In an order which Gortschakoff has addressed to his soldiers, he admits a loss of from 500 to 1000 men per day, during the last thirty days of the siege. To continue to defend the south side, he says, would have been to expose the troops to be uselessly murdered. The latest intelligence from Kars represented the garrison as hard pressed by the Russians, who had captured a convoy with provisions intended for the relief of the place; they had also devastated the surrounding country. It was, however, still hoped the garrison would be enabled to hold out until the snow should oblige the Russians to retreat. A brief telegraphic despatch from Hamburg states, that on the 27th ult., six English vessels appeared before Riga, and bombarded two of the batteries by which the city is defended.

UNITED STATES.—*The Revenue.*—The duties received at seven of the principal ports of the United States during the first quarter of the present fiscal year, amounted to $14,600,000; this is about four millions less than were received at the same ports in the corresponding quarter of 1854.

The Mexican Boundary.—Under the Gadsden treaty, the U. States have secured both the passes to the Pacific, and both are said to be practicable for railroads.

The Treaty with Japan.—This much talked of treaty does not appear after all to have secured any commercial advantages of much moment to this country. The Japanese deny the right of Americans to a residence for the purposes of trade, and sent away some merchants from San Francisco, who attempted to establish themselves at Hakodadi, with the object of provisioning whaling vessels. The U. S. government considers that the Japanese have construed the treaty correctly.

The Steamboat Law, though deemed at first very strict and burthensome, has proved to be a valuable safeguard to the public. The Inspectors of the St. Louis district state, that within their district no explosion has yet taken place in boilers constructed in conformity to the law, nor do they believe that any have occurred in the whole country. The number of casualties has in consequence greatly decreased. The passengers carried on steamboats during the past year, numbered 1,046,249; of these 13 lost their lives by fire; by sinking, 3; other modes, 12; by explosion, *none*—total, 28.

Wisconsin, by her new census, has a population of 552,109, against 305,391 in 1850. Gain in five years, 246,708, or about eighty per cent.

Texas.—Late Galveston dates mention an engagement between the Texan Rangers commanded by Capt. Callahan and a large body of Indians and Mexicans. Forty Indians and Mexicans were killed, and four of the Texans.

New York.—The assay office in this city had been one year in operation on the 10th inst. During that period, the gold bullion received, amounted to $27,952,778. Silver, do., $278,403. On the 14th, the clipper ship Adelaide arrived from California, with 2000 tons of freight, consisting mainly of wheat, barley and flour. Mortality last week, 341.

Philadelphia.—Mortality last week, 158, viz., 59 adults and 99 children.

Miscellaneous.—*The Submarine Cable.*—The attempt to lay the submarine cable from Cape Breton to New Foundland, has not been abandoned. The parties interested are sanguine of success, and intend to repeat their endeavours the coming summer. It is expected that the lost cable can be recovered as one end remains fast to the New Foundland shore, and with the aid of proper mechanical means, it is said, can be drawn in. The land portion of the line, extending from Cape Ray to St. Johns, a distance of 400 miles, is very near completion.

Telegraphic Progress.—Canada has now 3400 miles of telegraph wire in operation. The last link of the line ending on Lake Huron, at Gooderich, was finished this week, and business commenced.

Iron Ore in New York.—Professor Emmons, the State Geologist of New York, has traced in the valley of the Adirondac, for a distance of two and a half miles, a bed of rich iron ore. He says there might be procured within two feet of the surface seven million tons of ore, which would make three million tons of superior iron.

How Marbles are made.—The common mode of grinding children's marbles is a curious instance of simplicity in machinery. A number of stone chips, broken to a suitable size, are put together in a tin box, and fastened to the rim of a water-wheel, and there left to grind themselves into shape.

Extraordinary Yield. — Alvah Hurlbut, of Ulysses, Tompkins county, New York, is said to have a single stalk of buckwheat, that produced 6618 full and perfect grains. The weight of this enormous yield was five and a half ounces.

The Missing Aëronaut.—Winchester, who ascended in a balloon from Norwalk, Ohio, on the 2d instant, had not been heard of up to the 17th, at that place.

Railroad Travel in Illinois.—On the 10th, two trains on the Chicago and Galena road brought in four thousand passengers. An immense business is done on this road.

African Discovery.—A great inner sea is said to have been discovered in equatorial Africa by Dr. Rebmaun. It is stated to occupy the space between the equator and 10 deg. south latitude, and between 23 deg. and nearly 30 deg. east longitude.

The Kinney Expedition.—Kinney's newspaper at Greytown says, that he and his associates have quiet possession of thirty millions of acres of land, in the Mosquito territory, and are ready to dispose of it to actual settlers. According to the same authority, 900 men from Alabama and Mississippi would soon leave the U. States, to join the expedition.

RECEIPTS.

Received from J. H. Painter, Io., $2, vol. 29; from H. Drinker, Pa., per N. P., $5, to 26, vol. 30; from W. D. Cope, Pa., $2, vol. 28; from Lewis Bedell, N. Y., $4, vols. 28 and 29, for T. Bedell, $2.25, to 6, vol. 29; from Wm. Mickle, agt., W. N. J., $2, vol. 29, for R. R. Clark, $2, vol. 28, for R. Jones, S. C. Paul, and Dl. Packer, $2 each, vol. 29; from Jas. Austin, agt., Nant., 28 dollars, for M. Gardner, F. Arthur, J. Paddock, E. A. Easton, Jos. B. Swaine, D. Ray, A. Barney, Ed. Mitchell, Fras. B. House, Benj. Gardner, Jemima Austin, C. C. Hussey, G. Hussey, Eu. B. Paddock, $2 each, vol. 29; from Geo. Mitchener, agt., O., for Thos. Penrose, $2, vol. 28, for Ann Hobson, $4, vols. 28 and 29; from Josiah M. Reeve, N. J., $2, vol. 28.

WEST-TOWN BOARDING-SCHOOL.

The winter session of the School will commence Second-day, the 5th of Eleventh month next. The p will be conveyed from the city, by railroad, to Chester, where conveyances will be in waiting to them to the School, on the arrival of the morning afternoon cars, on Second-day, the 5th, and Third- the 6th of Eleventh month. The children will get baggage the day after their arrival. The cars leave depot, south side of Market street, above Eighte (formerly Schuylkill Fifth street,) at half past 7 o'c A. M., and at half past 3 o'clock, P. M. The agent o school will be at the railroad depot on Second Third-day *afternoons*, and will furnish pupils with tic and accompany them to West Chester. Those wh by the *morning* train will be furnished with ticket a person in attendance. To those who procure tic as directed, the fare from Philadelphia to the Sch including baggage, will be one dollar, which will charged at the School. All baggage should be distir marked West-town, and with the name of the ow and should be sent directly to the depot.

The West-town office is at Friends' Bookstore, 84 Arch street, where all small packages for the pu left before 12 o'clock *on Sixth-days*, will be forwar *All letters* for the pupils and others at the School, sh be sent by *mail*, directed to *West-town Boarding-Sc West Chester P. O., Chester Co., Pa.* Packages sh be distinctly marked and put up in a secure manne that their contents will not be liable to be lost by h ling. The stage will leave West Chester for the Sch during the *winter session*, on Second, Fourth, and Seve days, on the arrival of the *morning* cars from the and from the School to West Chester on the same d to meet the morning cars for Philadelphia. The for each passenger to and from West Chester by stage, will be 25 cents. When special conveyance other times are provided at the School, an extra cha will be made.

West-town, Tenth mo., 2d, 1855.

INDIAN CIVILIZATION.

A man Friend is wanted to assist on the farm Tunessassah, and to aid in carrying out the cont for the improvement of the Indians.

Application may be made to JOSEPH ELKINTO 377 S. Second str
THOMAS EVAN
Philad., Tenth mo., 1855. 180 Arch str

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in t Institution.

Application may be made to either of the undersig members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS, } Philada.
SAMUEL BETTLE, JR. }

MARRIED, at Friends' Meeting-house, Plymouth, Mo gomery county, Pa., on Fifth-day, the 11th instant, MUEL BENINGTON, of Delaware county, to MARY, dau ter of Jacob Albertson, of the former place.

DIED, on the 5th of Fifth month, 1855, in the town New Baltimore, Green Co., N. York, HOLLET TITUS, a nearly 88 years; a member of Coeymans Monthly M ing.

——, on the 3d of Sixth month, 1855, at his reside in the town of New Baltimore, Green Co., N. Y., SE MON CARMAN, in the 77th year of his age; a membe Coeymans Monthly Meeting. He bore a protracted ness with Christian fortitude, manifesting entire resi ation to the Divine will. He was much attached to principles of the gospel as held by ancient Friends, we trust his end was peace.

——, on the 24th of Seventh month, 1855, in N Baltimore, Green Co., N. Y., HENRY HALSTED; a me ber and much esteemed minister in Coeymans Mont Meeting.

——, on the 10th inst., after a short illness, in N Baltimore, Green Co., N. Y., THOMAS BEDELL, aged years; a much esteemed member and elder in Coeym Monthly Meeting. He was much concerned for support of our Christian doctrines and testimonies held by ancient Friends, and his labours and exam will be greatly missed in his meeting.

——, on the 9th of Sixth month, 1855, at the re dence of her husband, the above named Thomas Bed ESTHER BEDELL; a much esteemed member and el in Coeymans Monthly Meeting, in the 81st year of age.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXIX. SEVENTH-DAY, ELEVENTH MONTH 3, 1855. NO. 6.

PUBLISHED WEEKLY.

ice Two Dollars per annum, payable in advance.

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

stage to any part of Pennsylvania, for three months, aid in advance, three and a quarter cents; to any of the United States, for three months, if paid in nce, six and a-half cents.

For "The Friend."

The Gulf Stream.

(Continued from page 50.)

fluence of the Gulf Stream upon Climates.

Modern ingenuity has suggested a beautiful le of warming houses in winter. It is done by ns of hot water. The furnace and the caldron sometimes placed at a distance from the apart- its to be warmed. It is so at the Observatory. his case, pipes are used to conduct the heated er from the caldron under the superintendent's lling over into one of the basement rooms of Observatory, a distance of one hundred feet. se pipes are then flared out so as to present a e cooling surface; after which they are united one again, through which the water, being cooled, returns of its own accord to the cal- n. Thus cool water is returning all the time, flowing in at the bottom of the caldron, while water is continually flowing out at the top.

The ventilation of the Observatory is so ar- ged that the circulation of the atmosphere ough it is led from this basement-room, where pipes are, to all other parts of the building; in the process of this circulation, the warmth veyed by the water to the basement is taken ace by the air, and distributed over all the ms. Now, to compare small things with great, have, in the warm waters which are confined he Gulf of Mexico, just such a heating appa- s for Great Britain, the North Atlantic, and stern Europe. The furnace is the torrid zone; Mexican Gulf and Caribbean Sea are the cal- rs; the Gulf Stream is the conducting pipe. m the Grand Banks of Newfoundland to the res of Europe, is the basement—the hot-air mber—in which this pipe is flared out so as to ent a large cooling surface. Here the circu- on of the atmosphere is arranged by nature; it is such that the warmth thus conveyed into warm air chamber of mid-ocean is taken up the genial west winds, and dispensed, in the t benign manner, throughout Great Britain the west of Europe. The maximum tempe- re of the water-heated air-chamber of the Ob- ratory is about 90°. The maximum tempera- re of the Gulf Stream is 86°, or about 9° ve the ocean temperature due the latitude. reasing its latitude 10°, it loses but 2° of tem- ature; and, after having run three thousand es to the north, it still preserves, even in win- the heat of summer. With this temperature, rosses the 40th degree of north latitude, and e, overflowing its liquid banks, it spreads itself for thousands of square leagues over the cold waters around, and covers the ocean with a mantle of warmth that serves so much to mitigate in Europe the rigours of winter. Moving now more slowly, but dispensing its genial influences more freely, it finally meets the British Islands. By these it is divided, one part going into the polar basin of Spitzbergen, the other entering the Bay of Biscay, but each with a warmth considerably above the ocean temperature. Such an immense volume of heated water cannot fail to carry with it beyond the seas a mild and moist atmosphere. And this it is which so much softens climate there. We know not, except approximately in one or two places, what the depth, or the under temperature of the Gulf Stream may be; but *assuming* the temperature and velocity at the depth of two hundred fathoms to be those of the surface, and taking the well-known difference between the capacity of air and of water for specific heat as the argument; a simple calculation will show that the quantity of heat discharged over the Atlantic, from the waters of the Gulf Stream in a winter's day, would be sufficient to raise the whole column of atmosphere that rests upon France and the British Islands, from the freezing point to summer heat. Every west wind that blows crosses the stream on its way to Europe, and carries with it a portion of this heat to temper there the northern winds of winter. It is the influence of this stream upon climate that makes Erin the 'Emerald Isle of the Sea,' and that clothes the shores of Albion in evergreen robes; while in the same latitude on this side, the coasts of Labrador are fast-bound in fetters of ice."

"Nor do the beneficial influences of this stream upon climate end here. The West Indian Archipelago is encompassed on one side by its chain of islands, and on the other by the Cordilleras of the Andes contracting with the Isthmus of Darien, and stretching themselves out over the plains of Central America and Mexico. Beginning on the summit of this range, we leave the regions of perpetual snow, and descend first into the *tierra témplada*, and then into the *tierra caliente*, or burning land. Descending still lower, we reach both the level and the surface of the Mexican seas, where, were it not for this beautiful and benign system of aqueous circulation, the peculiar features of the surrounding country assure us we should have the hottest, if not the most pestilential climate in the world. As the waters in these two caldrons become heated, they are borne off by the Gulf Stream, and are replaced by cooler currents through the Caribbean Sea; the surface water, as it enters here, being 3° or 4°, and that in depth 40° cooler than when it escapes from the Gulf. Taking only this difference in surface temperature as an index of the heat accumulated there, a simple calculation will show that the quantity of specific heat daily carried off by the Gulf Stream from those regions, and discharged over the Atlantic, is sufficient to raise mountains of iron from zero to the melting point, and to keep in flow from them a molten stream of metal greater in volume than the waters daily discharged from the Mississippi river. Who, therefore, can calculate the benign influence of this wonderful current upon the climate of the South? In the pursuit of this subject, the mind is led from nature up to the Great Architect of nature; and what mind will not the study of this subject fill with profitable emotions? Unchanged and unchanging alone, of all created things, the ocean is the great emblem of its everlasting Creator. 'He treadeth upon the waves of the sea,' and is seen in the wonders of the deep. Yea, 'He calleth for its waters, and poureth them out upon the face of the earth.'

"In obedience to this call, the aqueous portion of our planet preserves its beautiful system of circulation. By it, heat and warmth are dispensed to the extra-tropical regions; clouds and rain are sent to refresh the dry land; and by it cooling streams are brought from Polar seas to temper the heat of the torrid zone. At the depth of two hundred and forty fathoms, the temperature of the currents setting into the Caribbean Sea, has been found as low as 48°, while that of the surface was 85°. Another cast with three hundred and eighty-six fathoms, gave 43° below against 83° at the surface. The hurricanes of these regions agitate the sea to great depths; they, therefore, cannot fail to bring to the surface portions of the cooler water below.

"At the very bottom of the Gulf Stream, when its surface temperature was 80°, the deep sea thermometer of the Coast Survey has recorded temperatures as low as 38°. These cold waters doubtless come down from the north to replace the warm water sent through the Gulf Stream, to moderate the cold of Spitzbergen; or within the Arctic Circle, the temperature at corresponding depths off the shores of that island, is only one degree colder than in the Caribbean Sea, while on the coasts of Labrador the temperature in depth is said to be 25°, or 7° below the freezing point of fresh water. Capt. Scoresby relates that on the coast of Greenland, in latitude 72°, the temperature of the air was 42°; of the water, 34°; and 29° at the depth of one hundred and eighteen fathoms. He there found a current setting to the south, and bearing with it this extremely cold water, with vast numbers of icebergs, whose centres, perhaps, were far below zero. It would be curious to ascertain the routes of these under-currents on their way to the tropical regions, which they are intended to cool. One has been found at the equator two hundred miles broad, and 23° colder than the surface water. Unless the land or shoals intervene, it no doubt comes down in a spiral curve, approaching the great circle." "It may well be questioned if our Atlantic cities and towns do not owe their excellent fish-markets, as well as our watering-places their refreshing sea-bathing in summer, to this stream of cold water. The temperature of the Mediterranean is 4° or 5° above the ocean temperature of the same latitude, and the fish there are very indifferent. On the other hand, the temperature along our coast is several degrees below that of the ocean, and from Maine to Florida our tables are supplied with the most excellent of fish. The sheepshead, so much esteemed in Virginia and the Carolinas, when taken on the warm coral banks of the Bahamas, loses its flavour, and is held in no esteem. The same is the case with other fish: when taken in the cold water of that coast, they have a delicious

flavour, and are highly esteemed; but when taken in the warm water on the other edge of the Gulf Stream, though but a few miles distant, their flesh is soft and unfit for the table. The temperature of the water at the Balize reaches 90°. The fish taken there are not to be compared with those of the same latitude in this cold stream. New Orleans, therefore, resorts to the cool waters on the Florida coasts for her choicest fish. The same is the case in the Pacific. A current of cold water from the south sweeps the shores of Chili, Peru, and Columbia, and reaches the Gallipagos Islands under the line. Throughout this whole distance, the world does not afford a more excellent or abundant supply of fish. Yet out in the Pacific, at the Society Islands, where coral abounds, and the water preserves a higher temperature, the fish, though they vie in gorgeousness of colouring with the birds, and plants, and insects of the tropics, are held in no esteem as an article of food. I have known sailors, even after long voyages, still to prefer their salt beef and pork to a mess of fish taken there. The few facts which we have, bearing upon this subject, seem to suggest it as a point of the inquiry to be made, whether the habitat of certain fish does not indicate the temperature of the water; and whether these cold and warm currents of the ocean do not constitute the great highways through which migratory fishes travel from one region to another.

(To be concluded.)

For "The Friend."

Not Satisfied with a Talk of Christ.

When William Edmondson was in New England in 1675, the people were greatly distressed by the Indians, waylaying and killing many of the inhabitants. He says, "I travelled in many places as with my life in my hand, leaving all to the Lord that rules in heaven and in earth. I heard of a tender people at a place called Reading, and with five or six Friends I went there to an ancient man's house, which was a garrison; for at that time most people, except Friends, were in garrisons for fear of the Indians. The gates being locked, we called, and the old man opened the gate; one of the elders was at prayer; so we stopped until he had done, and then went into the room where several were met to exercise religion, but they seemed to be disturbed at our coming in. I stood still and told them, 'We came not to disturb them, for I loved religion, and was seeking religious people;' the old man of the house bid us sit down, and he sat by me. As I sat, my heart being full of the power and Spirit of the Lord, the love of God ran through me to the people. I told them I had something in my heart to declare among them, if they would give me leave. The master of the house bid me speak, and my heart being full of the word of life, I spoke of the mysteries of God's kingdom; and as I was speaking, I touched a little upon the priests. The old man clapped me on the shoulder, and said, he must stop me, for I had spoken against their ministers. So I stopped, for I was tender of them, and felt they were a tender people, yet my heart was full of heavenly matter. After a little pause I told them, I had many things to declare unto them of the things of God, but being in that house, must have leave of the master of it. He bid me speak on, which I did in the demonstration of the Spirit and power of the Lord; so that their consciences were awakened, and the witness of God in them answered to the truth of the testimony. They were broken into many tears, and when I was clear in declaration, I concluded the meeting with fervent prayer to the Lord.

'The old man rising up, got me in his arms, and said he owned what I had spoken, and thanked God, that he could understand it; and said he had heard that we denied the Scriptures, and denied Christ who died for us; which was the cause of the great difference betwixt their ministers and us. But he understood this day that we owned both Christ and the Scriptures; therefore would know the difference betwixt their ministers and us. I told him their ministers were satisfied with the talk of Christ and the Scriptures; and we could not be satisfied without the sure inward, divine knowledge of God and Christ, and the enjoyment of those comforts the Scriptures declared of, which true believers enjoyed in the primitive times. The old man replied with tears, those were the things he wanted. He would not let us go until we had eaten some victuals with them, though at that time provisions were scarce, because of the great destruction by the wars. Thus, leaving them loving and tender, when we parted the old man wept, got me in his arms, and said, he doubted he should ever see me again."

The power that accompanied the ministry of Friends at that day, showed that it came from the Living spring, and it carried conviction into the hearts of many. Is there no danger in the midst of much high profession, of a ministry spreading among us consisting of many words without Divine authority, gratifying itching ears, but leaving the heart insensible of any baptizing power attending it? If the sure inward, divine knowledge of God and Christ is not known, the ministry and the religion of professors among us, may consist in a mere talk of the things testified of in the Holy Scriptures, stored in the memory, and recited under the name of gospel ministry. But let those who are bowed down under a true sense of the falling away from the life and virtue, which once distinguished the true Friends, keep to their respective gifts, and the guidance of the Lord's Spirit, and he will anoint them for his work, and clothe their services with a measure of his baptizing power, to the quickening and comfort of sincere hearts.

From "Old Humphrey's Portfolio."

What are your Points!

It has been said that every man has a "strong corner," the meaning of which expression is, that every man has a particular point or quality which in some degree distinguishes him from others; or that he has a hidden strength which circumstances alone make manifest. Whether this be true or not generally, it certainly is occasionally so in individual cases.

The different points or prominent qualities among mankind are well worthy of our best attention, that we may emulate the good and avoid the evil. The humble and teachable pick up many a lesson, that the proud and opinionated pass by, or despise.

One man has faith, so that he looks up to his heavenly Father with such unbroken and unshaken trust, that come what will, he is never stricken down. Others are stopped in their course by molehills, but he removes mountains of difficulty, and never so much as doubts the attainment of his object. He seems to take as his motto the text, "The Lord God will help me; therefore shall I not be confounded: therefore have I set my face like a flint, and I know that I shall not be ashamed." Isa. l, 7. Faith is the gift of God, and a precious gift it is; worth praying for, watching for, and striving for. Do you possess it? Is it one of your points? If so, happy are you.

Another has hope, in a very unusual degree, both in temporal and eternal things. He looks on the bright side of every event, and sees an oasis in every desert, and a glittering star in the bl est sky. Not only is he hopeful himself, bu makes others so. When he appears, his eye i up with animation; and when he speaks, his w are full of encouragement. "The darkest n has a day;" "Many a broken ship gets saf land;" "Give it up? no, never?" "Hope o the end," are words that are continually on his He reminds his desponding Christian friend the unchangeableness of the Saviour's love, exhorts them not to fear the threatening sto

> "Ye fearful saints, fresh courage take;
> The clouds ye so much dread
> Are big with mercy, and shall break
> In blessings on your head."

In this way he encourages other hearts strengthens his own. While his desponding ne bors deplore the winter, he anticipates the summ and when they look mournfully on the west, wh the sun is setting to-night, he points cheerfull the east, where it will rise to-morrow. If hop not among your points, seek it with all your s

A third possesses charity or Christian love, t mingling with his thoughts, his words, and deeds, "hopeth all things," and "endureth things." This is an excellent point indeed, as rare as it is excellent and inestimable. "I afraid that he is a faulty one," said a clergyr of a notorious offender; "but as I have some qualities which you have never seen, so he have some good ones, that you have never disc cred." Well is it said of faith, hope, and char or love, that "the greatest of these is charit

To know our points and to turn them to adv tage is true wisdom; to mistake them, and to unc take what we are not equal to perform, is great fo

But if "every man has a strong corner," i it not be said with equal truth, that every one his weak side?" The illustrations which mi be advanced to prove the latter remark wo greatly outnumber those that support the forr observation. There are bad points as well as g ones.

One man is proud and vain, not considering t "a man's pride shall bring him low." This pe of his character he shows in his mien and his m ner, his look and his language. He wa haughtily, speaks in a dictatorial way and gi himself all manner of airs in his silly conc Pride and vanity puff up many a heart. A pr man, like a fish, is easily caught, if the bai suited to his taste. "If," said an old fisherm "I wanted to catch one simpleton, I would h him with a bribe; if I wished to catch twenty, them with promises; but if I desired to catc hundred, I would poison them with flattery." pride is one of your points, the sooner you get of it the better.

Another is deceitful, so that you are never with him. He plays different parts at differ times; to-day he is a friend, and to-morrow enemy. His language before your face and beh your back, never agree; the one is all fur, and other all talon; "the words of his mouth smoother than butter, but war is in his heart; words are softer than oil, yet they are dra swords." There is something so mean and piti in deceit, that it deserves to be shot at as a targ and exposed to general ridicule.

A third is selfish. He is a perfect "I, by its I," all the centre of his own circle. Selfishn is as a blot on his brow, palpably visible to though unseen by himself. The apparent ki ness of a selfish man is interested and his seemi generosity is only "throwing a crab to catch apple." Of all human failings, selfishness is of the most common, and, when carried to extrem one of the most hateful. The poor may suff

the selfish man heeds it not; the houseless
r shiver, but he wraps himself up in his own
liket and is at ease; the hungry may perish, but
t matters that? he has enough and to spare.
This is one form of selfishness; but it has others
cannot be counted. Are you selfish?

Unnumber'd grateful tongues shall bless
That heart, where'er it goes,
That kindles at another's joy,
And weeps for others' woes.

In reviewing your qualities, remember that one
d and useful point is worth more than a hun-
d that are neither good nor useful. We read
hat instructive fable, "The Fox and the Cat,"
though the cat had but one point, it enabled
, on approach of the hounds, to run up a tree,
to get out of danger, while the fox, with all
cunning, and his thousand points, was over-
en by the dogs and torn to pieces. Bear in
d that a little Christian principle is better than
ch worldly shrewdness; and that faith, hope,
charity, will impart a thousand times more
ce and joy, than pride, deceit, and selfishness.
Once more, what are your points? If they are
d, encourage them; call them out, and bring
m into full practice, that they may be as mar-
to your bones; but if they are evil, pray
inst them, strive against them and abandon
m, lest they soil your garments, dim your hope,
ress your heart, and bring you to dishounor.

The Chemistry of Common Life.

(Continued from page 51.)

t would be out of place here minutely to dis-
s the way in which plants and animals are
rished and sustained. It is sufficient to ob-
ve, that throughout what may be called dead
mineral nature there exist numerous, more or
s simple, compounds of hydrogen carbon and
rogen, which the plant is able to appropriate
l employ in building up its growing substance.
the air, for example, there floats, as we have
n, an unfailing supply of carbonic acid. The
ne gas exists also in nearly all natural waters,
l in the soil it is formed abundantly along with
er comparatively simple combinations of car-
. All these the plant takes in by its leaves or
its roots, and from them, by a still obscure
mistry, extracts and makes its own the carbon
y contain. So from water and ammonia it
es hydrogen—from nitric acid, ammonia, and
er compounds, it takes nitrogen—and from the
d earthy matter of rocks and soils it selects
l takes up the so-called incombustible, inor-
ic, or mineral ingredients which are necessary
the production of its perfect substance.
Of raw and simple materials like these, the ani-
l can make nothing. Among them all, water
he only one it can with safety introduce into
stomach, and upon this it cannot live or be
tained. It is upon the results of the plant's
ours—upon the substances of the plant's body,
new and usually more complex combinations
ich the living plant has manufactured from the
ple compounds which nature presents to it—
t the herbivorous animal can alone support
lf. Out of these, by wonderful methods, which
cannot explain, the plant forms starch, sugar,
, and gluten, in all their varieties. So formed
the plant, the animal eats them; digests and
anges them anew by a further mysterious che-
stry which we are only now beginning faintly
follow; and finally fits them into appropriate
ces in its own body. Thus dead nature daily
ours for the food of plants; the living plant
ly labours for the food of animals. In the order
nature, the plant must precede, and accompany, and unceasingly work for the animal. Alone, in the midst of physical nature, man and all other animals would be helpless, forlorn, and short-lived.

Thus far, then, our science teaches us how different in relation to external things the life of plants is from the life of animals, and yet how closely and inseparably they are connected;—how selected first from earth and air to form the plant, the same matter next builds up the more curious animal frame; and when that is worn out, or dies, returns again to earth and air, to run the same course anew. It thus shows one simple though grand idea pervading all life, embodied in the existing course of animated nature, yet by its manifold and complex details, leading us perpetually to admire the surpassing Workman from whose beneficent intellect it sprung.

And in this plant, so essential to the life of all, what a miracle of chemical contrivance and chemical endowment it is! This little sporule, which the unassisted eye can scarcely discern,—in which even by the aid of the microscope only an obscure structure can be observed—in this little germ how much discernment and concealed intention really rests! Placed in one condition, it remains unalterably the same for an indefinite period of time. If life is there, it is life in a state of quiescent torpor; quiescent yet watchful; a life of most profound repose. Placed in another condition, it seems at once to perceive the change. It swells and moves; the inner being bursts its shell, and comes forth; slowly and cautiously expands its growing length; feels, as it were, and examines every substance it touches; selects and rejects as suits its purpose; transforms each chemical body it takes up, and fits it for the place it is intended to occupy in the building about to be erected; and with materials so collected and prepared, it builds unceasingly—without wearying, and after a predetermined plan—green leaf, graceful twig, towering stem, blooming flower, luscious fruit, nourishing seed; till through the wonderful working, mechanical and chemical, of that hidden speck of life which so long slept in the microscopic germ, beauty and grace adorn the landscape, and inert useless matter has been abundantly converted into food for man. How slow and limited is our most advanced chemical knowledge, compared with that easy skill so richly given to this tiny seedlet!

Let us now leave those substances which are naturally necessary to human life, and consider for a little those things which by habit have become to modern nations a kind of second nature. In looking to modern life in this point of view, it appears widely distinguished not only from that of classic times, but even from that of the middle ages. Sugar, tea, coffee, cocoa, brandy, and tobacco have all become familiar to Christian Europe and America within the last 300 years. By the end of the 14th century, the cultivation of sugar had already become important in Western Asia and Northern Africa. Brought into Spain by the Moors, and cultivated in Andalusia, it was planted in the Madeiras by the Portuguese, who in 1520 possessed already sixty sugar manufactories in the island of St. Thomas alone. Thence it penetrated to America with the Spaniards, and became a staple article of Spanish American growth. Now, about 4500 millions of pounds of cane sugar, produced chiefly in America, pass yearly through the hands of European and American merchants, while in addition nearly 500 millions of the same kind of sugar are extracted from the beet-root in Northern Europe, and consumed in the different countries of our more eastern continent. It was not till the year 1659 that sugar refining began to be practised in England; and in 1700, the consumption of all England was only 20 millions of pounds. Now, we are not only the great refiners of Europe, but by far the greatest consumers of sugar of every variety. In the year 1853, the consumption of the United Kingdom amounted to 818 millions of pounds of sugar, being at the rate of 28 lbs. a year—upwards of half-a pound a week—for each of our population. What a change in the habits and modes of living of the people does this imply!

The introduction and rapid spread of the habit of using tea is still more recent and remarkable. The leaf was not brought to Europe till about the ebginning of the 17th century. Sugar refineries were already in operation in England, when in 1664 the East India Company thought a couple of pounds of tea a not unroyal gift to present to the Queen of England. Now we consume at the rate of two pounds a head as the yearly allowance of every individual in the three kingdoms, and the total annual consumption of the United Kingdom is about 25,000 tons, or sixty millions of pounds! The use of this leaf is specially great in China and Thibet, in Russia, Holland, and England, and in the States and provinces of North America. The entire quantity consumed over this wide area, among about 500 millions of men, is roughly estimated at upwards of two thousand millions of pounds.

Coffee, though less a favourite among us than tea, is preferred to it by several of our continental neighbours. On the whole, perhaps the spread of coffee drinking the last 300 years has been more wonderful even than that of tea. It was not till the beginning of the 15th century that it was introduced into Arabia from Abyssinia. About the middle of the 16th, it began to be used in Constantinople, and in spite of the opposition of priests and Turkish doctors, it may now be considered as the staple minor luxury of Mahometan life. In the middle of the 17th century (1652), the first coffee-house was open in London; and now, two hundred years after, the yearly consumption of coffee in the United Kingdom has reached the large amount of 35 millions of pounds. The quantity of the coffee bean actually bought and sold is about 600 millions of pounds every year, and it is in daily use among perhaps 120 millions of men!

We may pass briefly over cocoa, the ancient beverage and nutriment of the Mexican Incas, and still the favourite in modern times of Central America, of Italy, and of Spain. It is consumed to the extent of about 100 millions of pounds a year, and among 50 millions of men.

But what is the chemistry of all this new food and drink, unknown to that ancient life, the manners and features of which form so great a part of our study at school? What new craving in our common nature have they awakened, what old craving more agreeably satisfied? What is their physiological action, in short, and upon what chemical constituents does it depend? Why have entire nations so readily fallen into the new habits, and why do they so pertinaciously cling to them?

By her fireside, in her humble cottage, the lonely widow sits; the kettler simmers over the ruddy embers, and the blackened teapot on the hot brick prepares her evening drink. Her crust of bread is scanty; yet as she sips the warm beverage—little sweetened, it may be, with the produce of the sugar cane,—genial thoughts awaken in her mind; her cottage grows less dark and lonely, and comfort seems to enliven the ill-furnished cabin. When our suffering and wounded soldiers were brought down frozen and bleeding from the trenches before Sebastopol to the port of Balaklava, the most welcome relief to their sufferings

was a pint of hot tea, which was happily provided for them. Whence this great solace to the weary and worn. Why out of scanty earnings does the ill-fed and lone one cheerfully pay for the seemingly unnourishing weekly ounce of tea? From what ever-open fountain does the daily comfort flow which the teacup gently brings to the careworn and the weak?

The answer we are enabled to give to these questions is still very imperfect. Recent chemical and chemico-physiological researches have indeed thrown much interesting light on the nature, composition, and mode of action of the warm infusions we delight to drink, and we can so far satisfactorily account for many of their effects. We may expect our present views, however, to be materially modified by the results of future research.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

THOMAS LIGHTFOOT.

(Continued from page 54.)

In the Yearly Meeting of that year, 1724, a concern arose for the well being of the members, and a committee was appointed, consisting of Thomas Lightfoot and a few other Friends, to prepare an epistle of advice and counsel. The epistle was drawn up, approved by the Yearly Meeting, and printed for distribution among the members. A portion of it we insert.

"Dear and Well-beloved Friends,—In the tender love of our heavenly Father, wherewith he hath loved us in his dear Son Christ Jesus, do we salute you, earnestly praying that he who is the fountain of all our mercies and blessings, may thoroughly sanctify the hearts of all his people and children everywhere. Since it hath pleased Divine Providence to favour the churches in these parts with rest and quiet, our sincere desire is, that all may make right use thereof, coming up in the one living faith, and dwelling in pure love, in like manner as the primitive churches, when they had rest, 'were edified, and walking in the fear of the Lord, and in the comfort of the Holy Ghost, were multiplied.' Where any abuse that rest, and fall into wantonness, janglings, envy or emulation, they grieve God's Holy Spirit, and become reproachful in his sight.

"Dear Friends, as the Lord has been very good and gracious to us, in this our solemn meeting, by favouring us with his Divine power and presence, to the opening of our hearts in love to him, and one to another; so he is pleased to bring a holy concern upon us, for the exaltation of his name and Truth, to recommend to your notice what is herein expressed.

"By accounts received from our respective Quarterly Meetings, we are given to understand, that love and unity is in a good degree continued among Friends, our meetings are kept up, and discipline put in practice; and by epistles from Rhode Island, Long Island, and Maryland, as also by Friends that have visited these Islands and parts adjacent, we are informed, that Truth prevails, and the testimony thereof is well received, and embraced in many places; divers being convinced, and some people come forth in the ministry to the comfort of faithful Friends."

"Dear Friends, We are touched with a godly jealousy, that the love and friendship of this world and spirit of it, with covetousness, pride, self-interest and the inordinate pursuit after lawful things here below, not only obstruct the growth of truth in some hearts, but hinder many from coming forward, as otherwise they might do, to carry on the good work of discipline, and perform other offices of love and service in the churches of Christ. Let us earnestly seek to the Searcher of all hearts for his Divine aid to empty us of these and all other hindering things, beseeching the Lord to cause many more worthy labourers to be fitted and made willing to come forward in this part of this great harvest.

"For this end, we earnestly recommend faithful Friends, especially ministers and elders, to watch over the flock of Christ, in their respective places and stations, always approving themselves by their holy examples, in conversation and conduct, to be such as faithfully and diligently walk up to the testimony of the blessed Truth, whereunto the Lord hath gathered us in this his gospel day.

"It is our advice, where any are found short, weak or faulty they may, without partiality, be admonished and sought in the spirit of love and Divine charity, so that it may be seen by all, that the restoring spirit of meekness and christian love abounds, before church censure comes; and that a gospel spirit is the spring and motive to all our performances, as well in discipline as worship. But if any decline or let fall any branch of their testimony, they are to be speedily dealt with and censured according to the good order and discipline established amongst us."

The epistle refers to former advices, and quotes some paragraphs from the last London epistle, and thus concludes.

"And now, Dear Friends, having thus recommended these things to your consideration and practice, we commit you to God, who is able and ready to assist us in His work and service, to the praise of his name, who is worthy forever."

"Signed on behalf and by order of the Yearly Meeting, held at Burlington, in the Seventh mo., 1724.

THOMAS LIGHTFOOT,
DAVID LLOYD,
ISAAC NORRIS."

In the Eleventh month, 1724, Thomas Lightfoot was married to Margaret Blunston, the widow of that valuable minister, John Blunston, and removed to her residence near Darby. He was then 80 years of age,—yet as respects his labours in the ministry, he was fervent and dedicated, and his faculties were not impaired, nor his judgment weakened.

In the First month, 1725, he brought his certificate of membership to Darby meeting, and there the brief remainder of his religious labour was mostly exercised. Towards the middle of the year, his health failed, and it was soon apparent that the end of his race drew nigh. Thomas Chalkley says in his Journal,—

"In the Eighth month, 1725, I went to Darby to visit our worthy aged Friend, Thomas Lightfoot, who lay very weak in body, none expecting his recovery. I called as I went from home, and then he was very ill, and told me 'he thought that illness would conclude his time in this world, but said that all was well, and likewise that he had a great concern upon his mind for the growth and prosperity of Truth in the earth, and desired with tenderness of spirit, that I would give his dear love to all friends;' and he now said, 'I never thought to see thee more, but am glad to see thee.' I stayed there all night, and in the morning we had a comfortable heart-melting time together, in which was revived the remembrance of the many favourable seasons of God's love we had enjoyed in our travels, in the work of the ministry of the gospel of Christ, and we tenderly prayed if we never met more in this world, we might meet in that which is to come, where we might never part more, but might forever live to sing with all the saints and holy angels, hallelujah to God and the Lamb."

"In the Ninth month, 1725, I was at the fu
ral of our worthy ancient Friend, Thomas Li
foot. He was buried at Darby; the meeting
the largest that I have ever seen at that pl
Our dear Friend was greatly beloved for his pi
and virtue, his sweet disposition and lively mi
try. The Lord was with him in his life and dea
and with us at his burial."

Thomas Lightfoot was about 81 years of a
at the time of his death.

essential principles of a far more important —the Brussels carpet loom; that the inventor a young man not twenty-three years old, who never even looked into a treatise on mechanics; finally, that all this was accomplished in the f space of forty days; and he will, at least, w that the history of useful art exhibits few h instances of mental and executive efficiency. Thus far we have traced, with some particula-, the ardent aspirings, the varied efforts, the cessive struggles and disappointments of a poor persevering youth. It shows what may be omplished by high aims, a fixed purpose, and blute industry. It will appeal to the warm mpathies of those who love to contemplate the elopment of mind and character under a disci-ne of hardship. * * * * The complete success of the coach-lace loom ught the inventor at once into notice. Fair-ks, Loring & Co., of Boston, John Wright, of rcester, Israel Langley, of Shirley, together h the inventor and his brother Horatio, united the purpose of building and running the looms. is association afterwards became the "Clinton mpany." E. B. B. was now in a condition to ry out his early and long-cherished, though n frustrated wish in regard to education. But time for that scheme had, he felt, gone by. had become better acquainted with the nature l measure of his own capacities. He saw open-before him a career of activity, success, and fulness. To this, accordingly, he resolved to vote his future life.

Soon after the Clinton Company began its ope-ions in Lancaster, the affairs of Freeman, Cobb Co., had become so far adjusted as to liberate m its legal embarrassment the counterpane m. One of the firm immediately contracted h the inventor on terms highly favourable to latter, for a number of the looms. But E. B. gelow happening soon after to be in New York, v there a new and different species of counter-ne then just introduced from England. An amination of this fabric convinced him not only t it would be more marketable than the knot-l counterpane, but that it could be made at less st. With a disinterestedness hardly less rare n his ingenuity, he advised —— Roberts to ve up the contract, and thus lay aside entirely e very curious and perfectly successful loom al-dy made. He at the time agreed to invent a wer loom for weaving this new fabric. Within x months from that time he had such a loom in ccessful operation. A small mill in Lancaster s filled with the machinery, and the business, adily prosperous, has remunerated the inventor, d enriched others.

After starting the coach-lace and counterpane tablishments, E. B. Bigelow took up the ques-on of weaving the ingrain or Kidderminster car-t by means of power-looms. It was no easy mat-r to produce a fabric in which the figures should atch, which should have a smooth, even face and rfect selvedge, and do this with a rapidity so much yond that of the hand-loom as to make it an ob-ct. The hand-loom weaver can, to some extent, eet these conditions by the exercise of his judg-ent. If the shuttle has not fully done its work, e can give the weft-thread a pull with his fingers. , on measuring, he finds that the figure is get-ng to be too long, or too short, he remedies the ult by putting either more or less force to the the, as he beats up. If he perceives that the rface of the cloth is becoming rough, he regu-tes the tension of the warps. By the exercise constant vigilance, skill, and judgment, he can *pproximate* to the production of a complete and gular fabric. But how shall these properties be imparted to inert matter? How shall iron be taught to observe, to judge, and to vary its action with such modifications as the case may require?

To the achievement of this seeming impractica-bility our inventor now addressed his extraordina-ry powers of analysis and concentration. A short study assured him that the idea was feasible. On the strength of this conviction—before he had made a model or even complete drawings of the machine—he entered into a written contract with a company in Lowell, to furnish them with power-looms for making ingrain carpets. His first loom for two-ply carpets was set up within a year. In the matching of its figures, in evenness of surface, and in the regularity of its selvedges, its product far surpassed that of any hand-loom. Its average daily work was from ten to twelve yards; that of the hand-loom is about eight yards.

He *must*, he *could*, do better than that. A second loom, with various modifications and improvements was ere long produced. By this the daily product was raised to eighteen yards. Still he was not satisfied. A third machine, with essential variations, at length appeared. This loom made, with perfect ease, from twenty-five to twenty-seven yards a day. The others, of course, like his first counterpane loom, were thrown aside. This loom was started in the summer of 1841. In the autumn he went to England. During this short visit the manufactures of that country naturally drew his special regard. He at once saw that, in some important particulars, the English manufactures were in advance of ours. His opinion to this effect, frankly expressed on his return to Lowell, was received at first with murmurs of surprise and incredulity. It was not long, however, before the practical adoption of his suggestions showed that they had taken full effect. In 1842 the several manufacturing corporations of Lowell paid a deserved tribute to E. B. Bigelow's knowledge and skill, by creating a new office, with a liberal salary, and appointing him to fill it. His duties were to make improvements and suggestions, and, generally, to advise and consult with the agents of the respective companies. In this capacity he brought forward some important improvements, which were adopted by all the cotton mills of Lowell. Finding his new office too general in its character and duties to give results satisfactory to himself, he resigned at the end of eighteen months, and with his retirement the office itself expired. During this period he built, for the Lowell Company, a mill to receive his power-looms; and thus started the first successful power-loom carpet factory recorded in the annals of manufacture.

(To be continued.)

Clothing for the Young.—Erastus Wilson says: Are the little highlanders whom we meet during three out of the four quarters of the year, under the guardianship of their nursery-maids, wadling about the streets in our public walks and squares, properly protected from the cold? Are the fantastically-attired children whom we see taking an airing in carriages in our parks, sufficiently and properly clad? If these questions can be truly answered in the affirmative, then, and then only, my remarks are needless. There can enter into the parent mind no more baneful idea than that of rendering children hardy by exposing them unnecessarily to cold, and by clothing them inefficiently. I have known instances wherein parents acting on this known instances wherein parents acting on this principle have failed entirely in rearing their offspring. Does nature treat her progeny thus? Does spring. Does nature treat her progeny thus? Does she not, first of all, insure the birth of her young only at a kindly season, and then provides them with downy coverings, warm nests, and assiduous protectors? And we must imitate nature, if we would give to Britain a race capable and worthy of maintaining her independance and honour.—The little denizens of a warm nursery must not be subjected, without a carefully assorted covering, to the piercing and relentless east or north-east winds; they must not be permitted to imbibe the seeds of that dreadful scourge of this climate—consumption—in their walks for exercise and health; they must be tended, as the future lords of the earth, with zealous care and judicious zeal. One-sixth of the deaths of young children, it must be remembered, result from cold.

Selected.

JACOB'S WELL.*

Here, after Jacob parted from his brother,
His daughters lingered round this well, new-made;
Here, seventeen centuries after, came another,
And talked with Jesus, wondering and afraid.
Here, other centuries past, the emperor's mother
Sheltered its waters with a temple's shade.
Here, mid the fallen fragments, as of old,
The girl her pitcher dips within its waters cold.

And Jacob's race grew strong for many an hour,
Then torn beneath the Roman eagle lay;
The Roman's vast and earth-controlling power
Has crumbled like these shafts and stones away;
But still the waters, fed by dew and showers,
Come up as ever, to the light of day,
And still the maid bends downward with her urn,
Well pleased to see its glass her lovely face return.

And those few words of truth, first uttered here,
Have sunk into the human soul and heart;
A spiritual faith dawns bright and clear,
Dark creeds and ancient mysteries depart;
The hour for God's true worshippers draws near;
Then mourn not o'er the wrecks of earthly art:
Kingdoms may fall, and human works decay,
Nature moves on unchanged—Truths never pass away.

J. F. Clarke.

* Suggested by a sketch of Jacob's Well, and Mount Gerizine.

For "The Friend."

Adherence to the Truth, the Ground of Spiritual Unity.

The ground upon which our worthy forefathers stood, in the support and defence of Truth, was attained to and maintained by simple obedience to the teachings of the Holy Spirit in the secret of their hearts, whereby they were led to forsake their carnal reasonings, and to cleave unto God; with the exercise of humble, fervent and continual *prayer*, that He might redeem them from the world and its spirit, and preserve them in that inward state of waiting and watching before Him, wherein alone they could be kept faithful to the pointings of his holy finger. By simple attention to "*the still small voice*," they were kept alive in the Truth, and in unity one with another, in their open and secret exercises before the Lord—speaking the same language, and minding the same things—with a single eye to *his* honour, who had called and qualified them to serve him.

But we read of one anciently who "was marvellously helped till he was strong; but when he was strong, his heart was lifted up to his destruction, for he transgressed against the Lord his God, and went into the temple of the Lord to burn incense upon the altar of incense;" and that for this unauthorized act he was called to an account by the priests of the Lord, who said unto him, "It appertaineth *not* unto thee, Uzziah, to burn incense unto the Lord, but to the priests, the sons of Aaron, that are consecrated to burn incense." And we may read or remember what happened unto him when he was wroth at the saying of the priests, and persisted in doing the thing which he had been advised against; how that he became and continued a leper, even unto the day of his

death, and was thrust out of the sanctuary by the priests unto whom his offerings were unsavoury.

How different was the case of this unfaithful king, who was smitten by the Lord for his disobedience and frowardness, from that of the prophet Elijah, who was enabled by cleaving unto God, his holy helper, to confound all the prophets of Baal! and what a lesson of humility should these, with the host of other testimonies, to the necessity and sufficiency of Divine wisdom and strength, teach us, who are professing to seek their direction and support, and to acknowledge obedience to the Holy Spirit as the ground of our unity and strength, lest the wall of our defence be broken down, and walls of partition continue to be raised up between those professing the same Divine guidance, by which our worthy predecessors were united together into the one body by the one Head; whom, while they accounted themselves as nothing, they acknowledged as all in all, and therefore did *not* stop short, or seek to go beyond his teachings, for a knowledge of those things which concern the salvation of the soul.

Being thus content with the simple discoveries of Truth to their minds, and obedient thereto, they were enabled to see eye to eye, and to walk by the same rule, seeking that honour only which cometh from God, rather than the praise of men, which has so often proved a snare to the unwatchful, exalting them in the spirit of their minds above *the little pure witness* for Truth in the secret of the heart; whereby their salt hath lost its savour, and has come to be trampled under foot; for, said our blessed Redeemer, "How can ye believe who receive honour one of another?"—and again it is queried, "What unity hath he that believeth with an infidel?" Is not obedience to the Truth both the ground of belief and of spiritual unity, and the evidence of our favour and acceptance with God? If so, how can we lay claim to these, while we are serving our own wills, and following our own wisdom, instead of adhering unto the simple leadings of the Spirit of grace, a measure of which is given to us all? Is it not possible for us to be deceiving ourselves in this matter, by regarding the wisdom of the flesh as Divine knowledge; and being led thereby into self-confidence and self-complacency, to become exalted above the *unflattering* witness of the everlasting and *unchangeable* Truth?

An Adventurous Craft.—Moored to our wharf is a little craft, which looks more like an oyster boat than any thing else—which, perhaps, has made the most adventurous voyage on record since the days of Ptolomy. She is called the St. Louis, and is only 26 tons burthen. Her master's name is Depeuy, and he belongs to Matamoros, Mexico. Finding himself in Leghorn, on the Mediterranean, Mr Depeuy determined, actuated by a love of adventure, to purchase this small sloop, which only draws four feet of water, and to return home in her. He manned her with three sailors, and loaded her with fruit, and after a stormy passage of eighty days during which he was baffled about by contrary winds, he finally arrived safely at New Orleans, after paying the sum of fifteen dollars fees at the Quarantine Station. We visited this little craft yesterday, and were astonished at her exploits when we surveyed her diminutive proportions. The Captain must be an excellent sailor. He intends going to Matamoros in her, and as a tribute to his sailor genius, we think the Quarantine Board should refund him the fees paid, and the city should not exact any wharfage. The venturous little bark lies at the foot of St. Peter street, in the Second District, and as she is a real curiosity, our citizens should not fail to visit her.—*N. O. Delta.*

For "The Friend."

We have received some extracts from John Barclay's Memorandums sent by a Friend in Iowa, who has occasionally furnished us with information concerning the country, climate, soil, productions, &c., of that improving State. He says, in an accompanying note, "Immigration continues so strong into this State, it is impossible to erect houses sufficient for each to contain one family only. We have been favoured in the past season with plentiful crops generally, and with little exception, with good health. Stock and produce are high for them to be in this State; wheat selling for $1.30 per bushel."

EXTRACTS.

"Fifth month 21st.—I resume these notes, and it is under a sense, greater if possible than ever, of my incompetency to set forth my many feelings and exercises, either in reference to my own condition, or that of the gathered church with whom I associate. I cannot recur in this place to what has transpired, since I last wrote in this little book; suffice it to say, my soul does feebly desire to bless the great name of the Lord, my Saviour, for the very thought and hope now presented before me—that because He lives, I live also. To be preserved alive in the Truth unto this day, and once more to meet with and recognize my friends in the Truth, in the life of it; this is indeed a favour. And to be given to know, in any measure, what has aimed at the life, and is yet seeking to devour, leads to some hope of a complete deliverance from the snares of death. Ever since I have attended this Yearly Meeting, my mind has been deeply exercised according to my capacity for the welfare of this people. As I proceed in my pilgrimage, I trust my confidence is increasing, that the great 'I AM,' the King of Zion, still reigns and will reign to the overthrow of all his enemies; and that He alone is equal to take care of his church, and to overrule all things for the good of his little dependent ones. Yet, O! how awful do the times appear in which we live; and how awfully critical is our standing among the various professions around us. Doubtless, it always has been so, perhaps more so, than those of any particular age may have thought. Every period has had its dangers, its temptations, its responsibilities. Yet surely ours are, if not new, very specious snares; and when I look around, I am ready to think, who, even among the highest in knowledge, in faith, or in gifts, is not fearfully liable to fall into some of these snares. O! I have this day seen, as I think, in the light of the Lord, the enemy endeavouring to deceive, if it be possible, the very elect. There are baits already laid, golden baits, which, if they are not seen and shunned, will even devour those who devour them. I see not how some, who now take the lead amongst us, will or can escape being carried away, as with a sweeping flood, by that which they are now swimming in; unless the Lord prevent, I see not how this Society can escape being landed, yea stranded, on a rock. Every day, every fresh occasion of witnessing the spirit and proceedings of these times, convinces me beyond all hesitation, that we are fast verging to a crisis,—an alarming crisis, and a shaking, sifting crisis, when every foundation will be discovered, every covering removed. And though many will say, 'Lo here is Christ, and lo there!' is he not with us, and do we not own him and follow him? Yet a clean separation will take place between the chaff and the wheat, and nothing will be able to endure the refining heat of that day, beside the beaten gold. O! how loose, how crude, how mixed are the views of many: how accommodating, how shifting is the ground they stand upon; how lofty and superficial is their edifice, though beautiful, and apparently solid also. O! for more humiliation, fasting, waiting! O! for less activity, self-conceit, less taking of the name of Christ in vain! May such a view of things conduce to drive and keep me yet nearer to the Source of safety and of all succour; that I may abide in Him, and grow up in Him in all things who is the Head!

A Mammoth Cave in Mackinaw.—A correspondent of the *Detroit Tribune*, writing from Mackinaw, mentions the discovery at that place of a remarkable cave, the entrance to which was revealed a few days since by a rush of water during a storm, which washed away the surrounding earth and rubbish. The opening was about four feet high and ten feet in width. A party of ladies and gentleman, well provided with lights and cord, entered it, and after ascending gradually through a long and narrow alley, surrounded upon every side with stalactites and crystals of calcareous spar, which glittered like diamonds in the torchlight, suddenly found themselves in an immense dome or amphitheatre, two hundred and fifty feet in length by two hundred and forty in width, and one hundred and eighty in height. Leaving this beautiful place, they then passed through a long series of alleys and magnificent chambers, and finally discovered a dim light through a crevice of the wall in front. Excavating a place of sufficient size for passage, they passed through and found themselves in a small cave, near "Dousman's far house." They had travelled a distance of nearly three miles beneath the surface of the ground.

Epistle of George Fox.

Friends and brethren in the Lord Jesus Christ, in whom you have all life, peace and salvation, walk in Him, who is your heavenly Rock and foundation, that stands sure, who hath all power in heaven and earth given unto him. So his power is over all! Let your faith stand in his power, which is over all, from everlasting to everlasting, over the devil and his power, that in the holy, heavenly wisdom of God, you may be preserved and kept to God's glory, out of all snares and temptations; so that God's wisdom may be justified of all his children, in this day of his power, and they all may be faithful, serving and worshipping God in his spirit and truth, and valiant for it upon the earth. For, as the apostle saith, "They that believe are entered into the rest, and have ceased from their own works, as God did from his." Now this rest is an eternal rest in Christ, the eternal Son of God, in whom every true believer hath everlasting life in Christ Jesus, their rest and everlasting day. For Christ the Rest, bruiseth the serpent's head, and through death destroyeth death and the devil, the power of death and his works; he is the Eternal Rest that giveth eternal life to his sheep. Christ fulfilleth the prophets, and all the figures, shadows and ceremonies, as in the Old Testament, and all the promises are yea and amen in Christ, who was the eternal Rest to all true believers in the apostles' days, and ever since, and is so now. Christ is the beginning and the ending, the first and the last, who is ascended above all principalities, powers, thrones, and dominions, that he might fill all things. For by Jesus Christ all things were made and created, whether they be things in heaven, or things in the earth; and he is the eternal Rest. They that believe are entered in to Christ, their eternal Rest, in whom they have eternal life and peace with God. Wherefore, I say again, in Him who is your Rest, live and abide; for in Him ye are happy, and his blessing will rest upon you. God Almighty keep and pr

e you all, his true believers, in Christ your
t and Peace this day, Amen. G. F.
ondon, the 18th of the Twelfth month, 1684-5.

Child Rescued by a Dog.—As one of the
w York city cars was passing down Fulton
et, a few days since, a lady, with a little girl,
empted to pass in front, the child being ahead.
ore the driver could hold up, the child was
rly under the horses' feet, when a large New-
ndland dog, seeing it, bounded to her, and
ing her in his mouth, rescued her from immi-
t danger of being trampled to death, brought
to the almost distracted mother, and laid her
vn. He looked up and wagged his tail, and
e a short bark, expressive of his delight, and
ay he went.—*Ledger.*

THE FRIEND.

ELEVENTH MONTH 3, 1855.

Friends who intend sending children to West-
vn Boarding-School by the West Chester cars,
e requested to observe that the time for leaving
Depot in the afternoon, has been changed
m half past 3 to *half past 2 o'clock.*

We are sometimes fearful lest we in this coun-
who have a testimony to bear, against war in
its relations, its origin, its accompanyments,
d its consequences, should not be sufficiently on
r guard against the feeling of interest, and the
itement, that are naturally awakened by tidings
battles and victories. There is some danger,
ile eagerly perusing the high-wrought descrip-
ns of an engagement, or the flourishing state-
nts of a despatch, that we may have our feel-
gs so far leavened into sympathy with the com-
tants, on one side or the other, as to allow our-
ves to overlook, or at least but partially admit
o consideration, the intensity of human misery,
d the enormous aggregate of wickedness which
ery battle must inevitably exhibit. It is well
r all to bear in mind, that such is the constitu-
n of human nature, that even the recital of
tions and scenes which was at first heard with a
rill of horror, if frequently repeated, grows less
d less repulsive, and the sensibility may be thus
adually and almost unconsciously blunted, until
e heart becomes callous to the record of the de-
ruction of human life, especially when accompa-
ed with glowing pictures of what are styled bril-
nt feats of arms, and we can read of the heaps
mangled victims that have fallen in the field, or
en slaughtered in the trenches, with almost
igid indifference, at least without those feelings
sorrow and repugnance, with which they should
l the breast of the true and sensitive disciple of
e Prince of Peace.

Certain it is that the sinful feelings in which
ar originates and is carried on are contagious;
d will gradually insinuate their poison into
e heart that is not preserved by Divine Grace,
) as not only to demoralize the nations engaged
n it, but by its false assumption of glory, of
ravery, and of its necessity for the support or
efence of a good cause, will tend to deprave the
one of moral feeling in others who are lookers
n; and thus stealthily prepare them to regard
cenes of bloodshed and rapine, the sufferings of
oncombatants who are invaded, and the desola-
ion of the widows and orphans whose natural
upporters and guardians have been ruthlessly
lain, as at most but evils that are inevitable, and
hich ought not to stand in the way of gratifying
heir thirst for conquest or of seeking to revenge
heir real or supposed wrongs. In this way, public
sentiment in our own country, may be deteriorated
by the iniquitous war now going on in Europe.

We think that for some time past there has been
no little evidence of an improved state of feeling
among professing Christians of nearly all denomi-
nations upon the subject of war. The tone of the
religious periodicals, indeed we may say of a large
part of the public press, has been very different
from what it was during, and for several years
after the European wars which terminated with
the downfall of Napoleon 1st. It has been more
generally denounced as an almost unmitigated
evil, and more willingly admitted to be, in every
aspect, contrary to the benign precepts of the gos-
pel of Christ. This is attributable, without doubt,
to the increase, or more general diffusion of the
light of Truth, which has brought these convictions
home to the minds of men of serious reflection;
and as the bloody scenes and false theories, which
blunt the sense of right and rouse the passions
from which war springs, have had but little play
during the long peace which the greater part of
the civilized world has so long enjoyed, the con-
viction of the sinfulness and inexpediency of war
has been more boldly and more freely avowed.
But now that the public eye is once more directed
to the manœuvring and deadly encounter of hos-
tile armies, and a systematic effort is making to
enlist the feelings of the belligerents in their na-
tional quarrel, we must anticipate a check to this.
and that the voice of Truth will be disregarded
amid the excitement and the false eclat of the de-
structive contest.

After all that has been admitted by many of the
prominent teachers in different professions of the
Christian religion, it is amazing how they can be
satisfied to inculcate the idea that Christians may
take any part in the horrible scenes of war; and
that they do not feel the duty which is incumbent
upon them, to bear a full and unwavering testimony
against it under every circumstance. It is but of
small moment to speak, in terms however strong,
of the dreadful realities of war, and to desire the
time to come when it shall be learned no more,
while the voice is not raised against war itself, as
being directly opposed to the religion of Christ,
and therefore that it must be unlawful for a christian
to engage in it. We take the following from the
Presbyterian, and we might suppose, with the
views expressed in the extract, that highly re-
spectable paper, the exponent of the principles and
feelings of a large body of professing christians,
would be found freely and firmly opposing war and
every thing connected with it; but such does not
appear to be the case.

We think he must indeed have been a "re-
markable Christian" who could continue "actively
engaged" in an occupation the "essence" of which
was to render him "defiant of God and lost to all
moral purity."

"In the memoirs of that remarkable Christian, Colo-
nel Blackader, we notice the frequent lamentations he
uttered at the exceedingly depraved character of the
soldiery under his command. Their profanity and lib-
ertinism shocked his sensibilities, and during a march,
he was sometimes constrained to ride far enough in ad-
vance of them to escape the sound of their fearful im-
pieties. On several occasions, after battle, he walked
over the field of blood to place himself within reach of
the emphatic *preaching* of the dead who were strewn
over it; and this preaching was not the less impressive
as it came from the silent corpses of those who a few
hours before were giving utterance to their inwrought
depravity in foul and odious blasphemies. Of such
materials armies are generally composed, and it seems
to be of the essence of war that those actively engaged
in it become defiant of God and lost to all moral
purity.

"When this unquestionable fact is remembered, how
appalling is such intelligence as that recently received,
of thirty thousand men killed in a single battle! Se-
bastopol has fallen! is the announcement; thirty thou-
sand slain! All are eager to learn the particulars, and
each one coolly calculates the political results of such a
victory. How few, alas! consider it in its moral rela-
tions, and reflect that, in all human probability, from
the previous character of the fallen, the great majority
of them have been hurried into the presence of an
angry God, and all the terrors of an endless perdition.
Few, comparatively few, fall on the battle-field with
the hope of heaven in their heart. On the contrary,
amidst the smoke and noise of deadly and fiendish
strife, not only is temporal life in many a one ex-
tinguished, but disembodied spirits are driven forth
into incurable despair and anguish. Hell is peopled
from the battle-field, and hence the news of such a
contest as that which has just taken place in the
Crimea, should be received, not with exultation and
shoutings, but with tearful eyes, that so many have
perished for time and eternity. This is no sickly senti-
mentality, as some would style it, but sober reason;
for one soul, in its endless destinies, is worth more
than a kingdom, and a lost soul is beyond any price of
redemption. Let Christians guard themselves against
the hardening influence which even the rumors of war
may produce, and pray for the time when 'war shall be
learned no more.'"

This is strong language, but in an article im-
mediately following the above, after quoting from
an account furnished by one of the participants in
an engagement with the Indians on our frontiers,
in which a most flippant, heartless description is
given of the slaughter of the poor creatures, many
of them women and children. The editor says—

"*While it may be necessary* to punish the Indians for
the massacres committed by them, it is certainly to be
deplored that any human heart can witness their de-
struction with feelings so utterly unfeeling."

Is it not "to be deplored" that the murder of
men, women, and children, should be spoken of as
a thing "necessary" among a people professing to
be the disciples of Him who came into the world
to save men's lives, to redeem them from all
iniquity, and translate them into his blessed king-
dom where nothing can hurt or destroy?

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to Tenth mo. 13th.

The War.—The allied fleet, which, according to the last news, had sailed from Sebastopol on a secret expedition, anchored off Odessa on the 8th ult. The force consisted of 8 ships of the line, 27 steamers and one other vessel. An immediate bombardment was expected. Since the destruction of the corn ports in the Sea of Azoff, the Russian army in the Crimea has received its supplies, principally from Odessa. The Emperor of Russia arrived at Odessa on the 22d of Ninth mo., and left the next day for Nicolaieff to attend a council of war. French troops were being concentrated on the Danube. A despatch from Gortschakoff states, that the allies had advanced from Eupatoria, threatening Perekop, but had retired on meeting the advance posts of the Russian left flank. The Invalide Russe gives a detailed account of the losses of the garrison of Sebastopol in the final struggle, as follows. Killed 2684, wounded 6058, contusions 1205, missing 1754; total 11,701. The same journal states that the Russians lost 1500 men on the 10th of Eighth mo., and from 500 to 600 men a day, from that time up to Ninth mo. 5th, making a loss of between 25,000 and 30,000 men in the last month of the defence. The garrison at Kars still holds out, though reduced to great extremes. Part of Omar Pacha's force was advancing from Batoum, to attempt to raise the blockade. The Turkish force now at Kars numbers 10,000. In a cavalry engagement near Kars, the Turks were defeated by the Russians. The Turks had about 400 men killed. In the Baltic, the allies had destroyed a number of small vessels in the Gulf of Bothnia. The bombardment at Riga is stated to have injured one of the batteries considerably. The Russians were actively engaged in repairing Sweaborg, and increasing its defences.

FRANCE.—Great exertions were being made to reinforce the army in the Crimea. Large numbers of sick and wounded men were constantly returning to France. The hospital accommodations for the wounded at Constantinople, had been vastly increased, but were still quite inadequate for the reception of the thousands sent there. About 70 per cent. of the wounded die.

DENMARK.—The Danish government has invited all maritime powers, including the United States, to meet in Congress at Copenhagen next month, to settle the question of the Sound Dues.

ENGLAND.—The Bank of England returns state the amount of notes in circulation at £20,292,555, being an increase of £129,870; and the stock of bullion in both departments, £12,359,281, showing a decrease of £449,-647, when compared with the previous return. A meeting of the creditors of DeLisle & Janvrin had been held, and the statement of their affairs was very satisfactory. The British ships Rodney, Albion, London, Leander and Wasp, have received orders to proceed, under the command of Admiral Stopford, to the coast of Italy. They will begin their mission, it is said, in the Bay of Naples. There had been no further advances in the rate of interest, and consols remained at 87½. The Liverpool cotton market was much depressed, and prices had further receded. Some sales had been made at a decline of nearly ⅛d. Sales of the week, 31,000 bales. Flour had advanced 1s. per bbl.

MEXICO.—The latest accounts from Mexico state that Alvarez has resigned the Presidency, owing to his advanced years and feeble health, and General Comonfort has been elected to fill the vacancy.

BRAZIL.—Dates from Para state, that the cholera had prevailed in that city and province with great violence and fatality. Above 8000 persons had died in the province. The disease had also reached the cities of Bahia and Rio Janeiro.

UNITED STATES.—The commercial marine of the United States now exceeds that of any other nation. It consisted, in the year 1854, of 40,500 vessels with a tonnage of 5,661,416. Great Britain and Colonies have 30,960 vessels and a tonnage of 5,043,270. The commercial marine of all the rest of Europe is not equal to that of either Great Britain or the United States.

Foreign Immigration.—During the week past, 6555 foreign immigrants arrived at the port of New York, on board vessels from British and German ports, bringing with them in cash, money to the amount of $245,075, or an average of thirty-eight dollars for every man, woman and child. The real amount of cash means is thought to be much larger, as it is said to be a well ascertained fact that the German immigrants do not report all they bring with them. It is estimated that the immigrants of the last year have brought about thirteen millions of dollars in ready money into the country.

Yellow Fever.—According to the weekly record, 2584 persons died of yellow fever in New Orleans, during the recent prevalence of the epidemic. The New Orleans Delta says that the new discovery of inoculation as a protection against yellow fever has been tried in three thousand cases in that city, this season, with entire success. There appears to be no doubt of the local origin of the fever, and that it originated the present year in New Orleans.

Banks.—The Secretary of the Treasury has published a statement of the condition of the Banks of the United States, according to returns, nearest to First month 1st, 1855. It appears that the number of banks and branches was 1300, having a capital of $332,000,000. Their circulation amounted to $186,952,000; the specie in their vaults to $53,944,545; real estate held by them, $24,-073,801. In 1837, the banking capital in the United States, was $290,000,000; the circulation $149,000,000; and the specie held by the banks, $37,915,000.

Kansas.—The contest respecting the institutions of this territory continue to be carried on with earnestness, and the Free State and the Pro-slavery party seem alike sanguine of ultimate success. In Georgia and Alabama there have been movements to raise funds, "for the purpose of equipping and sending to Kansas sound and reliable southern emigrants and slaves, with a view to sustain there a preponderating influence." So far, the Free State men appear to have a majority of the actual residents on their side, notwithstanding their elections are controlled by the people of Missouri.

The Western Plains.—Accounts from Fort Laramie have been received to Ninth mo. 29th. General Harney was about to leave that post to establish a fort at White Earth River, to overawe the Winnebagoes. The Brule Indians had agreed to deliver up the murderers of the mail party. The Chief, Little Thunder, was not killed at the battle of Blue Water. Winter had set in with unusual severity. Col. Sumner, with seven companies of cavalry, was *en route* for Fort Laramie.

Ship Building.—The prospects of an improved freighting business from the United States to Europe, in connection with the probability, that the numerous vessels now in the war service, will be required for an indefinite period, has given an impulse to ship building in the United States, and the ship carpenters of Boston, New York, &c., are said to have full orders for the next six months, at advanced prices.

Philadelphia.—Interments last week, 178.

Miscellaneous.—*March of Improvement.*—Six years ago not a steamer plied on the rivers in Oregon. Now there are eleven. Two run on the Columbia from Astoria, one from Fort Vancouver, and one from the Cascades to Portland, two to Oregon City. Three ply on the Upper Willamette to Carrelles, (head of steamboat navigation,) and two between Cascade City and the Dalles.

North-Western Emigration.—The great North-Western stream of emigrants crosses the Mississippi at Davenport, (Iowa.) Its magnitude the past season may be inferred from the income of the ferry at that place, which has amounted, it is said, to upwards of *ninety thousand dollars.*

Judicial Decision.—The Asheville (N. C.) Spectator says, that recently, at Jackson Superior Court, Judge Manly decided that a person professing the doctrines of Universalism, was an incompetent witness in the Courts of that State, and, in consequence, two or three witnesses of that persuasion were ruled out.

Newly Discovered Island.—A Nantucket whaling vessel has discovered a new island in the South Pacific Ocean. It is situated about two hundred and fifty miles south of Desolation Island, and the ship which encountered it, took from it in less than a week's time, four hundred barrels of sea elephant oil.

Dreadful Hurricane.—Late advices from St. Domingo state that a tremendous hurricane was experienced there, which blew down nearly one-third of the houses of the city, tore up an immense number of cocoa-nut and other trees, and almost entirely destroyed the growing crops. Several merchant vessels were injured, and two men-of-war ships wrecked.

The Cork Tree in the United States.—The cork tree, which flourishes naturally in the south of Europe, is an evergreen, about twenty or thirty feet in height. The substance denominated cork is the outer bark, which sometimes grows two or three inches in thickness. From the Patent-Office the seed has been distributed to a number of States to test its adaptation to our climate.

Difference in the Set of Tides.—Professor Bache notes the following singular difference in the motion of the tides in the Atlantic and Pacific Oceans. On our own coast, in the Atlantic, they flow from east to west; on the coast of Great Britain, from west to east; and on the Pacific their motion is circular, they sweep round by Asia, turn and flow back.

Great Fire.—On the night of the 16th, a desolating fire occurred at Bloomington, Ill. Two persons lost their lives, and others were injured. The destruction of property is estimated at $150,000.

Deaths by Violence, in California.—From First mo. 1st to Eighth mo. 1st, 1855, 320 persons were put to death by lynching and murder, and two persons were executed according to law.

Large Casting.—A few days since, an iron girder was cast at Oram's foundry in Philadelphia, the length of which was 70 feet with a spring of 10 feet, and the weight nearly eight tons. This is said to be the largest casting ever made in this country.

RECEIPTS.

Received from Z. Hampton, agt., Io., $2, to 10, vol. 28, and for Rd. Mott, $2, to 35, vol. 28, E. Bundy, $2, to 42, vol. 29, Jos. Embree, $2, to 14, vol. 29, Thos. D. Langstaff, $2, vol. 25; from Jas. Bell, Pa., $2, vol. 28; from Jehu Fawcett, agt., O., $44, for Jos. Painter, Theo. Mourland, Jos. Lynch, J. Carr, J. R. Carr, Ind., M. Howell, A. Street, J. Heald, Saml. Carr, David French, $2 each, vol. 29, Saml. Street, Anna Macy, C. Allen, $2 each, vol. 28, Lewis B. Walker, $4, vols. 26 and 27, Danl. Test, $4, vols. 26 and 27, M. W. Woolman, $4, vols. 28 and 29, Mary Brown, $2, to 30, vol. 29, Wm. Fisher, $2, to 27, vol. 29, Ruth Stanley, $2, to 19, vol. 29; from Jos. W. Satterthwaite, per J. Elliott, O., $2, to 12, vol. 29.

A stated meeting of the "Female Society of Philadelphia for the Relief and Employment of the Poor," will be held at the House of Industry, No. 70 N. Seventh street, on Seventh-day, 3d inst., at 3½ o'clock, P. M.

WEST-TOWN BOARDING-SCHOOL.

The winter session of the School will commence on Second-day, the 5th of Eleventh month next. The pupils will be conveyed from the city, by railroad, to West Chester, where conveyances will be in waiting to take them to the School, on the arrival of the morning and afternoon cars, on Second-day, the 5th, and Third-day, the 6th of Eleventh month. The children will get their baggage the day after their arrival. The cars leave the depot, south side of Market street, above Eighteenth, (formerly Schuylkill Fifth street,) at half past 7 o'clock, A. M., and at half past 2 o'clock, P. M. The agent of the school will be at the railroad depot on Second and Third-day *afternoons*, and will furnish pupils with tick and accompany them to West Chester. Those who by the *morning* train will be furnished with tickets a person in attendance. To those who procure tick as directed, the fare from Philadelphia to the Sch including baggage, will be one dollar, which will charged at the School. All baggage should be distinc marked West-town, and with the name of the owr and should be sent directly to the depot.

The West-town office is at Friends' Bookstore, 84 Arch street, where all small packages for the pu left before 12 o'clock *on Sixth-days*, will be forward *All letters* for the pupils and others at the School, sho be sent by *mail*, directed to *West-town Boarding-Sch West Chester P. O., Chester Co., Pa.* Packages sho be distinctly marked and put up in a secure manner, that their contents will not be liable to be lost by han ling. The stage will leave West Chester for the Scho during the *winter session*, on Second, Fourth, and Seven days, on the arrival of the *morning* cars from the ci and from the School to West Chester on the same da to meet the morning cars for Philadelphia. The fa for each passenger to and from West Chester by t stage, will be 25 cents. When special conveyance other times are provided at the School, an extra char will be made.

West-town, Tenth mo., 2d, 1855.

INDIAN CIVILIZATION.

A man Friend is wanted to assist on the farm Tunessassah, and to aid in carrying out the conce for the improvement of the Indians.

Application may be made to JOSEPH ELKINTON, 377 S. Second stree THOMAS EVANS, Philad., Tenth mo., 1855. 180 Arch stree

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in th Institution.

Application may be made to either of the undersigne members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS, } Philada.
SAMUEL BETTLE, Jr. }

DIED, on the 4th of Tenth month, at the residence Calvin Cooper, in Columbiana county, Ohio, ANN MI LEB; a member and elder of Sandy Spring Monthly an Particular Meeting, in the 81st year of her age. Sh endured a painful illness of several weeks, with muc Christian patience, and appeared to make a peaceft close.

——, on the 20th ult., at Bedford, Pa., ELIZABET R., wife of Abram M. Taylor, of Cincinnati, in the 47t year of her age. This dear Friend was in early li favoured with a precious visitation of redeeming love and yielding obedience to the impressions then mad on her mind, she was strengthened to turn her back o the fashions and vanities of the world, and to follo her Redeemer in the path of self-denial. Continuin under the restraining influence of the cross of Christ she became exemplary in life and conversation, an possessing a sound judgment, though of a gentle spirit her counsel was highly valued by her friends, who hav the consoling belief, that having submitted to the purify ing operations of Divine grace, she has been admitte into that "city that hath no need of the sun, neither o the moon, to shine in it, for the glory of God doth light en it, and the Lamb is the light thereof."

——, at his residence near Burlington, N. J., on th 22d of Tenth month, PAUL JENNEYS, (formerly o Sandwich, New Hampshire,) in the 66th year o his age; a member of Burlington Monthly Meeting Our dear Friend, having in early life, from religiou conviction, joined the Society of Friends, he was firm and consistent in maintaining its principles. At various times prior to his last sickness, he evinced his belief that his continuance would be short, and that his "work was done." During his illness, he was patien and trustful, and enabled to make the Lord his refuge. He spoke instructively to those about him, and although humble in applying to himself the comforting text which he recited, his friends rejoice in the consoling persuasion, that he has realized his hope, (which was based upon his Saviour's merit and mercy,) of admittance through the gates of praise within the walls o salvation.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXIX. SEVENTH-DAY, ELEVENTH MONTH 10, 1855. NO. 9.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

For "The Friend."

The Gulf Stream.

(Concluded from page 58.)

Navigators have often met with vast numbers of young sea-nettles, (medusæ,) drifting along the Gulf Stream. They are known to contribute the principal food for the whale; but which bound by this route has caused much curious speculation, for it is well known that the habits of the right whale are averse to the warm water of the stream. An intelligent sea-captain informs us that, two or three years ago, in the Gulf Stream, on the coast of Florida, he fell in with what he called a 'school of young sea-nettles as had never before been heard of.' The sea was covered with them for many leagues. He likened them, in appearance on the water, to acorns floating on a stream; but they were so thick as completely to color the sea. He was bound to England, and after five or six days in sailing through them. In about sixty days afterwards, on his return, he fell in with the same school off the Western Islands, where he was three or four days in passing them again. He recognized them as the same, for he had never before seen any like them; and on various occasions he frequently drew up buckets full, and examined them.

Now the Western Islands is the great place of resort for whales; and at first there is something curious to us in the idea, that the Gulf of Mexico is the harvest field, and the Gulf Stream the gleaner which collects the fruitage planted there, and conveys it thousands of miles off to the very whale at sea. But how perfectly in unison is it with the kind and providential care of the great and good Being, which feeds the young ravens when they cry, and provides for the sparrow!

The sea has its climates as well as the land. These both change with the latitude; but one varies with the elevation above, the other with the succession below the sea-level. Each is regulated by regulation; but the regulators are, on one hand the same; on the other currents.

The inhabitants of the ocean are as much the objects of climate as are those of the dry land; and the same Almighty hand which decked the lily and cares for the sparrow, fashioned also the whale, and feeds the great whale. Whether of the land or the sea, they are all his creatures, subjects to his laws, and agents in his economy. The sea, therefore, we infer, has its offices and duties to perform; so may we infer, have its currents, and also, its inhabitants; consequently, he who undertakes to study its phenomena, must cease to regard it as a waste of waters. He must look upon it as a part of the exquisite machinery by which the harmonies of nature are preserved, and then he will begin to perceive the developments of order, and the evidences of design, which make it a most beautiful and interesting subject for contemplation. To one who has never studied the mechanism of a watch, its main-spring or the balance-wheel is a mere piece of metal. He may have looked at the face of the watch, and, while he admires the motion of its hands, and the time it keeps, or the tune it plays, he may have wondered in idle amazement as to the character of the machinery, which is concealed within. Take it to pieces, and show him each part separately; he will recognize neither design, nor adaptation, nor relation between them; but put them together, set them to work, point out the offices of each spring, wheel, and cog, explain their movements, and then show him the result; now he perceives that it is all *one* design; that, notwithstanding the number of parts, their diverse forms and various offices, and the agents concerned, the whole piece is of *one* thought, the expression of *one* idea. He now perceives that when the main-spring was fashioned and tempered, its relation to all the other parts must have been considered; that the cogs on this wheel are cut and regulated—*adapted* to the ratchets on that, &c.; and his conclusion will be, that such a piece of mechanism could not have been produced by chance; the adaptation of the parts is such as to show it to be according to design, and obedient to the will of *one* intelligence. So, too, when one looks out upon the face of this beautiful world, he may admire the lovely scene, but his admiration can never grow into adoration unless he will take the trouble to look behind and study, in some of its details at least, the exquisite system of machinery by which such beautiful results are accomplished. To him who does this, the sea, with its physical geography, becomes as the main-spring of a watch; its waters, and its currents, and its salts, and its inhabitants, with their adaptations, as balance-wheels, cogs and pinions, and jewels. Thus he perceives that they, too, are according to design; that they are the expression of One Thought, a unity with harmonies which One Intelligence, and One Intelligence alone could utter. And when he has arrived at this point, then he feels that the study of the sea, in its physical aspect, is truly sublime. It elevates the mind, and ennobles the man. The Gulf Stream is now no longer, therefore, to be regarded by such an one merely as an immense current of warm water running across the ocean, but as a balance-wheel—a part of that grand machinery by which air and water are adapted to each other, and by which this earth itself is adapted to the well being of its inhabitants—of the flora which deck, and the fauna which enliven its surface."

"Great need I find to be watchful lest by conformity to some things which have crept in among this people, strength should be given to that part which stands opposed to the plain self-denying path into which our worthy predecessors were divinely drawn, and enabled to walk in."

Exploration of the Tschadda.

The laws which regulate the spread of civilization over the globe are singular. A continent undreamed of by Ptolemy and Pliny is now contending for the hegemony of civilization, not with Rome itself, but with Rome's remotest province; while countries hardly more that a day's journey by railroad from Africa and Numidia, once the most populous portions of the empire, are still dreaded as the abodes of certain death to all civilized intruders. If a very probable account is to be believed, the continent of Africa was circumnavigated before Rome was built; yet the interior of Africa promises to remain a wilderness long after the locomotive shall have travelled from Fond du Lac to the Falls of St. Anthony, and furnaces and forges have reflected the image of their tall chimneys from the bosom of the Salt Lake.

Yet the undertow which is to take these forgotten lands into the sphere of action has at last set in, and is now gaining greatly in velocity. In 1805 Mungo Park left the Gambia, with thirty-eight Europeans, to verify the conjectured identity of the Joliba, as seen at Timbuctoo, with the Quarra. Only seven men of the expedition reached the Niger at Lazo, and this remnant, with their gallant commander, succumbed to the prevailing diseases or perished on the river. In 1816 Capt. Tuckey undertook an expedition to the Congo, then supposed to be the mouth of the Niger; of this party but one man returned alive. In 1832 and '33 the Liverpool expedition, conducted by the brothers Lander, lost forty Europeans out of forty nine; and Buxton's expedition in 1842 started with one hundred and forty-two whites, and returned with forty-two.

Since that time the fruits of manifold efforts of civilization came to maturity. It is indeed astonishing to reflect upon the discoveries and improvements in naval architecture, in physiological and chemical studies necessary to enable Europeans to explore these portions of the world. South America, and especially Peru, had to be thoroughly known and its natural resources laid bare; for the quinine there gathered appears to be an indispensable necessary to sustain Caucasian life in these climates. Steam navigation had not only to be discovered, but iron substituted for wood as a material and the screw propeller for the paddle wheel.

The occasion which led to the starting of the last expedition was given by Dr. Barth, perhaps the leading name among the geographical explorers of the day. Before entering upon his perilous journey to Timbuctoo, this intrepid traveller undertook a trip to the southern shore of Lake Tschad, in the course of which he crossed a large river flowing westward, which he rightly conjectured to be the Tschadda, an eastern tributary of the Niger. When this information reached the Foreign Department, Lord Clarendon proposed to the admiralty to send a steamer up the Tschadda from its mouth, in order to settle this question, and if possible to effect a communication with Dr. Barth and Vogel, the explorers by land. It happened that in 1852, M'Gregor Laird had offered to furnish a steamer for the exploration of one of the African rivers. His plan was now accepted. The government agreed to contribute five thousand

pounds, and — Laird undertook to construct a screw steamer of two hundred and fifty-five tons, which was to make fifteen knots an hour, and to bear all the expenses of the trip, besides conveying a number of government officers as passengers. As the natives could not be expected to appreciate or understand the objects of a purely scientific expedition, the incitement of traffic was adopted as a means of facilitating intercourse with the chiefs.

Captain Berroft was the first choice of the government, or directing head of the expedition. During a residence of twenty-two years at Fernando Po, he had done more, perhaps, than any other European for the civilization of these regions. Unfortunately death removed him from the scene of action in the midst of the most industrious preparations. The two other appointees were Dr. Barkie of the royal navy, and Dr. Bleek, a German philologist. They went on board of — Laird's steamer, the "Pleiad," in Fifth mo. of last year and sailed from Liverpool to Sierra Leone, where the greatest part of their European crew were exchanged for Kroomen, who were employed as sailors, and for such interpreters as could be obtained of the various dialects. On the 8th of Seventh mo. they set sail for Fernando Po, with sixty-six men, twelve of them Europeans. Dr. Bleek, who had fallen ill, was left behind, and his place supplied by — May, a volunteer from the British ship the "Crane."

After an absence of four months the Pleiad returned to Fernando Po, without the loss of a single man; and on the 12th of Second mo. last, Dr. Barkie, in good health, submitted his report to the Geographical Society of London. The geographical results are not reported by the English journals; but the Tschadda was explored and surveyed for two hundred and fifty miles beyond the highest point reached by Allen and Oldfield in 1832.

What has created the greatest sensation is, the unprecedented good fortune by which every European who joined the expedition returned in safety. It is ascribed in a great measure to the construction of the vessel, the first screw steamer ever applied to purposes of exploration. She is built on the model of the famous yacht America, comparatively broad and short, measuring one hundred feet in length, and twenty four in breadth, which facilitates her movements in the short turns of a river channel. By taking out her screw she may be converted into a fast-sailing schooner. Her great extent of stowage enables her to carry fuel for the whole voyage, and dispense with the taking in green wood on the banks, in obtaining which disease is generally contracted. Of still greater importance were the plentiful use of quinine, both as a preventive and as a cure; the regular application of Burnett's "disinfecting fluid;" the precautions taken against a gathering of bilge water; the cleaning of the deck by scraping instead of scouring; and the practice of boiling water before suffering it to be drank. Fortunately, also, the river was entered at the moment its waters were rising, and when the generation of miasmata was comparatively inconsiderable.

It is thus clearly shown that an expedition discreetly and ably conducted may safely trace the great arteries of the African continent. The veil which has so long rested upon the interior of that vast region may now be raised, and the judicious expenditure of a few thousands may reduce the unknown portions to the void between the heads of the Niger and Indian Ocean.

The expedition did not meet with Dr. Barth; but Dr. Barth has since retraced his footsteps to the Tschadda and heard news of them from the natives, and the information communicated by him was the first intelligence of the expedition which reached the home country. The most remarkable feature in Dr. Barth's narrations is the great populousness of the country and the high state of barbaric cultivation everywhere displayed. He uses the word fleets in speaking of the trading vessels he met with on the river. It is strange how uniform are all the productions of human effort. The civilization we receive by tradition would be, in innumerable respects, the same if that tradition had never been. In these secluded wilds, having not a thread of communication with the European world from Lesostin downward, we find human affairs arranged on substantially the same plan as among ourselves. War and peace, government and subjection, trade and traffic, tilth and handicraft, all communicate by the same hinges as if the seven wise men of Greece had sat in council over them.—*Philadelphia Bulletin.*

Epistle of George Fox.

Before I left Kingston, something further opened to me, which I was moved to write, and send amongst Friends; as follows:—

Dear Friends,—My love is to you all in the Holy Seed, that reigns over all. And my desire is, that every one, both male and female, may feel the Seed Christ in you, which is heir of the promise of life eternal, that ye may all grow up in Christ Jesus, your Head, and be built upon Him, the rock and foundation that God hath laid, which stands sure over all rocks and foundations in the world; that ye may eat and drink of this spiritual rock, the spiritual water and food; so that ye may truly and inwardly say, that your rock and foundation, your bread and water of life, is from heaven, and your bread and water is sure; and that ye know his voice that feeds you, and leads you into the pastures of life which are always fresh and green. In this, your affections are set on things that are above, seeking that which comes down from above, where Christ sits at the right hand of God, making intercession for you; who is your Mediator, making peace between God and you; who is your heavenly Bishop to oversee you, that ye keep in his light, life and power, and do not go astray from his heavenly fold and pasture, that He, your Shepherd, may feed you therein; who is your Prophet to open to you the fulfilling of the promises and prophecies, himself being the substance; that ye may live in him, and he in you, yea and reign in your hearts there to exercise his offices, his prophetical, priestly and kingly office, who is heavenly and spiritual; that ye may know the three, that bear witness in the earth, the Spirit, the water and the blood, which is the life of Christ, which cleanseth from all sin; the water that washes and refreshes you; and the Spirit that baptizes and circumcises you, and leads you into all truth; that ye may come all to drink into one Spirit, and keep the unity of the Spirit, which is the bond of the heavenly peace. So being led by the Spirit of God, ye are his sons and daughters, and by his Spirit will come to know the three that bear witness in heaven, the Father, the Word and the Holy Ghost. These are the three witnesses that are in heaven, that bear record of all things; for he is God in heaven, and God in the earth. Therefore, I desire, that ye may all feel his love shed in your hearts, and in it live, (above the love of the world which is enmity,) and in that you will keep in the excellent way. For love edifies the body of Christ, builds his church up, and keeps out of the enmity, for it is above it, and brings and keeps all in true humility, and in the true divinity; to be courteous, kind, and tender one towards another, and to show forth the nature of Christ, and true Christianity in all your lives and conversations; that the blessings of the I may rest upon you, as you all live in the seec the gospel, the seed of the kingdom of God which all nations are blessed. In that ye wil have a care of God's glory. There is the hil mountain, where the light shines to the answe the witness of God in all; and the salt, that good savour to the witness of God in the he of all; and that savour being kept in, the salt not come under the feet of men. So, my lov you all in Christ Jesus, whom God hath give be a sanctuary for all his people, who is above, and not of this world, in whom you life, peace, and salvation. In Him, God Almi keep and preserve you all to his glory. A As you live in the peaceable truth of God keeps you under, and within his protection; they that make a profession of the Scripture Truth, and yet live out of the Truth, in the s of strife, unquietness and discontent; in a triving, plotting, ravenous, destroying spirit, w is of the devil, and not of God, that spirit is ju out of the Truth, and to be of him in whom t is no truth, whose portion is in the lake, an the fire that burns.

G. F.

Kingston, the 27th of the Fifth mo., 1683.

For "The Friend

Erastus Brigham Bigelow.

(Continued from page 61.)

Before quitting his post at Lowell, E. B. B low had projected a new manufacturing estab ment at Lancaster for the weaving of gingh A company was formed; the required capital promptly subscribed, and the projector was cha with the execution of the design. At the time the Lowell Company resolved to build a l mill for the reception of their carpet power-lo and E. B. Bigelow was commissioned to de and erect it. Both of these mills are of vast and in character perfectly unique. The one named, with its two hundred iron looms, is, in a grand carpet machine—the mill and its furn being so combined, adjusted, and adapted, t produce the most harmonious action and the l est results. The Lancaster mill is even mor markable. Its connected structures, covering than four acres of ground, are filled with mac ry and apparatus of the most perfect chara much of which was invented or adapted, an of which was arranged and adjusted by E. B. l low. Of this mill, the editor of the Merch Magazine says: "It is deservedly rated as most perfect establishment in the United Sta Of the dye-house connected with it, he speal "probably the most perfect in the world;" ad "that the entire arrangement is of the most fect description, and in its vast completeness st a splendid monument to the genius and mas power of the mind of its projector." Thes mense structures, with their numerous and va and complicated machines, many of which new and nearly all of which were newly mo or adjusted, were carried on simultaneously working plans for the buildings and the mach being furnished as fast as the work adva These plans, once matured and put into the h of the workmen, were scarcely in a single ins changed; and the loss in this way was exceed small—a striking proof of E. B. Bigelow's ness talent, his constructive abilities, and far-r ing mental vision. Contemporaneously with labours, he superintended important enlarger of the Counterpane Works, and of those be ing to the Coach-lace Company. Nor was th During the three years thus occupied, he nine distinct, important, and patented inven It would have been strange if, under a m

ssure so constant and intense, his health had given way. Justly alarmed, at length, he fled n the toil and care which would soon have ed all. A voyage to Europe, with his family, a continental journey, completely restored .

On his return in 1848, he proceeded to develop complete the Brussels Carpet Loom. The s of this machine was indeed contained in the n for coach-lace. But farther invention was ded to adapt it to the weaving of wider fabrics, he making of figures that match, and to the nation of velvet-pile. This was fully accom- hed. His power-looms weave rapidly and per- ly the Brussels and the Wilton, the tapestry velvet tapestry carpets. They are competent, fact, to every kind of looped and velvet-pile ic known in the market.

n Ninth month, 1851, E. B. Bigelow took with to England specimens of his Brussels carpet. ir appearance at the Exhibition, though late, w much attention, and largely increased the ur with which the British public had already un to look on the so long despised American partment. The juries having then closed their urs, no prize could be awarded to these fabrics. in a supplement to the Report on Class XIX, find the following:

The specimens of Brussels carpeting exhibited E. B. Bigelow are woven by a power-loom, in- ted and patented by him, and are better and e perfectly woven than any hand-loom goods have come under the notice of the jury. This, ever, is a very small part of their merit, or er of that of E. B. Bigelow, who has com- ely triumphed over the numerous obstacles that ented themselves, and succeeded in substitut- steam-power for manual labour in the manu- ure of five-frame Brussels carpets. Several nts have been taken out by different inventors his country for effecting the same object; but et none of them have been brought into success- or extensive operation, and the honour of this ievement—one of great practical difficulty, as l as of great commercial value, must be awarded native of the United States."

The shrewd and practical manufacturers of Eng- l were quick to see and prompt to acknowledge value of the new machinery. An arrangement immediately made with Crossly & Sons, for ing the looms in their immense carpet manu- ory at Halifax. Subsequently these gentlemen chased, and now hold, the patent-right for the ted Kingdom.

Previously to the introduction of E. B. Bige- 's inventions, power-looms had scarcely been l for any but the plainest and simplest fabrics. se improvements cover the whole higher range extile art. If we except such regal luxuries he pictured tapestries of the Gobelins, there is complex, or useful, or beautiful texture pro- ed by skill and patience in the hand-loom, to ch his machinery has not been, or may not be, pted. As compared with the plainer and more aic processes, this almost magical mechanism, its results of endless and beautiful variety, be called, not unaptly, the poetry of the u. * * * * *

To appreciate the difficulties of this achieve- nt, and the greatness of the success, one must p in view the nature and demands of the ving art. Each different fibre which it uses its own peculiar properties, and whether it be on, or wool, or flax, or silk, the machinery st be adapted to those peculiarities. The num- of fabrics which differ essentially in their ure is almost countless. To these considera- s must be added the constantly recurring changes in figure and colour required to meet a fickle taste and ever-varying demand. *He* must be a good arithmetician who can calculate the combinations required to produce by automatic machinery the numerous dissimilar fabrics which fill up the long interval between plain cloth and a Wilton carpet. More than all, perhaps, it deserves to be considered, that a power-loom for weaving tissues of the higher class, must have not only many and complex mechanical movements, but, to a certain extent, also the capacity of self-adaptation—an ability, in fact, to meet exigencies as they arise.

The extent of E. B. Bigelow's contributions to inventive art has often been misapprehended. Many think of him as the inventor of a single machine—the carpet power-loom—and suppose this to be all. It is a great mistake. The numerous and complex requirements of the textile art were not to be met by a single invention. Accordingly, E. B. Bigelow has, in this connection, twenty-two United States patents. Each of these is a distinct but necessary part in a closely-connected series of improvements, by means of which, under appropriate modifications, every variety of fabric may be wrought by power-looms.

It is difficult, by mere description, to impart a clear idea of mechanical movements. All that we shall here attempt will, we trust, be intelligible to any one who has ever seen a loom in action. The figure on coach-lace is formed by raising on the surface of the ground-cloth, a pile similar to that of the Brussels carpet. It is made by looping the warps over fine wires, which are inserted under such of them as have been selected by the Jacquard to form the figure. These warps are then woven into the body of the cloth. The wires are now withdrawn, to be reinserted. In the Bigelow loom this finger-work is executed by automatic pincers. There is something wonderfully cunning in the movement of these nippers. Seizing the end of the wire, they draw it out from the loops, carry it back towards the lathe, thrust it into what is called the open shed, and there drop it. The warp-threads, which had been drawn apart, are now closed, and immediately reopened for the passage of the shuttle, which carries the woof to tie and bind the loops. The pincers having dropped their wire, return to take another. As it is necessary to have a number of these wires, and as they lie close together, a difficulty arose. It was clearly impossible to make the pincers so narrow, and so exact in their discrimination, as to seize the proper wire, and not molest its neighbours. This was avoided by a mechanical contrivance on the other side of the loom, which, just at the right moment, gives a little push to just the right wire, and thus puts it in just the right place for the waiting pincers. The curious mechanism by which these little rods are withdrawn and replaced, must work, it is evident, in perfect harmony with that which forms the figure.

The loom for Brussels and tapestry carpeting is the coach-lace loom full grown. Nothing short of actual inspection can give any just idea of its wonderful capacities and life-like action. Wires three feet or more in length are here inserted and withdrawn with a precision and quickness which no manual dexterity ever attained. Let us watch the operation. First, mark that intruding knife or wedge, which, as it rises, separates from its companion the wire next to be taken, and guides the pusher, which shoves it along towards the pincers. The pincers now walk up, grasp the wire, and draw it entirely out. While this is doing, another set of nippers, hanging down like two human hands, come forward, descend, and catch the wire at the moment when the drawing pincers drop their prey. No sooner have they seized the wire than they retreat to their original position, beneath which a small, angular trough has just arrived. The fingers relax, and the wire drops into the trough, which immediately returns. Last of all, a triangular pusher rushing through the trough sends the rod into the open shed. Note, also, the double action of the withdrawing pincers, which, while they attend to their own special mission, perform, also, sergeant's duty, by constantly bringing into line the straggling wires. Those bird-like, three-fingered claws, which dart back and forth with such rapidity, are busy in plaiting the selvedge, and their work is perfect. These, too, are "contrived a double debt to pay," for, whenever their thread breaks, they instantly stop the loom. In this loom, and that for coach-lace, the mechanical contrivance for weighting the warp-threads is the same, being one of the most ingenious, as well as most important, of E. B. Bigelow's improvements.

(To be concluded.)

The sorrows and heaviness which the Lord brings over his people immediately, for his own wise purposes, or which are permitted to befall them by adverse accidents, or sometimes by means of the wicked, which, (as the Psalmist says,) are his sword; these are, or may be, for the preparing of the heart for his service, or for weaning from this transitory world and the love of it; and the Lord is pleased often to sweeten such bitter cups; the troubles which we bring on ourselves, through our own unwatchfulness, I know by experience, lie with a dead weight upon us; and from such I heartily pray that both I and those whom I love, may be delivered.—*R. Shackleton.*

Wonders of the Atmosphere.

The atmosphere forms a spherical shell surrounding the earth to a depth which is unknown to us by reason of its growing tenuity, as it is released from the pressure of its own superincumbent mass. Its upper surface cannot be nearer to us than fifty, and can scarcely be more than five hundred miles. It surrounds us on all sides, yet we see it not; it presses on us with a load of fifteen pounds on every square inch or surface of our bodies, or from seventy to one hundred tons on us all, yet we do not so much as feel its weight. Softer than the finest down—more impalpable than the finest gossamer—it leaves the cobweb undisturbed, and scarcely stirs the slightest flower that feeds on the dew it supplies; yet it bears the fleets of nations on its wings around the world, and crushes the most refractory substances with its weight. When in motion its force is sufficient to level the most stately forests and stable buildings with the earth—to raise the waters of the ocean into ridges like mountains, and dash the strongest ships to pieces like toys. It warms and cools by turns the earth and the living creatures that inhabit it. It draws up vapours from the sea and land, retains them dissolved in itself or suspended in cisterns of clouds, and throws them down again as rain or dew when they are required. It bends the rays of the sun from their path to give us the twilight of evening and of dawn—it disperses and refracts their various tints to beautify the approach and the retreat of the orb of day. But for the atmosphere, sunshine would burst upon us and fail us at once—and at once remove us from midnight darkness to the blaze of noon. We should have no twilight to soften and beautify the landscape—no clouds to shade us from the scorching heat—but the bald earth, as it revolved on its axis, would turn its tanned and weathered front to the full and unmitigated rays of the lord of day. It affords

the gas which vivifies and warms our frames, and receives into itself that which has been polluted by use, and is thrown off as noxious. It feeds the flame of life exactly as it does that of the fire—it is in both cases consumed, and affords the food of consumption; in both cases it becomes combined with charcoal, which requires it for combustion, and is removed by it when this is over.

"It is only the girdling, encircling air," says a writer in the North British Review, "that flows above and around us, that makes the whole world akin. The carbonic acid with which to-day our breathing fills the air, to-morrow seeks its ways round the world. The date trees that grow round the falls of the Nile will drink it in by their leaves; the cedars of Lebanon will take of it to add to their stature; the cocoa nuts of Tahiti will grow rapidly upon it; and the palms and bananas of Japan will change it into flowers. The oxygen we are breathing was distilled for us some short time ago by the magnolias of Susquehanna, and the great trees that skirt the Orinoco and the Amazon—the giant rhododendrons of the Himalays contributed to it, and the roses and myrtles of Cashmere, the cinnamon-tree of Ceylon, and the forests older than the flood, buried deep in the heart of Africa far behind the Mountains of the Moon. The rain we see descending was thawed for us out of the icebergs which have watched the Polar star for ages; and the lotus-lilies have soaked up from the Nile, and exhaled as vapour snows that rested on the summits of the Alps."

"The atmosphere," says Mann, "which forms the outer surface of the habitable world, is a vast reservoir, into which the supply of food designed for living creatures is thrown—or, in one word, it is itself the food in its simple form of all living creatures. The animal grinds down the fibre and the tissue of the plant, or the nutritious store that has been laid up within its cells, and converts these into the substance of which its own organs are composed. The plant acquires the organs and nutritious store thus yielded up as food to the animal, from the invulnerable air surrounding it. But animals are furnished with the means of locomotion and of seizure—they can approach their food, and lay hold of and swallow it; plants must await till their food comes to them. No solid particles find access to their frames; the restless, ambient air, which rushes past them loaded with the carbon, the hydrogen, the oxygen, the water—everything they need in the shape of supplies, is constantly at hand to minister to their wants, not only to afford them food in due season, but in the shape and fashion in which it alone can avail them."

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 60.)

AARON COPPOCK.

This Friend was born in Cheshire, Great Britain, Tenth mo. 25th, 1662. He was convinced of the Truth when quite young, and removed to Pennsylvania soon after. He is supposed to have been a son of Bartholomew Coppock, who in 1682 settled with his family near Chester. Bartholomew was a man of good standing in civil and religious Society, being often used in religious appointments, and representing, on numerous occasions, the county of Chester in the Assembly of Pennsylvania. About the year 1714, Aaron Coppock removed to reside at Nottingham, still in the county of Chester, with his family.

Being a friend of a sound judgment, and exemplary in his walking, he was, soon after his removal, chosen an elder, in which station he did not long continue, his heavenly Father having called him to the work of the ministry. During the short period during which it was allotted him to labour in this service, he was "concerned to exhort Friends to a life of self-denial, watchfulness and prayer." This, his Friends say, "he did in great sincerity, zeal and innocence." He was diligent in the attendance of meetings, and, we doubt not, was often admitted to participate therein of that blessed communion which the humble worshippers of Christ Jesus do at seasons witness with him.

On the 1st day of the Tenth month, 1725, he was taken ill, and suffered greatly. During the early part of his sickness, poverty of spirit was his portion, and a consequent depression of mind. This dispensation, which was no doubt in infinite wisdom administered, soon passed away, leaving a blessed prospect of eternal happiness before him, with a sure hope that he should, through adorable mercy, partake thereof. In this assurance, knowing in whom he had believed, he departed this life, after a sickness of nine days. He was aged 63 years, and had been engaged in the ministry of the gospel about seven.

RALPH JACKSON.

Ralph Jackson was a useful member of Philadelphia Meeting, and had received a gift in the ministry in which at times he was engaged to labour for the good of others. At what period of time he left his native country, and came to America, we have not been able to learn. His first abode was in Maryland, where he remained for some time, removing to Philadelphia early in 1692. He produced to the Monthly Meeting of Philadelphia, held Fifth mo. 29th of that year, a certificate of membership, from West River Monthly Meeting in Maryland. He was soon engaged in various ways by his brethren in religious profession, and it was not long before he appeared in the ministry. His gift, it is understood, was not in many words, but he was generally esteemed, and that which he had to offer was received in love, and was to edification.

In the year 1695, he married, in Philadelphia, Elizabeth Ricketts, a widow, whose maiden name had been Palmer. She was a valuable helpmate, in her earthly pilgrimage, and was soon a fellow labourer in the gospel of Christ. This beloved companion, of whom we have already given a sketch, was removed from him by death, in the year 1704. In 1707 he married again. His choice this time was Sarah Dymock, the widow of Tobias Dymock. She was also a valuable woman, much used in religious Society.

We have evidence of his faithfulness to the requirings of duty, in the abundant record preserved of his visits to neighbouring meetings, but he does not appear ever to have travelled in the service of Truth, out of the limits of his own Yearly Meeting. He departed this life on the 27th of the Tenth month, 1726, being in "an advanced age." His Friends say, "His life and conversation being exemplary, merited esteem."

SARAH PHIPPS.

Sarah ——,* was born at Reading, in Berkshire, England, in the Ninth month, 1643. She was convinced of the Truth in her childhood, and about the time she reached maturity, suffered imprisonment on several occasions for her faithfulness in attending religious meetings. She married Joseph Phipps, who had been a great sufferer in the same place, for his testimony in support of his Christ principles.

They came to Pennsylvania, in the year 1 and appear at first to have located themse about Chester, Joseph being appointed to re sent the county of Chester in the Assembly, wl was held at the beginning of 1683. They r removed into Philadelphia county, in the ne bourhood of Abington, he being in 1687 an ac member of Dublin Monthly Meeting. In winter of 1694, they met with a serious loss in destruction of their house and out-buildings fire. The immediate destitution was so comp that the Quarterly Meeting of Philadelphia, wl occurred a few weeks afterwards, directed its t surer to furnish them funds for present need, recommended the Monthly Meetings to furn further aid. It appears that no lives were and the pecuniary embarrassment was soon moved through the kindness of their Friends, the renovating effects of industry.

Soon after the year 1700, she appeared in ministry, in which for the last twenty years more of her life, she was, her Friends test "serviceable" in the church. In 1716 she left a widow, and survived her valuable husb about eight years. She died on the 27th of Eleventh month, 1725, aged 81 years an months.

ROBERT FLETCHER.

There were two valuable Friends of this n in Pennsylvania, in the early part of the last tury. Robert Fletcher, of Abington, who decea about the 1st of the Sixth month, 1726, was of these. He was one of the early settlers, and filled some important public offices with great cr to himself, and benefit to his neighbours. W drawing near the close of his earthly pilgrimage felt the sustaining presence of the Lord with soul, and in thankful commemoration of his serving mercy he was enabled to feel, and to dec to those about his dying bed, that "he had lived cording to the measure of grace given him." this consoling assurance, he was enabled to en the valley of the shadow of death, fearing no e having, through faith in the Lord Jesus, a living obedience to the word of his grace, nessed a preparation for an admittance amor the saints in light.

Thomas Chalkley says, "I was at the burial Robert Fletcher, a worthy man, and one uni sally beloved by all sorts of people, as far as e I heard. There was a large meeting at his fu ral, wherein several testimonies suitable to the casion, were borne: some of his last words w mentioned, which were that he had lived cording to the measure of grace given hi "The death of this Friend was a loss to the co try, to our Society, and to his neighbours, as w as to his family and friends."

JERVIS STOCKDALE.

Jervis Stockdale was, in the language put fo by Haddonfield Quarterly Meeting concerning h "a lively minister, and exemplary in his dep ment." He resided at Evesham, was a use citizen and Friend, but except the attendance his superior meetings as a representative, we h little trace of his labours in the Society. He m ried Mary, the daughter of Hugh Sharp, a Fri of high standing in public and private life, and a considerable time an elder.

Jervis Stockdale was not long permitted to joy his domestic happiness, nor to labour in Lord's harvest field. He was taken sick in spring of 1726, made his will on the 26th of

* er ma den name was probably Binfield.

ith month that year, and, about the 15th of the eventh month, was released from his sufferings. is field of labour had probably not been very xtensive, but in it he was much missed. His neral took place on First-day, the 18th, being the week of Yearly Meeting, that year, held at rlington.

Thomas Chalkley, says, "First-day morning I ent to Evesham, to the burial of our serviceable iend, Jervis Stockdale; he being in good es-em, there was much people. The meeting was a good, tender frame, and continued several ours, in which divers testimonies were delivered, order to stir up people to Truth, and righteous-ess, and godly living, that they might die well. odged the night before at Peter Fearon's, and the morning I was awakened out of my sleep it were by a voice, expressing these words: e that liveth and believeth in me, shall never .' This I took to be the voice of Christ; I do know that it was vocal, but it was as plain as it were. From these expressions I had to ob-ve to the people, the happy state and privilege those who live and believe in Christ, and that h must not live in sin."

(To be continued.)

Selected.

FAMILY HARMONY.

Oh, sweet as vernal dews that fill
The closing buds on Zion's hill,
When evening clouds draw thither,—
So sweet, so heavenly 'tis to see
The members of one family
Live peaceably together.

The children, like the lily flowers,
On which descends the sun and showers,
Their hues of beauty blending;—
The parents, like the willow boughs,
On which the lovely foliage grows,
Their friendly shade extending.

But leaves the greenest will decay,—
And flowers the brightest fade away,
When autumn winds are sweeping,
And be the household e'er so fair,
The hand of death will soon be there,
And turn the scene to weeping.

Yet leaves again will clothe the trees,
And lilies wave beneath the breeze,
When spring comes smiling hither;
And friends who parted at the tomb,
May yet renew their loveliest bloom,
And dwell in heaven together.

Selected.

THE RAINY DAY.

The day is cold, and dark, and dreary;
It rains, and the wind is never weary;
The vine still clings to the mouldering wall,
But at every gust the dead leaves fall,
And the day is dark and dreary.

My life is cold, and dark, and dreary;
It rains, and the wind is never weary;
My thoughts still cling to the mouldering past,
But the hopes of youth fall thick in the blast,
And the days are dark and dreary.

Be still, sad heart, and cease repining;
Behind the clouds is the sun still shining;
Thy fate is the common fate of all:
Into each life some rain must fall,
Some days must be dark and dreary.

Longfellow.

From the Edinburgh Review.

The Chemistry of Common Life.

(Continued from page 60.)

In the first place, past experiment has shown that there is a remarkable chemical analogy ong the four substances, Chinese tea, Paraguay , coffee, and cocoa, which are chiefly employed the preparation of infused beverages. All of m in the roasted state in which they are used, contain aromatic oils in minute proportion, to which the peculiar aroma of each is due. All contain also a proportion of an astringent substance resembling the tannin of gall-nuts or oak bark. In three of them, Chinese tea, Paraguay tea, and coffee, is found a variable quantity of a peculiar white crystalline body, to which the name of theine or caffeine has been given; while in cocoa a different but similar body exists, which is known by the name of theobromine. Of these three constituents, which are all extracted by hot water, two—the volatile oil and the theine—are known to exercise a peculiar action upon the system. The oil possesses narcotic properties, intoxicates, occasions headaches and giddiness, and sometimes paralysis in those who as tea-tasters are much exposed to its influence. New tea contains this oil in larger quantity than old tea does, and for this reason it is said that the Chinese rarely use their tea till it has been kept over a year. The small proportion of it which exists in tea as we get it in Europe, is not only harmless, but is probably one source of the soothing exhilaration which tea and coffee produce.

The theine, again, is a bitter substance possessing tonic or strengthening qualities, but distinguished particularly by the property of retarding the natural waste of the animal body. Most people are now aware that the chief necessity for food to a full grown animal, arises from the gradual and constant wearing away of the tissues and solid parts of its body. To repair and restore the worn and wasted parts, food must be constantly eaten and digested. And the faster the waste, the larger the quantity of food which must daily be consumed, to make up for the loss which this waste occasions. Now the introduction of a certain quantity of theine into the stomach lessens the amount of waste which in similar circumstances would otherwise naturally take place. It makes the ordinary food consumed along with it, go further, therefore,—or more correctly, lessens the quantity of food necessary to be eaten in a given time. A similar effect in a somewhat less degree, is produced by the volatile oil, and therefore, the infusion of tea, in which both these ingredients of the leaf are contained, affects the rapidity of the natural waste in the tea-drinker in a very marked manner.

As age creeps on, the powers of digestion diminish with the failing of the general vigor, till the stomach is no longer able to digest and appropriate new food as fast as the body wears away. When such is the case, to lessen the waste is to aid the digestive powers in maintaining the strength and bulk of the weakening frame. "It is no longer wonderful therefore," says our author, "that tea and coffee should be favourites on the one hand with the poor whose supplies of substantial food are scanty, and on the other, with the aged and infirm, especially of the feebler sex, whose powers of digestion and whose bodily substance have together begun to fail. Nor is it surprising that the aged female whose earnings are barely sufficient to buy what are called the common necessaries of life, should yet spare a portion of her small gains in procuring this grateful indulgence. She can sustain her strength as well with less common food when she takes her tea along with it: while she feels lighter at the same time in spirits, more cheerful, and fitter for the dull work of life, because of this little indulgence."

The wide prevalence of the taste for infused beverages, illustrates in a marked manner the existence of common instinctive cravings among a large proportion of the human race. In tropical as well as arctic regions, the practice of using warm drinks equally prevails. Dr. Johnson follows the topography of these harmless stimulants in the following terms:—

"In Central America the Indian of native blood and the Creole of mixed European race indulge alike in their ancient chocolate. In South America the tea of Paraguay is an almost universal beverage. The native North American tribes have their Appalachian tea, their Oswego tea, their Labrador tea, and many others. From Florida to Georgia in the United States, and over all the West India Islands, the naturalised European races sip their favourite coffee; while over the Northern States of the Union, and in the British Provinces, the tea of China is in constant and daily use.

(To be continued.)

For "The Friend."

Salutary Hints.

A call to the work of the ministry is one of the most important gifts among the diversity, communicated to the members of the church of Christ. Those who receive it are as a medium through which the Lord condescends to speak to the people; they can no more command his use of them, than the trumpet can command his voice who speaks through it. He selects and prepares his own ministers, furnishes them with what he designs to be delivered, and gives the authority, and the power, when and where he puts forth his servants to preach his everlasting gospel. This ministry is not of man nor by man, but by the revelation of Jesus Christ through his Holy Spirit, operating on the hearts of his chosen instruments. It requires the will and the active spirit of man to be brought into great subjection; to effect which many humbling dispensations are administered. When the Lord conveys a gentle intimation to speak what he opens at the time, and it is yielded to, he gives a reward of heavenly peace; and there is a present release from those fears which have enveloped the mind, in the work of preparation. But there are many dangers to which those who have received the gift are exposed. Satan may tempt them to value themselves above their brethren, particularly when injudicious persons speak indiscreetly of their performances, and by their imprudent attentions lead them to feel that they are regarded as being peculiarly gifted, and of superior usefulness in the church. They may be induced to use their stations to gratify personal opposition to others, and to support party designs, under the profession of preaching the gospel, altogether out of the spirit of redeeming love and the authority of Christ; by which the ministry is brought into disrepute. Some persons, for want of close attention and subjection to the Lord's will, have mistaken the place he designed for them in the body; all which may be escaped through humble watchfulness and prayer.

Thomas Chalkley has some pertinent remarks, founded on his own experience, which may be advantageously revived. He says, "As in the work of conversion or regeneration, there is a growth and increase from the state of a child to that of a man in Christ, so in the work of the ministry or preaching the gospel, there is also a growth from a babe to an able minister, in all which the power and grace of the Holy Spirit must be our guide, our help and support; keeping close to which, we shall increase in divine wisdom and sound judgment, and our hearts and understandings will be more and more opened and enlarged. The apostle Paul said, 'when I was a child I spake as a child, understood as a child, and thought as a child;' and yet he was an excellent child of God, and minister of Christ; and as he grew in his gift, and Christ's

grace, he became a wonderful serviceable instrument in the hand of God. Now a child's state in the ministry is too much overlooked by many, some thinking to be men as soon as they are brought forth into the ministry; and according to my observation, divers have been at a loss, and some quite lost, for want of a patient continuing in well doing. Not waiting to feel a growth and increase from above, they have gone on in their own strength and will, perhaps against the advice and instruction of a sound and honest Aquila and Priscilla, and have been hurt; and some who had received a gift, have had the same gift taken from them, even by the Lord who gave it them."

"As I take it, a true minister of Christ is to take no thought what to say, but it will be given him in the same hour that which he should speak to the people; and if it is not given from above, I believe he or she ought to be silent; for they receive freely, if they do receive anything from Christ, and so they ought freely to administer; and where little is given, little is required; all which is plain from Christ's own words in the New Testament; and Christ's cross is to be taken up by his ministers in their preaching, as well as in their conversation.

"When I first felt a necessity on me to preach the gospel, I had but a few sentences to deliver, in great fear and tenderness, with some trembling, with which my brethren were generally satisfied and edified. * * * * Through a continual labour and spiritual travail, I witnessed a growth in experience, and an enlargement in expression and heavenly doctrine; and my heart was mightily enlarged to run the ways of God's commandment; divers were convinced, and some I hope thoroughly converted, and many comforted, and God through the ministry of his dear Son, glorified, who is thereof only worthy for ever. In all which I have nothing to boast of or glory in, saving in the cross of Christ. Christ is all in all. He is the great teacher of teachers, and the highest school-master of all; and he says, 'he that will be my disciple, must first deny himself, and take up his cross, and follow me.' * * * * And I find to this day, that it is safe for me when I am ministering to the people, when the spring of divine life and power, from which sound truths and edifying matter springs and flows into the heart or understanding, abates or stops, to stop with it, and sit down; and not to arise, or speak publicly to the people, without some spiritual impulse or moving, and openings."

As early as 1658 George Fox delivered this counsel to the ministers respecting the exercise of their gifts: "Take heed of many words; what reacheth to the life settles in the life." "There is no one strikes his fellow servant, but first he is gone from the pure in his own particular; when he goeth from the light he is enlightened withal, then he strikes; and then he hath his reward. The light which he is gone from, Christ, comes and gives him his reward. This is the state of the evil servants. The boisterous, the hasty, and the rash, beget nothing to God. When all are settled in the life, they are in that which remains forever; and what is received there, is received from the Lord; and what one receiveth from the Lord, he keepeth; so he sitteth still, cool, and quiet in his own spirit, and giveth it forth as he is moved."

"Though they that travel may have openings when they are abroad, to minister to others, yet for their own particular growth, they must dwell in the life which doth open; and that will keep down that which would boast. For the minister comes into the death, to that which is in the death and in prison; and so returns up again into the life, into the power, and into the wisdom, to preserve him clean." "Friends, come into that which is over all the spirits of the world, fathoms all the spirits of the world, and stands in the patience. With that ye may see where others stand, and reach that which is of God in every one. Here is no strife, no contention, out of transgression. For he that goeth into strife, and into contention, he is gone from the pure spirit. When any goeth into contention, if any thing hath been begotten by him before, that contentious nature doth get atop, spoileth that which was begotten, and quenches his own prophesyings. So if that be not subjected by the power in the particular which would arise into strife, that is dangerous."

"Let every one mind that which feels through and commands his spirit, whereby every one may know what spirit he is of; for he should first try his own spirit, and then he may try others; he should *first know his own spirit*, and then he may know others. Therefore that which doth command all these spirits, where the heats and burnings come in and get up, in that wait, which chains them down and cools; that is the elect, the heir of the promise of God. For no hasty, rash, or brittle spirits, though they have prophecies, have held out, and gone through, they not being subjected in the prophesy."

"It is a weighty thing to be in the work of the ministry of the Lord God, and to go forth in that. It is not as a customary preaching; it is to bring people to the end of all outward preaching. For when ye have declared the truth to the people and they have received it, and are come into that which ye spake of; the uttering of many words and long declarations out of the life, may beget them into a form. And if any run on rashly into words again without the savour of life, those that are come into the thing he spake of, will judge him, whereby he may hurt again that which he had raised up before. So Friends, ye must all come into the thing that is spoken in the openings of the heavenly life among you, and walk in the love of God, that they may answer the thing spoken to; and take heed all of running into inordinate affections; for when people come to own you, there is danger of the wrong part getting up." These contain good hints for other classes, besides ministers.

For "The Friend."

A Noble Indian.

The Detroit Advertizer contains an obituary notice of the Buffalo Chief, who died on the 7th of Ninth mo., aged about one hundred years. He was the head of the Chippewas, and the most able and distinguished chief of that nation. The Advertizer says of him that he was noted for his rare integrity and magnanimity, his wisdom in council, and his power as an orator. The Buffalo Chief, though a man of great personal courage, was always a friend of peace, and averse to deeds of cruelty and bloodshed. "At a war council of the bands, during the treaty of 1842, many warriors and braves related their exploits, their deeds in war, and the number of scalps each had taken from the enemy. Lastly, the stalwart Buffalo Chief arose, and said that unlike his red brethren who had spoken, he never took a scalp in his life, though he had taken prisoners, whom he fed and treated well—advised them to come no more to the lands of the Chippewas—and set his captives free." In 1849 his influence saved the life of a Sioux prisoner. He kept him unharmed from the Chippewas for several months, and finally took means to have him safely returned to his home beyond the Mississippi. He is described as being a person of medium stature, with a remarkably grave and dignified countenance, expressive great thoughtfulness. Toward the close of life he made a profession of the christian relig A short time before his death he presented Indian Commissioner with his pipe and tob pouch, desiring him to take them with hin Washington, saying, "I have smoked my pipe, and have no more use for them."

Ways of Committing Suicide.—Wearing shoes on damp nights in rainy weather.

Leading a life of enfeebling, stupid laziness, keeping the mind in a round of unnatual ex ment by reading trashy novels.

Going to balls in all sorts of weather in the t nest possible dress. Dancing till in a comp perspiration, and then going home through damp air.

Sleeping on feather beds in seven by nine rooms.

Surfeiting on hot and very highly stimula dinners.

Beginning in childhood on tea, and going from one step to another, through coffee, chew smoking, and drinking.

Keeping children quiet by teaching them suck candy.

Eating without time to masticate the fo

Allowing love of gain to so absorb our min as to leave no time to attend to our health.

Following an unhealthy occupation beca money can be made by it.

Tempting the appetite with niceties when stomach says no.

Contriving to keep in a continual worry at something or nothing.

Retiring at midnight and rising at noon.

Gormandizing between meals.

Giving way to fits of anger.

Neglecting to take proper care of ourselves w a simple disease first appears.

For "The Friend

The following letter written by Mary Capp and found in her life published in Friends' Lib ry, vol. xii., page 134, seemed so appropriate the present tried state of our Society, I thoug would offer it for insertion in "The Friend."

"Birmingham, Ninth mo. 21, 183

"To C. B. C.,—My Kind and Dear Frienc Thy affectionate communication was, as ever, cordially accepted. That thy precious mother witness the best of comforters through all bereavements and trials, I doubt not. My l love is to her. The foundation stands sure t unites the humble followers of the Redeem This is my hope and my anchor. My soul lo and breathes, in the spirit of prayer, for prese tion in this day of sifting. Sometimes I th in my solitude, that perhaps I enter, in proport to what I can bear, into what some dear fell probationers have to sustain in the present st of our religious Society. My heart mourns; I know not what to do better than to leave unto that Wisdom that ruleth over all. In deep humiliation we may be dumb with silen but Oh! if we can trace the hand of the Lor it, we may take courage, and hold on our lo way, as disciples of a crucified Saviour, bear his cross from day to day, until we put off th corruptible bodies, and rise triumphant over opposition, through the power that conquers de hell, and the grave. That I may really be a h ble waiter in patience, at my Saviour's feet daily the petition of my soul, and that I may derly feel for, and with my conflicting Friends

M. C.

Kindness to Servants.—Accustom yourself to
at your servants with kindness and humanity.
le of the ancients said, *we should look upon them*
unfortunate friends. Consider that you owe
y to Providence the great difference that exists
ween you and them; do not make them feel their
dition, and do not aggravate their trouble.
thing is so low as to be haughty to one who is
ler you. Use no harsh expressions; that mode
speaking should be unknown to a person of a
ished and delicate mind. As service is estab-
ed contrary to the natural equality of mankind,
s our duty to sweeten it. Have we any right
with our servants to be without faults, when we
ly show them that we are not faultless?

For "The Friend."

A few lines of encouragement to all such as are
nd faithful, and are desirous for the mainte-
nce of the "law and the testimony," as held by
fathers and mothers in Israel.

Dear and tender Friends,—My spirit salutes you
the love of the gospel, and I feel a tender sym-
hy with you, wherever your lot may be cast in
s day of proving and sifting, as passing through
sieve which separates the chaff from the wheat.
has ever been the lot of the chosen and faithful
be tried and proved: our blessed Lord told his
ciples, that "it must needs be that offences
uld come," and the apostle Paul said to the
rinthians, "there must also be heresies among
, that they which are approved, may be made
nifest," and very many have arisen, "speaking
verse things," thereby drawing aside many
o were not settled and grounded in the Truth.
d now as formerly, when so many are in a
sed state, we may be declared by such, as out
unity with them, because we cannot unite with
h proceedings as are contrary to Truth, and to
good order and discipline established by the
rd in our religious Society, yet I do verily be-
ve if we possess our souls in patience, and are
htly concerned for the honour of Truth, (al-
ugh for a time we may have to suffer,) yet in
time, as we cling closer and closer to our
ad and Ruler, "we shall have the victory," and
gment certainly will be on the head of the
usgressor. S. C.

Niagara District, C. W., Eleventh mo., 1855.

Whitewash for Outhouses and Fences.—Take
lean barrel that will hold water. Put into it
f a bushel of quick-lime, and slack it by pouring
r it boiling water sufficient to cover it four or
inches deep, and stir it until slacked. When
ite slacked dissolve in water, and add two
unds of sulphate of zinc, which may be had at
r of the druggists, and one of common salt, which
a few days will cause the whitewash to harden
the wood-work. Add sufficient water to bring
o the consistency of whitewash. To make the
ve wash of a pleasant cream colour, add three
unds yellow ochre. For fawn colour, add four
unds umber, one pound Indian red, and one
nd lampblack. For gray or stone colour, add
r pounds raw umber, and two pounds lampblack.
e colour may be put on with a common white-
sh brush, and will be found much more durable
an common whitewash.—*Scientific American.*

Fossil Foot Prints.—A human foot print, said
be too perfect in shape and proportions to be
ubted, was taken from the Middlesex Freestone
arry, at Portland, Connecticut, recently. It is
parently the footstep of one of the Aborigines,
d doubtless one of the primitive tribes, as it
hibits unmistakable evidences of the original
occasin. This specimen was taken at a depth of
ty feet in the rock.

THE FRIEND.

ELEVENTH MONTH 10, 1855.

We give below a report taken from one of our city papers, of the proceedings in the United States District Court in reference to the alleged contempt thereof by P. Williamson. We think it will strike our readers as a singular feature in the final adjudication of this singular case, that the assertion made in the original return to the Habeas Corpus, and which at the time was stated by the Judge to constitute the evidence of contempt, viz., that the parties named in the writ were not at *any time* in the possession of P. Williamson, is not even alluded to in the interrogatories, by answering which the "contempt" is said to have been purged.

On Saturday, Passmore Williamson appeared in the United States District Court, accompanied by Messrs. Meredith, Gilpin and Hopper, his counsel, and offered the following petition:

Petition.—U. S. A. vs. Williamson, District Court U. S., Eastern District of Penna.

To the Hon. the Judge of the District Court of the United States for the Eastern District of Pennsylvania.

The petition of Passmore Williamson respectfully showeth:

That he desires to purge himself of the contempt because of which he is now attached, and to that end is willing to make true answers to such interrogatories as may be addressed to him by the Court touching the matter heretofore enquired of by the writ of Habeas Corpus to him directed at the relation of John H. Wheeler.

Wherefore he prays that he may be permitted to purge himself of said contempt by making true answers to such interrogatories as may be addressed to him by the Hon. Court touching the premises.

P. Williamson.

Affirmed and subscribed before me, Nov. 2d, 1855.

Chas. F. Hrazlitt, U. S. Com.

Judge Kane, after consideration, replied to the petitioner as follows:

"Passmore Williamson—The Court has received your petition, and, upon consideration thereof, have thought right to grant the prayer thereof. You will therefore make here, in open Court, your solemn affirmation, that in the return heretofore made by you to the writ of habeas corpus which issued from this Court at the relation of John H. Wheeler, and in the proceedings consequent thereupon, you have not intended a contempt of this Court or of its process: Moreover, that you are now willing to make true answers to such interrogatories as may be addressed to you by the Court, touching the premises inquired of in the said writ of habeas corpus."

The required affirmation was then made in the form dictated by the Judge.

Mr. Van Dyke, the District Attorney, then submitted an interrogatory in writing, which was not read aloud at that time.

Mr. Gilpin said Mr. Williamson was perfectly willing to answer the interrogatory submitted by the District Attorney, but as he did not know what other interrogatories might follow this he thought it best that it and its answer should be filed.

Mr. Vandyke said he was willing either to file the interrogatory or to submit it for an immediate reply.

Mr. Gilpin and Judge Kane both remarked that they had understood the District Attorney to intimate that if the question propounded was answered in the affirmative, he would be satisfied. The Court further said that it was for the petitioner to make his election whether or not the interrogatories and the replies should be filed.

After consultation with his counsel, the petitioner preferred that the questions and answers should be filed.

The Court directed that the interrogatories should be filed. This was done and the parties retired for a time.

Mr. Gilpin then read the interrogatory that had been propounded, and the reply of Mr. Williamson.

The defendant and his counsel then retired and after some time returned.

The interrogatory was as follows:

United States vs. Passmore Williamson. Nov. 2d, 1855, and now John C. Vandyke, Attorney for the United States, by leave granted, files the following interrogatory:

Interrogatory.—Did you, at the time of the service of the writ of Habeas Corpus at the relation of John H. Wheeler, or at any time during the period intervening between the service of said writ and the making of your return thereto, seek to obey the mandate of said writ, by bringing before this Honourable Court the persons of the slaves therein mentioned?

If to this interrogatory you answer in the affirmative, state fully and particularly the mode in which you sought so to obey said writ, and all that you did tending to that end.

And therefore, it is ordered that the defendant, Passmore Williamson, do make true answers to said interrogatories.

The reply made was as follows. The reader will, however, understand that this reply was amended at the suggestion of the Court, to conform better to the views of the District Attorney. The following is the reply as amended:

Answer of Defendant.—I did not seek to obey the writ by producing the persons therein mentioned before the Court, because I had not, at the time of the service of the writ, the power over, the custody or control of them, and therefore it was impossible for me to do so. I first heard of the writ of habeas corpus on Friday, July 20, between one and two o'clock, A. M., on my return from Harrisburg. After breakfast, about 9 o'clock, I went from my house to Mr. Hopper's office, when and where the return was prepared.

At 10 o'clock I came into Court as commanded by the writ. I sought to obey the writ by answering it truly; the parties not being in my possession or control, it was impossible for me to obey the writ by producing them. Since the service of the writ I have not had the custody, possession or power over them; nor have I known where they were except from common rumor or newspaper reports in regard to their public appearance in the city or elsewhere.

Some discussion arose between the District Attorney and the counsel of Mr. Williamson. Mr. Vandyke contended that the reply of the defendant was evasive and contradictory. The Judge said the difficulty, he thought, could be easily overcome by amending the answer, and to the suggestion of the Court it was amended in the following manner:

I did not seek to obey the writ by producing the persons in the writ mentioned before this Court.

I did not so seek because I verily believed that it was entirely impossible for me to produce the said persons agreeably to the command of the Court.

This answer was then accepted by the Court and ordered filed.

Mr. Vandyke then submitted another interrogatory, the substance of which was whether or not Mr. Williamson had been guilty of mental reservations in his reply to the first interrogatory?

The Court overruled this interrogatory as superfluous and improper.

Mr. Vandyke withdrew this interrogatory and offered another, which was also overruled by the Court on the ground that it led to such replies as had already been objected to by the District Attorney.

Mr. Vandyke also withdrew this question.

Judge Kane then remarked that the District Attorney had been invited to aid the Court in this case, but that he would bear in mind that his relation to Mr. Wheeler is now suspended. This was only an inquiry as to what injury had been done the process of the Court.

Mr. Vandyke said he was aware of the position he occupied.

Judge Kane then said—"The contempt is now regarded as purged, and the party is released from custody. He is now reinstated to the position he occupied before the contempt was committed. Mr. Williamson is now before me on the return to the writ."

SUMMARY OF EVENTS.

EUROPE.—One week later from Liverpool.

The War.—The anticipated attack of Odessa had not commenced at the last dates from that quarter. The fleet numbering eighty vessels, still lay off the harbour. The Russian army made an attack on Kars on the 29th of Ninth month, but was repulsed. The loss of the Turks is stated at 700 men; that of the Russians is reported to amount to several thousands. The allied forces in the Crimea had commenced a concentric advance from Eupatoria towards Baidar, Kertch and Kinburn, in order to surround and cut off the Russian army. The advanced posts of the allies were within five leagues of Bakschiserai, and the Russians were retreating. The north portion of Sebastopol has been surrounded by the Russians with new fortifications, and placed in a state to sustain a siege. Taman and Phangoria, in the straits of Kertch, had been destroyed by the allies. In a despatch from St. Petersburg, dated

the 17th, it is intimated that the appearance of the allied fleet before Odessa was a feint intended to draw off the Russian troops from Ochakoff.

GREAT BRITAIN.—Parliament has been further prorogued to the 11th of next month. The Bank of England had further advanced the rate of interest to six per cent. on sixty days paper, and under, and seven per cent. on that maturing at longer dates. The Bank of France had also raised its rate to six per cent. Both Banks continued to lose their gold. The falling off in the bullion of the Bank of England for the week had been £526,000. Consols had fallen to 87.

Liverpool Market.—Cotton had undergone a decline of about 1-16d. Breadstuffs were in active demand, and flour had advanced from 1s. to 2s.

CENTRAL AMERICA.—Accounts from Nicaragua represent the Kinney Colony in a flourishing condition. A party had returned from an exploring trip to the mining regions on Indian River, and make a very satisfactory report of their gold discoveries. The adventurer, Walker, had surprised and taken the town of Granada.

SOUTH AMERICA.—From Chili and Peru, there are great complaints of the scarcity of food. The Valparaiso papers even anticipate a famine. In Lima, the Convention, then in session, were considering the propriety of suspending the import duties on breadstuffs. In Ecuador, and in fact along the whole South Pacific Coast, there is a deficiency of provisions. Advices from Rio Janeiro to Ninth mo. 21st, state that the cholera was raging there with increasing severity. About 800 deaths had already occurred.

UNITED STATES.—The amount in the U. S. Treasury on the 22d ult., subject to draft, was $22,013,000. Nothing has been heard from the British Government, respecting the representations of our Government to it, concerning the violation of the United States' neutrality laws by English officials in recruiting troops for the Crimea. Quite recently, a company of 45 men was clandestinely organized, and taken from St. Louis for the British service. Joseph Wagner, one of the parties convicted in New York of enlisting troops for the Crimea, has been sentenced to two years in the State Prison.

Bounty Lands.—The applications for bounty land warrants at the Pension Office under the late act, are 222,-800, and they are still coming in; 5500 were received during the Tenth month.

Dreadful Railroad Disaster.—On the 2d inst., a terrible catastrophe occurred on the Pacific Railroad at the crossing of the Gasconade river, about 100 miles west of St. Louis, Missouri. The opening of the railroad to Jefferson City was to be celebrated on that day, and an excursion train with between 600 and 700 passengers, left St. Louis in the morning, with persons who desired to be present on the occasion. The bridge across the Gasconade river gave way, and fell with a tremendous crash, carrying ten of the cars with it, a distance of from 25 to 30 feet. More than twenty persons were killed, and a much larger number had limbs broken, or sustained other serious injury. Out of the hundreds, who were in the cars, but few escaped entirely unhurt. Among the sufferers are some of the most prominent citizens of St. Louis.

Nebraska.—A census of this Territory has been recently taken, from which it appears that its population is still quite small. The total, (exclusive of one county from which there was no return,) is 4565. Of this number, 1517 were white males over 21 years of age.

Utah.—Deseret papers to Ninth mo. 19th, have been received. Near the close of Eighth month, grasshoppers in countless numbers descended on the settlements, north of Utah county, destroying everything green in their way. The county of Tocele had suffered a similar visitation. The chiefs of the Snake and Utah tribes of Indians met at Salt Lake City on the 2d and 11th of Ninth month, and negotiated a treaty of peace and amity. A Horticultural Society has been organized in the Territory. A number of missionaries left Salt Lake on the 10th and 11th of Ninth month, for the United States and England. The Pacific Express Company has established a regular express between Salt Lake City and California.

California and Oregon.—San Francisco dates to the 5th ult. About 96,000 votes were polled at the late election in California. The Legislature is composed of 72 Americans, 39 democrats, and 2 whigs. There was a majority against a prohibitory liquor law. The mines continued to produce largely. The steamship George Law brought $1,670,000 in gold at her last trip; she connected at the Isthmus with the John L. Stevens, which brought down nearly $1,900,000. The cholera broke out on board the steamer Sierra Nevada during her passage from San Juan to San Francisco, with the passengers that left New York, Ninth mo. 5th. The disease committed frightful ravages, and 71 deaths are reported as having occurred during the voyage, and 24 in addition after the vessel put into Acapulco. The authorities refused to grant permission for the dead to be brought on shore. The steamship Cortes of the same line arrived at Acapulco the following week, but had no sickness on board. It was reported that many volunteers had left and were about leaving San Francisco to join Walker's band in Nicaragua. Oregon dates to Ninth mo. 27th, had been received. The Oregon gold mines have not produced largely. The metal is found in many places, but few persons have yet obtained much of it. Some, however, think it will soon be found in greater abundance. The grasshoppers have been making sad havoc with the wheat in the southern part of the Territory.

Texas.—The late attack on the Indians by a company of Texan Rangers, under Captain Callahan, was made, it appears, within the Mexican territory, and is regarded in Mexico as a great outrage. It is denounced by Gen. Smith, the commander of the U. S. troops; but late advices state that Governor Pease sanctions Callahan's course, and that more rangers have gone to the frontier to join his command. The north-western part of Texas is peopled, principally by emigrants from Germany, France, Switzerland and Hungary, who are said to be unanimously opposed to slavery. The settlers in that part of Texas, now desire to form a new State with free institutions. By the act annexing Texas, it is provided that it may be divided into two or more States, and it is probable that such a division will ere long be demanded.

New York.—The value of exports from this port during the Tenth month, amounted to $8,035,699. Tonnage has become scarce, and freights are higher. There is also a great scarcity of sailors. It was stated a few days since as a remarkable fact, that there was at that time but one unengaged vessel in port, and that one a small brig. The number of inmates in the care of the city almshouse at present, is nearly six thousand. The "Governors" have officially notified the Common Council that the actual expenses for the current quarter have run on their previous estimates $75,000, and call upon them to make up the deficiency. The dearness of provisions, they say, has compelled them to exceed the usual appropriation. Mortality last week, 363.

Philadelphia.—The mortality in this city for the Seventh, Eighth and Ninth months, numbered 3387, which is 1144 less than that of the corresponding quarter of 1854. Much of this mortality was among children, of whom 1895 died under five years of age. Interments last week, 194.

Miscellaneous.—*A New State.*—The Legislature of Michigan has passed an act providing for the formation of a new State or Territory of Superior. Michigan gives part, and Wisconsin another part, to form the new Commonwealth.

A Panther Killed.—On the night of Tenth mo. 20th, a cougar, measuring seven and a half feet, was killed on Sycamore creek, Tennessee, by a party of men with dogs. In the conflict he killed three dogs, and crippled several others.

The Missing Aëronaut.—It is now believed that Winchester, who went up from Norwalk, Ohio, on the 2nd ult., was drowned in Lake Erie.

Large Sale of Pork.—A Louisville dealer lately sold an English packer 20,000 hogs, at $6 per hundred. The aggregate amount of the transaction would be about $240,000.

Extensive Flour Mills.—There are sixteen flouring mills, with eighty-four run of stone, capable of manufacturing about ten thousand barrels of flour per day, at Oswego, N. Y. The facilities for handling grain are extensive, the elevating capacity being about thirty-six thousand barrels per hour, and the storing room equal to about two millions two hundred thousand bushels.

The Term of Naturalization, in Canada, has been reduced from seven years to three years' residence.

Two more Asteroids.—On the 5th ult., two more small planets were discovered between Mars and Jupiter. One by Luther, in Prussia, and the other by Goldsmith, of Paris. Both planets were again observed on the 7th, at Altona or Paris.

Lake Superior Copper.—The yield of the various mines in this region, is computed by the Lake Superior Journal, at 4990 tons for the present year. It is expected that a much larger quantity will be mined the coming year.

RECEIPTS.

Received from J. King, agt., N. Y., for M. Peasley, J. Otis, F. Armistead, C. Gifford, Wm. King, $2 each, vol. 29, for N. D. Tripp, $2, vol. 28; from Stp. Hobson, agt., O., for Jos. Penrose, Joel Gilbert, $2 each, vol. 28, Thos. Bowman, $2, vol. 29; from A. Garretson, agt., for David Lupton, $4, vols. 28 and 29; from H. D. Mede $2, vol. 28; from Wm. A. Robinson, R. I., $4, vols. and 29; from Nathan Hall, O., $3, to 52, vol. 28; fr Jesse Hall, agt., O., for Wm. Hall, Parker Hall, Je Hall, Mt. P. B. School, Jos. Lupton, $2 each, vol. 29, Brad. Thomas, $2, to 36, vol. 29, for Rachel Miller, to 27, vol. 29; from Caleb Bracken, agt., O., $2, vol. for J. Holloway, Jacob Branson, F. Davis, $2 each, vol. 29, Levi Hoge, $4, vol. 28; from H. Harrison, Ill., vol. 29; from F. Mills, agt., N. Y., $2, vol. 29, for Th Townsend, M. Dingman, $2, vol. 29; from M. Bat Pa., $4, vol. 27 and 28; from T. Mendenhall, $2, 28; from Benj. Evans, $2, to 11, vol. 29; from Sa Chadbourne, C. W., $2, to 9, vol. 30, Sl. Birdsall, $2 9, vol. 30; from M. Atwater, agt., N. Y., $2, to 13, 29, for L. H. Atwater, Joshua Haight, Jacob Haight, H. Deul, $2 each, vol. 29, for Wm. Brownell, $4, v 28 and 29.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS, } Philada.
SAMUEL BETTLE, JR. }

DIED, at Summerset, Niagara Co., N. Y., on the 1 of Sixth month, 1855, JACOB HAIGHT, aged seventy years and nine days. He was one of the first settl in the town, where he had resided about 35 years, d ing which time he was a useful and consistent mem of Hartland Monthly Meeting of Friends; firmly atta ed to the doctrines and testimonies of the Society held from the beginning. He died in the faith of Lord and Saviour Jesus Christ.

——, on the 1st of the Eighth month last, at her sidence in Cincinnati, O., ELIZABETH C., wife of Ja Taylor, aged 39 years.

——, on the 7th of Ninth month, 1855, PRISCI wife of William Fisher; an esteemed elder and overs of Salem Monthly and Particular Meeting, Ohio, a sixty years. She bore the severe pain and sufferin a protracted illness with becoming resignation to Divine will, trusting in the mercy of her Redeemer, was favoured with an assurance of acceptance into mansions of peace.

——, on the 30th of Ninth month last, MERRICK aged 81 years; an elder and member of Bradf Particular and Monthly Meeting. This dear Friend an example of upright walking, and of patience and nocence. He acceptably filled the station of overs for more than twenty years successively, wherein was careful to watch over the flock, and to dische his duty in the important trust. During his illness, articulation was much impaired by paralysis; yet few words which could be understood, evinced t prayer and praise were much the clothing of his sp On the morning of his decease, he inquired for his and niece, to whom he said, "All is well;" and in a minutes expired. Thus, having endeavoured to be w he should be, by the grace of God, he quietly sweetly closed a well-spent life.

——, at Hartland, Niagara Co., N. Y., on the 2nd Tenth month, 1855, WILLIAM DAVIS; a consistent m ber and overseer of Hartland P. M. of Friends, in seventy-first year of his age. He bore the sufferin an acute disease, with Christian patience and resig tion.

——, on the 15th ult., at her residence in Burling N. J., MARGARET M. SMITH, in the 65th year of her a valued member and overseer of Burlington Mon Meeting.

Appeal for the Ancient Doctrines of the Re- ious Society of Friends. Published by Direc- n of the Yearly Meeting held in Philadel- ia, in the Fourth Month, 1847.—*Addressed its Members.*

t the rise of the religious Society of Friends, h took place at a period of great commotion, professors of religion were seeking the Lord, not seeking him where alone he was to be d, in their own hearts, failed to obtain that antial comfort and settlement in the Truth h they longed for. Not sufficiently regarding onvictions and strivings of the Holy Spirit, ting at times upon their hearts, in order to them out of all sin, and to teach them to wait the Lord, that they might worship him in and in truth, their attention was directed to urely activity, in outward and ceremonial rmances.

ing taught that the Scriptures were the word d, and the primary rule of faith and practice, searched them in their own will and wisdom, formed conclusions respecting their own con- n, and the doctrines of the gospel, which not founded on the testimony and light of the t in themselves, were often very erroneous. made a high profession of faith in our Lord Christ, and in what he did and suffered for without them, thinking that by his righte- ss imputed to them they were delivered from uilt and penalty of sin, although they had bmitted to Him in his spiritual appearance e heart, and did not see that it was there were to come to the saving knowledge of and of Christ, and experience deliverance sin, and the introduction of everlasting right- ess in the room thereof. Whilst they exalted criptures in the place of the Spirit, and by ing to the truths recorded in them, supposed elves to be sound Christian believers, they in alliance with the spirit of the world, its ns and customs. Many were enemies to the of Christ, notwithstanding in words, they him their Redeemer and Saviour, and were in the observance of what they called religi- ties, but which being performed in the un- fied will of man, and without the putting of the Shepherd of the sheep, were lifeless ruitless, as regards perfecting holiness in the f the Lord. Accordingly, under a high pro- n of religion, but in an intolerant spirit to- those who differed from them, they denied ossibility of being made free from sin in this t the same time that they considered them- selves justified by faith in our Lord Jesus Christ. In this state of things, it pleased the Lord Almighty, in his infinite love and goodness, to visit the kingdom of Great Britain with his glorious day-spring from on high, and to prepare and anoint chosen messengers to go through the land, to proclaim anew the everlasting gospel of life and salvation, as it was preached by the primitive ministers and believers in Christ. These were changed men themselves, before they went about to instruct others. Their religion was not acquired in the schools of the learned, nor by any effort of their own intellectual faculties, whether cultivated or not; but it was learned in the school of Christ, under the humbling discipline of his cross, and by the immediate teachings of his Holy Spirit in their hearts. Thus they were made living witnesses of his power, and of his second coming without sin unto salvation; and as they grew in grace they were established on Christ Jesus, the rock and foundation upon which he builds his church. As they were prepared for it, the mysteries of the kingdom were opened to them, and their minds enabled to understand and receive the doctrines of the Holy Scriptures, which they highly esteemed, and believed were to be rightly understood and the precious promises they contain availingly applied, only by the same Spirit which gave them forth.

It was early opened to them, that however prevalent was the opinion, that learning and study and great research were necessary to acquire a knowledge of the "School Divinity," by which it was supposed a man was made a minister of the gospel, all this knowledge gathered by the wisdom and labour of man, was but "as a painted sepulchre, a dead carcase, without the power, life and spirit of Christianity, which is the marrow and substance of a Christian ministry." After speaking of the high estimation in which this "School Divinity" was held, Robert Barclay further says, "And if in any age since the apostles' days God hath purposed to show his power by weak instruments, for the battering down of that carnal and heathenish wisdom, and restoring again the antient simplicity of truth, this is it. For in our day, God hath raised up witnesses for himself as he did fishermen of old; many, yea, most of whom, are labouring and mechanic men; who altogether without that learning, have by the power and spirit of God, struck at the very root and ground of Babylon; and in the strength and might of his power, have gathered thousands, by reaching their consciences, into the same power and life, who as to the outward part have been far more knowing than they, yet not able to resist the virtue that proceeded from them. Of which I myself am a true witness and can declare from a certain experience, because my heart hath been often greatly broken and tendered by that virtue and life, that proceeded from the powerful ministry of those illiterate men. So that by their very countenances as well as words, I have felt the evil in me often chained down and the good reached to and raised. What shall I say then, to you who are lovers of learning and admirers of knowledge? Was not, I also, a lover and admirer of it, who also sought after it, according to my age and capacity? But it pleased God, in his unutterable love, early to withstand my vain endeavours, while I was yet but eighteen years of age; and made me seriously to consider, which I wish also may befal others, that without holiness and regeneration no man can see God, and that the fear of the Lord is the beginning of wisdom, and to depart from iniquity a good understanding; and how much knowledge puffeth up, and leadeth away from that inward quietness, stillness and humility of mind, where the Lord appears and his heavenly wisdom is revealed."

Our early Friends were true believers in all the doctrines of the gospel—in the Three that bear record in heaven, the Father, the Word, and the Holy Ghost, which three are one;—in the Godhead and manhood of our Lord Jesus Christ;—in the propitiatory sacrifice which he offered without the gates of Jerusalem for the sins of the whole world;—in his resurrection and glorification at the right hand of God the Father, our Mediator and Advocate, and who will be our Judge;—and in the Holy Spirit which proceedeth from the Father and the Son;—and also that the Holy Scriptures were written by Divine inspiration, and contain a declaration of all the fundamental doctrines and principles relating to eternal life and salvation; and that whatsoever doctrine or practice is contrary to them is to be rejected as false and erroneous;—that they are a declaration of the mind and will of God in and to the several ages in which they were written, and are obligatory on us, and are to be read, believed and fulfilled, through the assistance of Divine grace. These continue to be the doctrines of Friends, and have been maintained by the faithful in every generation since the rise of the Society.

The fundamental doctrines of Christianity were generally held by other Christian professors; but the spiritual and regenerating nature of the gospel dispensation, being very much lost sight of, Friends were sent to turn the people to the light of Christ in the heart, by which they might see their fallen condition, the exceeding sinfulness of sin, and that many were resting in a mere belief in a system of religion of man's framing, which they imagined was founded on holy scripture, but which in many respects was defective, and incompatible with the gospel dispensation. It was the labour of these evangelical preachers, not only to publish the doctrines of Christ and his apostles, in their original simplicity and truth, but also to bring their hearers to the life and substance, imparted by the illuminating and quickening and baptizing power of his spirit and grace in their hearts.

George Fox in describing his commission says:—"I was sent to turn people from darkness to light, that they might receive Christ Jesus; for to as many as should receive him in his light, I saw, he would give power to become the sons of God; which I had obtained by receiving Christ. I was to direct people to the Spirit, that gave forth the Scriptures, by which they might be led into all truth, and up to Christ and God, as those had been who gave them forth. I was to turn them to the grace of God and to the truth in the heart which came by Jesus; that by this grace they might be taught, which would bring them salvation; that their hearts might be established by it, their words might be seasoned, and all might come to know their salvation nigh. I saw Christ

died for all men, was a propitiation for all, and enlightened all men and women with his divine and saving light, and that none could be true believers but those who believed therein. I saw that the grace of God, which bringeth salvation, had appeared to all men, and that the manifestation of the Spirit of God was given to every man to profit withal. These things I did not see by the help of man; nor by the letter, though they are written in the letter; but I saw them in the light of the Lord Jesus Christ and by his immediate spirit and power, as did the holy men of God by whom the Holy Scriptures were written. Yet I had no slight esteem of the Holy Scriptures; they were very precious to me; for I was in that spirit by which they were given forth; and what the Lord opened in me, I afterwards found was agreeable to them."

Friends have always regarded the Holy Scriptures as secondary and subordinate to the Spirit; and while to this they direct people for a knowledge of the Divine will concerning themselves, they believe it will lead all who have the Scriptures, to obey the doctrines and precepts of the gospel which are contained therein. It has always been and continues to be the concern of our religious Society "to encourage all our members to practise the frequent perusal of them, with their hearts turned to the Lord, that so he may be pleased to open their understandings to receive that spiritual benefit which he designs they should convey, whether it be in doctrine, correction, reproof, or instruction in righteousness, that the man of God may be perfect, thoroughly furnished unto all good works." Ancient Testimony revived, &c., p. 42.

Notwithstanding the degeneracy which has appeared in the Society at different periods, the blessed Head of the church in his unmerited mercy and goodness, has continued to extend the visitations of his love and power to sons and daughters, many of whom have yielded to his requirings. To these, the same doctrines and testimonies have been precious; and many have been clothed with a holy zeal and courage, to watch over the flock against the inroads of the enemy, and to maintain these principles as a sacred trust, in support of which, many in the beginning offered up their lives. We believe these doctrines and testimonies will not be permitted to fall to the ground, but will continue to spread, until they finally prevail over all opposition.

The present is a day of peculiar trial, arising from the influence of the spirit of the world, the luxury and ease which the abundance of the things of this life brings in upon our Society, and from the divided feelings produced by the circulation of some writings, put forth by members, containing sentiments which do not accord with our doctrines. And under a religious concern for the restoration of that precious unity which once characterised us, and in discharge of what we apprehend to be a duty devolving upon us, we have believed it right to point out some passages in the writings alluded to, which do not convey the views of Friends; in order that our members may be on their guard against adopting forms of expression, and modes of defining and explaining doctrines, which differ from the simple and scriptural methods used by the Society. By the frequent repetition of such opinions and modes of expression, the mind may be gradually led to look upon the differences we have referred to, as matters of little moment; and thus by degrees, imperceptible perhaps to its clouded vision, the way may be prepared for a departure from a full belief and acknowledgment of the truth, as it is in Jesus, and as it has always been held by our religious Society.

From the Edinburgh Review.

The Chemistry of Common Life.

(Continued from page 69.)

"In Europe we have no means of knowing how long such tastes and practices have prevailed. The Romans, at their banquets, used cups and saucers made of silver and richly embossed. They were nearly of the same shape as those now in use, and were employed for drinking hot water out of. Whether it was customary to infuse herbs in this water on any occasion we do not read. But in Holland and England sage tea was in use till a very late period: and its antiquity is shown by the statement that the Dutch, in their early intercourse with China, carried out dried sage leaves as an article of traffic, and exchanged them against those of the Chinese tea-tree. Now, however, every country in Europe has chosen for itself one or other of the familiar foreign beverages. Spain and Italy delight in cocoa: France, Germany, Sweden, and Turkey in coffee; Russia, Holland, and England in tea; while poor Ireland makes a warm drink for itself, out of the husks of the cocoa, the refuse of the chocolate mills of Italy and Spain.

"So all Asia feels the same want, and in different ways has long gratified it. Coffee, indigenous in Abyssinia or the adjoining countries, has attached itself to the banner of the Arabian prophet, and has followed it wherever in Asia or Africa his false faith has triumphed. Tea, a native of China, has spread spontaneously over the hill country of the Himalayas, the table land of Tartary and Thibet, and the plains of Siberia, has climbed the Altais, overspread Russia, and is equally despotic in Moscow as in St. Petersburg. In Sumatra the coffee-leaf yields the favourite tea of the dark-skinned population, while Central Africa boasts of the Abyssinian chaat, as the indigenous warm drink of the Ethiopian people. Everywhere, unintoxicating and non-narcotic beverages are in general use—among tribes of every colour, beneath every sun, and in every condition of life. The custom, therefore, must meet some universal want in our common human nature."

This wide use of simple medicated drinks is simple enough. But it is still more remarkable that in so many different countries, and from so many different plants, different races of men—ignorant alike of chemistry and physiology—should have been led by a common instinct to select, for the purpose of preparing these drinks, vegetable substance which contains the same peculiar acting ingredient. Thus, the theine which characterizes the Chinese leaf, is present not only in the coffee bean brought into use in Abyssinia and Arabia, in the coffee leaf employed as yet only in Sumatra, in the Mate or Paraguay tea which has been long collected among the forests of Paraguay, but also in the Guarana or Brazillian cocoa, in use among the natives of Brazil; while the true cocoa of Central America contains the very similar substance theobromine. This fact, which has been established beyond doubt by recent chemical research, is one of the most curious in the whole history of human instincts. Through how many successive trials,—after how wide and long an experience of bodily comfort and discomfort,—must half-civilized men in each of these countries have come to settle down into the general custom of using the several indigenous plants which modern times have found commonly employed among them. How very curious that the chemistry of our day should discover that in so many cases the plants thus selected should be capable of yielding to water the same chemical and physiological ingredient!

The passion for fermented drinks is akin to the love of infused beverages, but it stands up somewhat different ground. It is not instin in the same sense as the desire for warm infu It has not everywhere led the different rac men through long trial and research to the n of gratifying it. These means have rather sp up of themselves before mankind in certain of the world, and have thus awakened the pas which, if it existed in human nature at all, w otherwise have remained dormant.

Thus, in tropical climates, where palm flourish, an accidental wound to the topmost causes a copious flow of sweet sap, which, own accord, speedily ferments and produce agreeable intoxicating drink. How early in ea climes must this grateful liquor have becom miliar to the primeval races? How natur was in them to make use of it!

So also in Mexico the American aloe pou copious juice into its own central cup, and in a brief space produces the Mexican pulqu pleasing to the native palate. And where grape vine bears its luscious bunches the expr juice soon begins to move and sparkle with bu of living gas, and the crude heavy liquor cha spontaneously into the cheerful and exhilar wine. Indeed the juices of nearly all fruits, of our more northern ones,—the apple, the the plum, the gooseberry, and a hundred othe naturally produce their own peculiar varieti intoxicating drink. Fermented liquors, there are natural beverages, which man could not s becoming acquainted with, and of which in r countries it required little ingenuity to obt continued and abundant supply. It was prob some fortunate accident which led to the disco of the mode of preparing sweet liquids sprouted grain (malt), and of converting t into an exhilarating drink by mixing them other liquids already in fermentation. A accident no doubt, led to the custom of che grains and roots, still practised in Peru, for preparation of fermented chica, and in the S Sea Island for the manufacture of the favo ava. And a yet rarer accident, at a more mo period, taught some sleepless Arabian alchemis torturing substance after substance in his c ble's alembics,—how to extract the fierce s from these agreeable drinks, and brought up, were, from the bottom of Pandora's box, that chohol which has since inflicted so many evils t the world.

(To be continued.)

Deodorising Properties of Coffee.—The Lot Medical Gazette gives the result of numerous periments with roasted coffee, proving that the most powerful means, not only of rende animal and vegetable effluvia innocuous, bu actually destroying them. A room in which r in an advanced degree of decomposition had l kept for some time, was instantly deprived of smell, on an open coffee-roaster being car through it containing a pound of coffee n roasted. The best mode of using the coffee disinfectant, is to dry the raw bean, pound it mortar, and then roast the powder on a modera heated iron plate, until it assumes a dark br tint, when it is fit for use. Then sprinkle i sinks and cesspools, or lay it on a plate in room which you wish to have purified.

As our understandings are opened by the l light, we experience that through an inward proaching to God, the mind is strengthened in dience; and that by gratifying those desires w are not of his begetting, these approaches to him obstructed, and the deceivable spirit gains stren

For "The Friend."

SLAVERY ITEMS.

he determination of slaves to obtain their free-
by purchase, or by flight, shows they have
same inherent love of liberty that their mas-
have. If the following can be relied on, the
aration for a general rush of the slaves at
andsville into the free States, threw their
ers into great consternation, and cost them a
re flogging, substituted for the decision of the
cil to hang them. Very few persons at the
h would live under such fear, for "all the
th that sinews bought and sold have ever
ed." The work of emancipation is on the
el, and it would be wisdom in the slaveholder
repare himself and his slaves for the benefits
eedom.

Negro Conspiracy in Mississippi.—The Ma-
(Miss.) Republican gives an account of the
overy of a negro conspiracy at Garlandsville,
er county. It says:—

A trustworthy negro on a neighbouring plan-
on, after having received pledges of secrecy,
aled the existence of the conspiracy to an over-
, and requested him to repair to a certain place,
he midst of a dark, unfrequented swamp, and
for himself. The overseer did not go, but the
morning he took with him some friends, and
t to the spot designated by the faithful negro.
re they saw every indication of a large crowd
ng been assembled; horses had been tied up,
kindled, and, from appearances, they calcu-
d that upwards of one hundred negroes had
e assembled on the preceding night. They
the spot, and the neighbourhood was quickly
med. Several negroes were taken up, and
ng them the leader. The greatest excitement
prevailing in the country; a council was held,
it was decided that the negroes should be hung
ediately; ropes were procured, and the sen-
e of the council was about to be executed,
n the crowd relented, fearing lest the innocent
uld perish with the guilty.

The negroes were then severely whipped, and
confessed that the conspiracy extended
oughout a large section of country, that there
ted several other organizations, which they
ed 'schools,' in the neighbourhood, and that
r object was to organize in sufficient force, and
ch, increasing their force as they went, to a
State. No arms or ammunition of any kind
ld be discovered; but the negroes confessed
they were to meet at Garlandsville next Sa-
lay night to make a start. When asked why
y selected that place as a rendezvous, they
ld give no reason, and the presumption is that
y intended to sack the place, and murder the
abitants. Two white men, they say, have been
ongst them, but their names were not known
he negroes, nor was anything developed which
ld identify them. Arms and ammunition are
obably concealed somewhere, as such a scheme
uld never have been attempted without them."
Ledger.

The terror of the slaveholder, at the sound of
menials' rising to secure their rights, reminds
of the proverb, "The wicked fleeth when no
n pursueth." All their arguments to prove
ipture authority for slavery, are overturned by
agitation they are at once thrown into by the
ad of the vengeance of the poor black, for be-
unjustly and often cruelly treated, by withhold-
his freedom and the fruits of his labour, and
turing him with the lash at their pleasure, to
tify their passion for tyranny and revenge. The
lowing is from another of the divisions of the
d of Egyptian darkness.

"*Rumor of a Slave Insurrection.*—On the night of the 16th, the citizens of Baton Rouge, La., were under arms and in great excitement, on account of a rumor that the slaves intended to rise and attack the U. S. Arsenal and the Bank. Nothing of the kind, however, took place. On the next morning, Joe Craig, a coloured barber and a suspicious character, was compelled to leave the place."—*Ledger.*

The number of slaves who have obtained their liberty by flight, appears to us to be small—61,664 in the last forty years. Until a *man* has forfeited his freedom by crime, and that adjudged by a jury of his peers, he has, according to the law of nature, the control of his own limbs, and his time, and pleasure, to enjoy life, liberty and happiness where he pleases, so long as he does not trespass on the rights and peace of others. No human power is endowed by the Creator with authority to deprive him of these enjoyments. God is no respecter of persons. Had the slave the power, he would have the same right to hold his master in bondage as the master to hold him.

"*Escape of Slaves.*—The Richmond Despatch speaks of a pamphlet just published in that vicinity, which estimates that, within the last forty years, 61,664 slaves have escaped from the South, or fifteen hundred annually, and that the total loss is $27,740,800."

According to the above unrighteous estimate of men and women as goods and chattels, the heirs of A. W. Talliafero have suffered the loss of several thousand dollars, by the justice of the testatrix in liberating twenty-three human beings, and providing for the expense of removing them to a free State. All such acts indicate the conviction, that slavery is a violation of the natural claim of man to unshackled liberty; and that the pretensions of the trafficker in human flesh to any warrant for the abominable system, have no other foundation than the cupidity of the slave dealer. We rejoice in the growing light on this dark subject.

"*Slaves Emancipated.*—Twenty-three negroes emancipated from slavery by the last will of the late Ann W. Talliafero, of King William county, Va., passed through Wheeling on Monday on their way to Mt. Pleasant, Ohio. The Wheeling Intelligencer says that each one, by the will of A. W. T., is entitled to a legacy of $150, to be applied in defraying the expenses of their removal and location in the State of Ohio."—*D. News of Tenth mo. 19th.*

The intelligence that public sentiment on the slave institution has undergone a change in latter years, in Kentucky, Virginia, and Maryland, is hopeful. We believe that efforts were made many years ago to prepare for a gradual extinction of it in two of those States, and have often heard it said that it would in all probability have taken place, had not the indiscreet and violent actions of some pretended abolitionists driven them back from their purposes. When men have arrived at a point, at which they have, of their own motion, determined to take this subject up, to see whether they can unite in preparatory steps to relieve themselves, of what they feel to be a burden, they should not be interfered with, especially by rude, injudicious strangers. It is wiser and better to leave them to the gradual developments of light on their own understandings Men will relinquish their prejudices under the influence of mental conviction, when attempts to hasten their abandonment, or to drive them from their present position, would only lead them to adhere more pertinaciously to it. We take the following from one of our papers.

"*Emancipation in Kentucky.*—The Newport (Ky.) News, at the suggestion of a number of prominent slaveholders in Kentucky, proposes that a Convention be held in Frankfort, to adopt a plan for the gradual abolition of slavery in that State. Public sentiment in Kentucky, and also in Maryland and Virginia, has been undergoing a change for some years in respect to maintaining the slave institution. Whether the citizens of those States are prepared yet for gradual abolition, the only way in which slavery can ever be extinguished in a State, will depend a great deal upon the discretion of the opponents of slavery in the free States. The fact that a proposition for freedom comes from slaveholders themselves, is one of great significance, and shows that the moral and political bearings of the question are as well understood among intelligent men in the South as they are in the North."—*Ledger.*

The following story is taken from a late paper, and had the baby been the child of a southern white man and one of his slaves, the father would have had no difficulty in confirming the sale of the child to raise money for a debt. We would ask what distinction should be made between an African and Asiatic child, when both have a tinged skin; it only wanted the authority of slave law, and the bargain would have been considered valid according to the "institution."

"*Trade in Chinese Babies.*—A Chinaman in Columbia hired a horse, for which he could not pay, and having with him a fine Chinese baby, offered to sell it for four dollars, in order that he might raise the necessary funds. A Dutchman present, says the Sonora Herald, who was keen for a trade, paid the money, and took the baby. He was, however, doomed not to remain long in possession of his bargain. The mother of the child, learning of the transaction, applied to a magistrate to recover her darling The Dutchman showed a fair bill of sale, but was informed that such transactions were not entirely legal, and that he must deliver up the article in dispute. He then filed a complaint to recover his four dollars, besides nine dollars for nursing the little one. But here again he was at fault, and the poor Dutchman was finally convinced that, for once, he had made a decidedly unprofitable investment."—*D. News.*

The decision against the sale of a fellow creature was just; and a blessing it is to any state to be exempt from the odious system of human slavery. May the day not be distant when it shall be abolished the world over!

For "The Friend."

Russia now occupies so large a space in the public eye, that it is desirable to have a familiar recollection of the principal facts of its history. The following brief account, taken from "The Leisure Hour," will therefore be likely to be interesting to the readers of "The Friend."

Russia—Before Peter the Great.

The immense empire of Russia, which embraces in its area more than half the territory of Europe, and about one-third of that of Asia, has no ancient history. Rome had risen and fallen, and the nations once tributary to her sway had grown up to political greatness, while Russia was yet a blank, a vast untravelled waste, but sparsely inhabited by its aboriginal barbarians, and the refuge, from time to time, of predatory hordes of Scythians, Huns and Slavonians, which latter race predominated in the end, and, with the Goths, who occupied the southern portion of the territory, may be regarded as the ancestors of the Russians of our day. They were idolaters, observant of the most cruel, senseless, and degrading superstitions, and they sternly resisted the progress of Christianity among them, sprinkling their altars with the blood of Christians as a peace-offering to their gods. Various other tribes amalgamated with those above

mentioned, but it cannot even be guessed in what proportions; and so little of ascertained fact is to be found in the records, such as they are, of the time, that no reliance can be placed on them. It is reported that the Varangians, from the coast of the Black Sea, conquered the Slavonians, and gave the first sovereign to Russia in the person of prince Rurik. The next sovereign of whom mention is made was Oleg, who built Novogorod, or the new city, which was the centre of government in the year 830. He was succeeded by three brothers, Rurik, Seniaf, and Trouver, the first of whom, upon the death of the other two, became prince of the empire in 852, and gave it the name of Russia. He died in 879, leaving the kingdom to his son Igor, then but five years old, and the regency to the boy's uncle Oleg, who governed the people with intolerable despotism for thirty years. He died in 913, when Igor ascended the throne at the age of forty. This prince led the first Russian armament against Constantinople; after committing unheard-of barbarities, he was defeated by the Greeks, but he returned next year to the assault, and succeeded in levying a tribute upon Constantine. In 945, after a reign of thirty-two years, Igor, marching against the Drevelins, a warlike people, fell into an ambuscade, and was massacred with all his guard. He was succeeded by Olga, his widow, who, acting as regent for twenty years, abdicated in favour of her son. During her reign she became a convert to the Christian faith, was canonized at her death, and is now the saint Helen of the Russo-Greek church, and a worker of miracles! Her son, Sviatoslof I., became sovereign in 965. He fell in battle at the end of seven years, leaving the empire divided between his three sons, Valdimir, Oleg, and Yarapolk. The first of these three, having got rid of the other two, assumed the entire sovereignty in 980. He was as yet the most ferocious of Russian rulers, but being a man of comprehensive intellect, was able to win the respect of surrounding nations, and to introduce the first elements of civilization among his people. He also embraced the Christian faith, and erected churches, palaces, and public institutions. To deter his subjects from apostatizing, he degraded the pagan gods, and put their priests to a bloody death. He is said to have died of grief in 1015, at the rebellion of his son Yaroslaf.

The death of Valdimir the Great left the empire a prey to the factions of his four sons, Sviastopolk, Boris, Gleb, and Yaroslaf. Sviastopolk murdered Boris and Gleb, but was defeated by Yaroslaf, and soon after died. Yaroslaf ascended the throne in 1019, and took the title of grand duke. He governed well for the space of thirty-five years, extended the Christian faith, and did much for the improvement of his subjects, being the first prince who established a code of Russian laws. His children married into most of the royal families of Europe. At his death, in 1054, he divided his dominions amongst his five sons; and the unfortunate country reaped again the inevitable anarchy resulting from such a division. Foreign troops were called in to fight the battles of the brothers; and Poles, Tartars, and Hungarians devastated the land. Isiaslof, who succeeded to the principal provinces, died in 1078, leaving two sons; but was succeeded by his brother Vsevolod, in whose reign a terrible plague devastated the country. He died in 1093, and was followed by Sviastopolk II., as the eldest branch of the house of Rurik. During his reign Russia was invaded by the Tartars under Genghis Khan, who in their progress levelled cities and destroyed everything. Sviastopolk was driven from his throne, and took refuge in Poland. The Tartars set up Uselas, his brother, in his stead. A civil war followed, the usurper was dethroned, and the rightful prince restored. Sviastopolk II. died in 1113, and Vladimir II., his cousin, ascended the throne. He restored peace to the distracted country, and at his death in 1126 left it at peace both at home and abroad. At his decease the throne was seized and vacated by eleven princes consecutively. Meteslof, son of Vladimir, at length established himself. During his reign of six years Russia again suffered from an awful famine and pestilence. Dying in 1132, he was succeeded by his brother Yarapolk, who reigned seven years. Vsevolod II. ascended the throne in 1139, and died in 1145. He was succeeded by Igor, whose detestable tyranny endured only six weeks, when the hatred of his people hurled him from the throne. He made way for Isiaslof II., who in his turn was deposed by Iouri I., in 1154. It was in his reign that Genghis Khan again advanced into Russia, committing atrocities unparalleled in history. His army, numbering 100,000 men, slaughtered all who fell into their hands, and razed cities, towns, and villages to the ground. Iouri collected his troops and marched against them; but in the fight he fell covered with wounds, and his followers were destroyed to a man. Russia did not recover for centuries from this terrible invasion.

Civil war ensued upon the death of Iouri, who as usual had divided the succession among his sons. In 1174, Mikhail I. assumed the sovereign power, dying at the end of two years, when Vsevolod III. ascended the throne; his reign was long and stormy, and his country a prey to the invasions of the Mongols and Tartars. He died in 1212, and again five pretenders to the supreme power, his sons, began a barbarous strife for dominion. A civil conflict of six years ended in establishing Iouri, the eldest son, on the throne in 1218, whose reign was signalized by a new famine and mortality, and a new Tartar invasion. He was succeeded in 1238 by Yaroslaf II., in whose reign the Swedes invaded Russia, but were repulsed by the young prince Alexander of Novogorod. The whole of the Russian provinces were at this period virtually subject to the Tartars and Mongols, who had on the banks of the Volga a camp of 600,000 men; and many of the succeeding princes had to profess fealty to the khan in order to retain even a semblance of power.

We pass over a period of two hundred years, during which the successive sovereigns of Russia were practically under Tartar dominion, and proceed to the reign of Ivan the Great, who came to the throne in 1462. At this time the Tartar power in Russia was beginning to decay. Ivan made vigorous war against it, defeated Achmet in a pitched battle, penetrated to his camp, and giving it to the flames, finally blotted out the Golden Horde which had held Russia in thrall for more than two centuries. He also made conquest in Poland, and at the end of the war gave his daughter in marriage to one of the Polish princes. He consolidated the sovereign power in his own person, and, more than any of his predecessors, deserved the title of sovereign. He was the first to adopt the title of czar, and in his reign relations were first established between Russia and Great Britain. According to the Russian historians, he was "the saviour of Russia, the author of domestic unity, of the imperial power, and of the national liberty;" but he was notwithstanding a cruel despot, and had criminals burned to death for heresy. The knout was introduced in his day.

(To be concluded.)

This life is the field of battle, and our most dangerous enemies are those of our own houses. May the lamp of God in the temple of our hearts, be kept still renewed and replenished with heavenly oil, that we may have a clear sight of what is pleasing within us, lest we should think otherwise of ourselves than we really are. Purity of heart is the main qualification for being of any service in the church of Christ. Let us then use all diligence to obtain and to retain this precious state. "Blessed are the poor in heart, for they shall see God;" they shall clearly discern the things which belong to his kingdom, and when they speak of them will be, of what they have seen with their (spiritual) eyes, and what they have looked upon; which has been brought by the Holy Spirit before the internal view, as an object of contemplation in themselves, and a subject which they are attentively prized to handle with clean hands, and with unpolluted lips to communicate to others.—*Richard Shackleton.*

Selected.

IN TIMES LIKE OURS.

In times like ours, 'twere wise if people would
Well scrutinize their zeal for doing good.
A few plain questions might suffice, to prove
What flows from party—what from Christian love.

There is an eye that marks the ways of man
With strict, impartial, analyzing ken;
Our motley creeds, our crude opinions, lie
All, all unveiled to that Omniscient eye.
He sees the softest shades by error thrown,
Marks where His truth is left to shine alone;
Decides with most exact, unerring skill
Wherein we differ from His word and will.
No specious names nor reasonings to His view
The false can varnish, or deform the true;
No vain excuses e'er avail to plead,
The right of theory for the wrong of deed.
Before that unembarrassed, just survey,
What heaps of refuse must be swept away!
How must its search from every creed remove
All but the golden grains of truth and love!

Selected.

CHEER EACH OTHER.

Yes, cheer one another along,
In paths which ye ought to pursue—
A word to dishearten is wrong
To those who are striving to do.
Speak cheeringly unto the sad,
The wounded in heart, and the poor,
A word of affection makes glad,
And helpeth the wrong to endure,
Deal gently with others that err—
'Tis mercy that saveth the lost—
And all that thy love may confer
Can never God's bounty exhaust.
Oh, cheer one another along
And joy and affection impart—
Unkindness of spirit is wrong,
But bless'd are the cheerful of heart.

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 69.)

MARY JONES.

Mary Jones, the wife of Edward Jones, one of the first settlers of Pennsylvania, was a woman earnestly engaged for the promotion of Truth and righteousness in the earth. She had in her husband a valuable assistant in her religious exercises, and one not only a good example in his family but in the world and in the church. She received a gift in the ministry, which her friends of Haverford Monthly Meeting say, was "sound, edifying and well received." They add, "she was zealous for the promotion of Truth."

She was probably advanced in years when she received a gift in the ministry, and her labors appear to have been confined within the limits of her own Yearly Meeting. Her own age is not noted, but her beloved husband was more than

fo score years old when she was called from
ics to reward. She died Seventh mo. 29,
73, and was buried at Marion.

JOSEPH WORTH.

Of Joseph Worth, of Stonybrook, we find this
timony: "He was favoured with an innocent
imony though not large,—was a man of an
emplary life, and brought up his children in
linness, although most of his neighbours were
other societies. He had a meeting held at his
use, until a meeting-house was built in the
ighbourhood." His death took place Seventh
m 30, 1726.

ELIZABETH WEBB.

Of Elizabeth Webb, wife and widow of Richard
Webb,* of Concord, then Chester county, ample
ecords exist to show that she was a woman of
a reat gift in the ministry, and endowed with
ny qualifications for usefulness in the church
nd in the world.

She was born, according to the best informa-
tn now to be obtained, in Gloucestershire, Eng-
nd, in or about the year 1663. Of her early
eligious feelings and growth in divine knowledge
ere are two accounts; one in the letter to An-
ony William Boehm, which has already ap-
eared in the Friend, the other a narrative pre-
ared for her children, which has never been pub-
ished. We shall principally use the latter in
ur sketch. It is entitled:

'A short memorial of the dealings of my God
ith me in the days of my youth, which I leave
behind me for young people to consider of,—and
ise all to take the counsel of Solomon, Eccle-
astes, xii. 1,—'Remember thy Creator in the
ays of thy youth, while the evil days come not,
or the years draw nigh when thou shalt say I
ave no pleasure in them.' No pleasure indeed
n vanity when a dying hour draws nigh! Then
ll below the sun will appear to be but vanity.

'I believe your tender Father will grant to
ou a visitation of his divine love, as he did to
my soul; for he is no respecter of persons. The
ss of ignorance he winks at, but he calls people
times to repentance, and draws souls to Jesus
Christ by the cords of Divine Love. 'There is
one can come to me,' saith Jesus, 'except the
Father, which hath sent me, draw him, and I
will raise him up at the last day.' 'It is written
in the Prophets, and they shall be all taught of
God. Every man, therefore, that hath heard and
learned of the Father, cometh to me.' See John,
vi. 44, 45, &c.

"In my childhood I had my education under
the Episcopal ministry, which then was called the
Church of England. I went to school to a min-
ister of that church, and to hear him preach on
the first day of the week. I well remember, that
when I was about ten years of age, some divine
motion began to be in my mind, according to my
childish capacity, which the evil spirit warred
against. When I would say my forms of prayer,
which I was taught, then I would grow drowsy,
but if I would give up my mind to think of
childish vanities, then I could keep awake well
enough. This was doubtless because my mind
began to be devoted to God. I began to think
upon my latter end, and thought if I had been in
the days when Christ was on the earth, I would
have been one of his followers. I began to love
to read the scriptures, and to go to the place of
worship with my Bible, and when the minister
did pray, I well remember my heart would be
given up and devoted to the Lord, especially when
he did say the Lord's prayer, as it is called."

When she was about twelve years old, she accompanied her mother to a few meetings of Friends, and the doctrine she heard preached therein by one of their ministers, took deep hold of her mind, and was remembered long after.

In the letter to Boehm, she says, "I was baptized and educated in the way of the Church of England; I went to school to a minister thereof, and loved and honoured him greatly, and he showed me great tenderness and respect. In those days I looked on the ministers to be like angels, that brought the glad tidings of salvation to the children of men; but when I was about fourteen years old, I went to live in a knight's house who kept a chaplain. He used to pray in the house with the family twice a day. I observed his conversation; I saw it was vain, and thought it ought not so to be."

What kind of service Elizabeth performed at the house of this knight she has given us no insight, although it is evident she continued to reside there several years. In her narrative for her children she adds: "I continued in the faith which I had received by education until I came to be about fourteen or fifteen years of age, about which time a brighter light shined on my childish understanding. I took notice that Christ Jesus said to his ministers, 'Freely ye have received, freely give;' as also that the Lord promised to teach his people himself. Many such testimonies are left on record, and by them I was convinced that the ministry of the church I did belong to, was not the true ministry. My forms of prayer did not suit with my condition, unless it were the Lord's prayer, so called, which I always had a great esteem for. I went to the church, so called, still, until a dread fell on me when I was in the worship house, and I thought it were just if it did fall upon my head. So I, after that, walked alone for some time. A sweet spirit was in my bosom, and a divine light shined in my understanding, which gave me to see my vanities Then I remembered the baptismal vows that were made for me in my infancy,—that I should renounce the devil and all his works, the pomps and vanities of this wicked world, and all the sinful lusts of the flesh, and should keep God's holy will and commandments. I thought this indeed would be the way to be a member of Christ, a child of God, and an inheritor of the kingdom of heaven. But oh! I wanted power to enable me to forsake all these things, and to keep God's holy will and commandments. [Then] it was made known to me by the true light, that I must walk humbly with or before my Maker, and take up the daily cross. This would crucify the vain delights of the world to me, and me to them; for the cross of Christ is the power of God to salvation, to all them that believe. Although this was hard to my natural temper, which was very airy and vain, yet I was made willing, and did bear the daily cross, and walk alone for some considerable time. The Spirit of Christ the true Light, which God the Father had sent into my heart, was then in me, a spirit of grace and supplication, which made intercession in me, and for me, with earnest longings and groanings which many times could not be uttered. One expression used to run through my mind very often, 'O Lord, preserve me in thy fear and in thy truth.' I much desired to know the people that were true to God, thinking Jesus Christ was become the beloved of my soul. I often cried, 'O Lord, where dost thou feed thy flocks? where dost thou cause them to rest at noon? for why should I be as one that turns aside from the flocks of thy companions?'

"O the drawing cords of Divine love! how did it draw my soul with longings for fuller enjoyment of the Divine knowledge of the true and right way, not seeing my inability to walk therein, feeling no condemnation for the sins of my ignorance. So I thought myself strong, even able to give up my life for Jesus, my love to him was so strong, at least I thought so. While my soul abode in this retired frame, bearing the daily cross, and walking humbly with my God, I had great peace, and Divine comfort, insomuch that the enjoyment of the Divine love was more to me than my natural food or any outward enjoyment. In those times of the singleness of my heart, and inward retirement with the good spirit, I had manifestations of things that were to come, which I have since seen come to pass. Oh! it is a great privilege to have the eye of the mind single, looking unto Jesus, who is the true light and true interpreter of the testimonies left on record in the scriptures of Truth, and also the revealer of the mystery of godliness and the mystery of iniquity. So it was that while I walked alone, praying to God the Almighty, day and night, for the knowledge of his will, and that he would be pleased to make known to me the right way that leadeth to eternal life, for that it was which my soul alone wanted,—I was convinced that the principles which the Quakers held were the truth, and their ministry was the true ministry."

(To be continued.)

*It is a singular fact that most writers referring to his Friend call her the wife of John Webb. The minutes of the meetings in Philadelphia, show that she was the wife of Richard. John's wife was Ann, and both were ministers.

For "The Friend."

Erastus Brigham Bigelow.

(Concluded from page 67.)

What is this remarkable process which we call *invention?* How does the brain act while devising its wonders of mechanic skill? These are questions of interest to inquiring minds, and may well puzzle those to whom even the witnessed action of complicate mechanism is a mystery impenetrable. * * * * *

E. B. Bigelow, in reply to an inquiry put to him, says,—"I am not sure that I can convey to your mind a satisfactory idea of the inventive process in my own case. One thing is certain, it is not chance. Neither does it depend, to any great extent, on suggestive circumstances. These may present the objects, but they are no guide to the invention itself. The falling apple only suggested to Newton a subject of inquiry. All that we know of the law of gravitation had to be reasoned out afterward.

My first step toward an invention has always been to get a clear idea of the object aimed at. I learn its requirements as a whole, and also as composed of separate parts. If, for example, that object be the weaving of coach-lace, I ascertain the character of the several motions required, and the relations which these must sustain to each other in order to effect a combined result. Secondly, I devise means to produce these motions; and, thirdly, I combine these means, and reduce them to a state of harmonious co-operation.

To carry an invention through its first and second stages is comparatively easy. The first is simply an investigation of facts; the second, as far as I can trace the operations of my own mind, comes through the exercise of the imagination. I am never at a loss for means, in the sense above explained. On the contrary, my chief difficulty is to select from the variety always at command those which are most appropriate. To make this choice of the elementary means, and to combine them in unity and harmony—to conduct, that is,

an invention though its last or practical stage, constitutes the chief labour.

In making this choice of the elementary parts, one must reason from what is known to what is not so—keeping in mind, at the same time, the necessary combinations, examining each element, not only in reference to its peculiar function, but to its fitness, also, for becoming a part of the whole. Each portion must be thus examined and re-examined, modified and re-modified, until harmony and unity are fully established. From the severity of this labour many inventors shrink, and this is the main reason why some very ingenious men fail to obtain satisfactory results. In my own case, the labour has not ended with the perfection of my looms; other machines, preparatory and auxiliar, were necessary to give full effect to the inventions.

It is a well-known fact, complex inventions have not, as a general thing, come at once into use. In many cases this has been because they were not immediately brought into harmony with other things. In a state of natural progress, things move on together, and become mutually adjusted. An important invention often disturbs these adjustments, and cannot be made to work efficiently until other inventions and new arrangements have brought all the related processes in accordance with it. This arduous duty I have endeavoured to perform for all my looms. Lee's band stocking-loom was invented several years before it was reduced to practice, and even this was not effected by the inventor. The comparatively simple power-loom for weaving plain cloth was of very slow growth. A long time elapsed before its organization was so far harmonized as to work at all, and, for several years afterward, successive improvements only gave to it a moderate speed. Its capacity, in this respect, has actually been doubled within the last fifteen years. If my own more complex machines, for the production of figured fabrics, have attained at once to a high state of perfection, I attribute it, in part, to the fact that my attention has also been given to those processes which are subordinate, preparatory, and collateral, and that these have been made to accord with the main invention. That this claim of success is not extravagant will appear, I think, when it is considered that the cost of weaving coach-lace was, at one stride, reduced from twenty-two cents to three cents a yard, and that of Brussels carpet from thirty cents to four cents. Of the fabric last named, my power-loom, under the easy tending of a single girl, produces from twenty to twenty-five yards daily, and this of the best quality. That mechanical possibilities do not reach much farther in this direction, will be conceded, probably, by all who are acquainted with the peculiar character of the process.

I find no difficulty in effecting that concentration of thought which is so necessary in pursuits like mine. Indeed, it is not easy for me to withdraw my mind from any subject in which it has once become interested, until its general bearings at least, are fully ascertained. I always mature in my mind the general plan of an invention before attempting to execute it, resorting occasionally to sketches on paper for the more intricate parts. A draughtsman prepares the working drawings from sketches furnished by me, which indicate in figures the proportion of the parts. I never make anything with my own hands. I do not like even drawing to a scale."

* * * * * *

In the ingrain-carpet power-looms of the great mills at Lowell, about thirteen hundred thousand yards are made annually. The same fabric is woven in large quantities by companies at Tariffville and Thompsonville, Ct., whose power-looms are worked under license from the Lowell Company. Higgins & Co. are using the Bigelow looms for tapestry and velvet-tapestry carpets, in their establishment in New York. Another Company, in Troy, N. Y., is weaving the same article under license from E. B. Bigelow. At Humphreysville, Ct., several looms are now employed in the manufacture of silk brocatelle. E. B. B. adapted and constructed the machinery for this beautiful fabric in 1851. Goods for which the hand-loom artisans of Lyons get three francs a yard, are made here at a cost for labour of fifteen cents a yard. The agent, —— Humaston, is entitled to much praise for the skill and perseverance with which he has brought these works into successful operation.

In 1849, Clinton was made a township by legislative act. In 1837, when the brothers Bigelow went to this spot, that they might use one of its brooks in operating the coach-lace loom, it was the least cultivated and least valued part of the old and beautiful town of Lancaster. At that time it contained some two hundred inhabitants; it has now about four thousand. There may be seen the great gingham mill, already named, producing annually nearly five millions of yards; the counterpane mill, which turns out yearly one hundred and fifty thousand dollars' worth of goods; the establishment of the Clinton Company, where two million yards of coach-lace, tweeds, &c., are woven; and that of the Bigelow Carpet Company, belonging to the two Bigelows, and H. P. Fairbanks, of Boston, the daily results of which are a thousand yards of Brussels and Wilton carpeting. The amount made by this single establishment, now only three years old, is equal to the entire importation of Brussels carpet from England, at the time when the works were started. Though these looms run night and day, they are inadequate to the constant demand.

We have seen, with admiration, on both sides of the ocean, many a village and city which owed their prosperity, if not their existence, to the genius of modern manufacture. But, to us, there is a charm in Clinton, which belongs to no other place of the kind. As, from those gentle, woody heights, we have surveyed its monuments of ingenuity, wealth, and enterprise—its numerous evidences of industry and thrift—its pleasant homes of competence and content—its institutions for learning and social improvement, and its neat temples reared for the worship of God—all of it the magical creation of a few short years—the spectacle certainly lost none of its interest, because we could trace it directly to the efforts of a single mind. Clinton, with all its actual and its prospective importance, was assuredly predestinated in that abode of honorable poverty, those hours of toil and vigil, and that filial love, which gave birth to the coach-lace loom. Happy he who may thus behold around him the good which he has done! While scattering "plenty o'er a smiling land," he plants, also, in good ground, the blessed seeds of individual and domestic happiness, of social progress, of education, and morals, and religion.

* * * * * *

The individual, whose well-directed labours have not only gained for himself reputation and fortune, but furnish employment and support to many thousand persons, while they save annually for his native land millions of dollars, is still under forty years of age. With such power of intellectual analysis and combination, such energy and persistency of purpose, he cannot yet have discharged the debt which he owes to his country and to mankind. That he still intends to devote himself to the advancement of industrial art, in all its interests, moral and material, we have the best reason to believe.

For "The Friend

A correspondent, who dates from "Cincin Ohio, Nov. 7th," requests the insertion of a rection of an article extracted from one of exchanges. He says, "Allow me to correc error occurring in 'The Friend' of 3d inst extracted from the Detroit Tribune. I refe the article headed 'A Mammoth Cave in M inaw.' There is not one word of truth in whole article, as I can affirm. The commu tion was written by some one, perhaps, conne with that paper, and who was desirous of ha an *original* article of his published. I have vi that far-north Island twice; the summer, one ago, and the one just gone. I was there when article appeared, and although I had been t more than two weeks, had never seen the trance. It afforded all the visitors much am ment to read the article; and we wondered many papers would copy it, believing it to be rect. I hope that a denial of the *truth* of extract, will be published in 'The Friend,' thus let it be known, that though errors *may* o in it, they will be corrected at the earliest op tunity." C. N

For "The Frien

First Annual Report of the Managers of Home for the Moral Reform of destitute Colou children.

In coming before the public with a report the proceedings of this association for the year, we feel that we have but little to interes As a home, it is yet in its infancy.

But a short sketch of the manner in which originated, and the good it is designed to ext to the degraded and neglected class of child for whom it was instituted, may perhaps awa in the minds of the benevolent, a desire to aid the promotion of this work of charity.

Several years since, a kind hearted colou woman, whose sympathies were excited by situation of the children found amid the scene vice in the neighbourhood of Bedford and M streets, (which may justly be called sinks iniquity), having obtained a small room for purpose, gathered around her a group of li ones, and devoted several hours of each day to task of instructing them to the best of her abil and reclaiming them from the influences that rounded them. A few individuals extende helping hand to her, enabling her to give meal a day to the poor, half-starved children, to keep a warm room to shelter them from winter's cold.

Among them she found a few who were ho less. These she took into her own room, enc vouring to find places for them as soon as could. A few individuals, members of the Soci of Friends, becoming acquainted with these fa united into an association, and established a Ho where these and other destitute children could received and provided for, and entrusted charge of the little family thus collected, to l This change of her position obliged her to disc tinue her connection with the day school she assembled; but the concern was not suffered fall to the ground. An active and energetic man, whose attention had been directed to t field of usefulness, at once devoted herself to and for some time laboured in it without any ot compensation than that arising from the cont plation of the good effected by her exerti among these outcasts of society. At length ac tional efforts were made by some of those who preciated her praiseworthy undertaking, and voluntary subscription a small salary was raise enable her to sustain and carry out more fully

evolent plan. Without other aid than that rded by the Soup Society, and the liberality of w individuals, she warmed, fed, and taught e little objects of her solicitude.

After a trial of some months, circumstances de- d the Association of Friends to close the Home, such of the children as had not been placed service, were boarded out, until finally it was cluded to unite the two concerns into one.

The school was removed to its present location, 218 Lombard street, formerly known as the ouse of moral reform for destitute coloured sons." This change was effected in the Ninth nth, 1854, and thus accommodations were pro- ed for boarding and lodging those among the ldren who were homeless or destitute of any per guardianship. What little money or furni- e, that remained at the disposal of the managers the Home, and the "Moral Reform Society," re appropriated to the support of the present titution, of which Sarah Luciani is now the tron. The day school is continued as formerly, h the exception of employing a young woman assist in teaching, a change rendered necessary the increase of labour which devolved on the tron under the new arrangement. The number scholars is at this time fifty-eight, including the who are at present boarded in the family. e day scholars are fed and clothed, and with exception of the lodging, receive nearly the e care as those who reside in the house. As a ge proportion of these are from the most neg- ted and degraded class, the beneficial results of s plan can be readily perceived. They are in- ucted in reading, writing, arithmetic, plain sew- , and household labours. Places, chiefly in the untry, have been procured for many, both boys l girls, who have been the recipients of this rity, during the past year as well as several ceding ones. From most of these favourable counts have been received.

The Abolition Society continues to pay half the nt of the house, and the Western Soup Society ll supply soup and bread through the winter son, and the latter important article during the mmer. We have had several donations from nevolent individuals, but we find our limited ans inadequate to the support of the establish- nt. We should be glad to increase our funds the help of such as are willing to aid us, either donations or subscriptions, which may be left th either of our trustees, viz:

THOMAS WILLIAMSON, S. W. corner Seventh and Arch streets.

MARMADUKE C. COPE, 286 Filbert street.

JOSHUA L. BAILEY, 153 Filbert street.

Articles of clothing, shoes or groceries, would acceptable, and might be left at the Home, 218 mbard street, above Seventh. If our country ends at this season of the year are disposed to rnish us with vegetables, etc., they would be tefully received at the same place.

Inter-Oceanic Ship Canal.—The Washington ar learns from a reliable source that some enter- ising citizens of the United States and New Gra- da have discovered and explored the long sought route for connecting the Atlantic and Pacific eans by means of a ship canal. This great de- eratum to the commercial world is certainly the ost grand and important enterprise of this age, d worthy the attention and consideration of every ilized people and government. The plan, as e Star understands, is to go to the Atrato river, me fifty miles from its mouth, with a depth of om six to ten fathoms, and from thence to the cific, a distance of some sixty miles more, with- t a single lock or obstruction in the contemplated canal. A liberal grant has been made by the government of New Granada to the persons engaged in this grand undertaking; and the whole route, from one ocean to the other, has been accurately surveyed, and the facts developed are beyond doubt or question, so far as the feasibility of the work is concerned.

For "The Friend."

Whose Government are we under?

In a season of retirement of mind, the above query arose, and was the forerunner of serious reflection, wherein it appeared that if we have chosen Christ for our portion, and his people for our people, then had we been made willing to lay the government on his shoulders, and to be directed in all our goings and doings by his unerring spirit.

But if we find within us that our motive to action is to obtain the honour of men, more than the honour that comes from God, we may rest assured we shall receive our reward; as our dear Lord hath said of such as perform what they may esteem a good act, to be seen of men, "verily they have their reward;" but it will not compare with, nor endure like that soul-sustaining peace which can only be purchased by the "obedience of faith," —that faith which "works by love to the purifying of the heart," by overcoming in us "the lust of the eye, and the pride of life." It seems to me these are two great and almost insurmountable barriers in this day, to the Truth taking full possession of many a heart that would otherwise be prepared to receive it, in the very love of it. But having loved themselves, and those things which gratify self, they do not submit themselves in *perfect obedience* to Christ, and place the government of their whole conduct and conversation on his shoulders whose right it is to govern, and whose pleasure and will it is to see his people blessed. They that will be partakers with Christ (and all may that will) of his kingdom of peace and joy, must also be partakers with him in his self-denial and suffering. If we suffer not for him and with him, how shall we expect to reign with him? If we know not a baptism into death, even the death of the cross, how can we become witnesses of the power and the resurrection of Jesus Christ? who is indeed the "resurrection and the life" of every true believer in Him; and they have this assurance "that the foundation of God standeth sure, having this seal, the Lord knoweth them that are his." If any should stumble or fall through the manifold infirmities of the flesh, or the ensnaring, subtle temptations of an unwearied adversary, who is sometimes permitted to "transform himself into the appearance of an angel of light," even after they have walked well for a season, and attained, as they may think, to some little eminence in the spiritual edifice, "the church of Christ," "let those that are spiritual restore such a one in the spirit of meekness," and in fear; "lest they also be tempted," seeing that every one of us "hold our treasure in an earthern vessel."

After reading the article published in No. 8, page 61 of "The Friend," I was instructed in the belief that Uzziah was comparable to man in his unregenerate nature, wherein those who have attempted to "burn incense" have like him, had to be "thrust out of the sanctuary;" and though "he became a leper, and continued so to the day of his death," it does not appear to me to establish the belief that there is no means of restoration for these; being firm in the faith that what was done by our dear Redeemer when he walked personally among men, he is still able to perform by his Holy Spirit in our hearts. May every one who has known too great activity of the creature, going forward in their own will and strength, to do those things, which it appertaineth only to our High Priest and holy Head, to annoint and qualify servants to do, be willing to acknowledge their error, and cry with the same faith that one did formerly, "Lord if thou wilt thou canst make me clean," that they may receive for themselves the same gracious answer, "I will, be thou clean." And I would that each one of these be found in the footsteps of him by whose faithfulness this query was elicited, "but where are the nine; hath none returned to give glory to God, save this stranger?"

G—t—n.

Eleventh month 5, 1855.

Congress Spring.—Doubtless of the thousands who resort to Congress Spring, Saratoga, during the "heated term," and quaff its water, few know anything of its history. Congress Spring was discovered in 1792 by John Taylor Gilman, of Exeter, N. H, then member of Congress, and subsequently Governor of New Hampshire. While gunning, he came upon a stream issuing from a fissure in a rock. The singularity of its appearance attracted his attention; the water was drank, the mineral qualities discovered, and being a member of Congress, he gave it the name of Congress Spring.—*Albany Argus.*

Our duty and interest are inseparably united, and when we neglect or misuse our talents, we necessarily depart from the heavenly fellowship, and are in the way to the greatest of evils.

THE FRIEND.

ELEVENTH MONTH 17, 1855.

Several Friends having requested the publication of the "Appeal for the Ancient Doctrines" issued by the Yearly Meeting of Philadelphia in 1847, we have commenced it in the present number.

However frequently the attempt may be made, (and it has been repeated again and again,) to disseminate the opinion that the attribution of unsoundness to the writings of J. J. Gurney, arises from misconception of his meaning, or a "mistaken process of reasoning and criticism on detached passages of his works;" we believe no candid person can deny that the extracts given in the Appeal, inculcate the sentiments attributed to them by the Appeal, and intended to be conveyed by the author at the time, as fully and clearly as do the extracts given from the writings of early Friends convey the doctrines they designed to enforce by them. If, as is said, it was the wish of J. J. Gurney to promulgate nothing but what was consonant with the truths of the gospel as professed by Friends, we may suppose that had he lived, he would have rejoiced that the church had pointed out his mistakes, and put his fellow-members on their guard against imbibing the dangerous errors contained in them.

We would solicit the attention of our readers to the Report of the "Managers of the Home for the moral Reform of destitute Coloured Children" published in our present number. The class of children which the institution is endeavouring to benefit, is not only a very degraded and suffering one, but one which finds comparatively few benefactors, even among the liberal and charitable. There is, perhaps, no way in which our coloured population can be more effectually assisted, than by a proper education and training of their children, and especially of such as are left in their earliest years, uncared for, exposed to the extreme of want,

and surrounded with everything calculated to lead them into crime and misery.

We have received a sheet written pretty closely on all sides, and then across on each page. The hand-writing looks familiar to us, but the difficulty of decyphering it is too great to be imposed on the compositor. We would be obliged to those who favour us with communications, if they would be careful to have them clearly written out.

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to the 27th ult.

The War.—The appearance of the allied fleet before Odessa was a feint, in order to take Oczakoff and Kinburn by surprise. On the 15th, the fleet anchored near Kinburn, troops were landed, and the place was captured after a combined attack by sea and land. The garrison consisted of 1500 men, about 200 of whom were killed and wounded, and the remainder surrendered themselves prisoners. On the morning of the 18th, the Russians blew up the fortifications on Oczakoff Point, which were assailable by the mortar vessels of the allies. By this movement, the allies command the mouths of the Bug and Dnieper, and have opened a path into an important district of Southern Russia. They may probably make an attack upon either Cherson or Nicolaieff. The English gun boats had reconnoitred the river, almost up to the last named place. Gen. Todtleben, so celebrated for his defence of Sebastopol, had been summoned to Nicolaieff. The Russian Emperor had left the city, and returned northward. The advices from Sebastopol show that the allies are advancing in strong force, and the Russians falling back, in good order, upon their fortified positions. The allies were close upon the Russian frontier at Albat, where it is thought they must make a stand, in which case a battle is inevitable. The Russians on the north side, keep up a constant fire upon Sebastopol, under cover of which they were withdrawing their troops, and concentrating them upon Perekop. A Russian despatch, dated the 22d, says the allies had marched 40,000 troops from Eupatoria toward Toulat, but afterwards fell back, on observing the Russian lancers on their left. The allied forces in the Crimea are officially reported to number 210,000 effective men; 30,000 French troops had arrived during the Ninth month.

RUSSIA.—The successive drafts for the army have, it is said, drained Poland of all its population fit for military service, and the heavy agricultural labour now devolves principally upon the women and children. Finland has also been severely drained. Measures of great severity have been ordered by the Czar against those Russian nobles who continue to reside abroad. The confiscation of their estates is threatened if they do not return within one year.

FRANCE.—On the 22d ult., a collision occurred on the Lyons Railway, by which a number of persons lost their lives. The total of duties upon imports paid during the first nine months of this year, amounted to 151,139,-275 francs. The Bank of France has arranged a loan of several millions of silver from the Bank of Amsterdam.

SPAIN.—The cholera still prevailed in Madrid. The cases averaged over 100 daily.

GREAT BRITAIN.—The money market was somewhat relieved. Consols had advanced to 88. About £900,000 in gold had arrived from Australia, but the greater portion of it was immediately withdrawn for the continental demand. The bullion in the Bank of England had further decreased £532,214. The British Consul at Cologne had been sentenced to imprisonment for enlisting recruits in Prussia for the British service. The Liverpool Chamber of Commerce has adopted a resolution that the Government should anticipate any breakdown in public confidence, by suspending the operation of the Bank Act of 1844. *Liverpool Market.*—Cotton dull, and prices declining; sales of the week, 39,000 bales at from 5¾d. to 6¾d. The stock of American in port, 250,000 bales. Wheat is dull, and 3d. lower. Flour had declined 1s. a bbl.

PERU.—Much excitement exists in Peru, relative to the bill establishing religious liberty. The Catholic priests denounce it violently. Many of the friends of the exiled President Echenique, have been permitted to return. The recently emancipated negro slaves are abandoning the large estates generally, and flocking to the cities and large towns.

VENEZUELA.—At the latest dates, cholera was making sad ravages among the inhabitants of Puerto Cabello, Caraccas, Valencia, and in the valleys generally.

NICARAGUA.—The latest accounts from Nicaragua, represent the country as quiet, Walker having completely obtained the ascendency. He had made peace with the opposing party. General Rivas had been appointed President, and Walker commander in chief of the Nicaragua forces. It is said that the people of Nicaragua appear to be pleased with the new state of affairs, and no more trouble was apprehended. Col. Kinney remained at Greytown, and Walker is reported to be disposed to drive him out of the country.

UNITED STATES.—The receipts of the U. S. Government for the quarter ending Ninth mo. 30th, were,—From customs, $17,085,238; sales of public lands, $2,-355,725; miscellaneous sources, $333,495—total, $19,-774,469. The expenditures were $16,594,116. According to despatches from the U. S. Minister at London, the negotiations with the British Government in relation to the Clayton and Bulwer Treaty, have closed, the ultimatum of our Government respecting Central American affairs, having been rejected. It is now understood that both Governments are released from the obligations imposed by the Treaty. Buchanan is about to return to the United States. Assurances of peaceful views are exchanged, but it is evident that the discussion of this question, and that of the British violation of our neutrality laws, has given rise to some unpleasant feelings.

Vermont.—The management of the finances of this State contrasts strikingly with that of most others. The total disbursements of the State revenue for the year ending Eighth mo. 3d last, were only $153,127, or *twenty-seven* times less than the actual expenses of the city of New York. The expenses of the Legislature were $24,130; the State printing cost $7,421; Executive salaries and expenses $2461; Judiciary and prosecuting crimes $62,469, (nearly one-half of the State expenses.) On the relief of the Poor, $500. Paid for Paupers in Asylum, $733. For Deaf and Dumb, $3240. To Agricultural Societies, $1855. Vermont is not one of the most wealthy States in the Union, but probably excels them all in its freedom from intemperance and crime, and in the health and longevity of its inhabitants.

New York.—The number of immigrants arriving at this port from foreign countries, during the ten months ending 30th ult., is stated to have been 119,420, against 290,000 for the corresponding season last year. Germans, 94,684; Irish, 8677. The shipments of specie from this port since the first of the year, have amounted to $26,434,488. Mortality last week, 291.

Philadelphia.—The mean temperature for the Tenth month was 54 degrees, which is ½ degree lower than the average for Tenth month for the last 30 years, and is nearly 5 degrees lower than in the Tenth month of last year. The highest of the thermometer was 75 degrees, and the lowest 33 degrees. Rain fell upon 14 days to the depth of 4.11 inches. At Paoli, the mean temperature was 52°, and the amount of rain 8.61 inches, nearly half of which fell in one night. Mortality last week, 139.

Pittsburg.—On the 9th inst., there was nine feet of water in the channel, and the larger class of packets were loading for Cincinnati, St. Louis, &c. The liquor venders recently tried in this city, for violating the Restraining Law, have been sentenced to five days' imprisonment, and to pay a fine of $50 each. Their cases, it is supposed, will be carried to the Supreme Court, in order to obtain a decision as to the constitutionality of the law.

California.—Dates to the 20th ult. The mail steamship that left San Francisco on that day, had two millions in gold on board. The steamship Sierra Nevada, on her last trip from San Juan to San Francisco, lost 45 passengers from cholera. The U. S. steamship John Hancock arrived at San Francisco, from Petropauluoski, bringing news that the Russians were at Amoor, in great force, both on sea and land. The allied fleet was in the Gulf of Tartary. Five hundred men, under Capt. Foy, of Sacramento, had gone to Nicaragua, to join Walker. Seven clippers from the Atlantic ports, had arrived at San Francisco, and their cargoes were sold readily. Business had improved, and most articles of Eastern merchandize were paying fair profits. Domestic flour was selling at $9.50 to $10,00. Large numbers of Chinese had left California. Accounts had been received from Oregon of Indian hostilities of a serious character.

Miscellaneous.—A Valuable Article.—A single pound of flaxen thread, intended for the finest specimen of French lace, is valued at $600, and the length of the thread is about 226 miles. One pound of this thread is more valuable than two pounds of gold.

The Guano Trade.—A decree, issued by the government of Peru, opening the port of Pisco, in Peru, to all the vessels employed in the guano trade, has been communicated to the State Department at Washington the United States Consul at Callao.

Cheap Labour.—An instance of the cheapness o boar in the Island of Tahiti, is given in the fact, when the steamer Golden Age touched there to fifteen hundred tons were put on board at an expen only *4s. 2d.*—less than a dollar.

Large Yield of Wheat.—J. A. Chandler, of Carc Va., raised the past season eight hundred and t bushels of prime wheat, on eighteen and a half acr accurately measured land, being nearly forty-six bus per acre!

The Death Punishment, having been abolished in ' cession, an agitation for its restoration has been c menced, and a large majority of the newpapers sus and advocate such a restoration.

Railroad Earnings.—In the last month, the receip the Galena Railroad amounted to $318,000, being excess of $133,000 over the receipts for the corresp ing month of last year.

Post-office Robberies.—In the last five months, no than eleven postmasters in Ohio have been arreste depredations on the mails.

The Pacific Railroad Accident.—By this terrible trag thirty persons lost their lives, and seventy were b wounded.

RECEIPTS.

Omitted Tenth mo 27th.—Received from Asa Gar son, agt., O., for J. Thomasson, $3, to 52, vol. 29 Edgerton, Eli Kennard, $2 each, vol. 28.

Received from J. Cockill, Pa., $2, vol. 28; from Garretson, agt., O., for John Gibbons, $2, vol. 29; f Ed. Prichard, per J. Churchill, $2, vol. 28; from W Hill, Mass., per C. H., $2, and for Wm. Wilber, P. Me er, P. Hussey, $2 each, vol. 29, and for T. Varn $2.36, to 10, vol. 29; from Wm. Foulke, agt., O., John Patten, $2, to 27, vol. 29, Jos. King, $2, vol. Aaron Deweese, $2, to 14, vol. 30, Jesse Deweese, vol. 29, Wm. Harmer, $3, to 52, vol. 29.

Friends' Boarding-School for Indian Children, at Tunessassah.

Two women Friends are wanted at this Institution assist in the family.

Also, a man Friend to aid in carrying out the c cern for the improvement of the Indians.

Application may be made to JOSEPH ELKINTON 377 S. Second str THOMAS EVANS, Philad., Eleventh mo. 1st., 1855. 180 Arch str

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in t Institution.

Application may be made to either of the undersign members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS, } Philada.
SAMUEL BETTLE, Jr. }

MARRIED, at Friends' Meeting-house, Moorestow Burlington Co., New Jersey, on Fifth day, the 25th u JONATHAN G. WILLIAMS and SUSANNA, daughter of Da Roberts, all of that place.

DIED, on the 28th of Third month last, MERCY, wife Aaron Steward, in the 63rd year of her age. Havi acceptably filled the station of overseer many years, l loss is deeply felt by her friends. She was a true l liever in the ancient doctrines of our religious Socie and of a meek and humble spirit. Her life was a p tern of that even tenor, which distinguishes the devot and unobtrusive Christian. While her friends lame her removal, they have the consolation of believing th their loss is her eternal gain, and that she has enter into everlasting rest.

——, at his residence, Mahoning Co., Ohio, AAR STEWARD, on the 27th of Tenth month, 1855, in the 77 year of his age; a member of Goshen Particular a Upper Springfield Monthly Meeting of Friends. I passed through much bodily suffering which he bo with Christian patience. It was frequently observe during his illness, that he was engaged in fervent su plication to the Father of mercies, that he might ha patience to the end. His friends have the consoli hope that he has changed the state of trial and affli tion, for a happy eternity, having passed from deat unto life.

THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XXIX. SEVENTH-DAY, ELEVENTH MONTH 24, 1855. NO. 11.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 50 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Postage to any part of Pennsylvania, for three months, paid in advance, three and a quarter cents; to any part of the United States, for three months, if paid in advance, six and a-half cents.

Appeal for the Ancient Doctrines of the Religious Society of Friends.

(Continued from page 74.)

From the works to which we have alluded, [illegible]ch, with the exception of the one to be last [illegible]ted from in this appeal, are the production of [illegible]same author, the following passages are selected, [illegible]hich the Holy Scriptures are spoken of, in a [illegible]ner different from that which our religious [illegible]ety has always thought to be safe, and consist[illegible] with the Scriptures themselves.

[illegible]n the concluding remarks, page 383, of a [illegible]tise entitled Essays on the Evidences, Doc[illegible]es, and Practical Operation of Christianity, [illegible] American, from the 3rd London edition,) after [illegible]ming up the argument for the authenticity, [illegible]divine origin of the Scriptures, it is said—

"In the fulfilment of the *written* prophecy; in the wis[illegible]n of the *written* doctrine; in the purity of the *written* [illegible]y; in the harmony of the contents of the Bible amidst [illegible]most endless variety—and in its efficacy as *the princi*[illegible] *means* employed by Divine Providence, for the *illu*[illegible]*nation, conversion,* and *spiritual edification* of men—the [illegible]uirer cannot fail to perceive unquestionable indica[illegible]as of the Divine origin of Holy Writ."

[illegible]n p. 85 of the same work, one of the proofs [illegible]gned for the Divine inspiration of the Bible is [illegible]en of as—

[illegible]ts practical effect as the *divinely appointed means of* [illegible]*version,* and religious edification."

[illegible]nother passage of the same tenor is found in [illegible]ok entitled "Hints on the Portable Evidence [illegible]hristianity," London, 1832, where the follow[illegible]language is used in p. 33.—

"The moral law as *revealed in Scripture,* partakes of [illegible] character of its author, first because it prescribes [illegible]practice of every virtue, and is therefore 'holy, and [illegible]st, and good,' and secondly, because it is 'spiritual,' [illegible]minuating itself into the heart, reaching the spirit, [illegible]d convincing the understanding. *It applies to all* [illegible]*cumstances, comprehends all conditions, regulates all* [illegible]*tives, directs and controls all overt acts.*"

[illegible]f the Holy Scriptures are thus to be designated [illegible]the principal means," of our "illumination and [illegible]ersion," and as revealing a moral law, "apply[illegible]to all circumstances, comprehending all condi[illegible]s; regulating all motives, directing and control[illegible]all overt acts," we must then acknowledge them [illegible]e "the primary rule of faith and manners." [illegible]many persons have been converted from the [illegible] of their ways, by other instrumental means [illegible]the Bible; and neither the precious truths of [illegible]y Writ, nor any other means, unless imme[illegible]ely applied by the Saviour, in the work of re[illegible]eration, can convert any man unto holiness.

While it is our duty to maintain the authority of the Holy Scriptures, it is necessary to avoid assigning to them a place, which He who inspired holy men to write them, never intended they should occupy, and which they do not themselves claim. Being given forth by the Holy Spirit, they are necessarily subordinate thereto, and are only availing for our instruction in righteousness, as the mind is enlightened and opened by the same Holy Spirit, to understand and profit by them.

In a work entitled An Essay on the Habitual Exercise of Love to God, considered as a preparation for heaven, it is said, p. 84.—

"Communion is in its nature reciprocal. Not only "are we to pour out our souls in prayer to the Lord; "but we are to *receive his mind or counsel in return.* It "is *on this ground,* as I conceive, that the *reading of the* "*Holy Scriptures* forms an *essential part* of our private "and family *devotional duties; for in that sacred volume* "*God condescends to speak to us,* to *develope his mind* for "our instruction, *guidance* and consolation."

The language here made use of, tends to encourage the belief that we may receive the mind and counsel of the Almighty respecting us, by merely reading the Scriptures, as the channel through which He "condescends to speak to us."

In like manner, in the following passages, the knowledge of sin is made to depend on an acquaintance with Holy Scripture.

In page 105, of the Portable Evidence, it is said—

"*The Bible, which alone fully reveals the nature and character of sin,* expressly declares that all men have sinned and are guilty in the sight of God. Although it is chiefly from the *light of Scripture,* that we obtain a "knowledge of this doctrine, we are quite sure now that "we have obtained it, that the doctrine is true."

And in page 114, of the same work—

"The sentiments which men entertain on the subject "of repentance, are ever found to be deep and extensive, "exactly in proportion to the depth and extent of their "views of sin; just as our estimate of recovery from a "disease is commensurate with our notion of the viru"lence and danger of the disease itself. Certain it is, "however, that as the *Scriptures alone reveal the true* "*character of sin,* and the universal sinfulness of man"kind, so it is *only in the Bible,* that we find an adequate "account of the nature and use of repentance and a *call* "*to repent* extended without exception to the whole hu"man race."

Likewise, in page 101 of the same—

"Now, it is in *the Scriptures only,* that the attributes "of our heavenly Father are fully made known to us. "And therefore it is only through the religion of *the* "*Bible,* that we can obtain *an adequate notion of sin.* But "the cardinal point revealed to us in Scripture and *only* "*in Scripture, without a knowledge of which it is impossible* "*for any man to form a full estimate of sin,* is this, that "God so loved us as to send his only begotten Son into "the world to be a sacrifice for our sins."

If it is in "the Scriptures only," that we can obtain "an adequate notion of sin," how did Enoch, Noah, Abraham, Isaac, and Jacob, and many others who lived before the Scriptures were written, learn to walk in obedience, and forsake their sins? And are we now under the gospel dispensation placed in a worse condition, and further removed from communion with the Almighty, than they were who lived in that early age? How different is the language of George Fox! (Journal, Leeds edit., vol. i., p. 187.) "I directed them," said he, "to the divine *light of Christ,* and his Spirit in their hearts, *which would let them see all their evil thoughts, words and actions,* that they had thought, spoken and acted; *by which light they might see their sin,* and also their Saviour, Christ Jesus, to save them from their sins. This, I told them, was the *first step* to peace, even to stand still in *the light that showed them their sins* and transgressions; by which they might come to see how they were in the fall of old Adam, in darkness and death, strangers to the covenant of promise, and without God in the world; and by the same light they might see Christ that died for them, to be their Redeemer and Saviour and their way to God."

The same erroneous view as is above alluded to, is expressed on page 386, of the Essays on Christianity, in the following language.

"Nor *can* the searcher after truth *do otherwise than* "*tremble* under the weight of his own responsibility, "*when he reads* the plain declarations of our Saviour, "couched in terms too clear to be misunderstood, and "too strong to admit of any palliated interpretation, "that both the rewards of the righteous, and the pun"ishments of the wicked, are of eternal duration."

Although it is undeniable that the minds of men are often arrested in the perusal of the Bible, and conviction sealed upon their understanding by that Spirit which indited, and which can alone savingly apply the precious truths therein contained, yet there is a manifest impropriety in thus ascribing these effects as the necessary result of reading the Scriptures, even in the case of the searcher after truth. How often are the blessed declarations therein set forth, read and reiterated without producing such sensations. Nothing can effectually bring a man to feel the weight of his responsibility and make him tremble under a true sense of it, but the power of the Holy Spirit awakening him to the reality of what awaits the immortal soul, and the fearful retribution which will overtake the impenitent wicked.

In a treatise "on the Distinguishing Views and Practices of the Society of Friends," 7th edition, London, 1834, is the following passage, p. 285.

"I am well aware that for *want of that knowledge of* "*Scripture,* which they ought to have obtained before "they settled in life, there are many parents amongst "us, who feel themselves incompetent to the work of "instruction—who long to be enabled to *feed their ten*"*der charge with the sincere milk of the word,* but know "not how to do it, and are therefore afraid even to make "the attempt."

And on page 87 of the Essays on Christianity, similar terms are made use of; viz.

"If then we would participate *in the benefits of Divine* "*Truth, nothing is so desirable as to approach the volume of* "*inspiration* with a humble and teachable mind, and "with earnest prayer that its contents may be blessed "to the work of our soul's salvation; nothing so reason"able as a conformity with the apostolic injunction, 'as "'new born babes, desire the sincere *milk of the word* "'that ye may grow thereby.'"

Now it cannot fairly be denied, that the tendency of the foregoing passages is to produce an undue reliance on the reading and study of the Holy Scriptures, in the work of salvation. To say that nothing is so desirable to those who

"would participate in the benefits of Divine Truth, as to approach the Bible with earnest prayer that its contents may be blessed to the work of their soul's salvation," is placing the Bible instead of the blessed incomes and operations of the Spirit of the Saviour of men, and holding out the idea that the divine nourishment by which the believer grows from a child to a young man in Christ, is derived therefrom; that the Bible is the converter and sustainer of the soul; that in short "the sincere milk of the word" is to be derived from the Scriptures. But the Apostle, in the passage where he speaks of the converts as being born again, "not of corruptible seed, but of incorruptible, by the Word of God which liveth and abideth forever," and in that other passage in which he exhorts them "as new born babes [to] desire the sincere milk of the word, that ye may grow thereby," does not mean the Bible; neither does he turn them to it as "the means of conversion," or as "the sincere milk of the word;" but to "the Word of the Lord which liveth and abideth forever," and "this," says he, "is the word, which by the gospel is preached unto you."

Our early Friends held views entirely different from those inculcated in the passages quoted above. Robert Barclay in his Apology, p. 72, says, "If *by the Spirit* we can only come to the true knowledge of God; if *by the Spirit* we are to be led into all truth, and so be taught of all things; then *the Spirit*, and not the Scriptures, is the foundation and ground of all truth and knowledge, and the primary rule of faith and manners." And again in p. 83, "If it be then asked me, whether I think hereby to render the Scriptures altogether uncertain, or useless; I answer, not at all. The proposition itself declares, how much I esteem them; and provided that to the Spirit from which they came, be but granted that place the Scriptures themselves give it, I do freely concede to the Scriptures the second place, even whatsoever they say of themselves; which the apostle Paul chiefly mentions in two places, Rom. xv. 4: "For whatsoever things were written aforetime were written for our learning, that we through patience and comfort of the Scriptures might have hope." And in 2 Tim. iii. 15—17: "And that from a child thou hast known the holy Scriptures, which are able to make thee wise unto salvation through faith which is in Christ Jesus. All Scripture is given by inspiration of God, and is profitable for doctrine, for reproof, for correction, for instruction in righteousness: that the man of God may be perfect, thoroughly furnished unto all good works." And further on, p. 84, he adds: "As then teachers are not to go before the teaching of God himself under the new covenant, but to follow after it, neither are they to rob us of that great privilege which Christ hath purchased unto us by his blood; so neither is the Scripture to go before the teaching of the Spirit, or to rob us of it. Secondly, God hath seen meet that herein we should as in a looking-glass, see the conditions and experiences of the saints of old; that finding our experience answer to theirs, we might thereby be the more confirmed and comforted, and our hope of obtaining the same end strengthened; that observing the providences attending them, seeing the snares they were liable to, and beholding their deliverances, we may thereby be made wise unto salvation and seasonably reproved and instructed in righteousness. This is the great work of the Scriptures and their service to us, that we may witness them fulfilled in us, and so discern the stamp of God's Spirit and ways upon them, by the inward acquaintance we have with the same Spirit and work in our hearts. The prophecies of the Scriptures are also very *comfortable and profitable* unto us, as the same Spirit enlightens us to observe them fulfilled and to be fulfilled; for in all this it is to be observed that it is only the spiritual man that can make a right use of them."

And in another place (Apol. Prop. II. p. 66,) he says: "As the description of the light of the sun, or of curious colours, to a blind man, who, though of the largest capacity, cannot so well understand it by the most acute and lively description as a child can by seeing them; so neither can the natural man of the largest capacity, by the best words, even Scripture words, so well understand the mysteries of God's kingdom, as the least and weakest child who tasteth them, by having them *revealed inwardly* and objectively by the Spirit."

(To be continued.)

Report of Dr. Kane.

The following is a copy of the official report of Dr. Kane, commanding the second Grinnell expedition in search of Sir John Franklin, to the Secretray of the Navy:—

"Our little party has returned in health and safety.

"We reached the Danish settlements of Upernivik on the 6th of Eighth mo., after an exposing travel of thirteen hundred miles. During this journey, which embraced alternate zones of ice and water, we transported our boats by sledges, and sustained ourselves on animal food exclusively by our guns. We entered port after eighty-four days exposure in the open air.

"I have the honour to subjoin a hurried outline of our operations and results in advance of more detailed communications.

"My previous despatches make the department acquainted with our arrival at the northern settlement of Greenland. Thence I crossed Mellville Bay without accident, and reached Smith's Sound on the 5th of August, 1853. Finding Cape Hatherton, the seat of my intended beacon, shut out from the sound by the more prominent headland of Littleton island, I selected this latter spot for my *Cairo*, erecting a flag-staff, and depositing despatches.

"To the north the ice presented a drifting pack of the heaviest description, the actions of hummocking having in some instances reared barricades of sixty feet in height. In my efforts to penetrate this drift, being driven back and nearly beset in the pack, I determined (as the only means of continuing the search) to attempt a passage along the land where the rapid tides (here of twelve to sixteen feet rise and fall) had worn a precarious opening. Previous to this responsible step, a depot of provisions, with a metallic life-boat, (Francis) was carefully concealed in a large inlet in latitude 78 deg. 26 min.

"The extreme strength of the Advance enabled her to sustain this trying navigation. Although aground at the fall of the tides, and twice upon her beam-ends from the pressure of external ice, she escaped any serious disaster. After a month of incessant labour, cheered, however, by a small daily progress, the new ice so closed around us as to make a further penetration impossible. With difficulty we found a winter asylum at the bottom of a bay which opened from the coast in latitude 78 deg. 41 min. Into it we thankfully hauled our battered little brig on the 10th of September, 1853. From this point, as a centre, issued the explorations of my party.

"The winter was of heretofore unrecorded severity. Whiskey froze as early as November, and mercury remained solid for nearly four months. The range of eleven spirit thermometers, selected as standards, gave temperatures (not yet reduced) sixty to seventy-five degrees below zero, and a mean annual temperature was 5 deg. 2 min. Fahrenheit, the lowest ever registered.

"This extreme cold, combined with one hundred and twenty days of absence of sun, gave rise to an obscure, but fatal form of tetanus (lockjaw). The exertions of Dr. Hayes, the surgeon of the expedition, had readily subdued the scurvy, but the fearful tendencies to tonic spasm defied our utmost efforts. This disorder extended to our dogs, of which seven of which perished, thus completely breaking up my sledge organization.

"The operation of search was carried on under circumstances of peculiar hardship. We were at our sledges as late as the 24th of November, and renewed our labours in March. Much of this travel was in darkness, and some at temperatures as low as —50 deg. The earlier winter travel was undertaken by myself in person, but by the aid of a single team of dogs, and the zealous operation of my officers, we were enabled to relieve the parties as they became exhausted, and to continue the search until the 12th of April. It is believed that no previous parties have gone so long in the field. Brooks, McGeary, Bonsall, Hayes, and Morton successively contributed to the general result. The men worked with fidelity and endurance.

"I briefly detail the exploration of our party.

"Smith's Sound has been followed and surveyed throughout its entire extent. It terminates in the northeast in a gulf 110 miles in its longest diameter.

"Greenland has been traced to its northern limit, the coast tending nearly due east and west, (lat. 82 deg. N.) Its further penetration towards the Atlantic was arrested by a glacier, which offers an impassible barrier to future exploration. This stupendous mass of ice issues in 60 degrees of longitude. It is coincident with the axis of the peninsula, and is probably the only obstacle to the insularity of Greenland. It rises 300 feet in a pendicular face, and has been followed along the base for eighty miles in one unbroken escarpment. This glacier runs nearly due north, and connects together, by an icy union, the continental masses of Greenland and America.

"It explains the broken and permanently fixed character of Upper Smith's Sound; its abundant icebergs, and to a certain extent, its rigorous climate. As a spectacle, it was one of the highest sublimity.

"The northern land into which this glacier merges has been named Washington, and the strait which interposes between it and Greenland I have named after Peabody.

"Peabody bay gives exit at its western end (latitude 80 deg. 12 min.) to a large channel which forms the most interesting geographical feature of our travel. This channel expands to the northward into an open and iceless sea, abounding in animal life, and presenting the feature of an open Polar sea. A surface of 1000 square miles was seen at various elevations rising from ice, with a northern horizon equally free. A north wind, fifty-two hours in duration, failed to bring any drift into this area.

"It is with pain that I mention to the department my inability to navigate these waters. Two hundred and twenty five miles of solid ice, so rotten as to be impassable to boats, separated them from the nearest southern lead. My personal efforts in April and May, failed to convey one of the smallest India-rubber boats to within 90 miles of the channel.

"My party, including myself, were completely broken; four of them had undergone amputa-

toes for frost bite; nearly all were suffering
m scurvy, and the season had so far advanced
to render another passage impossible. To the
th of latitude 81 deg. 17 min. the shores of the
annel became precipitous and destitute *even of*
ssage to the sledge. William Morton, who with
Esquimaux and a small team of dogs, had
ched this spot, pushed forward on foot until a
ral cape, lashed by a heavy surf, absolutely
ocked his progress.

"It was on the western coasts of this sea that I
l hoped to find traces of the gallant martyrs
ose search instigated this expedition. The
ended efforts of Dr. Ray—now first known to
—would have given such a travel a merely geo-
aphical value. Reviewing conscientiously the
dition of my party, it is perhaps providential
t we failed in the embarkation.

"The land washed by this sea to the northward
l westward has been charted as high as latitude
deg. 30 min. and longitude 76 deg. This forms
nearest land to the pole yet discovered. It
rs the honored name of Grinnell.

"As the season advanced it became evident
t our brig would not be liberated. Our imme-
te harbour gave few signs of breaking up, and
unbroken ice surface extended to the sound.
was now too late to attempt an escape by boats;
fuel was deficient, and our provisions, although
ndant, were in no wise calculated to resist
rvy. At this juncture I started with five vo-
nteers on an attempt to reach the mouth of Lan-
ster Sound, where I hoped to meet the English
peditions, and afford relief to my associates.
ring this journey we crossed the northernmost
ck of William Baffin, in ——, but finding a
id pack extending from Jones' Sound to Hak-
t island, with difficulty regained the brig.

"The second winter was one of extreme trial.
e were obliged, as a measure of policy, to live
e lives of the Esquimaux, enveloped in walls of
ss, burning lamps, and eating the raw meats of
e walrus and bear. At one time every member
our party, with the exception of Bonsall and
rself, was prostrate with scurvy and unable to
ve his bunk. Nothing saved us but a rigorous
ganized hunt, and the aid of dogs, in procuring
lrus from the Esquimaux, the nearest settlement
which people was 70 miles distant from our
rbour.

"With these Esquimaux—a race of the highest
terest—we formed a valuable alliance, sharing
r resources, and mutually depending upon each
ier. They were never thoroughly to be trusted,
t by a mixed course of intimidation and kind-
ss, became of essential service.

"I have to report the loss of three of my com-
des—brave men, who perished in the discharge
their duty. Two of these—acting carpenter
ristian Ohlsen and Jefferson Baker—died of
ckjaw; the third, Peter Shubert, of abscess fol-
ving amputation of the foot. Ohlsen was a
luable adviser and personal friend. He acted
command of the brig during my absence upon
e sledge journeys.

"Knowing that a third winter would be fatal,
d that we were too much invested by ice for an
pedition from the Sound to liberate us in time
r the present season, I abandoned the Advance
the 17th of May, and commenced a travel
the south. The sick, four in number, were con-
yed by our dog sledge. I had to sacrifice my
llection of natural history, but saved the docu-
nts of the expedition.

"The organization of this journey was carefully
tured to meet the alternating contingencies of
and and water. It consisted of boats cradled upon
oden runners, with lesser sledges for the occa-
sional relief of cargo. With the exception of reduced allowances of powdered breadstuff and tallow, we depended upon our guns for food, but a small reserve of Borden's meat biscuit was kept unused for emergencies. Our clothing was rigorously limited to our furs. We walked in carpet mocassins.

"Our greatest difficulty was the passage of an extensive zone of ice which intervened between the brig and the nearest southern water. Although this belt was but eighty-one miles in linear extent, such was the heavy nature of the ice and our difficulties of transportation, that its transit cost us thirty-one days of labour, and an actual travel of three hundred and sixteen miles.

"From Cape Alexander we advanced by boats with only occasional ice passages at the base of glaciers. At Cape York I erected a cairn and pennant, with despatches for the information of vessels crossing Mellville bay; and then, after cutting up my spare boat for fuel, embarked for the North Greenland settlements.

"We arrived at Upernivik (as before stated) on the 6th of August, without disaster, and in excellent health and spirits. Throughout this long journey my companions behaved with admirable fortitude. I should do them an injustice if I omitted to acknowledge their fidelity to myself, and gallant bearing in times of privation and danger.

"From Upernivik I took passage for England, in the Danish brig Marianne; but most fortunately touching at Goodhavn, (Disco,) we were met by our gallant countrymen under Capt. Hartstene. They had found the ice of Smith's Sound still unbroken, but having met the Esquimaux near Cape Alexander, had heard of our departure, and retraced their steps. They arrived at Disco but twenty-four hours before our intended departure for England. Under these circumstances, I considered it obligatory upon me to withdraw my contract for passage in the Marianne, and return with the Release and Arctic.

"The present season is regarded as nearly equal in severity to its predecessors. The ice to the north is fearfully extended, and the escape of the searching squadron from besetment is most providential. The rapid advance of winter had already closed around them the young ice, and but for the power of the steamer, and the extraordinary exertions of Captain Hartstene, an imprisonment would have been inevitable. Not only Smith, but Jones and Lancaster Sounds, were closed with an impenetrable pack; but, in spite of these difficulties, they achieved the entire circumnavigation of Baffin's bay, and reached the Danish settlements by forcing the middle ice."

For "The Friend."

A Word of Encouragement.

Affliction has been the lot of the righteous of every generation, but the Lord has been their stay and their staff, and by his secret invincible power has worked their deliverance in his own time and way, to their humiliation and astonishment, and to the praise and glory of his own great and ever excellent name; giving indubitable evidence that his ever watchful eye is open to see all their troubles, and in his mercy he manifests himself as described by the inspired penman,—"In all their afflictions He was afflicted, and the angel of his presence saved them; in his love and in his pity He redeemed them, and bare them, and carried them all the days of old." As their dependance has been placed solely in him, they have witnessed his delivering arm to work wonders for them; under a sense of which they could say, "What ailed thee, O thou sea that thou fledest, thou Jordan that thou wast driven back, ye mountains that ye skipped like rams, and ye little hills like lambs."

In the gathering of our religious Society, the enemy of all good was not wanting to raise unfounded charges and insinuations against the way of Truth, knowing that the blessed principle of light and grace professed by Friends, struck at the seat of his kingdom in the heart of man. But among all the opposers that the faithful members have met with, from that day to this, none have been more fierce, or done more against the cause of Truth, than false brethren, who, having known something of the heavenly anointing, for want of abiding under the daily cross, have become weary of the plain way which the blessed Head of the church has led and still leads into, and have turned therefrom.

Divers unfounded charges and unjust insinuations have been put forth by those who seceded from Ohio Yearly Meeting in the Ninth month, 1854, against those who have continued faithful in their allegiance to it, which it may not be my present business much to animadvert upon; but I may just remark, that the insinuation that Ohio Yearly Meeting as now composed, is but a small part of the Society that belonged to it previous to that time, to say the least of it, is very incorrect; it being clearly evident, that not more than one-third of the original number have gone off in the secession. My present business, however, is to encourage all my dear Friends to faithfulness, and not to be afraid with any amazement, either from the incorrect statements which have been put forth, or the great mistake that most of the Yearly Meetings have made, in disowning the true Yearly Meeting of Ohio, and owning that of the Separatists. All these circumstances combined, but go more fully to show that the whole proceeding was mainly the fruit of party feeling, and the incorrect representations made by those who left us, and by others interested in misleading.

But our blessed Lord and Saviour has laid it as an incumbent duty upon us, to uphold the ancient faith and testimonies of the Society in their purity, as also to maintain that Christian discipline and order which He has established in his church, for her comfort and edification. We can but mourn over those who have seceded from us, and thereby broken down the long established order of Ohio Yearly Meeting; believing that if they had been faithful to the gift of God in them, they would have continued with us, and we should still have had the comfort of going to the house of God in company.

The earnest solicitude of my spirit is, that the honest-hearted, upright testimony bearers among us, may be encouraged. Let not smallness of numbers, nor any other obstacles, prevent us from duly keeping up our religious meetings, and let us keep near to one another in spirit, in honour preferring one another; and then I believe our evermerciful and good Shepherd will more and more bind us together in the unity of the faith, and of the knowledge of the Son of God, and give ability for every service that he may require; for he can carry on his work by few or by many. "Then will the offering of Judah and Jerusalem be pleasant unto the Lord, as in the days of old, and as in former years;" and the great and glorious work, so nobly begun and carried on by our primitive worthies, and for which we were gathered to be a people, will still be promoted, to his praise who is Head over all things to his church.

The Lord hath preserved unto us a remnant in most or all of the Yearly Meetings, although in some of them it may be but a very small one, who I trust will no more bow to the image of separa-

tion which has been set up, than Daniel did to the image in his day. May these keep in the faith, and in the everlasting patience, and our blessed Lord and Saviour who has laid upon them a necessity to uphold the faith, testimonies and discipline of our religious Society, will make a way for them in his own time to become united together, to their mutual comfort and growth in the Truth, and to the advancement of his kingdom in the earth.

May these, wherever situated, be preserved as in the cave, all the due and appointed time, where the faithful Obadiahs may visit them in spirit, and administer to their help so far as true Christian sympathy can do it, to their comfort and strength. For the Lord will work, and who shall let it, he will make way for his blessed cause of truth and righteousness over the heads of all its opposers, and the pure principle of light and grace professed by us, must and will prevail over sea and land; and children yet unborn will have to praise and magnify the name of our God, for his mercies in unfolding the mysteries of the gospel of life and salvation to this people, and for raising up and preserving a remnant from generation to generation, maintaining the same precious faith once delivered to the saints. J. E.

Ohio, Eleventh mo. 11th, 1855.

From the Edinburgh Review.

The Chemistry of Common Life.

(Continued from page 74.)

In the chemical history of these fermented drinks there are many things which will repay the careful student who is desirous of thoroughly understanding this important chapter of the "chemistry of common life." In all cases, for example, and whatever may be the source of the liquid we employ, the same chemical substance undergoes the same chemical change during the process of fermentation. In every instance we start with grape sugar—that is, the kind of sugar which exists ready formed in the grape and other fruits. If we wish to employ grain we make it sprout, and thus produce within it a peculiar substance called diastase, which, when the grain is crushed and steeped in warm water, converts the starch of the grain into grape sugar, and dissolves it, forming the sweet wort. To this solution of grape sugar we add a ferment, usually yeast, if it does not naturally contain one, as grape and palm tree juices do. Through the action of the ferment the grape sugar is changed, always in the same chemical way, so that sparkling carbonic acid gas and intoxicating alcohol are in every case produced. At the same time a peculiar ethereal oil in small proportion, is formed. This is different in the juice or sap of each different fruit or tree, and hence each variety of fermented drink derives its own peculiar boquet.

Then how singular and worthy of study are the effects they produce upon the system, corporeal and spiritual, when introduced into the stomach. They exhilarate, they enliven, they excite to laughter, they awaken merriment, they stimulate and exalt the mental powers. Some they stupify, some they convert into irritable savages, some into drivelling idiots, and some into mere pugnacious animals. All, if long and largely used, they finally brutalize, prostrate, and, in the end, carry to an untimely grave.

But more wonderful than these poisonous and destructive effects is the passion for indulging in them, which these fermented liquors awaken in a large portion of our fellow men—the love with which these unfortunates are smitten by them—the fascinating influence by which they are charmed. The will becomes absolutely spellbound through the action of alcohol on the bodies of some, and reason is dethroned, even where it formerly exercised a clear and undisputed sway.

We cannot here discuss the causes of all this. They lie, in fact, as yet, a great way beyond the limits of our actual knowledge.

But there are certain beneficial, though less marked, effects produced by alcoholic drinks, which recent chemico-physiological research, to a certain extent, explains. Taken in moderate quantities they act like tea in lessening the bodily waste, and thus are of real value to persons whose power of digestion are impaired, either by disease or by the advances of age. They seem also to defend the body, to a certain extent, against wear and tear which a constant exercise and agitation of the mind is apt to occasion.* Yet the degree and form in which these effects are produced vary with the kind and composition of the fermented drinks we make use of. The proportion of water with which the alcohol is diluted, the peculiar ethereal oil with which it is mixed or contaminated, the kind of acid naturally formed and contained in the liquor (such as the acetic acid of beer, the lactic acid of cider, and the tartaric acid of grape wine), the kind and quantity of the salts which occur in it, the hops or other narcotics which, in the case of beer, have been infused in it—all these ingredients of the drink modify its action upon the system, and give rise to those diversities in the effects which different fermented liquors are found to produce upon the same individual.

The melancholy influences which the passion for alcoholic drink exercises upon the comfort and well being of society is a social rather than a chemico-physiological question. To what extent, on the grounds of moral expediency, it is proper, by fiscal or other regulations, to punish the moderate and self-restraining for the purpose of tying up the hands of the immoderate and those who will make no effort to restrain themselves,—whether it is better to bind men of lax principles and little education by vows which are so likely to be broken, or to instruct and educate them in a better understanding of what is for their own present and future good,—whether it is better to withhold spirit licences and shut up beer-houses, or to make the poor man's home as comfortable as the fireside of the village inn, and to teach young females of the humbler classes, as their first and most responsible duty, how to keep them so,—whether any one of all these methods is the best for suppressing a wide-spread evil,—or whether, for the moral regeneration of the most helpless of our people, a good man would not cheerfully aid in employing and furthering them all,—these are questions in social economies in regard to which, in this free country, we must be content to differ.

We have spoken of the passion for intoxicating liquors which continued use awakens, as the most remarkable circumstance in the scientific history of fermented drinks. It is from this fascinating power that the danger of using them principally arises. And from this we derive our strongest arguments in favour of the more extended use of tea and other infused beverages, which, however, indulged in, lead at least to no moral delinquencies or violations of public law. But this fascinating power alcoholic liquids share with another class of indulgences, also introduced into Europe in modern times, and already most extensively consumed every European race. These are the narcotic stances we indulge in.

Of such substances it is remarkable how l a number are in use in different parts of the w over how wide an area the habit of consun them prevails, among how many different tr of men, and from how remote a period. The rigines of Central America rolled up the toba leaf and dreamed away their lives in smoky r ries, ages before Columbus was born, or the c nists of Sir Walter Raleigh brought it within precincts of the Elizabethan Court. The c leaf, which is still the comfort and strength of Peruvian muleteer, was chewed as he does it r in far remote times, and among the same mc tains, by his Indian forefathers. The use opium, hemp, and the betelnut, of which only first has yet been transplanted into Europe, prevailed among Eastern Asiatics from time the most fabulous antiquity. The same is pr bly true of the pepper plants, indulged in by South Sea islanders and the natives of the Inc Archipelago; of the thorn apples, the use of wh still lingers among the natives of the Andes on the slopes of the remote Himalayas; of ledum of Northern Europe; of what, from abundant growth and use among ourselves, r be called the English hop; and of the sing fungus of Siberia, which, passionately loved by natives of that forbidding region now, has beer use among them from time immemorial. narcotic appetite appears, indeed, to have a n ral and deep root in the human constitution. is of the nature of an instinctive craving, whi like that for the kind of comfort which tea coffee bring, has led to the discovery and use countries far remote from each other of differ substances, capable of producing the same gene effects upon the system.

(To be concluded.)

* The general application of the opinions contained in the two last paragraphs, would be exceedingly dangerous. There may be cases where the use of alcoholic drinks have the good effect here attributed to them; but they are rare; most generally their use is positively injurious to both the physical and mental economy.—*Ed. of Friend.*

For "The Friend

A MIDSUMMER'S NIGHT SCENE.

The village bell tolls forth the midnight hour,
In deep and measured tones, that fall upon
The listening ear with solemn strength, and seem
Like parting knells, to warn us of the death
Of buried hours, and years, and with them fears
And hopes and joys, that agitated once.
The atmosphere of life, as now the notes
Of this resonant bell, which lightly float,
And tremble on the ambient air a few
Short moments, then in the distance growing
Faint and dreamy, merge themselves at last in
Blank infinity.—Dian's meek orb looks down
Upon the earth with such benignant beams,
She seems an angel watcher, gazing on
This sublunary sphere with love Divine
To erring man, and holy sympathy
For frailties once her own.—This midnight hour
Has lulled the animated throng to rest.—
The deep and heavy respirations of
Yon kine, that lay outstretched upon the soft
Green sward; the bay of distant watch-dog borne
Upon the zephyr's light and airy wing,
The marsh-frog hoarsely croaking to his mate,
Or owlet's plaint from out her lonely cave,
Make silence felt, and tell of deep repose.
The balmy air comes wafted from the south,
And softly sweeping though the feathery pine,
Breathes forth in plaintive music:—or, perchance
It rocks the lithe and pendant willow bough,
Where cradled in their nest of moss and down,
The linnet's callow brood securely sleep.—
Anon, a faint and distant lightning flash,
Illumes the misty margin of the west,
Though yet the searching eye can trace no cloud
To blot the gemmed and starry vault of heaven.
But soon the swift and ruddy shafts of flame
Reveal a mass of dark portentous clouds,
That shape themselves like rugged mountains: or
Assume the form of huge impending crags,
With ruined towers and lofty battlements,
That seem tooerhang unfathomable gulfs,

here chaos, and eternal night supreme
ave revelled, and defied the forked shafts
ectric, that incessant play amid
is grand and solemn scenery.—But list!
he muttering thunder strikes the startled ear
's distant cannon booming o'er the sea.—
he breeze that scarcely stirred the trembling leaf,
e gently played upon the fervid cheek,
rows lusty in its strength; whilst darkling o'er
he heavens, onward comes the gathering
mpest.—The black and thunder freighted cloud
prolls its shadowy pall high o'er the arch
mpyrean, and shrouds the pallid moon
sable cerements, that in darkness steep
he universe. Now on the sulphurous
ittle-ground of heaven, fiercely grows
he elemental conflict;—flaming through
he air, the lightening pours its fiery shafts,
nd fast and far the bellowing thunder,
des upon the rushing blast that threatens
esolation in its mad career.—
'Tis past—
he warring elements have sunk to rest.
ow slowly drifting to the shadowy east,
he clouds in silent majesty retire;—
nd on their piled and snowy pinnacles,
he silvery moonbeams glitter, like the arrows
f the morn, which glancing earthward crown
he Alpine glacier's summit;—and amid
his gorgeous drapery of heaven, methinks
shining seraph stooping from the skies,
as folded her celestial wings, and sits
throned, the herald of returning peace.
he welcome draught, the parched and thirsty earth
as quaffed, and from her bosom gratefully
xhales a fragrant tribute to the Source
nd generous Fountain of all good.—And when
he orient sun shall ope the gilded portals
f the east, ten thousand diamond drops
hat gem each trembling leaf, and flow'ret cup,
hall sparkle for a moment in his rays
hen with unfettered pinions gently waft
heir dewy incense to the brightening skies.

For "The Friend."

Early Anti-Slavery Advocates.

WILLIAM BURLING.

n preparing the materials for the Biographical tches of the early Friends of Pennsylvania and v Jersey, I found some matter relative to Wil- n Burling, Ralph Sandiford, and Benjamin , the early opposers of slavery. Having made s of most points of interest relative to them, I pose giving sketches aside from the general es.

ccording to the estimate of the age of William ling, furnished by Benjamin Lay, he must have n born about the year 1675, on Long Island. en quite young he was convinced of the evil of ery, and was constrained to bear testimony inst it. In the year 1718 he wrote some ob- rations "concerning slave-keeping," of which jamin Lay has preserved a portion in his book itled, "All slave-keepers that keep the inno- t in bondage, apostates." The original work Burling, I suppose cannot be found, that part served by Lay, he informs us, was the preface. vas "an address to the elders of the church n the occasion of some Friends compelling cer- n persons, and their posterity, to serve them tinually and arbitrarily, without regard to ity or right, not heeding whether they give m anything near so much as their labour de- veth."

"My dearly beloved Friends, and elder breth- , whom, as it behoves me, I would entreat as iers, a weighty concern from the Lord is, and h been at times for many years, on my spirit, consideration of this unchristian liberty being ulged in the church,—for it is in itself none of least of the world's corruptions. Indeed the rd, by his spirit, manifested the evil to me be- e I was twelve years of age, and since, from e to time, I have had drawings in mind to re- prove and testify against it. Nor have I been altogether silent, although much discouraged by reason of its being practised by so many Friends, yea, elders too. Though I have formerly thought it strange that the church did not exclude it by her discipline, and fix the judgment of Truth upon it, yet now I am sensible such a thing is not easily done or accomplished. There being so strong opposition in many, it cannot be brought to the test, and judgment brought forth into victory in the cause at present, without danger of much strife and disorder in the church, which is generally hurtful wherever it prevaileth, therefore to be generally avoided. However, I hope we are all unanimous in our judgment, that whatever Friend hath anything from the Spirit of Truth to communicate to his brethren, either by word or writing, concerning this or any other matter, he ought to be allowed, and received in his testimony, and borne with by his brethren, so long as he keeps to the counsel and direction of the Holy Spirit, and therefore delivers nothing but what is according to Truth, although it happens to be never so contrary to the interest or inclination of the readers or hearers.

"Now I would such Friends as practise or plead for the aforesaid sin, evil or liberty, should consider solidly what hardship they impose on such as are concerned to bear testimony against it; for while so many Friends continue in said practice, no one can reprove it, and give it that deserved character which is agreeable to its nature, without implicitly condemning many of his brethren, elder brethren, as transgressors in this thing, which is very hard to do. Yet, if the Lord require such a thing or testimony of any Friend, he is necessitated so to judge his brethren, or quench the spirit in its motions in his own heart. The case admits of no medium. Again I entreat those who slight and disregard the testimony of any whom the Lord concerns to appear against this fleshly liberty, to consider whom they oppose and withstand. The inspired apostle speaking concerning the Lord's instruments whom he was pleased to make use of, saith, 1 Thess. iv. 8, 'He therefore that despiseth, despiseth not men but God, who hath also given unto us his Holy Spirit.' O! that I could prevail so far with all my dear brethren, that none would any more plead for or endeavour to defend the aforesaid unjust practice; neither endeavour to shield it from the judgment of Truth. We may do well to remember, the devil is the author of all sin, and sin is the transgression of the law."

How, or in what manner, this pamphlet or small book of W. Burling, was circulated we know not. It appears from the time in which it came forth, that it was caused by the agitation felt through the society by the unwise anti-slavery movements of William Southby and John Farmer. William Burling seems to have been preserved out of the spirit of bitterness, and he lived long after the publication of his sentiments against slavery, in apparent unity with his Friends. We have evidence that he was much employed in meetings for discipline on Long Island, and his manly handwriting, clear and easily read, indicates the firmness of an intelligent man of moderate school education, rather than the neatness of a *clerk*.

We can trace William Burling by his signing certificates of membership from Flushing, and returning certificates of ministers who had been attending the Yearly Meeting on Long Island, until the year 1740. After that period we have no information concerning him. He probably died soon after, and with him seemed to perish for a time the public testimony against slavery on Long Island.

For "The Friend."

Russia—Before Peter the Great.

(Continued from page 76.)

Ivan was succeeded by Vassili Ivanovitch in 1505. He completed the subjugation of the Tartars, and took the city of Smolensko from the Poles. He reigned twenty-nine years, and was succeeded by Ivan IV., who was but four years old at the death of his father. His mother, the princess Helen, was to be regent during his minority; but for five years she exhibited such abominable profligacy and blood-thirstiness, that she was poisoned by the connivance of her family, to deliver the land from her intolerable yoke. The young prince, a true son of such a mother, grew up to merit the appellation which history accords him—that of Ivan the Terrible. His boyish amusement was to ride down old men and women, and to worry them with dogs. His subjects called his minority "a minority of blood." He was partially brought to reason, however, by the inhabitants of Moscow, who, made desperate by his ferocious rule, fired the city in several places in one night, and nearly burnt him in his bed. He first established a Russian militia, the well-known "strelitz," by which means he doubled the military force at his command. He compelled the khan to be baptized, and overthrew the Turks with their whole army of 80,000 men. Siberia, with its mines of gold and silver, was added to Russia in his reign, a territory extending across the north of Asia, from the frozen ocean to the frontiers of China. During the life of his wife Anastasia, who had great influence over him, Ivan had restrained his passions within tolerable bounds; but after her death he became a perfect monster of ferocity. His first act was to exile his prudent advisers, and persecute their friends; one of them he stabbed with his own hands, while the victim was devoutly praying in church. His chief delight was to witness the agonies of the torture which he causelessly inflicted. He constantly carried an iron rod, with which he chastised those who brought him unwelcome intelligence, and would coolly read the letters while the blood was streaming from their persons. The inhabitants of Novogorod offended him, and he revenged himself by a massacre which endured five weeks, from 500 to 1000 being slaughtered every day, hundreds of them by his own hand. A volume might be filled with a bare recapitulation of the details of his bloody and disgusting tyranny. He yet thought himself a fit subject for an English alliance, and sent to Queen Elizabeth, demanding the hand of the lady Mary Hastings in marriage. The crowning atrocity of this miscreant was the murder of his favourite son, whom in a moment of suspicion he accused of conspiring against him, and felled to the ground with his iron rod. The prince perished from the blow, and Ivan the Terrible never smiled after. He died in the agonies of remorse on the 17th March, 1584, leaving behind him a character for cool, gratuitous ferocity and cruelty unparalled in human history.

Ivan was succeeded by his son Feodore I., a weak prince, who left the affairs of government solely to his chancellor, Boris Goudonoff, the brother of his wife. This man aspired to the sovereign power. To remove one of the obstacles to his ambition, he assassinated Feodore's younger brother, Dimitri, and spread the report that he had committed suicide. Feodore died after a reign of thirteen years; and it was strongly suspected that he too perished through the instrumentality of his minister.

The throne being now vacant—the race of Rurik having terminated—the grandees of the empire assembled to elect a sovereign. The choice

fell on Boris, who with pretended reluctance accepted the proffered dignity. By this time Russia had obtained a rank among the nations of the earth, and numbered nearly twelve millions of inhabitants, spread over a territory of 125,000 square miles. The new sovereign was crowned with great magnificence, and made great professions of clemency, which won him the regard of the people. In his reign Russia was again visited with a most grievous famine of three years' duration, for which time every aggravation of misery was endured. The granaries were exhausted, and horrors are related of the sufferings of the people which remind us of the siege of Samaria. More than a hundred and twenty thousand people died at Moscow only; and the famine prevailed throughout the whole empire. The czar did his utmost to assuage the general suffering; but notwithstanding that ample funds were distributed for their relief, it is supposed that not less than half a million of people perished in Russia by the famine of 1601. The close of the reign of Boris, however, contrasted miserably with its commencement. Fearful of his security, he established a reign of terror almost equal to that of Ivan himself, and became so hateful to his subjects that they gladly listened to the pretensions of a youth named Gregory Olrefief, who claimed to be the czarovitch Dimitri, and consequently the heir to the throne. The king of Poland declared for the impostor, and furnished him with troops. The czar was defeated in a pitched battle, and died shortly after on the 5th April, 1605. His son Feodore was by the nobles declared his successor, but was dethroned by the successful pretender, and, with his mother, strangled in prison. The false Dimitri entered Moscow at the head of a large army on the 21st of June, 1605, and was proclaimed czar; and, to his own astonishment, was acknowledged by the mother of the real Dimitri, who had been assassinated, as her son; a declaration which she was induced to make through fear. He now became a favourite with the people, and the brightest anticipations were formed of his reign; but becoming intoxicated with success, he gave himself up to extravagances of all sorts, and confiding in a false security was slain by the conspirator, Chouiski, at the head of some insurgent strelitz, terminating his career in less than one short year.

(To be concluded.)

For "The Friend."

A Serious Call.

When the children of Israel could not stand before their enemies, the Lord God said, "There is an accursed thing in the midst of thee, O Israel; thou canst not stand before thine enemies, until ye take away the accursed thing from among you." Josh. vii. 13.

Is there not abundant evidence in this day, that the Society of Friends has the accursed thing among them? And will it not be wise for each one of us to search himself, querying, as every one of the disciples did when told by their Lord that one of them should betray him, "Lord, is it I?" For we may well remember, that he who had coveted and taken the goodly Babylonish garment, and the silver, and the gold, and concealed them until the tribes were assembled, and he was found out by the lot, was put to death, and all that he had was burned with fire.

The Society of Friends was raised up to bear witness to the world of the power of the Son of God to change the hearts of men, and of the revelation of the righteousness of God unto all men, so that they who continue in sin are without excuse, "because that which may be known of God is manifest in them, for God hath showed it unto them." Rom. i. 19.

In a tract written by W. Caton, "on behalf of the brethren," and which appears by Sewell's history to have been widely circulated by the early Friends, he says: "They are a people that fear God above all the families of the earth, and that worship him in his own way, viz. in spirit and in truth; they do also love God above all, and their neighbour as themselves." "They were raised up for this very end and purpose, to praise and magnify his name in the earth, who is God over all, blessed forever, and to publish his living truth abroad, that his salvation might be known unto the ends of the earth, and therefore hath he manifested his eternal power in them, by which the world shall be overturned."

"The heart of the unregenerate man is deceitful above all things, and desperately wicked: who can know it?" Jer. xvii. 9. "We were all by nature children of wrath, even as others, foolish, disobedient, deceived, serving divers lusts and pleasures, living in malice and envy, hateful, and hating one another." Eph. ii. 3; Tit. iii. 3.

But God, who is rich in mercy and compassion, being unwilling that man, whom he created in his own image, should be destroyed through the deceit of the evil one, has provided a means, not only for his escape out of the state of death and darkness, into which he has by his unfaithfulness brought himself, and for his renewal up again into the innocency and joy of his first estate, but also for his translation into the everlasting kingdom of the rest, and peace, and joy of his own son.

Jesus Christ having condescended to take upon him the seed of Abraham and come into the world, and having been tempted in all things like unto us, yet without sin, he hath condemned sin in the flesh: and having tasted death for every man, he ascended up on high, leading captivity captive, and received gifts for men; and he is now come again the second time, by his spirit, into the hearts of all men. He is the Word who was in the beginning with God, and was God—the true Light which lighteth every man that cometh into the world, and to as many as receive him he giveth power to become the sons of God.

George Fox, after long seasons of great distress, and sore conflict with the powers of darkness in his own heart, had to declare—"Now was I come up in spirit through the flaming sword, into the paradise of God. All things were new; and all the creation gave another smell unto me than before, beyond what words can utter. I knew nothing but pureness, and innocency, and righteousness, being renewed into the image of God by Christ Jesus, to the state of Adam, which he was in before he fell."

William Penn, said, that "The eternal, wise, and good God was pleased, in his infinite love, to honour and visit this benighted and bewildered nation [England] with his glorious day-spring from on high; yea, with a most sure and certain sound of the Word of Light and Life, through the testimony of a chosen vessel [G. F.], to an effectual and blessed purpose, can many thousands say, 'Glory be to the name of the Lord forever.'" "For they were directed to the light of Jesus Christ within them, as the seed and leaven of the kingdom of God: near all, because *in* all, and God's talent to all; a faithful and true witness and just monitor *in* every bosom; the gift and grace of God to life and salvation, that appears to all, though few regard it."

"And as their [the early Friends] testimony was to the principle of God *in* man, the precious pearl and leaven of the kingdom, as the only blessed means appointed of God to quicken, convince, and sanctify man, so they opened to t what it was in itself, and what it was give them for; how they might know it from their spirit, and that of the subtle appearance of evil one, and what it would do for all those, w minds are turned off from the vanity of the w and its lifeless ways and teachers, and adher this blessed light *in* themselves, which disco and condemns sin in all its appearances, and sh how to overcome it, if minded and obeyed its holy manifestations and convictions; gi power to such to avoid and resist those things do not please God, and to grow strong in l faith, and good works; that so man, whom hath made as a wilderness, overrun with br and thorns, might become as the garden of G cultivated by his divine power, and replenis with the most virtuous and beautiful plant God's own right hand planting, to his eter praise."

"They were changed men themselves be they went about to change others. Their he were rent as well as their garments; and t knew the power and work of God upon th And this was seen by the great alteration it m and their stricter course of life, and more gr conversation, that immediately followed upon

"They recommended silence by their exam having very few words upon all occasions; t were at a word in dealing; nor could their cu mers with many words tempt them from it; l ing more regard to truth than custom, to exam than gain."

They sought not to lay up for themselves t sures upon earth. J. Gough, says: "At the fi indeed, people were shy of dealing with them that many of this people were reduced to difficu in procuring a living by their callings for a seas but afterwards, when they became better kno manifesting the excellency of that internal relig which they professed by the regularity of th moral conduct, and their conscientious regard fidelity in their commerce, void of all fraud, ceit and circumvention; careful in manufactur or choosing such goods as might be substan and answer the expectations of the purchas moderate in their profits, sparing in their comm dations, and punctual in their payments; not s ing more for their ware than the precise sum t were determined to accept, taking no advantag ignorance, the unskilful customer being sure to treated with as much justice as the most judicio their tried integrity begat general confidence, that confidence brought them a great resort t customers, so that they prospered greatly in th outward affairs, and verified the proverb th honesty is the best policy."

They proved the truth of the declaration Jesus, "My doctrine is not mine but his that s me. If any man will do his will, he shall kn of the doctrine, whether it be of God."

Isaac Pennington, declared, "We are gathe into that, and abide in that, in which no truth be denied; and are in Him who leadeth into truth, and teacheth to deny no truth that ever held forth by the spirit of the Lord. Some of may not yet be grown up in understanding i the mysteries of the kingdom, which God h revealed and made manifest to others, but yet do not deny but own one another in our seve measures of knowledge, and sense of things, in our several growths. And we own and ackn ledge in God's sight, the several dispensations hath brought forth, both before the law, and un the law and prophets, and in the time of Chri appearance in the flesh, and after when he sent Spirit, and all the time the church was in wilderness, and now she is coming forth again

brightness and glory of the Father, looking
h as the morning, fair as the moon, clear as
sun, terrible as an army with banners. Nor
we disown anything that is of God in the
fessors of this age; but only that which we
w and are required by him to testify against,
being not of him."

And as for denying redemption by the blood
Christ, none upon the earth, as the Lord God
oweth, are so taught, and do so truly, rightly,
l fully own redemption by the blood of Christ,
he Lord hath taught us to do. For we own
blood of the Lord Jesus Christ, both outwardly
l inwardly, both as it was shed on the cross,
l as it is sprinkled in our consciences, and know
cleansing virtue thereof in the everlasting
enant, and in the Light which is eternal; out
which Light men have but a notion thereof, but
not truly know nor own it."

Wm. Caton, said, "By the same spirit, by
ich they were guided that spoke forth the
ptures, do these people understand it, every one
ording to their measures, and the Light in
ich they walk doth give them the same under-
nding in the holy scripture, which they had
t spoke forth the scripture, although many
ong them are short of so large a measure as the
hors of the holy scripture had. So that they
far from striving and contending about the
aning thereof among themselves, for that which
Light opens to one is not contradicted by
m that are in the light, and therefore they are
peace among themselves, and in unity one with
other."

But alas! how changed is our state at this day!
While one saith I am of Paul, and another I am
Apollos, are ye not carnal?" As envying, and
fe, and division, are the fruits, so are they the
ofs, of the carnal mind, which is enmity against
d—for the tree is known by its fruits. But the
it of the Spirit is love, joy, peace, long suffer-
, gentleness, goodness. Unless the tree be first
nged, they who go about to change the fruit
l but beat the air.

May it not be said of us, "Even from the days
your fathers, ye are gone away from mine ordi-
nces and have not kept them, Return unto me
l I will return unto you, saith the Lord of
sts." Mal. iii. 7. How long halt ye between
o opinions? If the Lord be God, follow him.
t us remember that obedience is better than
rifice. Let each one of us be willing to take
rist's yoke upon us, and to learn of him. Will-
to sit alone and keep silence because we have
ne it upon us, willing to bear the indignation
the Lord, because we have sinned against him,
til we shall feel our mouths touched with a live
l from off the altar, and hear with our spiritual
the language, "Lo, this hath touched thy lips,
l thine iniquity is taken away and thy sin
rged." That so being made the sheep of Christ,
may know his voice and follow him, who goeth
th conquering and to conquer, and again expe-
nce, as did those who first assumed the honoura-
name we claim, the fulfilment of the ancient
ophecy, "Thy watchmen shall lift up the voice,
h the voice together shall they sing; for they
ll see eye to eye when the Lord shall bring
in Zion." For how much soever the Omnipo-
t shall see fit to chasten and to prove his peo-
e, if ever "the earth shall be full of the know-
ge of the Lord, as the waters cover the sea,"
re will be but one vital spiritual religion, and
e religious society of Friends in the world; and
less our fathers were deceived, that religious
ciety must uphold all the doctrines and the tes-
monies of the gospel as maintained by them in
e beginning.

The Catacombs of Paris.

The Reviеu Francaise gives the following account of a recent visit to the Catacombs of Paris. As it has been of late years almost impossible to obtain permission to descend into these subterranean excavations, we conceive the account will possess a certain interest for our readers:—The party consisted in all of about one hundred persons, and amongst them was M. Haussmann, the prefect of the Seine, the Ottoman Ambassador, an Armenian bishop, Dr. Paul Gaimard, the traveller, a number of savans, authors, and artists, and some females. The party entered by a door in the inner court of the Octroi office, at the Barriere d'Enfer. Each gentleman carried a long wax candle and a box of matches. After descending a long narrow spiral staircase to a depth of more than one hundred feet, the party placed themselves under the direction of the engineers specially attached to the Catacombs. They proceeded along a narrow gallery five or six feet high, neatly cut in the stone. From this gallery others branch off in different directions. The names of the different quarters of Paris and the different suburbs, beneath which the main gallery runs, are inscribed on the walls; on the roof is a black line to indicate the road to be taken; but as this line is interrupted in several places by the branches, any visitor that should trust to it alone, and attempt to proceed unaccompanied by a guide, would be very likely to lose himself. Here and there water penetrates through the roof and the side of the gallery, but not in sufficient quantities to render it impassable.

After about half an hour's walk the visitors arrived at a sort of a large edifice in the stone, the entrance to which is by a door, kept constantly locked. Above the door are inscribed in large letters the words *Memoriæ Majorum*, and on both sides of it are funeral inscriptions in Latin and French. The door being opened, the visitors entered the Catacombs, properly so called. The galleries there are wider, and the roof higher. The air is sharper, but impregnated with the odour of the dead, and this odour soon becomes fixed on the clothes, and even the hands and faces of visitors. It is known that all the remains of the dead in the different cemeteries of Paris were at one time conveyed to the Catacombs. These remains, which are more or less intact, more or less dark or brown, damp or mouldy, are arranged somewhat like books in a library. The arrangement is effected with a deal of symmetry. The bones, according to their dimensions, are placed one on the other in the form of a cross or lozenge, of two or three feet high, and each cross or lozenge is surmounted by a row of skulls, which serves as a basis for a new structure. Here and there a large cross has been formed of skulls which present any singularity of form. At intervals there are stones which divide the bones into categories; and on these stones are inscribed the cemetery from which, and the date at which, the bones were removed. Some categories consist of the remains of entire communities of monks and nuns. In the corner are those of the prisoners massacred in September, 1792, but these bones have not yet become so worn by time as to enable them to be classified. On a table are exposed such skeletons or bones as present any peculiarity either in conformation, or from the effect which time has had on them, some having become hardened, others mouldy. In some places are heaps of bones which have not yet been arranged. At intervals also are wells five or six feet deep, filled with water so clear and pure that the visitors would be tempted to drink it, were it not that he sees at the bottom some human remains which have fallen in. Inscribed everywhere on the walls are sentences from the Bible, from the ancient Greek and Latin authors, or from the principal writers of France, Italy, and other countries. It is calculated that the Catacombs altogether contain the remains of not fewer than from eight to ten millions of human beings; and they are so divided into streets and squares as to form a complete subterranean town. The streets or galleries run, in the whole, to the length of several leagues. The whole visit occupied about an hour and a half. The effect produced upon the visitors by the spectacle of the multitude of skulls and bones is solemn in the extreme; it makes him, if not a wiser, at least a sadder man.

For "The Friend."

One of our correspondents writing from Walworth county, Wisconsin, says: "All kinds of produce fetch a good price, and are easily conveyed to market. Railroads are in every direction: one from Jonesville to Milwaukie, thence to Chicago, thence to Beloit, within fourteen miles of the former place. Another is in progress from Racine direct to Beloit, which is finished and in use from the Lake to Burlington, a distance of twenty-five miles; besides many others that are in progress, one from Milwaukie to Lacross, and another from Chicago, *via* McHenry, Richmond, Ill., Gevena, Elkhorn, and so on north to the Pinery, Wisconsin. The soil we find to be fertile, and adapted to most kinds of produce, together with nearly all kinds of fruit. The trees are remarkably thrifty and productive, with the exception of the apricot and peach, and of these we have a reasonable supply, annually. Our fruit is of the fairest and choicest qualities I ever met with in any part of the world. Our villages, &c., are building up very fast; but not many Friends amongst the emigrants. There is one First-day meeting held alternately at D. Lyon's, in Hudson, and John Crego's, in Honey Creek, in Wal. Co. The farmers, many of them, are complaining some concerning their potato crop this season, on account of the disease that prevails to some extent, especially on the prairie land. The fall is quite pleasant, with plenty of rain for the season. Our winters are generally rather pleasant, with the exception of about two or three weeks of severe weather, though but little snow."

Grafting Fruit Trees.—An interesting discovery has been made in France with regard to engrafting fruit trees. Instead of making use of a graft, a slip is taken from an apple tree, for example, and planted in a potato, so that a couple of inches of the slip remain visible. It soon takes root, developes itself, and finally becomes a handsome tree bearing fine fruit. This method is due to a Bohemian gardener.

THE FRIEND.

ELEVENTH MONTH 24, 1855.

Notwithstanding the boasted advantages of slavery, according to the representations of those interested individuals who profess to believe that it is a "peculiar institution" sanctioned by Divine Providence; who, they say, created one portion of mankind to be under the control of the other, and to administer to their support and enjoyment, without regard to the loss and suffering which the servile class must endure, its effects upon that portion of our country where it flourishes, are to impoverish and deteriorate it; and through the slow accumulation of its blighting, it cannot re-

quire many years to bring it to an end in those States where it has continued the longest.

The following, taken from the N. Y. Tribune, has been prepared from the census returns, from 1800 to 1850, as "being conclusive evidence of the relative growth of different sections of the Union."

1800.	
Total population of the Free States	2,684,609
Total population of the Slave States	2,621,316
Excess in Free States in 1800	63,293
1810.	
Total population of the Free States	3,687,445
Total population of the Slave States	3,552,369
Excess in Free States in 1810	135,076
1820.	
Total population of the Free States	5,152,314
Total population of the Slave States	4,485,817
Excess in Free States in 1820	666,497
1830.	
Total population of the Free States	6,995,627
Total population of the Slave States	5,871,293
Excess in Free States in 1830	1,124,334
1840.	
Total population of the Free States	9,730,135
Total population of the Slave States	7,332,431
Excess in Free States in 1840	2,397,704
1850.	
Total population of the Free States	13,588,069
Total population of the Slave States	9,658,232
Excess in Free States in 1850	3,929,837

When the slave population of 1850, amounting to 3,198,298, is deducted from the aggregate population of the Slave States, it shows the following results:

Total number of freemen in the Free States	13,588,069
Total number of freemen in the Slave States	6,459,934
Excess of freemen in non-slaveholding States	7,128,135

According to the same ratio of increase, there will be in the United States in 1860:

Total population of the Free States	18,539,834
Total population of the Slave States	12,555,701
Excess in Free States in 1860	5,984,133

of which 12,555,701 in the Southern States, 4,157,787 will be slaves; leaving only 8,397,914 freemen in the slaveholding States, against 18,539,834 in the non-slaveholding or Northern States.

The above estimate of proportionate increase in the non-slaveholding States, if carried forward to 1900, shows the following startling results:

Total population of the Free States	62,815,476
Total population of the Slave States	36,080,030

The slave population, at the same ratio of increase as heretofore, will then amount to 11,875,052, making a grand total of 98,595,512 inhabitants.

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to the 3d inst.

The War.—The capture of Kinburn had not been succeeded by any events of importance. The Russians appear to consider that Perekop is the point principally aimed at, and that Cherson and Nicolaieff are in less danger of an attack. When the allied fleets withdrew from Odessa, the most of the Russian troops there were sent to Nicolaieff, and the fugitive inhabitants returned. The fort and town of Kinburn were occupied by 15,000 allied troops. General Codrington had been appointed to the chief command of the British forces in the Crimea. The advance of the allied troops had been countermanded, and the forces recalled to their former positions, in consequence of a belief that the Russians meditated an attack upon the positions of the allies at and near Sebastopol. An article in the London Times says, that the main body of the allied army will at once go into winter quarters, and that the attempts to expel the Russians from the Crimea will be abandoned for the present season. Prince Gortschakoff has, it is stated, been authorized by the Emperor to defend or abandon the Crimea, according to circumstances, without incurring any responsibility for the determination he may adopt. In a recent order of the day, he declared that he would remain and defend it to the last. The allies were repairing and arming the south side of Sebastopol, and keep up a desultory fire against the north side of the harbour. The Russians have constructed a road across the Putrid Sea, communicating with Simpheropol, and by this road supplies and reinforcements may reach their camp.

GREAT BRITAIN.—An excitement prevailed throughout England amounting almost to a panic, on the subject of a war with the United States. This absurd alarm seems to have been caused chiefly by a series of ill timed, if not malicious, editorials in the London Times, exaggerating the difficulties between the two countries in regard to British enlistments in the United States, and the Nicaragua question. The Queen has appointed a commission to consider how far it may be practicable and advisable to introduce the principle of decimal division into the coinage of the United Kingdom. The Government has prohibited the exportation to all foreign countries of saltpetre, nitrate of soda, sulphate of potash, and chlorate of potash. The bullion in the Bank of England had increased £85,000. Consols, 88.

Liverpool Market.—Cotton was in better demand with a small rise in the lower and middling qualities. The advices from Manchester were more favourable. Flour and wheat were a trifle lower. Philadelphia and Baltimore flour was quoted at 43s. The members of the insolvent banking house of Paul, Strachan & Bates, London, had been tried and severally found guilty. They were each sentenced to transportation for fourteen years. They were convicted of appropriating to their own use the securities entrusted to their care by their customers. They are to be sent to Gibraltar to work with the ordinary convict gangs at that station.

UNITED STATES.—*Nicaraguan Affairs.*—It is stated from Washington, that official intelligence has been received from England assuring our Government, that the despatch of the British squadron to the West India station has no reference to Central American matters, nor any object hostile to the United States.

The Cotton Crop.—The export value of the cotton crop for the year ending Sixth mo. 30th, 1855, is stated to be $88,143,844. In the year previous, it was valued at $93,593,220. The average export price for the last year was 8.74 cents a pound.

Mexican Affairs.—The business of this great export mart is diminishing, in consequence of the construction of railroads, which have drawn to the Atlantic ports, much of the produce which heretofore found its outlet at New Orleans. In 1853 the exports amounted to nearly $99,000,000; in the year ending Sixth mo. 30th last, only $82,000,000.

Commerce and Navigation.—The United States Treasury Department has prepared its annual statement of commerce and navigation. The aggregate amount of imports for the year was $261,382,960; while the domestic Exports amounted to $246,705,553. Of the latter, the amount in gold and silver coin was $19,842,423, and in gold and silver bullion, $34,114,995.

New York.—The shipments of breadstuffs from this port for the week ending the 17th inst., were of flour 124,078 bbls.; wheat 267,894 bush.; corn 69,139 bush. On that day, sales of white Canadian wheat were made at $2.25; red wheat $2.12.

Pennsylvania Coal.—The product this year will amount to not less than six millions of tons, worth at the mines twelve millions of dollars.

Philadelphia.—Mortality last week, 151.

Miscellaneous.—*The power of the Rothschilds.*—Since the commencement of the present war, the loans negotiated by this house amount to the enormous aggregate of $515,000,000, viz.: to England $80,000,000; to Turkey $40,000,000; to Austria $120,000,000; to Russia $130,000,000; to Sardinia $10,000,000; to England, in exchequer bills, $35,000,000, and a second loan just being perfected $100,000,000. Most of these loans, it is to be presumed, have been sold out before this, the Rothschilds merely acting, in such cases, as agents between the public and the governments that borrow. Nevertheless, the house that can even temporarily assume such a burden, within little more than a twelvemonth, must be one of gigantic influence, credit and power. The Rothschilds are said to be inimical to the present French Emperor, as they were to Napoleon 1st, and also disposed to exert their influence for the restoration of peace in Europe, fearing that a long continuance of the insane contest now raging, will seriously impair the value of all government securities.

Great Canal Project.—A project has been started in Louisiana to connect the Mississippi river with Lake Borgne by a canal, cut from a point, eleven miles below New Orleans, to an intersection with Bayou Philipon.

The First Railroad in Iowa.—The Mississippi and Missouri Railroad was to be opened to the city of Muscatine, Iowa, on the 20th inst. It is an extension, under different owners, of the Chicago and Rock Island Railroad.

Coal in Texas.—A large body of bituminous coal posed to be inexhaustible in quantity; has been d vered in Lavaca county.

A New Kind of Potato.—D. Boll, a florist of New Y has succeeded in raising a number of the plants of *Dioscores Japonica*, in the open air this year. They planted out when warm weather commenced, and dug up in the Tenth month, at which time many of roots had attained the size of two feet in length. form the root resembles the sweet potato, but is lil white potato in flavour. It is believed that it w make on excellent substitute for the latter.

Salt.—It is said that the quantity of salt manu tured, this season, at the Onondaga Salt-works Syracuse, N. Y., will reach 6,000,000 bushels—an cess over the average of 500,000 bushels, which wil very opportune, as there is a partial failure of the crop in the West Indies. The price will be about $ per barrel, making the whole crop worth about $1,6 000.

Winter Wheat.—The Sheboygan (Wisconsin) Jou says that wheat, in many localities, is so large tha is necessary to turn in the cattle and feed it down. have a good report (says the Milwaukie Sentinel) fi the winter wheat from all quarters of the State. season has been propitious, and the grain stands t and green.

The Erie Railroad.—The whole number of cars locomotives on this road is 3168, which, if coupled gether in one train, would reach a distance of twe one miles, and be able to carry 150,000 persons in day from New York to Lake Erie. The company in its employ not less than 5000 persons, whose pay month is $125,000 or $1,500,000 per year.

A Census of the city of Hartford, Conn., just co pleted, shows a total population of 26,317 against 1 851 in the year 1850, being an increase of 8466 in years.

A Water Spout.—On the 20th of last month, French ship of the line Le Tage encountered off Ca a water spout, which in a few moments swept away three masts. Two men were killed, and seven slightly wounded by the catastrophe.

RECEIPTS.

Received of Joel Evans, agt., Pa., for J. F. Harris P. Hoopes, J. Lewis, $2 each, vol. 28; from Isaac Ly Wis., $6, vols. 26, 27 and 28; from Dr. B. Taber, Vt., $ vol. 29; from Pelatia Gove, Vt., $2, vol. 28; from Isr Buffinton, agt., Mass., $22, viz. for David Buffinton, vol. 28, for M. Gould, M. Chace, N. Buffinton, M. B. B finton, Thos. Wilbur, M. D., Wm. F. Wood, P. Cha S. Buffinton, P. Tripp, Senara Lincoln, $2 each, vol 29; from Geo. D. Smith, O., $2, vol. 28; from J. Hoy for S. Hoyle, N. J., $2, vol. 29; from Geo. Huntingt agt., N. Y., for Thos. Twining, Moses Huntington, W O. Tyre, $2 each, vol. 28, for Jos. Battey, Geo. Huntington, Dl. Sisson, $2 each, vol. 29; from Ezekiel Bun agt., O., $32, viz. for E. Williams, $4, vols. 28 and John Bundy, $4, vols. 29 and 30, Joel Doudna, R. Plu mer, $2 each, vol. 28, Geo. Tatum, jr., R. H. Smith, Green, Knowis Doudna, J. T. Schofield, Eli Hodg Jesse Bailey, jr., Jos. Stanton, H. Stanton, E. Bun $2 each, vol. 29.

Friends' Boarding-School for Indian Children, at Tunessassah.

Two women Friends are wanted at this Institution assist in the family.

Also, a man Friend to aid in carrying out the co cern for the improvement of the Indians.

Application may be made to JOSEPH ELKINTON, 377 S. Second stre THOMAS EVANS, Philad., Eleventh mo. 1st., 1855. 180 Arch stre

Appeal for the Ancient Doctrines of the Religious Society of Friends.

(Continued from page 92.)

n the "Essays on Christianity," p. 84, the following sentiment is expressed with respect to the le:

It is divine truth as applied to the heart of man by e Spirit of God, which converts, sanctifies and edi-s; and of this divine truth, the only authorized cord, a record at once original and complete, *is the ble.*"

Tow we freely admit, and have often plainly ared, that the Holy Scriptures contain a de-ation of all the fundamental doctrines and ciples relating to salvation, and that whatso-doctrine is contrary to them may, on that very ount, be justly rejected as false: nor have we placed our own, or any other writings, on an ality with them. But to say that the Bible is "the authorized record of divine truth," implies nothing since the Scriptures were issued, has n written by Divine authority; whereas it is evi-t that there have been many written predictions ch have since been fulfilled; many epistles of stian counsel and advice; many treatises on n and religious experience, which have been ned under a measure of the same divine influ-e and authority which led holy men of old to e the Scriptures. Did we deny these things, might naturally be supposed to believe that ne immediate revelation has ceased and been rely withdrawn from the church.

t is the immediate power of the Holy Spirit ch "converts, sanctifies and edifies;" and this one by showing unto man his separation from , and what it is that does separate; which in e instances may be that of which the Scriptures him no information; some secret sin, which Holy Spirit alone, that searcheth the heart, is a discerner of its thoughts and intents, gs before him in that light which does not ead, and calls upon him to relinquish. This ten done without the use of Holy Scripture, ell as in the application in other cases of its ed doctrines.

n the following passages, the term Gospel ap-s to be limited to the Holy Scriptures. In "Portable Evidence," page 164, it is said, in king of persons who have received outward uction:

Their case is not to be confounded with that of the nstructed *heathen*, who have *never heard the truth.* these *the Gospel* has been preached: *it is written in book of God* for their instruction, and if they reject hey do so at their peril."

In the "Essay on the habitual Exercise of Love to God," it is said on page 5, in reference to regeneration—

"In effecting this blessed change in the affections of "fallen man, the Holy Spirit makes use of the gospel of "our Lord Jesus Christ, *as his grand appointed instrument.* "*That gospel written in the Holy Scriptures,* and preached "by the Lord's messengers, is a spiritual weapon of "heavenly mould, and when wielded by a divine hand, "it penetrates the heart, and becomes the power of God "unto salvation."

Joseph Phipps in his treatise on "The Original and Present State of Man," chap. iv., p. 25, says, "The gospel taken in its full extent, is *the revelation of the love and mercy, and the offer and operation of the grace of God through Christ,* to fallen man, in his natural and corruptible state, in order to his restoration and salvation. It is *not wholly contracted into the mere tidings,* but *including these, goes deeper,* and essentially consists in the thing declared by them, *the power of God administered to the salvation of the soul.* By this, the outward coming of Christ is rendered truly and fully effectual to each individual. Those who believe in and obey him, in his inward and spiritual manifestations, by which the gospel is preached in every rational creature under heaven, may come to be partakers of his life, and be saved by him from the second death of eternal misery, though providentially incapacitated to know the exterior history of his incarnation," &c.

Such likewise is the uniform language of our early Friends. George Fox constantly speaks of the gospel as the power of God. Isaac Penington calls it "the power of God unto salvation." Yet in a work entitled "Brief Remarks on Impartiality in the Interpretation of Scripture,"* these ancient worthies, as well as Robert Barclay and others, must be included in the designation of "some persons under our name," who have "wrested from its obvious meaning" the declaration of the apostle Paul, "I am not ashamed of the gospel of Christ; for it is the power of God unto salvation to every one that believeth."

"My next example," it is there said, "forms a part of "that noble declaration of the apostle Paul: 'I am "'debtor both to the Greeks and to the Barbarians, both "'to the wise and to the unwise; so, as much as in me "'is, I am ready to preach the gospel to you that are at "'Rome also. For I am not ashamed of the gospel of "'Christ; for it is the power of God unto salvation to "'every one that believeth, to the Jew first and also to "'the Greek, for therein is the righteousness of God "'revealed from faith to faith, (that is, I presume, *from "'the faith of the preacher to the faith of the hearer,*) as it "'is written, the just shall live by faith.' Rom. i. 14—"17.

"The word gospel properly signifies glad tidings: and "every one knows that the glad tidings which the "apostle was appointed to preach, were those of life and "salvation through the incarnation, crucifixion and re-"surrection of Christ. * * * Now the gospel thus "preached by the apostle, under a divine call and qua-"lification, was the powerful appointed instrument for "the conversion of those to whom he was sent. It was "by this instrumentality as I conceive, that he baptized "them into the name of the Father and of the Son and "of the Holy Ghost, (Matt. xxviii. 19: comp. Eph. v. 26.) Christ loved the church, 'that he mighty sanc-"tify and cleanse it with the washing of water by the "'word.' Hence to those who believed his message, and "accepted the Lord Jesus Christ as their only Saviour, "these *glad tidings* were found to be *the power of God unto "salvation.* (Comp. 1 Cor. i. 18.) 'For the preaching of "'the cross is to them that perish foolishness, but unto "'us that are saved it is the power of God.' (See also "Eph. v. 26.) It is surely much to be regretted that by "*some persons under our name,* the passage on which "these remarks are offered, has been misunderstood, "and (without the smallest intention as I believe to de-"viate from accurate truth) *wrested* from its obvious "meaning. The declaration that the gospel of Christ "is the power of God unto salvation, has been regarded, "not as a description of the efficacy of that gospel for "the salvation of sinners, but as a definition of the gos-"pel itself, as if the gospel of Christ and the power of "God, were convertible terms. Hence it is concluded "that the gospel is not the good news of salvation "through a crucified Saviour; but the power of God, or "in other words, the influence of the Holy Spirit in the "heart. The tendency of this *mistake* to dismiss from "our view a most important and fundamental part of "Christian truth, that very part on which all the rest is "built, is too obvious to require notice."

It is further added—

"In the epistle to the Colossians we find another pas-"sage in which the gospel has been by *some persons* "supposed to signify *the power of God manifested* in the "heart; (see chap. i. 21—23.) 'And you that were "'sometime alienated,' &c., 'If ye continue in the faith "'grounded and settled, and be not moved away from "'the hope of the gospel, which ye have heard, and "'which was preached to every creature which is under "'heaven, whereof I, Paul, am made a minister.' The "circumstance which has induced *some persons* to *sup-"pose* that the *gospel* here signifies an internal principle, is "that in the original text, for 'to every creature,' we read "*en,* which must as they *presume,* mean *in* or *within* "every creature. This circumstance is, however, of no "importance, for it is certain that the Greek particle "may be rightly rendered *to* or *among* as well as *within,* "as is evinced by numerous passages in the New Testa-"ment itself. Thus we read in Luke i. 17, 'to the wis-"'dom of the just,' &c., &c. That the apostle here uses "the word 'gospel' in its usual sense, of the glad tidings "of salvation, through Jesus Christ, may be concluded "from his speaking of it as that which had been preach-"ed; that whereof he was made 'a minister;' that "which the Colossians themselves had heard, and so "heard as to believe in Christ crucified." * * * "The "apostle's meaning seems to be, that whereas, under "the legal dispensation, the knowledge of revealed truth "was confined to a single nation, *the glad tidings* of sal-"vation had now been proclaimed to men of *every coun-"try,* or *to the world at large.* That the gospel, when the "apostle wrote these words, *had actually reached every "province* of the *known* inhabited world, or Roman Em-"pire, is indeed, by no means improbable."

It is we think obvious, that in these remarks, the gospel is, contrary to the clear testimony above cited from Joseph Phipps, restricted to the mere "glad tidings of salvation through the incarnation, &c., of Christ," and the idea held out that it is erroneous to consider it as "the power of God manifested in the heart;" and that when the apostle spoke of its being "preached in every creature under heaven," he merely meant that the account of Christ's death, &c., had reached every province of the Roman empire.

The doctrine of those designated as "some persons under our name," will appear from the following extracts from the writings of Robert Barclay, George Fox, and Isaac Penington.

In the Apology [Prop. V. and VI., sect. 23] Robert Barclay says: "This *saving spiritual light*

* A few copies of this work were first printed and privately circulated by the author, and coming into the hands of some of those who had separated from our religious Society, it was reprinted and extensively circulated.

is the gospel, which the apostle saith expressly is preached in every creature under heaven; even that very gospel whereof Paul was made a minister. (Col. i. 23.) For *the gospel is not a mere declaration* of good things, being *the power of God unto salvation to all those that believe*, Rom. i. 16. Though the outward declaration of the gospel be taken sometimes for the gospel, yet it is but figuratively, and by a metonymy. For, to speak *properly*, the gospel is this inward power and life which preacheth glad tidings in the hearts of *all men*, offering salvation unto them, and seeking to redeem them from their iniquities; and therefore it is said to be preached 'in every creature under heaven;' whereas there are many thousands of men and women to whom the outward gospel was never preached. Therefore the apostle Paul, (Rom. i.) where he saith 'the gospel is the power of God unto salvation,' adds, that 'therein is revealed the righteousness of God from faith to faith; and also the wrath of God against such as hold the truth of God in unrighteousness;' for this reason saith he, 'because that which may be known of God is manifest in them, for God hath showed it unto them.' Now that which may be known of God is known by the gospel which was manifest in them. For those of whom the apostle speaks had no outward gospel preached unto them; so that it was by the inward manifestation of the knowledge of God *in them*, which is indeed the gospel preached in man, 'that the righteousness of God is revealed from faith to faith;' that is, it reveals to the soul that which is just, good and righteous; and that as the soul receiveth it and believes, righteousness comes more and more to be revealed from one degree of faith to another."

Our honourable elder, George Fox, says on one occasion, (Journ., vol. i., p. 160,) "I was speaking in the meeting, that *the gospel was the power of God*, and how it brought life and immortality to light *in men*." And in another place, (vol. ii., p. 25,) he says he told the people of Truro, that "*the gospel was the power of God*, which was preached before Matthew, Mark, Luke and John, or any of them, were printed or written; and it was preached in every creature; of which a great part might never see nor hear of those four books." Isaac Penington, (Works, vol. iv., p. 63,) holds the following language: "*The gospel is the power of God unto salvation.* Oh! blessed is he who meets with that which powerfully saves! Most men's religion is but a talk and profession of that which they have not; and what will such a kind of religion avail, when it comes to be tried by the piercing fire of the spirit of burning and pure impartial judgment?"

An attempt is made in the same work, (the Brief Remarks on Interpretation of Scripture,) to make it appear that our ancient Friends were mistaken in their understanding of the text, (2 Peter, i. 19—21,) "We have also a more sure word of prophecy; whereunto ye do well that ye take heed, as unto a light that shineth in a dark place, until the day dawn and the day-star arise in your hearts."

"The idea," it is said, "was *at one time rather prevalent* among the members of our Society, that when the apostle used the term 'a more sure word of prophecy,' he was alluding, not to anything written, but to that divine, illuminating influence by which the prophets were inspired, and which guides the Christian believer into all truth. Such a view of the passage, is indeed but seldom insisted on at the present day; but as it is still sometimes advanced, I think it right to acknowledge my own sentiment, that it *is at variance with that simplicity* which we ought always to maintain in the perusal and interpretation of the sacred writings.

"That the very sure word of prophecy, *which had been uttered and was written*, is here meant, is evident from the immediate context, in which the apostle distinguishes this word from the day-star which arises in the heart, and at the same time identifies it, (as I conceive,) with prophecy of the Scriptures. It ought, however, to be observed, that we need not confine these expressions to that part of Scripture which contains predictions of future events, for the term prophecy is applicable to every kind of inspired speech or writing; and the Jews were accustomed to call the whole of the Old Testament, 'the prophecy.'"

"The Holy Scriptures are a light, to which at all times, and under all circumstances, we do well to take heed; but they shine only in a dark place, until the minds of those who read them are illuminated by the Holy Spirit, until the day dawn, and the day-star arise in our hearts."

Now it is well known that our primitive Friends bore testimony, that "the more sure word of prophecy," mentioned by the apostle Peter, referred to "the Word nigh in the heart," which does indeed shine in the heart of man, as in a dark place, until by obedience to its manifestations, we are led from one degree of light unto another, the day begins to dawn, the day-star arises in our hearts, and our path shineth more and more unto the perfect day.

George Fox's emphatic contradiction of the carnal reasoning of the priest at Nottingham, on this subject, (Journal, vol. i., p. 117,) is too well known to require repetition. The same understanding of the text was again expressed by him, many years afterwards, in his book of Doctrinals, p. 542.

Robert Barclay (Truth Cleared, &c., Works, vol. i., p. 161,) says, "As for *the more sure word of prophecy*, we grant it is the rule, but deny that that more sure word is the Scriptures; but it is that *word in the heart*, from which the Scriptures came, and in and by which the Scriptures are to be interpreted. And is it not gross blindness and darkness to say, the Scripture is more sure than that word, light, life and spirit from whence they came?"

William Penn, (Works, vol. ii., p. 46,) says, "*The Spirit of Jesus is the word of prophecy;* which is not distinct in nature from the day-star, but in degree only; the utmost attainment being still through the same power and spirit, however diversely denominated, according its several operations."

And, (Works, vol. ii., p. 291,) in reply to John Faldo, he enters into an argumentative defence of this interpretation, concluding with the declaration, that "the law written in the heart is a more sure covenant, law and word than the law written upon stones or the outward book of the law," and that the contrary assertion would be "to subvert the very state of the gospel, which was and is the time of the pouring out of the Spirit upon all flesh, and bringing mankind to a more near, sure and living word of prophecy, than any outward writings whatever can possibly be."

The testimony of George Whitehead, also, (Works, p. 197,) is very clear. He says on one occasion: "The priest would have this *more sure word, to be the Scriptures of the prophets; which I was constrained to oppose;* considering wherein and between what the comparison (*more sure word*) consisted, as being between the voice that came from heaven to Christ in the mount, (which Peter, James and John heard,) and the Word, the Light, or Spirit of prophecy in the hearts of those believers, who heard not that voice from heaven, &c."

In corroboration of the above sentiments, we might quote from the writings of Isaac Penington, Charles Marshall, Francis Howgill, and many others; but it is needless to say more than that on this subject we believe there was entire harmony among our ancient Friends.

(To be continued.)

From the Edinburgh Revie

The Chemistry of Common Life.

(Concluded from page 84.)

In the United Kingdom the narcotic m largely indulged in is the hop. Of this we c sume nearly forty millions of pounds (thirty-ei and a half) every year, chiefly for imparting terness and other qualities to beer. Of this la quantity upwards of thirty-five millions of pou are used in England alone, being at the rate two pounds a head of the population. The t cotic quality of the hop flower resides in a vola oil and in an aromatic resin, of which it cont about eight per cent. of its weight. The spec action upon the system which is exercised by th ingredients of the hop has not been as yet sa factorily investigated. There can be no dou however, that the extensive use of this narcotic the southern half of the island, exercises an portant influence upon the common life and eve day behaviour of the English population.

Next to the hop, tobacco is the favourite narc in the United Kingdom. About thirty millions pounds of this leaf are now consumed among of which about five millions are used in Irel This is at the rate of nineteen ounces a head Great Britain, and twelve ounces a head for people of Ireland. It is partly, no doubt, beca of the smell which accompanies the use of tobac that opposition to this use has been more wid and publicly made both in this country and America, than against the less obtrusive hop, wh in England is so much more largely used, which in its silent and unseen way, is proba the source of as much real evil.

The results of recent chemical researches m upon the tobacco-leaf are full of interest, instr tion, and warning. They have shown that in dry leaf there naturally resides from two to ei per cent. of a narcotic, volatile, highly poisono alkaline liquid, to which the name of *nicotine* been given, and along with it a three-or-four-th sandth part of a volatile fatty oil, which also p sesses narcotic properties. Upon the chewer influence of tobacco depends chiefly upon the tion of these two ingredients of the natural le But the smoker produces during the burning his tobacco a new oily "distilment," which con to him with the smoke, and naturally exalts action of the tobacco upon his system. This pyreumatic oil, as it is called, mingles in vap with the natural volatile oil and nicotine of tobacco, and aids in producing those varying a complicated effects upon the body and brain, w which most of us are directly or indirectly fa liar. That these effects are usually pleasing, experience of millions daily testifies; that they sometimes injurious is equally certain; that th awaken thirst, and lead some to drink intoxicat liquors, cannot be denied; and yet, according the highest authorities in this department of p siology, the use of tobacco in moderation has been *proved*, in this country at least, to be in rious to the human health. That the practice smoking and chewing, as practised sometimes this country, and oftener in the United Stat may lead to dirty and disgusting habits, those our readers who do not share this amiable v will readily admit, and also that tobacco may used immoderately and to the manifest injury health. But it may be permitted to scient common sense, to doubt whether all this justi the utter condemnation of the practice, and fierce denunciations against the use of tobacco any form or degree, which have lately been forth both in Great Britain and America.*

* It is evident the Reviewer is here pleading for

Did time permit us further to consider the
emico-physiological history of narcotic sub-
nces, we should have turned to the use of opium
d hemp in the East, of the strange cocoa in
ru, of the still stranger fungus in Siberia, and
the other less extensively used narcotics of
hich the names have already been mentioned.
e may observe, however, as showing how very
ge a part these substances occupy among the
ans or enjoyment of common life, that they are
sumed at present in the following enormous
portions :—

Tobacco among	800	millions of men.
Opium "	400	"
Hemp "	200 or 300	"
Betel "	100	"
Cocoa "	10	"

od that of tobacco there are consumed about
80 millions of pounds every year ; of betel, 500
illions ; of opium, 20 millions ; of hops, 80 mil-
ns, and of cocoa, 30 millions of pounds. The
fluence of so vast a consumption of substances of
is class upon the domestic economy, even of our
n working classes, is apparent when we consider
w large a proportion of their weekly earnings is
metimes expended in gratifying this one appe-
te. But in India,—where, on an average, not
re than sixpence a head is yearly spent by the
ole population in the purchase of clothing,—
rcotic indulgences rise at once to the importance
being the second great necessary of common
e. The late —— Porter read before the British
sociation, August, 1850, a paper which placed
a succinct, but very striking, form, what he
med the self-imposed taxation of the working
sses of this country. He showed that the cost
distilled spirits to the people of the three king-
ms amounted in 1849 to about twenty-four mil-
ns sterling, that about twenty-five millions are
pended in beer, and seven millions and a half in
bacco,—making in all an annual expenditure of
y-seven millions in these stimulants, not in-
ding the cost of tea, coffee, and chocolate : a
m, therefore, fully equalling the whole public
venue of the United Kingdom. Among the
rking classes it is probable that one-third of the
rnings of the family is spent in these indul-
nces. We may naturally inveigh against such
excess of unproductive and often injurious sen-
al gratification ; but it is obvious that tastes so
eply seated in human nature, so universally in-
lged, and so dearly gratified, must take their
gin in the physiological composition of man,
d have some intimate connexion with the na-
ral condition of his being.

We cannot dismiss the subject of warm infu-
ns and narcotic indulgencies—so widely natu-
lized among European nations within the last
ree centuries—without remarking upon the in-
ence they must necessarily exercise upon the
dily constitution and mental character of the
ople who so largely use them. The soothers
d exciters we individually indulge in, if taken
excess, are seen gradually to affect and sensi-
y to modify both our tempers and our usual state
bodily health. Let the use of these become
neral, even in a moderate degree, and similar
anges will in time affect a whole people. We
ow from medical history that the general cha-
cter of disease, and the nature of systems, have
ry much altered since modern beverages and
rcotics have become common. This indicates

fulgence to which he is himself addicted. Like other
ewers or smokers, he is desirous to save from " utter
ndemnation" a practice " producing those varying and
mplicated effects upon the body and brain with which
ost of us are directly or indirectly familiar.—*Ed. of
iend.*

the presence of constitutional change, and we cannot tell how far or how deep such changes may proceed. It is a problem, therefore, which interests not merely the physiologist and psychologist, but the Statesman, also, to ascertain how far and in what direction such changes may go,—how far the actual tastes, habits, and character of modern nations have been modified or even created by the prolonged consumption of the substances we have been considering, and what influence their continued use is likely still to exercise on the final fortunes of a people. The fate of nations has frequently been decided by the slow operation of long acting causes, unthought of and unestimated by the historian, till these causes had gradually changed their constitution, their characters, and their capabilities, while their names and local homes remained still the same.

We must here close our illustrations. The chemical study of the means and appliances of life makes known to us many more adjustments and adaptations, such as those we have pointed out. In the composition, structure, and chemical functions of the several parts of the body,—in the process of breathing and the purposes served by it,—in that of digestion and the many pre-arranged contrivances by means of which it is completed, —in the odours and miasmata which fill the air, and either increase our comforts or endanger our lives,—in every part either of our internal economy or of external material nature with which we come into contact in daily life,—examples of chemical adjustment are met with not less interesting or worthy of attention that any of those we have quoted in the present article.

Epistle of George Fox.

Not long after this I received an account by letter from some Friends, that were prisoners at Denbigh in Wales, that many Friends there were under great sufferings for the testimony of a good conscience. In the tender sense whereof I was moved, in the love of God, to visit them with a few lines, as a word of consolation to them in their sufferings ; and of exhortation, to stand fast in the testimony committed to them, after this manner :

Dear suffering lambs for the name and command of Jesus ; be valiant for his Truth, and faithful, and ye will feel the presence of Christ with you. Look at him who suffered for you, who hath bought you, and will feed you ; who saith, Be of good comfort, I have overcome the world ; so look at Christ, your sanctuary in whom ye have rest and peace. To you it is given not only to believe but to suffer for his name's sake. They that will live godly in Christ Jesus, shall suffer persecution by the ungodly professors of Christ Jesus, who live out of him. Therefore, be valiant for God's truth upon the earth, and look above that spirit that makes you suffer, up to Christ, who was before it was, and will be when it is gone. Consider all the prophets, Christ and the apostles, who suffered and were persecuted, but they were never persecuted as true men, but as deceivers, and yet true. Christ is the same to-day as he was yesterday ; a rock and foundation for your age and generation, for you to build upon. I have written concerning you, (since I heard your letter,) to Friends in Cheshire, to visit you, understanding that you belong to their quarterly meeting ; and therefore I desire that some Friends of your county would go, and lay your suffering condition before the Monthly or Quarterly Meeting in Cheshire. I have written likewise to Richard Davis, that some of that side may go and visit you, and see how your condition is. My love is to you in the Lord, who is your alone support. G. F.

London, the 27th of the Eleventh mo., 1682..

For " The Friend."

Russia—Before Peter the Great.

(Concluded from page 86.)

The conspirator, Chouiski, was chosen his successor, and ascended the throne in 1606. He made himself popular by dispersing the Poles who had sided with the impostor. They, on their part, rose against him, marched upon and invested Moscow, and finally dethroned him. He died in prison at Warsaw, having reigned but four years. After his death ensued an interregnum characterized by the most dreadful barbarities. In the absence of any governing power, the Swedes invaded the country, and disputed its possession with the Poles. From this state of anarchy the Russians were delivered by Pojarski, a simple citizen, who, by his disinterested patriotism, earned for himself the title of the Cincinnatus of the north. Having purged the land from its foes, he magnanimously refused the vacant throne, and induced the people to elect Mikhail Romanoff, a descendant from the Rurik family by the female side. This young man was chosen czar in 1613, and became the founder of the present imperial family of Russia. He got rid of the Swedes and Poles, and having restored peace, directed all his energies to establish his country in tranquillity and prosperity. In spite of some unprosperous wars, he reigned thirty-two years, and died at the age of forty-nine through breaking a blood-vessel. His reign is regarded as an advantageous one for Russia, but it is not free from the stain of cruelty ; as an instance of which it may be mentioned, that upon the capture of a second pretender of the name of Dimitri, he had him cut to pieces in his presence.

On his death, his son Alexis was proclaimed as his successor ; but the government fell into the hands of Morosof, a crafty and avaricious minister. The tyranny of this man produced a revolt, which ended in his enforced retirement. Another pretender to the throne now arose ; he was said to be the son of the false Dimitri. After a vain attempt to enlist the Poles in his favour, he fled to Stockholm, whence he was sold to the czar for a sum of money, and soon after suffered death by quartering at Moscow. Subsequently a revolt, originating in the general distress, broke out in the capital ; and it was only suppressed by the slaughter of the insurgents and the banishment of some thousands of them to Siberia. Alexis died in 1676, having reigned thirty-one years. He was much regretted by his subjects, as, during his life, he effected many reforms for the welfare of the state. He had married twice, having by his first wife two sons, Feodore and Ivan, and several daughters, of whom Sophia was the eldest and most celebrated ; by his second wife he had two children, Peter and Natalia.

Feodore III., the eldest son of Alexis, succeeded him. His reign, though short, was distinguished by one remarkable act. Observing that his nobles were continually quarrelling about questions of genealogy which involved precedence, he ordered all the records of descent to be gathered in a heap in the palace yard, and set fire to them, thus terminating their absurd squabbles. He died after reigning but five years.

Ivan V., the next heir, was an imbecile, but his rights were warmly supported by his sister Sophia, and he ascended the throne. The feuds of the two families into which Alexis had married, however, led to the fiercest rivalries and the most horrible excesses. The strelitz revolted, and being for a time masters, insisted that Ivan should share the throne with his half-brother Peter ; and on the 6th of May, 1681, they were crowned jointly,

Sophia being declared regent on account of the imbecility of Ivan and the youth of Peter.

The young czar Peter, afterwards Peter the Great, was sent by Sophia to an obscure village, and purposely surrounded by loose and abandoned characters, in the hope that he might imbibe their dissolute principles. He happened, however, to come in contact with a Genoese of the name of Leport, a profligate it is true, but a man of action and intellect, with whom he contracted a lasting friendship, and from whom he learnt the art of government. Influenced by his new friend, Peter began a new life. He organized a military force, fortified the village, and turned it into a military school. Finding an old vessel stranded on the coast, he set her afloat again, and, under the guidance of an old Dutch sailor, began the practical study of navigation. In all his studies he was encouraged by his mother, who was extremely bitter against the faction of Sophia. At sixteen, Peter, by her advice, married Eudoxa, daughter of Colonel Lapuchin, who bore him a son. The regent, alarmed at the new character he was acquiring, attempted his assassination. The attempt failed, and, as a consequence, led to her own overthrow; she was compelled to abandon her authority and retire into a monastery. Peter issued a proclamation that her name should not in future appear in any public document; and, with the consent of his elder brother Ivan, who had not participated in the crimes of his sister, assumed the sole sway. Peter manifested the kindest regard for his brother up to the day of his death, which took place in 1696.

For "TheFriend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 77.)

ELIZABETH WEBB.

Elizabeth then states, that although her residence was then not near any meeting of the Quakers, she had, as mentioned before, attended a few in earlier life with her mother. She adds, the doctrine she had then heard, "proved 'as bread cast upon the waters,' which was found by me many days after. The sound of the voice seemed to be in my mind when I was alone, and some of the words came fresh into my remembrance, and both the voice and the words suited the sweet spirit which had the exercise of my mind. I also met with a little book of theirs, which I read, and thought the doctrine therein contained suited with the doctrine of the apostles. So I was convinced,—but had no acquaintance with any of said people, so could not have the privilege of any instrumental assistance. I did not find freedom to open my condition to any of my acquaintance, but got alone as much as I could with my Bible, as I thought I had a better sense or understanding of what I read in a quiet perusal, than I had when I read aloud in the family. I can never forget the sweet visits of the Holy Spirit to my soul many times when I was alone. Oh! it loves a single soul. This divine love is exceeding sweet, clean and pure, my soul tasted of it, in those my young and tender years, even to a rapture several times. But Oh! my poor simple soul dwelt in a weak vessel, and had a subtle adversary near it, and many of his instruments not far off, who used to scoff at my silent behaviour.

"Some of my relations counted I should grow melancholy, or go into a consumption, so they did their endeavour to divert me, and they with my own reasoning prevailed, to my inexpressible sorrow afterward. Reasonings came into my mind after this manner,—I was young in years, and might take a little more delight in the world. It was time enough to live such a strict and sober life,—I might serve God when I was older. Such were my reasonings with flesh and blood which do not love to bear the daily cross. So I let go my inward exercise of watching, and left off retirement, letting my love go outward to worldly things. Vanity sprung up again in my mind, and the Divine, meek, sweet loving spirit withdrew. I could not find it again when I pleased, although I did seek for it sometimes, being pleased with the sweet comforts of its love, though I did not like the daily cross. I did believe it was the Quakers' principle, and that they enjoyed the sweetness of Divine love at their meetings. I sometimes went a great way to a meeting, to seek for Divine refreshment there, but to no purpose. My soul was become dry and quite barren as to any of the heart-meltings which I had felt when I used to walk humbly with my Lord Jesus Christ, whose meek spirit and divine love had been as precious ointment poured into my heart, while I dwelt within with him. Now he had withdrawn himself, and was gone! my soul remembered his sweet savour, and wanted to enjoy it again,—but could find it neither at home nor abroad. The remembrance of these times of darkness, dryness, doubtings and confusions, causeth me to admire the goodness of the Lord in preserving from dispair. If I had mirth one day, I had sorrow on the morrow. In this bewildered, dry, barren state of mind I remained about three years.

"When I was about nineteen years of age [1682], it pleased the Allwise God to send his quickening Spirit again into my heart. His light shined in my mind, and all my transgressions were set in order before me. I was made deeply sensible of my undone state without the great mercy of my offended Father, and my grieved lamb-like Redeemer. Then I mourned over Him whom I had pierced! Then I cried, Wo is me, I have slain the babe of grace, I have crucified the Lord of life unto myself afresh! I had not put him to open shame, for I had been preserved in moral honesty in all respects, so that my acquaintance counted me a very honest, blameless girl. They used to say, I could be trusted with anything, even with untold gold. But the Searcher of hearts found me so guilty, that I doubted there was no mercy for me. The testimony of our Lord Jesus I found, 'Except your righteousness exceed the righteousness of the Scribes and Pharisees, ye shall in no wise enter into the kingdom of heaven.'

"After many days and nights of great sorrow and anguish of soul, such as cannot be expressed by me, having no creature to make my moan unto, it came into my mind to lie down at the gate of mercy, and give up my soul into the hand of God. I said, Oh! Lord, if I perish, it shall be at the gate of thy mercy, for if thou cast me into hell, I cannot help myself. I will give up to thee, do thy pleasure by me. Thy judgments are just and righteous altogether, for I have slighted thy sweet love. Thus I made confession of my transgressions unto my God, and sunk down into the judgments, and in the midst thereof, the Lord remembered mercy. He caused his Divine love to spring up again in my bosom, by which my heart was broken, which before was very hard. The heavenly water of this Spring of Divine life and sweet compassion, refreshed my dry and barren soul. My hope was revived,—for which I did then, and do still, magnify the name of my merciful Father and Holy Redeemer, whose compassions fail not, but are new every morning. Great is his faithfulness. He is merciful in his dealings with the children of men. I am witness of it, many experiences. Glory be given to the na of the Lord my God, and to the Lamb for ev more!"

Of this period Elizabeth, in her letter to Boeh writes: "I entered into solemn covenant with G Almighty, that I would answer his requirings, it were to the laying down my natural life; t when it was shown me, that I ought to take the cross in a little thing, I had like to have be disobedient in the way of small things; l although I had gone through so much inward exercise, yet I was afraid of displeasing my su riors; being then a servant to great persons. was shown me that I should not give flatteri titles to man; and I was threatened inward that if I would not be obedient to the Lord's i quirings, he would take away his good spirit fr me again. I was in a strait; afraid of displeasi God, and afraid of displeasing man; till at last, was charged by the Spirit with honouring m more than God, for in my address to God I us the plain language, but when I spoke to man woman I must speak otherwise, or else they wou be offended. Some would argue that God A mighty being the only One, the singular langua was proper to Him alone; and man being m up of compound matter, the plural was more pr per to him. Oh! the subtle twistings of prov Lucifer that I have seen, would be too many to i sert. Although God Almighty is that only On yet he is the Being of all beings; for in him v live, and move, and have our being. Let th cover be what it would, I had scripture on u side, which they called their rule; and I kno proud man disdained to receive that langua from an inferior which he gave to the Almight So it became a great cross to me, but it was ce tainly a little thing in the way of the progress my soul, until I gave up to the Lord's requirin in this little thing."

Elizabeth now left the family where she ha been residing, and went to reside with a membe of the Society of Friends. She had now the oppo tunity of constantly attending their religiou meetings She was not yet twenty years of ag Her religious exercises were not over,—and a though living and mingling with those with who she had sweet unity, she had yet to withstan many temptations of Satan. She says: "I soo entered into the wilderness again. I went to liv with the people called Quakers, and frequente meetings, and felt Divine refreshment in my sou This was given of God in order to strengthen it i bearing the daily cross, but the natural part too hold of the joy, and (as is usual with the old ma if he is not kept under the cross) turned the gra of God into vanity and elevation of mind. thought, surely now all is well,—I am taken int the favour of God, and am walking among h people. I thought all the hard exercises wer over, and was much elevated in my mind, bu kept it all to myself. It was well I did; for saw afterwards, that this was the way by whic the Ranters went out. After this joy abated, went to retire to seek some solid comfort—but m soul's comforter had withdrawn himself and wa gone. I was left in a vast howling wilderness where I was miserably buffeted by Satan, wh brought darkness into my mind, deprived me o my faith, and brought reasonings to cause me t believe nothing but what I could see with the ey of reason. So, I questioned the truth of all thing that are left on record in Holy Writ, because could not see by the eye of reason how Jesu Christ should be the Son of God. At least Sata prevailed so far, that I was like to sit down in th Jew's opinion of Christ. Oh! the prince of th

per of darkness is a horrible companion for a
man soul. Oh! the horror of darkness that
my soul felt, especially in the night, when many
miles I thought evil spirits were about me, and I
sometimes questioned whether I should live to see
the light of the morning. I found no freedom to
speak of those great troubles to any but the Lord
alone, to whom I cried day and night for faith
and deliverance. Not one tear could fall from my
eyes; my heart was like a fiery oven. Oh! the
trials of sorrow, and nights of anguish my soul
went through, none can be sensible of, but those
who have gone through the like. It was of the
Lord's great mercy I was not lost forever. There
was a little hope at the bottom of my mind, that I
should be brought through these hard exercises,
sometime or other, and this little glimmering of
light and hope was as an anchor to my soul. So
after I had undergone these inward exercises about
three months, it pleased my gracious God, one day,
from on high to cause his Divine light to
shine in my understanding in a more than com-
mon degree. His Divine love sprang up in my
heart, and the Holy Spirit of life and light even
overshadowed my soul. All doubtings and rea-
sonings, and all the powers of darkness fled before
it; I did believe in the power of God, and was
able to say, 'Oh! Almighty God! thou that
madest the world by thy word, art able by the
same word of power to take upon thee what form
in thy pleasest.' Oh, that the Lord should lay hold
of our nature, in order to unite us to himself.

The sense of this laid me very low. This
great visitation, and the sense of this great con-
descension of the Lord Almighty to me, and to
mankind, brought me under great obligation to
love and love Him and Jesus Christ, his only Son,
above things in this world. So, I came to know
both the true and saving faith which giveth vic-
tory over Satan, is the gift of God. It sprung up
in me, in his Divine love, with which he was
pleased to fill my heart at that time, and ever since
I have found by experience, that the more I have
given up my heart in love to God and Jesus
Christ, his only Son, my Redeemer, who said
without me ye can do nothing, the stronger my
faith hath been in him."

(To be continued.)

Selected.

Christ had his sorrows. When he shed
His tears, O Palestine, for thee.—
When all but weeping females fled,
In his dark hour of agony.

Christ had his sorrows—so must thou,
If thou wilt tread the path he trod,—
Oh, then like him submissive bow,
And love the sovereignty of God.

Christ had his joys—but they were not
The joys the son of pleasure boasts;
Oh, no! 'twas when his Spirit sought
Thy will, Thy glory, God of Hosts!

Christ had his joys—and so hath he
Who feels his Spirit in his heart,
Who yields, O God! his all to Thee,
And loves Thy name for what thou art.

Christ had his friends—His eye could trace
In the long train of coming years,
The faithful children of his grace;
The full reward for all his tears.

These are his friends—and these are thine,
If thou to him hast bowed the knee;
And where these ransomed millions shine,
Shall thy eternal mansion be

The faithful witness in my breast,
Gives to my conscience, peace and rest,
When'er His will I do:
But soon his indignation burns,
And from me his blest presence turns,
When I *mine own* pursue!

The following essay was found after his decease, among the papers of our late valued friend, Samuel Leeds, of New Jersey. It had been prepared by him for this Journal, to which he not unfrequently acceptably contributed, and we think bears marks of the deep religious concern for the welfare of our religious Society, and of that heavenly Charity which he had long manifested to be the abiding clothing of his Spirit. As a legacy to the readers of the Friend, we have no doubt it will be doubly valued by them.—Eds. of Friend.

For "The Friend."

Society of Friends.

George Fox having become established in the Truth by faithfulness to the inward manifestations of the Light and Spirit of Christ Jesus, "Waxed strong and bold" in the work of the Lord. Travelling through different parts of England, Ireland and Scotland, and also in various places on the Continent of Europe in the work of the ministry, the Lord was with him; and in every place where he came, if not before he came to it, he had his particular exercise and service shown to him; so that the Lord was his leader indeed. And it was not in vain that he thus travelled, God in most places sealing his commission by the convincement of some of all sorts, as well publicans as sober professors of religion.

Many of these, by being faithful to the same Divine Teacher, were prepared to receive the same blessed doctrines of the Gospel of Christ, and in due time the mouths of some of them were also opened to publish the glad tidings of the Gospel of peace and salvation in the power and demonstration of the same Holy Spirit; turning many from darkness to light, and from the power of Satan unto the power of God. These being co-workers with George Fox in the spreading of the Gospel of Christ, the Truth was published far and wide among many people, directing them to Christ their Heavenly Teacher, so that by being obedient to this teacher in their own hearts, they might come to sit under their own "vine and fig tree," where none could make them afraid. Hence these faithful labourers in the Lord's vineyard, keeping to the light, and walking in the path of self-denial, were brought into the blessed unity of the Eternal Spirit, and into the one true and saving faith of God, which works by love to the purifying of the heart. Being living members of the church militant, they were cemented together by the bond of Gospel love and fellowship; and being faithful in assembling themselves together to worship God in spirit and in truth, they were favoured oft-times with the company of the Son of God, to the refreshing of their souls, and to their mutual comfort and joy in the Holy Ghost, always keeping in remembrance that one was their master, even Christ, and all they were brethren. Our early Friends being thus united together, and rooted and grounded in the pure love of God; it was said of them: "They will meet, they will help, and stick one to another." And it was common to hear some say, "Look how the Quakers love and take care one of another." If loving one another, having an intimate communion in true religious feeling, and a constant care to meet together for the worship of God, and to help one another, be any mark of primitive christianity they had it, blessed be the Lord, in an ample manner.

One most excellent trait in the character of our early Friends was, that they not only loved one another, but they loved their enemies. This they both taught and practised, for they not only refused to be revenged for injuries done them, and condemned it as of an unchristian spirit, but they did freely forgive, yea help and relieve those that had been cruel to them, when it was in their power to have been even with them, of which many and singular instances might be given: endeavouring, through patience to overcome all injustice and oppression; both preaching and practising this doctrine as christians, for others to follow.

How this noble character of our primitive Friends, —obtained through patience and suffering for the testimony of Jesus,—corresponded with the blessed doctrine and great example of our Lord who, when condemned to die by the hands of wicked men, prayed "Father forgive them for they know not what they do." It surely would be well for Friends of the present day seriously to reflect and deeply consider this unalterable doctrine of the Gospel of Christ, spoken by himself, "If you forgive not men their trespasses, neither will your Heavenly Father forgive you your trespasses."

It appears evident in many instances, even among the members of the Society of Friends, in the present day, that the doctrine of forgiveness, is too little regarded, and lived up to by far too few. The reason is evident, Friends are not that lowly despised people they were in the beginning, viz: "They came forth low, and despised and hated, as the primitive christians did, and not by the help of worldly wisdom or power, as former reformations in part have done; but in all things it may be said this people were brought forth in the cross, in a contradiction to the ways, worships, fashions, and customs of this world; yea, against wind and tide, that so no flesh might glory before God."

"They could have no design to themselves in this work, thus to expose themselves to scorn and abuse, to spend and be spent; leaving wife and children, house and land, and all that can be accounted dear to men, with their lives in their hands, being daily in jeopardy, to declare this primitive message revived in their spirits by the good Spirit and power of God; viz. "That God is light, and in him is no darkness at all; and that he has sent his Son a light into the world to enlighten all men in order to salvation; and that they that say they have fellowship with God and are his children and people, and yet walk in darkness, (viz. in disobedience to the light in their consciences, and after the vanity of this world,) they lie and do not the truth. But that all such as love the light and bring their deeds to it, and walk in the light, as God is light, the blood of Jesus Christ, his son, should cleanse them from all sin."

It cannot be supposed that we of the present day can get along rightly in any other way more easy or different from the lowly path of self-denial in which our predecessors found it their duty to walk; but it is evident that many of our Society, for want of abiding in the same humble path, under the restricting influence of the cross of Christ, in which we were brought forth as a religious body of people; have taken great liberty in dress and address; and widely departed from the simplicity of the Gospel of Christ, which so conspicuously shone in the beginning among the members of this Society. Hence, by despising the cross, many have become earthly minded, and waxing fat, like Jeshurun of old, have "kicked," forsaking "God that made them, and lightly esteeming the Rock of their Salvation;" thus manifesting to the world and their brethren, that they are not all of Israel that are called by the name of Israel. These revolting and careless sons and daughters in the Society, always have been cause of much exercise and painful travail to the living members of the body; because these desire the salvation of their souls as the Apostle did when he said, "Brethren, my heart's desire

and prayer to God for Israel is, that they may be saved."

Joshua, the servant of the Lord, before he died gathered the Children of Israel together and reasoned with them thus: "If it seem evil unto you to serve the Lord, choose you this day whom ye will serve, whether the gods which your fathers served, that were on the other side of the flood, or the gods of the Amorites, in whose land ye dwell: but as for me and my house, we will serve the Lord." S. L.

New Jersey, 1855.

The Music of Insects.

About midsummer, the majority of the singing birds have become silent; but as one voice after another drops away, a new host of musicians of a different character take up the chorus, and their melodies are suggestive of the early and later harvest, as the voices of the birds are associated with seed-time and the season of flowers. In our climate the voices of no species of insects are very loud; but, when their vast multitudes are united in chorus, they may often be heard above the din and clatter of a busy town. Nature is exhaustless in the means by which she may effect the same end; and birds, insects, and reptiles are each provided with different, but equally effective instruments, for producing sounds. While birds and quadrupeds make sounds by means of a pipe connecting with their lungs, the frogs are provided with a sort of bag-pipe and the insects represent, in their respective species, the harpist, the violinist and the drummer. Thus, there are several species that make sounds by the vibration of a membrane attached to their sides, or to the shoulders of their wings. Such are most of the crickets and grasshoppers. Others of the same tribes rub their legs against a vibrating appendage connected with their sides, in humble imitation of the violin players; lastly, the drumming insects, like the woodticks, are provided with a little hammer, which they strike against the ceiling that forms their retreat. It seems to me that no man can be indifferent to the sounds and music of insects. Even the buzzing of flies about one's chamber or sitting-room, has a soothing and tranquillizing influence, and may be regarded as one of those circumstances provided by nature, to relieve the world of that dead silence, which would otherwise render this earth a dreary and melancholy abode. We are so formed, that every sound in nature, except her notes of alarm, by habit, becomes pleasing and assimilated to music; and in the silence of winter, the increased delight afforded us by every remaining sound, is an evidence of this truth. The tiny hammering of the woodtick in the ceiling, the buzzing of flies, and above all, the chirping of the cricket on the hearth, are among the poetical sounds that are associated with winter days at home, as the voices of the raven, the jay, and the woodpecker, are suggestive of winter in the woods.

The fly, the gnat, the beetle and the moth, though each utters a sound that awakens many pleasing thoughts and images, are not to be ranked among singing insects. The latter comprehend the locusts, the crickets and the grasshoppers, that seem appointed by nature to take up their little lyre and drum, after the birds have laid aside their more musical pipe and flute. Though certain insects are supposed to make their sounds by means of wind, their apparatus is placed outside of their bodies, and as they have no lungs, the air is obtained by a peculiar inflation of their chests. Hence, the musical appendages of such insects are constructed on the principle of the jews-harp, and the reeds in a reed organ. The grasshopper, in all ages, has been noted for his musical propensities; and is frequently represented as playing on the harp in certain ancient emblematical vignettes. Each *genus* of these insects has a peculiar modulation of his notes. The common green grasshopper that, during the Eighth and Ninth months, fills the whole atmosphere with his din, is found chiefly in the lowland meadows which are covered with the native grasses. The grasshopper modulates his notes somewhat like the cackling of a hen, uttering several chirps in rapid succession and following them with a loud, spinning sound, that seems to be the conclusion of the strain. The strains are continued incessantly, from the time when the sun is high enough to dry the dews, until dew-fall in the evening. These players are delighted with the clear, bright sunshine, and sing but very little on cloudy days, even when the air is dry and warm. There is another species of grasshopper, with short wings, that makes a kind of grating sound, by scraping his legs, that serve for bows, against his sides, that represent, as it were, the strings of a viol. If we go into the whortleberry pastures, we may hear still another species, that makes a continual trilling, like the note of the hair bird, and often continues the sound half a minute or more, without apparent rest. This insect reminds me of the louder shrilling of those species which are heard in the Southern States. The note of this grasshopper is not so agreeable as the notes of those whose strains are more rapidly intermittent.

The American locusts make their peculiar sounds by inflating air into their bodies, and expressing it between two small apertures, situated a little below the base of their wings. These holes lead from a musical table, on each side of which are five or six thin bars, connected by exquisitely fine membranes. There is an insect of this tribe that is seldom heard until midsummer, and then only during the middle of the warmest days. This note is a pleasant remembrancer of sultry summer noondays, of languishing heat and refreshing shade. It begins low, and increases in loudless until it is almost deafening, and then gradually dies away into silence. The most skilful musican could not perform a more delightful *crescendo* and *diminuendo*. It has a peculiar vibratory sound, that seems to me highly musical and delightful. The insect that produces this note is a grotesque looking creature, resembling about equally a grasshopper and a humble-bee.

The black crickets, and their familiar chirping, are well known to everybody. It is an insect of this tribe that is celebrated in English romance as the "cricket on the hearth." The American species do not so habitually frequent our dwelling houses; but they are all around our door-steps, and by the wayside, under every dry fence and every sandy hill. They chirp night and day, and more or less in all kinds of weather. They commence their songs many weeks before the grasshoppers, and continue them to a later period in the autumn, not ceasing until the hard frosts have driven them into their retreats, and silenced them by a torpid sleep.

The note of the katydid, which is a drumming sound, has less music in it than that of some of the other insects I have described. In our literature, no other species has become so widely celebrated, probably on account of the fancied resemblance of his notes to the word *katydid*. To my ear, an assemblage of these little musicans, all engaged in uttering their peculiar note, seems more like the hammering of a thousand little smiths, in some busy hamlet of insects. There is nothing melodious in these sounds, and they are accordingly less suggestive of poetical thoughts than those of the green nocturnal grasshopper, that is heard at the same hour, and in similar situations.

The nocturnal grasshopper, sometimes ca[lled] the August pipers, commence their chirping ab[out] the second week in the Eighth mo. These are [the] true nightingales of insects, and the tribe t[hat] seems to be most worthy of being consecrated [to] poetry. There is a singular plaintiveness in th[eir] low and monotonous notes, which is the charm [of] the late summer and early autumnal evenin[gs], and there are but few persons who are not affec[ted] by these sounds with a remarkable sensation [of] subdued but cheerful melancholy. This ef[fect] does not seem to be the result of association, [so] much as that of some peculiar cadence or mo[du]lation of the sound.

I believe it has not been generally noticed, t[hat] the notes of these insects are commonly in unis[on]. These nocturnal pipers are the loudest singers [of] our indigenous insects, and their notes are alm[ost] invariably on octave lower than those of the bl[ack] crickets. It is also worthy of notice, that they [al]ways vary their key-note according to the te[m]perature of the atmosphere, with certain [de]grees. They are evidently dependent on a cert[ain] amount of heat for their vivacity, and beco[me] more or less torpid as the temperature of the [at]mosphere sinks below a certain point.—*Hortic[ul]tural Journal.*

For "The Friend

The present is a day of much discouragem[ent] in our Society. When we take an outward v[iew] of its condition, there seems to be much to c[ause] down the honest and sincere-hearted, who of [old] go mourning on their way, and are ready to c[ry] "Spare thy people, O Lord, and give not thy he[ri]tage to reproach."

But is it profitable for us to dwell too mu[ch] upon our condition as a people? or to be queryi[ng] in our minds, what shall this man do, or wh[at] shall that man do, or what would be the proj[per] course for us to pursue as a Society?

Dear Friends every where, let us leave the iss[ues] of these things with the Lord, and let us end[eav]our individually to turn inward unto Christ, t[he] Rock, upon which the true Church is built. L[et] us be willing to put our trust in him, and he w[ill] make us more than conquerors in the end. H[is] encouraging is the promise to such as are th[us] concerned, that they that trust in the Lord shall [be] as Mount Zion, which cannot be removed, b[ut] abideth for ever.

How necessary it is for us in this day of shakin[g] to endeavour to dwell near unto Christ; to kn[ow] an abiding in him and he in us. Let us endeavo[r] on all occasions, to keep to the word nigh in t[he] heart and in the mouth. All difficulty wou[ld] then be removed from amongst us. If all we[re] under the influence and government of the Prin[ce] of Peace there would be no confusion within o[ur] borders, our condition then as a people would ho[ld] forth the language, "Look upon Zion the city [of] our solemnities; thine eyes shall see Jerusale[m] a quiet habitation, a tabernacle that shall not [be] taken down."

The enemy of all good has many stratagems [to] draw us away from a dependence upon God, a[nd] upon that Divine Light, which hath appeared un[to] all men to lead and guide them, and where [we] cannot induce to undervalue the Light within [us] and lay waste the necessity of a dependence up[on] it, in order to direct our steps aright, he is r[eady] wanting in endeavouring to beget in us an und[ue] dependence one upon another. The newly co[n]vinced, and those who are young in experien[ce] are very liable to be caught in this snare. Af[ter] their hearts have been tendered and contrit

re the Lord, and the incomes of Divine good felt to attend them from day to day, the Most- h, in his wisdom, often sees meet to with- w himself for a season, in order to try their h: it is at such seasons as these, that some, want of a patient, abiding trust in the Lord, in to seek strength and comfort in some other . They begin to look to the poor instruments help, and sorrowful it is, there are those who, ugh weakness or some other cause, are ready give improper encouragement to those who thus under the refining hand; which tends to e such above the pure witness for Truth in r own hearts; they begin to compass them- es about with sparks, and to warm themselves fire either of their own or of another's kin- g. It is said of such, that they shall lie down orrow.

) for more of an abiding trust in the Lord, for he Lord Jehovah is everlasting strength. It is alone that is able to bring any through to his se, and to the edification of the Church. Dear ends, and especially you who like myself are ng, and sometimes have desires raised in our rts, according to our measures, for the welfare Zion and the enlargement of her borders, let e concerned to keep down to our several gifts; us not suffer the approbation and the regard hose who love that which is good, to exalt us ur own eyes; let us look to the rock from nce we have been hewn, and to the hole of the from whence we have been digged, let us walk umility and godly fear, accounting ourselves othing and acknowledging Christ as all in all.

nester County, Eleventh mo., 1855.

For "The Friend."

Liberia.

his infant Republic appears to contain within lf, the elements of permanency and progress. ry philanthropic mind must desire that the lt of its anticipated growth, may be the eleva- and improvement of the African race. The owing notice of its present condition is taken n the Ledger.

Including the Maryland colony, its territory ends from the Shabac river on the North, (near British colony of Sierra Leone,) a distance of t six hundred miles toward the South and t, between the parallels of 4½ and 7½ degrees th latitude. Perpetual verdure covers the nd, while the face of the country is diversified gentle hills and sloping valleys. Says Bishop tt:—'The climate, in my opinion, is healthy, h more so than that of our (American) South- coast. I never saw a more vigorous and thy people than the natives, nor did I ever see human form better developed. The acclimated nists, too, enjoy excellent health. As to emi- nts from another clime, they must pass through ocess of acclimation, which will, in general, severe or otherwise, according to their own its.'

Between twenty and thirty rivers, flowing into Atlantic, water the country—the chief of which the St. Paul's, Junk, St. John's, Mechlin, ou, and the Cavally. On the St. Paul's, several ns have been commenced, and its banks are lded with many comfortable brick dwellings. wards of four hundred farms are located on this r, on which reside more than three thousand ivators. Land is sold at forty and fifty dollars acre. In 1852, about nine thousand pounds of ar were made on the St. Paul's; it is of good lity, light in color, and as well granulated as best Porto Rico.

Besides the great staples of sugar and coffee, e can be raised, to an indefinite amount, rice, cocoa, ginger, arrowroot, pepper, ground-nuts and indigo. Nearly all our garden vegetables and those peculiar to the tropics may be abundantly cultivated. A great variety of fruits abound, among which may be found the banana, pine apple, guava, lemon, orange, tamarind and coca nut.

"There are immense forests of woods, suitable for building and furniture. The camwood is sought after in Europe and the United States as a dye. The most common tree is the nut-bearing palm, from which is extracted the palm oil, now most extensively exported to France, Germany, England and America. Eighty thousand tons were exported from the African coast in 1852 and 1853. Education is encouraged and cared for, and the refining light of Christian truth diffused throughout the length and breadth of the land. Where thirty years ago the degraded heathen native built his hut and offered human victims to his false gods, or the tangled bush overspread the cattle, a civilized nation dwells, composing twenty towns and villages, the happy abode of ten thousand freemen. The public buildings, the school-houses, and the churches, evince the elements of an enlightened Christian community, destined to afford peace, happiness and full manhood to its worthy dwellers, and truth and civil and spiritual life to all Africa."

For "The Friend."

There can be no reasonable objection to the republication of The Christian Appeal for the Ancient Doctrines of our religious Society, in the columns of "The Friend," and there are doubtless many who will be glad of its appearance therein; for although the erroneous views which it is its design to refute, are not altogether the cause of our lapsed condition as a people, the encouragement and entertainment of them will have the effect to settle us in a literal faith, and to make us content with the shadow of religion, without its soul sustaining substance. How can any well-wisher of the Truth, and of our religious profession be found resisting the testimony which is borne in this Appeal, against the undeniable tendency to underrate the power of the gospel, by exalting the letter above the Spirit.

There can be no surer ground of unity, peace, and hope, than in the faithful maintenance of those Christian doctrines and testimonies, which were committed to our worthy forefathers to uphold; but in the endeavour to do this, there is danger of substituting the wisdom and zeal of the creature in the place of that wisdom which is from above—which "is peaceable, gentle, easy to be entreated, full of mercy and good fruits, without partiality, and without hypocrisy"—whereby judgment will be turned away backward. The exercise of a party spirit, in the work of reformation, will ever oppose a barrier against the preservation or restoration of gospel unity and harmony, for these can only be maintained under the prevalence of that charity, which "suffereth long, and is kind, thinketh no evil, is not puffed up, doth not behave itself unseemly, but beareth all things, hopeth all things, and is not easily provoked." And happy will it be for us, as a people, if we are not offended in Him, who hath called us to suffer for his cause and testimonies' sake; but choose to do this rather than seek to deliver ourselves by the exercise of our own wills and wisdom—acknowledging the share which we may *individually* have had in producing our present difficulties, and not looking too much to others for this, or for their remedy.

The following remarks made in reference to a communication inciting Friends to an individual search of heart for the cause and remedy of our lapsed condition, it is to be hoped, may represent the feeling and concern of many amongst us. "With the spirit of it I have united, as it seems to have no favourite point to carry, but endeavours to gather the minds of Friends to the true place of waiting, and fountain of wisdom in ourselves—not depending upon any man, but trusting our cause to the Lord alone, which advice has much accorded with my desire, and I have felt very sensible that I dare not claim for myself an exemption from all share in the cause of our troubles; and therefore desire much more to feel the evidence of forgiveness for myself, than to be found condemning any class of my brethren. There has no doubt been a general lapse, and happy will it be for all who are so honest to themselves as to be found 'minding their own business.'" This will no doubt be the exercise and concern of all who are found faithful unto Him, who came not to condemn, but to save the world, not to call the righteous but sinners to repentance.

For "The Friend."

Sheep in France and Great Britian.

The number of sheep in France and the United Kingdom is estimated at 70 millions, viz: about 35 millions in each. In France, the sheep require nearly twice as many acres of land for their support as they do in England, and the average return of an English sheep farm is said to be fully six times greater than that of a French one. In France, wool is looked to as the principal produce and meat the accessory; in England, the the reverse is the case. About 10,000,000 sheep are slaughtered annually in the British Isles, which yield an average weight of 80 lbs. of neat meat. In France the average is only about 40 lbs. The value of the British flocks is estimated as follows,

35,000,000 sheep at 25s. each, £43,750,000
Wool, 4 pounds each, at 10 cts. per lb. £5,833,333

£49,583,333

Resolutions.—Always to take the part of an absent person who is censured in company, so far as truth and propriety will allow.

Never to think the worse of another on account of his differing from me in political and religious opinions.

Not to affect to be witty or to jest so as to wound the feelings of another.

To aim at cheerfulness without levity.

Never to court the favour of the rich by flattering either their vanities or their vices.

I felt a degree of languor on my animal spirits, and once or twice, in the course of the day was grieved to perceive, that my manner and spirit savoured of hastiness—especially when speaking of those whom I thought were acting wrong. I hope I mourned over this, and made a fresh application to the blood of sprinkling.—When shall these Canaanites be driven out of the land? When shall I possess that invincible patience and meekness which no provocation can move.—*From Lady Mansfield's Diary.*

Aluminum, the New Metal from Clay.—The large bar of this new metal, presented by the Emperor of the French, on exhibition at the Polytechnic Institution, London, evokes the admiration of all who see it, not only on account of the external silvery appearance, but also from its extreme lightness, toughness, malleability, and durability, difficult fusibility, or absolute indifference to that tarnisher or destroyer of metals, oxygen, a stern resistance to the action of water, and a chemical contempt for that bane of large cities, sulphuretted hydrogen. Aluminum, it is reason-

able to expect, will form all our culinary vessels; no more copper or brass pans to poison our acid sauces, pickles, condiments, and confectionery.

If this description of aluminum, which, although discovered many years ago, by the late Sir Humphrey Davy, has been very little known, is correct, it possesses many properties which are not found in silver. The latter is not only very expensive, but it is easily tarnished by the yolk of an egg, sulphuretted hydrogen, &c., and its weight is about four times greater than that of aluminum. The colour of the new metal, we understand, more nearly approaches the bluish white of platinum than the purer white of silver. Its specific gravity is only about 2 1-2 times that of water; that of silver being nearly 11, and of platina 22 times.

THE FRIEND.

TWELFTH MONTH 1, 1855.

We have received from several quarters, requests for the republication of certain extracts from the writings of different Friends; which we will attend to, as opportunity presents for the introduction of that description of matter into our columns. It does not do, to crowd them with too a large a portion of that kind of reading.

We not unfrequently receive from publishers, copies of works just issued from the press, with the expectation of their being noticed in our Journal. It is rarely we have time for their perusal, and cannot express an opinion without examination. As many of the works are published in New York, we have no opportunity for returning them. Works of fiction, several of which have been left at the office, are neither read, nor noticed by us, and we should much prefer their being withheld.

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to Eleventh month 10th.—The needless excitement in England, in relation to a war with the United States, had subsided. The British Government has prohibited the exportation of saltpetre from the territories of the East India Company, to any ports except London and Liverpool. It has also been ordered that vessels loading in England with saltpetre or nitrate of soda for the United States, shall discharge the same. The cotton market was active, owing to the scarcity of current qualities, and prices had advanced from ⅛ to ¼*d*. Sales of the week, 77,500 bales. The stock of American in port was 195,000 bales. Breadstuffs had considerably advanced; wheat was 3*d*. higher; flour 1*s*. Philadelphia and Baltimore flour was quoted at 44*s*. to 45*s*. The London money market was easier. Consols had advanced to 88⅞.

The War.—Strenuous efforts were being made to draw Sweden into the alliance against Russia. General Canrobert was at Stockholm, charged with this mission. The Austrian Gazette states that a French camp of 50,000 men was being formed at Silistria. From the Crimea, there was little to report. The Anglo-French army at Eupatoria had made an incursion into the country, and returned after burning several villages, and many farm-houses and stores along the route. St. Petersburg despatches say that the Russian army is provisioned for eight months. The Czar and his brother Constantine witnessed the capture of Kinburn from Oczakoff. The former returned to St. Petersburg direct from Nicolaieff. General Todtleden was providing for the safety of Nicolaieff, by the erection of batteries below Passka, where the river is only 600 fathoms broad. The inhabitants of Cherson and Nicolaieff have been informed that those cities are liable to be attacked, and large numbers of the people have gone into the interior, at the expense of the Government. A grenadier corps had arrived at Simpheropol, with 8000 wagons drawn by oxen, and laden with provisions for the Russian army, which is now stated to number 200,000 men at all the positions in the Crimea.

FRANCE.—The monthly statement of the Bank of France is said not to be unfavourable in its general character, although it will show a further diminution of one million pounds sterling in the stock of bullion, which has sunk in all more than one hundred and twenty millions of francs. The great "Exposition" was to close on the 18th.

INDIA AND CHINA.—At the latest dates, the insurrection of the Santhals had not been quelled. The religious quarrel at Oude was still active. From Shanghai, the dates were to Ninth mo. 7th. A large and well armed piratical fleet had been destroyed or dispersed to the northward of Shanghai, by a British man of war. The passenger traffic between Shanghai, California, and Port Philip, had been almost annihilated by the restrictive measures lately adopted against Chinese immigration. In the north of China, the rebels had been defeated in several districts. The insurrection at Canton had been virtually suppressed, and trade was reviving. Vast numbers of persons accused of being implicated in the rebellion, were still subjected to torture and decapitation. The number executed at Canton within the past year, is stated at 70,000.

MEXICO.—At the latest accounts, General Alvarez continued to fill the post of Provisional President. He had removed the seat of Government to Tlalpan, about 80 miles south-west of the city of Mexico. Telegraphic communication had been established between the two places. The salaries of all the employees of the Government have been reduced one half, and the expenses of the military establishment, which formerly amounted to $2,000,000 per month, have been reduced to about $400,000.

UNITED STATES.—*Foreign Trade.*—During the year ending Sixth mo. 30th, 1855, 9315 American and 10,012 foreign vessels entered the ports of the United States, from other countries. The American vessels had a tonnage of 3,861,391, and were manned by 137,251 men and 557 boys; the foreign had a tonnage of 2,083,948, and the crews consisted of 99,891 men and 916 boys. These figures correspond nearly with those for the previous year, there being a small increase in the number of vessels. Out of $533,600,000 in value transported between American and foreign ports during the last year, over three-fourths were carried in American bottoms, the freight on which is to the credit of this country, whether collected here or abroad.

The Whaling Fleet.—The late California papers bring reports from one hundred and eighty-two ships of the north-west whaling fleet, or nearly all the whale ships in that quarter. It is computed that the average number of barrels of oil taken by each vessel is not far from 500; and the New Bedford Shipping List considers the chances good for swelling this number to 700 barrels before the close of the season.

New York.—No specie was shipped during the week ending the 24th ult. Sales of Southern red wheat on that day, at $2.19; white Canadian, $2.30. The firm of Grinnell, Minturn & Co., (of which Henry Grinnell, who fitted out the two Arctic expeditions in search of Sir John Franklin, is a member,) will clear, it is stated, the present season, three quarters of a million of dollars upon orders from the British government for grain, sent to that house, by reason of H. Grinnell's connection with it. Deaths for the week, 350.

Philadelphia.—Mortality last week, 159.

Miscellaneous.—*Bank of England Notes.*—It is stated that Bank of England notes, payable sixty days after sight, have been sent to this country to a large amount. It is supposed they are intended for the purchase of breadstuffs for shipment to Great Britain, and to postpone the exportation of specie from London, for that purpose.

Valuable Kids.—Dr. J. B. Davis, of South Carolina, recently sold fifteen three quarter breed Cashmere kids, seven months old, at $200 each.

Kansas.—The population is now stated to be between thirty-two and thirty-five thousand. Large numbers of settlers were arriving from all quarters.

The Mobile Advertiser says that, at the coming session of the Alabama Legislature, a propositon to appropriate $100,000 from the Treasury, to aid in making Kansas a slave State, will be warmly pressed upon that body.

Ship Building on the Lakes.—There has been 129 vessels launched at different points on the Lakes, this season, with an aggregate tonnage of 46,567, of which 9055 were of steam, and 32,511 sail.

Tea.—During the last season, 83,199,190 lbs. of tea were exported from Canton to England, 5,895,490 lbs. to Australia, and 31,007,115 lbs. to the United States. Only 2,491,509 lbs. were exported to Continental Europe.

Improvement of Ireland.—In a late speech of the Earl of Carlisle, Lord Lieutenant of Ireland, he says, "The condition of Ireland is at present such, on the whole, as gives rise in my mind to the strongest feeling of satisfaction and hope. Agriculture is undergoing an immense development. The general condition of the people is strikingly advanced in ease and comfort; they are better fed; they are better clad, and the new complaint in Ireland is, that there are almost too few to work, and too few mouths to be fed."

Russian America.—The Hudson's Bay Company has guaranteed to the Russian authorities the unmolested possession of the Russian territory upon this condition, while the war shall last, upon condition that the peaceful and trading operations of the former in the neighborhood of that territory shall continue, during the same period, to be free from attack by the latter. We also learn from the same authority, that the British Government has sanctioned this guarantee, by which the Hudson's Bay Company are saved the expense of strengthening their posts by any military defences during the present war, while they obtain the absolute monopoly of the fur trade in that quarter—the Russian company being entirely cut off.

The Condition of London.—A correspondent of the National Intelligencer says, that the street population of London are in an excited and restless condition, and have more than once, of late, overawed the Government. They were first called out by the resistance to the Sabbath observance bill, and afterwards assumed a different character, and now demand bread or employment. They meet on the First-day of every week, in great numbers in Hyde Park.

RECEIPTS.

Received from E. Underwood, F., N. Y., $2, vol. from P. Boyce, Vt., $2, vol. 29; from Geo. Michener, agt., O., for P. W. Leake, $4, vols. 27 and 28; from J. Huestis, agt., O., for Robt. Todd, Jesse Hiatt, John, Debby Dewees, $2 each, vol. 29; from Thos. P. N. J., per Wm. M., $2, vol. 29.

WEST-TOWN SCHOOL.

The Committee charged with the Oversight of the Institution, will meet at the School on Fourth-day, the 5th of Twelfth month, at 10 o'clock, A. M., and the Committee on Instruction, the preceding evening, at half past 7 o'clock.

The Visiting Committee attend at the School on Seventh-day, the 1st of the month.

THOMAS KIMBER, Clerk.

For the accommodation of the Visiting Committee, besides the regular stage on Seventh-day morning, there will be a conveyance at West Chester, on the arrival of the afternoon cars. Conveyances will be at West Chester, on the arrival of the morning and afternoon cars on Third-day, the 4th inst. The cars leave the Depot at half past 7, and half past 2 o'clock.

Friends' Boarding-School for Indian Children, at Tunnesassah.

Two women Friends are wanted at this Institution to assist in the family.

Also, a man Friend to aid in carrying out the concern for the improvement of the Indians.

Application may be made to JOSEPH ELKINTON, 377 S. Second street,
THOMAS EVANS,
Philad., Eleventh mo. 1st., 1855. 180 Arch street.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in this Institution.

Application may be made to either of the undersigned members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS,
SAMUEL BETTLE, Jr. } Philada.

DIED, on the 2d ult., at Tuckerton, N. J., MARY MATHIS, in the 54th year of her age; a member of Little Egg Harbour Monthly Meeting. At times during her illness her sufferings were very great, (particularly a few weeks before her death,) which she bore with patience and resignation. Her friends are comforted in the belief, that she has, through mercy, been permitted to enter into the heavenly mansion.

——, at his residence in Burlington, N. Jersey, on the 16th of the Eleventh month, 1855, STEPHEN GRELLET, in the 83d year of his age; a member and minister of Burlington Particular and Monthly Meeting.

Appeal for the Ancient Doctrines of the Religious Society of Friends.

(Continued from page 90.)

h the same proportion that the Holy Scriptures nduly exalted, must the importance and neeity of the immediate guidance of the Holy rit, as distinct from that of Scripture, be pracly diminished.

h the following passages, which speak of perto whom the outward knowledge of the comof Christ has not been made known, the lanage is far from conveying the clear and distinct owledgment of the universal and saving light, ch has always been made by our religious Soe. For example, it is said in page 98 of the dable Evidence—

"o conclude, the *light of Scripture* respecting the rnal government of God, and future rewards and nishments, as well as respecting *the law itself*, far eeds the *light of nature*, both in clearness and exit. Yet with *that fainter, narrower light*, it is in just ordance, in *perfect harmony*."

What is meant by this "light of nature" is exded in a note on page 366 of the Essays on istianity, where that phrase is used:—

beg it may be understood," it is there said, "that the light of nature I mean simply, the light which d has *communicated to the souls of men*, independtly of an *outwardly revealed religion*."

hat is, according to the writer's own use of the rs, independently of *Scripture*. If allusion is ade in the above passages to the universal and ving light, which our Society has always believed ine in the heart of every man that cometh t the world, it is surely a most unscriptural and roper way of speaking of it, for it is here asred that the light of Scripture far exceeds that gt. But the Divine and saving light, the grace od which brings salvation, and hath appeared all men, is no "*light of nature*." "It is no ral principle or light," says Barclay, "for ne is nothing," adds he, "required of man and eful to man, which this grace teacheth not." tems clear, however, from the above, and other ages, that the doctrine here maintained is, there is some natural faculty or power of the an mind which is capable of distinguishing een right and wrong, which is styled a moral e, and which is a fainter and narrower light that of Scripture, but still a light. That this , appears from the following passage in pages and 58 of a work entitled, "Thoughts on dit and Discipline," where it is said:—

"The main distinction, however, of the human soul—"*the ground of its responsibility*, and therefore the strong-"est internal evidence of its future life of happiness or "misery, is the *moral faculty by which we are enabled to per-"ceive and understand the law of our God*. God is a Holy "Being; he has *written the law of righteousness on the heart "of man*, and we have every reason to believe that this "internal revelation is a work of that Holy Spirit, who "has developed the same law in *all its branches and par-"ticulars* through *the medium of Scripture*. The faculty "by which the mind of man perceives this law, and is "compelled to confess its rectitude, is called the *moral "sense*."

In page 92 of the Portable Evidence it is said—

"Furnished as we are by the Author of our being "with a *moral principle*, it is impossible for us to con-"ceive that God will reward and punish mankind in a "future world by any other than the moral rule. We "should be utterly at a loss to account for the contrary, "which would be directly opposed to that sense of right "and wrong which he has so graciously *interwoven with "our very nature*."

Now a moral sense interwoven with our very nature cannot be the light of the Spirit of Christ, because this is wholly distinct from man and all his faculties. To suppose that man has a sense of right and wrong interwoven with his very nature, by which he ascertains the law of God respecting his duty to him, is to suppose that there is a faculty in the fallen nature of man which can inform him of this duty. But man does not come into the world in possession of a Divine law, or with a sense of right and wrong interwoven with his natural constitution. It is written from time to time upon his heart by that Spirit which is his appointed guide, and was the purchase of the Redeemer's blood, and the free gift of his grace; for the gospel covenant is, "I will also give thee for a light to the Gentiles, that thou mayst be my salvation to the ends of the earth."

The sentiments expressed in the following passages taken from the Brief Remarks, &c., are at variance with those of our ancient Friends. The fourth example there given of the supposed mistakes in the interpretation of Scripture is, it is said, furnished by the view sometimes taken of John i. 9, "That was the true light which lighteth every man that cometh into the world."

"The misinterpretation," it is there said, "which I "wish to notice, is that of certain writers, who appear "to suppose that because Christ is called the light (i. e. "the enlightener) he is therefore to be identified with "the influence which he bestows; in short, that the light "of the Spirit of God in the heart of man, is itself actu-"ally Christ. The obvious tendency of this mistake is "to deprive the Saviour of his personal attributes and "to reduce him to the rank of a principle.

"For the same reason we cannot but object to the "doctrine that Christ is the anointing. Truly he is the "anointed of the Father, and the anointer of his own "people; but who, on that account, would think of "identifying him with the anointing, that is, with the "enlightening qualifying influence of the Holy Spirit?

"This peculiar *notion* is also occasionally applied "amongst us to a highly important passage in the epis-"tle of Paul to the Colossians, where he speaks of the "mystery which hath been hid from ages and genera-"tions, but now is made manifest to the Saints: to "whom, he adds, God would make known what is the "riches of the glory of this mystery among the Gentiles, "which is Christ in you the hope of glory:" Col. i. 27. "The words 'Christ in you' are often recited by us "take as 'Christ within' and these expressions are "sometimes used amongst us as a synonyme for 'the "'light of the Spirit of Christ in the heart,' a view "which some have *imagined* to be supported by the "apostle's treating the whole subject as a 'mystery.' "Hence it necessarily follows that the light of the Spi-"rit of Christ in the heart, is the same as Christ himself, "and is represented as the hope of Glory."

It is afterwards added—

"These mistakes, especially John i. 9; and Col. i. 26 "—28, have often been made by persons who cordially "accept the Lord Jesus in all his gracious offices both "as God and man. Thus the *errors themselves* have na-"turally enough been suffered to pass with little notice. "But in some who have seceded from us in America, "they have evidently been the means of aiding that "tremendous process in heresy; by which the Eternal "Word or Son of God, is gradually converted into a "mere influence, and finally becomes nothing at all but "a seed sown in the hearts of all men."

In what sense it was that our ancient Friends used the expression "Christ within," is plain from the following language of William Penn. "They never said that every divine illumination or manifestation of Christ in the hearts of men was whole God, Christ, or the Spirit, which might render them guilty of that gross and blasphemous absurdity, some would fasten upon them: but that God, who is light, or the Word, Christ, who is light, styled the second Adam, the Lord from heaven, and the quickening Spirit, who is God over all, blessed forever, hath enlightened mankind with a measure of saving light; who said, I am the light of the world, and they that follow me shall not abide in darkness, but have the light of life. So that the illumination is from God, or Christ the Divine Word; but not therefore that whole God or Christ is in every man, any more than the whole sun or air is in every house or chamber. There are no such harsh and unscriptural words in their writings. It is only a frightful perversion of some of their enemies, to bring an odium upon their holy faith. Yet in a sense the Scriptures say it; and that is their sense, in which only they say the same thing. I will walk in them and dwell in them. He that dwelleth with you shall be in you. I will not leave you comfortless, I will come to you. I in them and thou in me. Christ in us the hope of Glory. Unless Christ be in you, ye are reprobates." Works, vol. ii., p. 780.

It is not merely "certain writers," in our Society, who *appear to suppose* this to be a Scripture doctrine; it is not a "*peculiar notion*," as is here expressed; for it is a doctrine maintained in all our approved writings, which so lies at the foundation of our faith, that we should no longer be the same Society of Friends, were we now to reject it.

The language of Robert Barclay upon this subject is clear and full. "Secondly, by this seed, grace, and word of God, and light, wherewith we say every one is enlightened and hath a measure of it, which strives with him in order to save him, and which may, by the stubbornness and wickedness of man's will, be quenched, bruised, wounded, pressed down, slain and crucified, we understand not the proper essence and nature of God precisely taken, which is not divisible into parts and measures, as being a most pure simple being, void of all composition or division, and therefore can neither be resisted, hurt, wounded, crucified or slain by all the efforts and strength of man;

but we understand a spiritual, heavenly and invisible principle, in which God as Father, Son and Spirit dwells; a measure of which divine and glorious life is in all men as a seed, which of its own nature, draws, invites and inclines to God." After speaking of this seed being resisted by the wicked, he says: "On the contrary as this seed is received in the heart, and suffered to bring forth its natural and proper effect, Christ comes to be formed and raised, of which the Scripture makes so much mention, calling it the new man, Christ within, the hope of Glory. This is that Christ within which we are heard so much to speak and declare of, everywhere preaching him up, and exhorting people to believe in the light and obey it, that they may come to know *Christ in them* to deliver them from all sin." "But by this we do not at all intend to equal ourselves to that holy man, the Lord Jesus Christ, who was born of the Virgin Mary, in whom all the fulness of the Godhead dwelt bodily; so neither do we destroy the reality of his present existence, as some have falsely calumniated us. For though we affirm that Christ dwells in us, yet not immediately but mediately, as he is in that seed which is in us; whereas He, to wit, the eternal Word which was with God, and was God, dwelt immediately in that holy man. He then is as the head, and we as the members, he the vine, and we the branches."—p. 137–9.

So likewise in the Declaration of Christian Doctrine, printed in London in 1693, it is said, "True and living faith in Christ Jesus the Son of the living God, has respect to his entire being and fulness, to him entirely in himself, and as all power in heaven and earth is given unto him; and also an eye and respect to the same Son of God, as inwardly making himself known to the soul, in every degree of his light, life, spirit, grace and truth; and as he is both the word of faith, and a quickening Spirit in us; whereby he is the immediate cause, author, object, and strength of our living faith in his name and power, and of the work of our salvation from sin and bondage of corruption. And the Son of God cannot be divided from the least or lowest appearance of his own divine light or life in us or in mankind, no more than the sun from its own light; nor is the sufficiency of his light within, by us set up in opposition to him the man Christ, or his fulness considered as in himself, as without us; nor can any measure or degree of light received from Christ, as such, be properly called the fulness of Christ, or Christ as in fulness, nor exclude him, so considered, from being our complete Saviour; for Christ himself to be our light, our life, and Saviour, is so consistent, that without this light we could not know life, nor him to save us from sin, or deliver us from darkness, condemnation or wrath to come: and where the least degree or measure of this light and life of Christ within, is sincerely waited in, followed and obeyed; there is a blessed increase of light and grace, known and felt; as the path of the just it shines more and more until the perfect day; and thereby a growing in grace, and in the knowledge of God, and of our Lord and Saviour Jesus Christ, hath been and is truly experienced. And this light, life, or Spirit of Christ within, (for they are one divine principle,) is sufficient to lead unto all Truth."—Sewell, vol. ii., p. 503.

The following passage occurs in a treatise entitled Biblical Notes and Dissertations, p. 462.

"Such being the plan ordained of God for our salvation, the question immediately arises, how we are to avail ourselves of its provisions. To this question, true philosophy presents a ready answer—through faith. Since it has been *demonstrated to our reason*, that God has revealed to us a *system of truth for our salvation*, reason itself proclaims, that we must be *saved* through the operation of that principle in the mind, by which alone revealed truth is accepted and appropriated. Now that principle is belief or faith."

In page 352, of the Essays on Christianity, the offices of Reason and Faith are thus defined—

"Reason demonstrates that God exists; it marks the sure indications of his moral government, of his power, wisdom, goodness, and mercy; *it ascertains the divine origin of the professed revelation of his will;* and it is rightly employed under the influence of the Holy Spirit in the sound and well principled interpretation of that which is revealed. *Faith draws near unto that God whom reason has discovered,* and relies with humble confidence on his unchangeable attributes; it quietly accepts as undoubtedly true, whatsoever he reveals to us, although in various respects deeply mysterious, and above the powers of our natural comprehension; it admits with equal readiness the laws, the doctrines and the promises of Scripture; and working by love, *applies them all to their genuine practical purposes.* Faith and reason in religion obviously interfere with one another, when we believe in some propositions which have no foundation in reason, or when we reason upon others which are the proper subjects only of faith; but as long as these noble and useful *faculties of the human mind* are kept respectively in their right province, and are brought to bear upon religion, each within its own prescribed limitations, so long will they be found to strengthen and adorn one another, and in an admirable manner to *co-operate in the mighty work of man's salvation.*"

Faith is here described as a natural faculty, by which man may draw nigh to that God whom reason has discovered, accept and appropriate a system of truth for his salvation, which it has been demonstrated to his reason that God has revealed, and apply the laws, the doctrines, and the promises of Scripture to their genuine practical purposes.

However correct our opinions may be respecting the Almighty Creator, and his attributes, there is nothing which can truly bear the name of the certain and saving knowledge of God, but that which he immediately communicates to the soul by his own Spirit. Christ is the Mediator, through whom we have access to God; and he says, "No man cometh unto me, except the Father which sent me draw him;" and "no man knoweth the Father but the Son, and he to whom the Son will reveal him;" therefore there is no true and certain knowledge of God, but by the Son, which he communicates by his Spirit; and he only, by his grace, can clothe the mind with humble confidence in God. Nor is it probable that man, however acute and learned, and indefatigable in his researches into the authenticity of the Holy Scriptures, would, by the force or influence of the natural faculties, admit the laws, doctrines, and promises of Scripture, to govern him. The natural man receiveth not the things of the Spirit of God, for they are foolishness unto him; neither can he know them, because they are spiritually discerned. It would be attributing to the natural faculties, powers which the Scriptures do not accord to them, and leave the work of salvation very much to man's efforts. Faith, which works by love and purifies the heart, is not a "faculty of the human mind." It is that belief and confidence which is produced by the immediate influence and testimony of the Holy Spirit in the heart of man, which convinces him that what is presented to his mind, as divinely required of him to believe, and receive, and practise, whether it be the requisitions of the Spirit within him, or the precepts of the Holy Scriptures without him, is from God.

(To be continued.)

Money, like manure, does no good, till it is spread; there is no real use of riches, except in the distribution; the rest is all conceit.

Gold and Corn.

The following beautiful contrast between gold of California and the gold of Agriculture from the speech of Edward Everett, at the tional Agricultural Fair, Boston, Tenth 26th:—

"The grains of the California gold are dead, organic masses. How they got into the gra between what mountain millstones whirled elemental storm winds on the bosom of oce torrents, the auriferous ledges were groun powder; by what Titanic hands the covered gr were sown broadcast in the placers, human scie can but faintly conjecture. We only know t those grains have within them no principle growth or reproduction, and when that crop to be put in, Chaos must have broken up soil.

"How different the grains of our Atlantic g sown by the prudent hand of man, in the kin alternation of seed-time and harvest; each curiou mysteriously organized; hard, horny, seemin lifeless on the outside, but wrapping up in interior a seminal germ, a living principle. D a grain of California gold into the ground, there it will lie unchanged to the end of time, clods on which it falls not more cold and lifel Drop a grain of our gold, of our blessed gold the ground, and lo! a mystery, in a few day softens, it swells, it shoots upwards, it is a liv thing. It is yellow itself, but it sends up a d cate spire, which comes peeping, emerald gr through the soil; it expands to a vigorous st revels in the air and sunshine, it arrays itself m glorious than Solomon, in its broad, flutteri leafy robes, whose sound, as the west wind whisp through them, falls as pleasantly on the husba man's ear as the rustle of his sweetheart's garme still towers aloft, spins its verdant skeins of v etable floss, displays its dancing tassels, charged with fertilizing dust, and at last rip into two or three magnificent batons like this, ear of Indian corn) each of which is studded w hundreds of grains of gold, every one possess the same wonderful properties as the parent gra every one instinct with the same marvellous productive powers. There are seven hundred twenty grains on the ear which I hold in my ha And now I say, of this transcendant gold of o the yield this year will be at least ten or fift times that of California.

"But it will be urged, perhaps, in behalf the California gold by some miserly old fogy, w thinks there is no music in the world equal to chink of his guineas, that though one crop only gold can be gathered from the same spot, yet o gathered, it lasts to the end of time; while will maintain) our vegetable gold is produced o to be consumed, and when consumed is gone forev But this, Mr. President, would be a most egregi error both ways. It is true the California gold last forever unchanged, if its owner chooses; while it so lasts it is of no use, no not so much as value in pig iron, which makes the best of balla whereas gold, while it is gold, is good for little nothing. You can neither eat it, nor drink it, smoke it You can neither wear it, nor burn it fuel, nor build a house with it; it is really useless you exchange it for con-umable, perishable goo and the more plentiful it is the less is its exchan able value.

"Far different the case with our Atlantic g It does not perish when consumed, but by a not alchymy than that of Paracelsus, is transmu in consumption to a higher life. "Perish in c sumption," did the old miser say? Thou f that which thou sowest is not quickened, *except die.* The burning pen of inspiration ranging i

and earth for a similitude to convey to our minds some not inadequate idea of the mighty rine of the resurrection, can find no symbol xpressive as bare "grain" It may chance of at or some other grain. To-day a senseless t, to-morrow it is human—bone and muscle, and artery, sinew and nerve: beating pulse, ing lungs, toiling, ah! sometimes over-toiling n. Last June, it sucked from the cold st of the earth the watery nourishment of its ending sap vessels, and now it clothes the manly with warm cordial flesh, quivers and thrills the five-fold mystery of sense, purveys and sters to the higher mystery of thought. Heaped n your granaries this week, the next it will e in the stalwart arm, and glow in the blushing k, and flash in the beaming eye—till we learn st to realize that the slender stalk which we seen bending in the cornfield under the yellow en of harvest, is indeed the "staff of life," h, since the world began, has supported the ng and struggling myriads of humanity on nighty pilgrimage of being.

Yes, to drop the allegory, and to speak out a figure, it is this noble agriculture, for promotion of which this great company is assled from so many parts of the Union, which the human race, and all the humbler orders imated nature dependant on man. With the otion of what is yielded by the fisheries and hase (a limited though certainly not an inficaut source of supply.) Agriculture is the rd which spreads the daily table of mankind. nty-seven millions of human beings, by accucomputation, awoke this very morning in the ed States, all requiring their "daily bread," her they had the grace to pray for it or not, and r Providence all looking to the agriculture of ountry for that daily bread, and the food of the stic animals depending on them; a demand eat perhaps as their own.

Ir. President, it is the daily duty of your farmers isfy the gigantic appetite; to fill the mouths of hungry millions—of these starving millions, ght say; for if by any catastrophe, the supply cut off for a few days, the life of the country man and brute—would be extinct."—*News.*

For "The Friend."

Knowledge Puffeth up.

om the circumstances in which persons are d in life, many do not attain the elevation in oral and religious point, which they might , had they mingled in good society, and had s to a proper course of instruction and read-

The active minds of children and young ons will be constantly in search of something nuse, and to furnish matter for thought and ersation. At this period of life, it is essento their welfare, to supply them with the s of information, which will store their minds correct ideas, and give them such a share of ledge, in the different branches of literature science, as is valuable and useful. Far better to have the memory furnished with subjects give strength to the intellectual faculties, and will ennoble the man, instead of feeding upon nces, and stories of imaginary and impure hts, which debase the mind, by kindling the ons, and employ it in contemplating subjects gross and immoral tendency. Many have re- d a bias in early life, for want of proper care rents and teachers, who have set them a loose mple, by which they have been degraded and ed from the Truth, and have never risen to dignity and chastened state of purity, exhibited e exalted standing of a true Christian.

ut while many have experienced serious disadvantages through improper training, others have been captivated by the attractions of learning, and their time and energies have been so engrossed with study, and their efforts to acquire knowledge on all subjects within their reach, that the great design of their existence, the glory of their Creator and their own salvation, has been much overlooked and forgotten. They become puffed up with their knowledge, pride themselves upon it, and regard with a degree of slight, brethren who fall below them in this respect, but who may be before them in the one thing needful, seeking instruction from their Lord in the mysteries of his kingdom, and counting all things as dross, in comparison of the excellency of the knowledge of Christ Jesus, their Redeemer. Instances have occurred of individuals, faithful to Him, whom he has restrained from improperly devoting their time and talents to literary and scientific pursuits, for which they had a great fondness. He saw the danger of their being diverted from following him, and thereby missing his regenerating and preparing work in their hearts, to fit them for communion with him, and the place he designed them for in his church, and has laid his hand upon them, and withdrawn them from an inordinate indulgence of their craving after literary acquirements. The unlawful love of lawful things has its snares, which the disciple of Christ is bound to guard against.

One who afterwards became an eminent minister, speaking of the temptations of early life, says, "My natural disposition was very volatile, and my apprehension quick; and as my faculties opened, I delighted much in books of a very contrary nature and tendency to those which had engaged my attention in childhood. I had a near relation, who, notwithstanding his having been divinely favoured in his youth, had slighted his soul's mercies, and pursued lying vanities. He kept house in the town; and through him, myself and my sisters had opportunities of obtaining plays and romances, which I read with avidity. I also spent so much time at his house as to be introduced into amusements very inconsistent with the simplicity of the Truth, and my former religious impressions; so that my state was indeed dangerous, and but for the interposition of divine Providence, I had been left to pursue courses which must have terminated deplorably. I also read history, was fond of poetry, and had a taste for philosophy; so that I was in the way to embellish my understanding, as is the common phrase, and become accomplished to shine in conversation, which might have tended to feed the vain proud nature, render me pleasing to those who were in it, and make me conspicuous in the world. But the Lord, in his wisdom, designed to bring me to public view in a line directly opposite to worldly wisdom, pleasure, or honour; and when he was pleased more fully to open to my understanding his great and glorious work of renovation of spirit, I saw that I must desist from these publications and studies, and pursue the one necessary business, viz: working out the salvation of my immortal soul; and I esteem it a great mercy that I readily attended to this intimation.

"However lawful it may be, in proper seasons, to look into the works of nature, and become acquainted with the history of former or present times, my attention was now powerfully attracted to higher subjects; and had I pursued those lower things, I might have become as a 'vessel marred upon the wheel.' This is, alas! the case with many who have been divinely visited, but who, not deeply and steadily attending to the instructions of pure wisdom, but seeking to be wise and learned, in matters which merely relate to this present state, have not advanced in the simplicity of Divine knowledge; and although it has remained obvious that the Lord's hand has mercifully been turned upon them to form them for his service, they have not grown up to that degree of usefulness in Christ's church, whereto they might have attained, had they passively abode the turnings of his preparing hand. Were the sons and daughters of our religious Society who are favoured with good natural understandings, clothed with heavenly wisdom, they would become and appear truly great, in the dignified simplicity and humility of the service of the King of kings. Human knowledge and acquirements too often puff up the minds of youth; and indeed some of more advanced age pride themselves therein, when, as examples to the rising generation, they should be clothed with humility. It was observed of a truly honorable member of our favoured Society, that 'he was a divine, and a naturalist, and all of the Almighty's making.' I have read very little on natural philosophy, and am not in a disposition to boast of my acquired knowledge of either human, natural, or divine things; but I may say, that I have admired how by one gleam of heavenly light the understanding is opened into natural things; so as in degree to behold as at one view, the general economy of the divine Former of all things, as it is displayed in the outward creation. This produces adoration to him under the humbling sense of his power, mercy and wisdom, as well as admiration of his works, and discovers that they are indeed marvellous, and in their full extent incomprehensible. Therefore, let not the faculties of his adopted children be so improperly occupied in exploring them, as to prevent an advance in their various stations in the militant church: when happily their souls are fixed in the triumphant, they will know so much as forever to inspire the angelic song of 'great and marvellous are thy works, Lord God Almighty;' 'in wisdom hast thou made them all.'"

Ignorance will not give a man vital religion any more than the learned sciences. If a man may be puffed up by his knowledge, so may an unlearned man by his imaginary humility and simplicity. Our talents are given to be employed in the right pursuit of lawful things, and under the restraints and the teaching of the Holy Spirit, to the glory of God, and in the work of our salvation, and the spreading of the Redeemer's kingdom.

Paper Manufactured from Wood.—A public demonstration of the very interesting process of Watt & Burgess, the patentees for the manufacture of pulp from wood-fibre, took place recently at the temporary works, Victoria wharf, Augustus-street, Regent's Park Basin, London. Among those present were Lord Stanley, Sir Henry Webb, two of Lord Palmerston's secretaries, and several leading paper-makers and publishers. Watt & Burgess have been engaged for more than a year and a half in experiments for the conversion of wood-fibre into pulp, the difficulty to overcome being to insure a constant supply of pure white pulp. At length, by a clear, intelligible process, wood-fibre, after being boiled and washed, is, in a few minutes, converted into white pulp, capable of being instantly transformed into excellent paper. The wood is first boiled in caustic soda ley, and washed free from alkali; it is then subjected to the action of chlorine, or an oxygenated compound of chlorine, and again washed to remove the hydrochloric acid. The wood is again treated with caustic soda ley, when it becomes immediately reduced to pulp. The pulp is now well washed and bleached, and is then ready to be manufactured into paper. Paper that would cost twenty-four pounds per ton if made from the material and by

the process described, would cost forty pounds manufactured from rags, while the latter supply is variable and interrupted, and wholly inadequate to the demand. Any kind of wood can be reduced, though certain kinds are better adapted. The patentees exhibited samples of the paper, some of which had been printed upon in lithograph and letter-press.—*Publisher's Circular.*

Bark Paper.—The high price of rags has of late called the attention of several persons, both in Europe and America, to the discovery of a substitute from which paper may be made, and we are glad to learn that one of our own citizens has succeeded in finding such a substitute for wrapping paper. About one year since, Charles H. Hall, of this city, was passing by one of our wood-yards upon Union wharf, when he casually took up a piece of hemlock bark, and put it in his mouth. The pungent taste of the tannin contained in the bark being agreeable to him, he continued to chew the same, when he found that it formed a mucilaginous paste similar to the pulp in the first process of manufacturing paper. The thought then struck him that this bark might answer as a substitute for rags, and he at once commenced experiments with various barks. After much application he has perfected a process, and a company, embracing some of our heaviest capitalists in Portland, has been formed for the manufacture of paper from all descriptions of bark, under a patent which C. H. Hall has obtained. The company have purchased a paper-mill at Waterville, and fitted it up with machinery adapted to the new process. Their paper is already extensively used in our market, and we learn that they have just made a contract with a carpet dealer in Massachusetts for one hundred tons of their paper. As yet they have only made wrapping paper, but from experiments making, we think they will be able soon to furnish even printing paper from bark.—*Portland Advertiser.*

Epistle of George Fox.

Friends and Brethren in Christ Jesus, whom the Lord hath called and gathered into himself, in him abide; for without him ye can do nothing, and through him ye can do all things. He is your strength, and support in all your trials, temptations, imprisonments, and sufferings, who, for Christ's sake, are accounted as sheep for the slaughter: in all these things we are more than conquerors, through Christ who hath loved us. And therefore, Friends, though you suffer by the outward powers, ye know that the prophets, Christ and the apostles, suffered by the unconverted. And though ye suffer by false brethren and false apostates for a time, and by their filthy books and tongues; whose tongues, indeed, are become no slander, let them speak, write, or print what they will; for the sober people even of the world hardly regard it; it is well they have manifested themselves to the world, that their folly may proceed no farther. Though, to the utmost of their power, they have showed their wicked intent, to stir up the magistrates, professors and profane against us, and to speak evil of the way of truth, God's judgments will overtake them, and come upon them, as sure as they have come upon those that are gone before them. Let their pretence be ever so high, mark their end; for they will fall like untimely figs, and wither like the grass upon the top of the house. Though they may seem to flourish and make a boast and a noise for a time, yet the Seed is on the head of such, and will grind them to powder; which seed bruises the serpent's head. Therefore, in this Seed, Christ, who is your sanctuary, rest, peace and quiet habitation, who is the first and the last, and over all, in Him walk; for the Lord taketh pleasure in his people that are faithful, that serve and worship him. Therefore let the saints be joyful in glory, and the God of peace, the God of all grace, who hath called us into his eternal glory by Jesus Christ, after that ye have suffered awhile, make you perfect, establish, strengthen, settle you. Cast all your care upon the Lord, for he careth for you. And, dearly beloved, think it not strange concerning the fiery trial that is to try you, as though some strange thing had happened unto you; for it is better, if the will of God be so, that ye suffer for well doing, than for evil doing; and rejoice inasmuch as ye are made partakers of Christ's sufferings. Wherefore let them that suffer according to the will of God, commit the keeping of their souls to him, in well doing, as unto a faithful Creator, for unto you is given in the behalf of Christ, not only to believe in him, but also to suffer for his sake. So it is given, or is a gift from Christ, to suffer for his name; and therefore rejoice, inasmuch as ye are made partakers of Christ's sufferings. If ye be reproached or evil spoken of for the name of Christ, happy are ye, for the Spirit of glory and of God resteth upon you; on their part he is evil spoken of, but on your part he is glorified. Therefore, if any suffer as Christians, let them not be ashamed; but let them glorify God on this behalf, though now for a season ye are in sufferings, and trials, and temptations, that the trial of your faith being much more precious than that of gold, which perishes, though it be tried with fire, may be found unto praise, honour and glory, who are kept by the power of God through faith, unto salvation. Therefore, mind your Keeper, wherever you are, or what sufferings soever ye be in; and mind the example of the apostle, how he suffered trouble as an evil-doer unto bonds. But the Word of God is not bound, which is everlasting, and endures forever; and they who are in that, which is not everlasting, and doth not endure forever, cannot bind the Word. The apostle said, "I endure all things for the elect's sake, that they may also obtain the salvation, which is in Christ Jesus, with eternal glory," (mark, with eternal glory.) And if we suffer with Christ, we shall reign with Christ, who abide faithful. Therefore, strive not about words to no profit, but shun profane and vain babblings, for they will increase unto more ungodliness, that ye may be vessels of honour, sanctified and meet for Christ your Master's use, and prepared unto every good work. Follow after righteousness, godliness, faith, love, patience and meekness. Fight the good fight of faith with your heavenly weapons; which faith is victory, (or gives victory,) by which ye lay hold on eternal life, and have access unto God, "who will render to every man according to his deeds; to them who, by patient continuing in well doing, seek for glory and honour, and immortality, eternal life; but unto them that are contentious, and do not obey the truth, but obey unrighteousness, indignation and wrath, tribulation and anguish, upon every soul of man that doeth evil, but glory, honour and peace to every man that worketh good." Christ said to his disciples, "If the world hate you, ye know that it hated me before it hated you. If ye were of the world, the world would love its own; but because ye are not of the world, but I have chosen you out of the world, therefore the world hateth you." And "if they have persecuted me, they will also persecute you." And John, in his general epistle to the church, saith, "Marvel not, my brethren, if the world hate you. We know that we have passed from death unto life, because we love the brethren." And Christ, in his prayer to his Father, saith of his followers, "As thou hast sent me into the world, so have I also sent them in the world; and the glory which thou gavest me, I have given them, that they may be one, even as we are on
And therefore all ye that know God and Je
Christ, whom to know is eternal life, and are
takers of his glory, keep the testimony of Je
and be valiant for his truth upon earth, that
may be all settled upon Christ, the rock and fo
dation. G. F

Dalston, the 3d of the Eighth mo., 1683.

Selected.

THE INDIAN SUMMER.

That soft autumnal time
Is come, that sheds, upon the naked scene,
Charms only known in this our northern clime—
Bright seasons, far between.

The woodland foliage now
Is gathered by the wild November blast;
E'en the thick leaves upon the poplar's bough
Are fallen to the last.

The mighty vines, that round
The forest trunks their slender branches bind,
Their crimson foliage shaken to the ground,
Swing naked in the wind.

Some living green remains
By the clear brook that shines along the lawn;
But the sear grass stands white o'er all the plai
And the bright flowers are gone.

But these, these are thy charms—
Mild airs and temper'd light upon the lea;
And the year holds no time within its arms
That doth resemble thee.

The sunny noon is thine,
Soft, golden, noiseless as the dead of night;
And hues that in the flush'd horizon shine
At eve and early light.

The year's last, loveliest smile,
Thou comest to fill with hope the human heart,
And strengthen it to bear the storms awhile,
Till winter days depart.

For "The Friend

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned memb
of the Yearly Meeting of Philadelphia.

(Continued from page 93.)

ELIZABETH WEBB.

Many efforts were made by her nominal frie
to prevent Elizabeth from settling down amon
the Quakers. The efforts failed, notwithstandi
she had a strong desire to please those with wh
she was connected, or esteemed. After a time
came forth in the ministry of the gospel. Of
preparation and entry into this work she th
speaks. "I have met with great trials and ex
cises, and have found by experience, that G
Almighty requires the whole heart, will and aff
tions,—that the Spirit of his Son Jesus Chr
may have the rule therein until he hath put
his crowns under his feet, and his and our heave
Father become all in all. This is a great wo
and is carried on by degrees, as the creature
able to bear it. As the old man dies daily,
new man is raised up, that lives in resignation
the will of God. The apostle testified, 1 Cor.
14, "The natural man receiveth not the thi
of the Spirit of God, for they are foolishness
him, neither can he know them, because they
spiritually discerned." Without the Spirit of
Lord Jesus, we can do nothing that is well pleasi
to God. The work of mortification and regene
tion, therefore, is of absolute necessity to sal
tion, for, said our Lord to Nicodemus, "Veri
verily I say unto thee, except a man be bo
again, he cannot see the kingdom of God." I
deavoured more and more to give up into the L
vine hand that so I might be weaned from all va
delights and worldly pleasures. At times I cou
say, "O Lord, my soul is as a weaned child, a

that is weaned of his mother." In this e simple state, my mouth was opened first to to God Almighty my heavenly Father in ie, and to praise his name for his great mercy, sometimes to exhort others to trust in the , and to be obedient unto Him." Of this irst appearance as a minister, she elsewhere "I was constrained, under a sense of duty, to l down in the congregation, and confess to goodness of God, and pray to him for the con- tion of it, and for power whereby I might be led to walk worthy of so great a favour, bene- nd mercy, as that I had received from his tiful hand. After I had made public confes- to the goodness of God, my soul was as if it been in another world. It was enlightened enlivened by Divine love, and I was in love the whole creation of God, and I saw every- g to be good in its place. I was showed things t to be kept in their proper places; the swine t not to come into the garden, nor clean s into the bed-chamber; and as it was in the ard, so it ought to be in the inward and new ion. Everything began to preach to me. The fragrant herbs, and beautiful flowers had a e in them to my soul, and things seemed to another relish than before. The judgments od were sweet to me. I was made to call to rs to come, taste and see how good the Lord nd to exhort them to prove the Lord, by an ient, humble, innocent walking before him, they could see, that he would pour out his tual blessings in so plentiful a manner; that e would not be room to contain them, but the flowings would return to him, who is the tain, with thanksgivings. I was made to warn le, that they should not provoke the Lord by bedience; for, although he bears and suffers , as he did with the rebellious Israelites in the erness, yet such shall know him to be a God stice and judgment, and shall be made to ess it one day."

he entered into the married state with Richard b, and became a member of Gloucester meet- but whether before or just after her first pub- ppearance in the ministry, we have no means certaining. Her first journey, to visit in the of the gospel, brethren and others at a dis- e, was taken into the north of England. She of it, "After I had been publicly concerned ome years at home," "I was drawn by the t of love," "to go into the north of England. re up in obedience to go, and in that, as well other journeys, I found my spiritual guide with me and direct my course. The Lord, gracious God, did bear up my spirit, and carry hrough by his power and wisdom alone. Oh! remembrance of the goodness of the Lord to oul in those early days, is not to be forgotten e. I had many visions of spiritual things, the outward man was asleep. Sometimes it ed as though I was in conflict with evil spirits, the Good Spirit used to give my soul the vic- many times, which was comfortable to me I was awake. Many remarkable circum- ces I met with in that journey, in the remem- ce of which I bless the name of my God at time, and have cause so to do forevermore. n I came to the far end of my journey, then eamed that I saw Jesus Christ, and a Friend I knew, walking together before me in a very sant green walk. I quickened my pace, and e up between them, and I thought it pleased Lord to take notice of me, and to show great lness to me. This was a comfort to me, al- gh it was in a dream. He appeared as a plain of middle stature, of a sweet, amiable, inno- countenance, and kind behaviour,—such as my soul could both love and reverence. On the morrow, I met with that Friend, and saw the fulfilling of the vision, for the Lord was very gracious to my soul; forever blessed be his holy name. I found by many experiences, that in these days I had certain manifestations of things in dreams, by which many times I was forewarned of things that came to pass. I travelled alone in great care to please God, and in great humility and simplicity. It was a good time to me, and I set it down as a memorial of the goodness of God to a poor young creature of the weaker sex. I can say, it is good to trust in the Lord, and to give up in simplicity to his requirings. The more simple and childlike my soul hath been, and free from care of pleasing, or fear of displeasing man, even wholly resigned up into the hand and will of God, the more it has been fitted and furnished as his instrument; and on the contrary, when I have been in care to please or in fear of displeasing man, the gift of God, which in its simplicity or singleness ariseth from the spring of eternal life, hath been muddied with a mixture of carnal reason, and then poor work is made. So, I exhort you, my surviving friends, to live in pure obedience and perfect resignation to the Divine will in all its requirings, for herein is our peace."

"In the year 1697, in the Sixth month, as I was sitting in a meeting in Gloucester, the place of my habitation, my mind was gathered into perfect stillness for some time, and my spirit was as if it were carried away into America, and my heart was, as it were, melted with the love of God. It flowed and seemed to reach over the great ocean, and I was constrained to kneel down and pray to the Lord for the prosperity of his seed in America. The concern never went out of my mind, day nor night, until I went in the love of God to travel there. So universal is the Divine love, it reacheth over sea and land, and my soul can say, 'Thy commandments, O Lord, are exceeding broad.' When I looked at this thing with an eye of reason, it seemed very strange to me, for I knew not the country, nor any creature that dwelt there, and I reasoned much concerning my own inability, and what people would say, if I left my husband and family. When I let such reasonings take place, I had nothing but darkness and trouble, and could not feel the Divine spring, no, not in a meeting, until I gave up. As soon as I resigned my will to the Divine will, and requiring in this thing, then the light and life of Truth sprang up in my bosom, by which I knew that it was the requiring of the only true God. I was timorous and fearful, and stood in the reasoning part, until these words ran through my mind with authority, 'The fearful and unbelieving shall have their portion with the hypocrites, in the lake that burns with fire and brimstone, which is the second death.' This brought a dread on my mind. Then I told my husband of my concern, and how close it was laid upon me. So after some time of consideration, he gave consent that I should go." In the other account she says, "I told my husband that I had a concern in my mind to go to America, and asked him if he could give me up. He said, he hoped it would not be required of me. I told him it was, but that I should not go without his free consent, which seemed hard to him at first. A little while after I was taken with a violent fever, which brought me so weak, that all who saw me, thought I should not recover. But I thought my day's work was not done, and my chief concern in my sickness, was about going to America. Some were troubled, because I had made it public; because they thought I should die, and people would speak reproachfully of me; and said if I did recover, the ship would be ready to sail before I should be fit to go. I thought if they would carry me and lay me down in the ship, I should be well, for the Lord was very gracious to my soul in the time of my sickness, and gave me a promise that his presence should go with me. My husband was made willing to give me up, he said, if it were for seven years, rather than have me taken from him."

Having the unity of her meeting,* her husband's consent, a good companion in Mary Rogers provided, and her bodily health restored, she sailed from Bristol, in the Ninth month, 1697. Of her voyage she says, "The dangers we were in at sea, and the faith and courage which the Lord gave my soul, would be too large here to relate. This I may say by way of encouragement to faithfulness that I had an evidence of the preserving arm of the Lord to be present, and that faith was given me in the midst of great dangers. Oh! it is good to trust in the Lord, and to be obedient to him, for obedience is indeed better than sacrifice. It was about the middle of the Twelfth month, that we, through the good providence of God, arrived at Virginia. The many remarkable occurrences that happened in that journey, would be too large to enumerate. One I may mention in order to manifest the universal love of God to mankind, and his great condescension in satisfying my inquiring mind. As I travelled in Virginia, from meeting to meeting, I saw great numbers of black people, who were in slavery. This was strange to me, and I wished to know if the visitation of the grace of God was afforded to them. I several times went in unto their little out-houses, called Negro Quarters, to see if I could discern any good in them by their deportment, but I could not see that way. When I had travelled about four weeks, as I was in bed one morning at a Friend's house, even after the sun was up, and shining in my room, I fell into a slumber, and dreamed I was a servant in a great house, and was drawing water at a well to wash the upper rooms. [Whilst thus engaged,] I heard a voice which bid me go and call others to help me draw water. I thought I went, and as I was going along a very pleasant meadow, a great light shone round about me, which exceeded the light of the sun. I walked in the midst of it, and as I went forward, saw a chariot drawn by horses coming to meet me. I was in care lest the light should frighten the horses, and cause them to throw down the people. When I came near, I knew the servants were those I was sent to call. They were both white and black. I said, 'Why have ye staid so long?' I thought they said, 'The buckets were frozen; we could come no sooner.' By this vision I was satisfied that the call of God was to the black, as well as to the white. I saw the fulfilling of the vision in part before I returned to Old England. We had an evening meeting at a Friend's house in New England, where the negroes came in. I felt a stream of Divine love run to them, and one young man, a black, was so reached by the love of God through Christ Jesus, that his heart was so broken that the tears ran down like rain. He was convinced of the Truth, lived honestly in it, and walked among Friends to his dying day, leaving a good savour behind him. His wife and children have kept to meeting since he is gone. These things have lived in my mind, as a memorial of the universal love of God, who would not that any should perish, but that all should come to the knowledge of the Truth, and be saved.

* Her certificate bore date Sixth mo. 31st, 1697; it is signed by her husband.

(To be continued.)

Are all our talents consecrated and sanctified for the use of the bountiful Giver of all good?

For "The Friend."

GEORGE MOGRIDGE.

A small volume has been recently published entitled "Memoir of Old Humphrey with Gleanings from his Portfolio." The book will be read with interest by those who have found instruction and pleasure in the author's productions. The life of this simple hearted, pious and benevolent man was unattended by those striking events which usually fix the attention of the biographer, yet it is hoped a sketch of his history and character, derived from the memoir alluded to, may be deemed worthy a place in the columns of "The Friend."

George Mogridge was born at Ashted, one of the suburbs of the town of Birmingham, on the 17th of Second Mo., 1787. His parents appear to have been estimable persons, of decidedly religious character, whose consistent example, and affectionate conduct, were ever held in grateful remembrance by their son. It would seem that George's advantages in the way of education, must have been rather limited, for at the age of fourteen, he was placed as an apprentice to the business of a Japanner. The thoughts and aspirations of the youth soon reached beyond the ordinary engagements of his calling. He was fond of reading, and his father being a subscriber to the Birmingham General Library, the son had the opportunity of gratifying his eager desire after knowledge. During the term of his apprenticeship, he employed his brief intervals of leisure, in writing both prose and verse. His first appearance in print, was in a local newspaper; the piece consisted of an address on the occasion of raising a statue to the memory of Lord Nelson.

Encouraged by his early attempts to secure the public notice, he soon became a contributor to several of the periodicals of the day. On completing his apprenticeship, he was married to Elizabeth Bloomer, whom he had known from early youth. This union, which had the promise of much happiness, was not permitted to be of long continuance, she was called from the world at an early age. After the lapse of a few years, he again married. His second wife was Mary Ridsdale, who was the companion of the larger portion of his life, and who survives him. "When about twenty-four years of age, George Mogridge entered into partnership with his elder brother as a japanner; and, so long as the latter remained in the firm it was prosperous, but after a time he retired in possession of a good property. The younger brother continued the business, for which he confessed he had no aptitude. Too many objects occupied his attention. He devoted too much time, for a young tradesman, to the public, as an overseer, guardian, and commissioner. His generous feelings prompted him to give far too liberally—it may be said indeed improvidently—to every case which had the semblance of distress; and he devoted to books and literature, the hours which might, probably, have been better employed in the more active duties of life. The result was an abandonment of his position as a tradesman, with the entire loss of all his property. In reviewing this part of his history, he once observed: "I look back on this period of my life with keen regret. To be deprived of luxuries, and limited in comforts, is comparatively a light affliction; but to bear humiliation and self-reproach, and still more to be undervalued and censured by those who before were prodigal in praise, is a heavy burden to bear. I drank to the very dregs the bitter cup of calamity, for I found but little kindness, and much severity. The kindness I did experience is graven on my heart." It is not to be inferred from this language of self condemnation that his moral character or commercial honour were compromised by an unfortunate issue to business. He was unsuccessful, but his uprightness and integrity were unimpeachable. His naturally keen susceptibilities and high sense of probity would incline him to scrutinize his conduct with much severity, when others might see little to censure or condemn.

George was now called to consider whether he should retrace his steps, and set out afresh in the business of a manufacturer, or enter on other engagements, which might give the promise of support, and which were more in harmony with his natural talent and tastes. He finally resolved to engage in literature, and trust to his pen for the means of a living for himself and family. It was a bold step for one who had hitherto only written for recreation, and mostly such light compositions as might fill a column in a magazine. He seems however, to have had some confidence in his own powers, though not a single friend at the time encouraged him in his purpose. His imagination was active, his powers of observation strong and accurate, and his memory unusually retentive. He had also a warm love for all that is beautiful in nature. His first attempts at regular authorship, were in the poetical line, and were attended with no great success. He afterwards tried his pen in prose, but, unknown to fame and patronage, our humble author met with not a few difficulties and disappointments. One manuscript offered by him to a bookseller, was detained nearly three months, and then declined. With another he was equally unsuccessful, for after he had walked a distance of fifty miles, (ten miles five times over) to inquire of its success, he found that the paper had not been opened. In other attempts to dispose of his manuscripts, he met with similar indifference and neglect.

Eventually, he made an engagement with a respectable bookseller, who undertook to issue a limited number of small tracts of a serious character, which were to be ready for publication at stated intervals. His feelings on entering on this service are expressed in a memorandum made by him at this time. "Mistrusting my own perseverance, yet, with an humble and confiding dependence in that Almighty Being who gave me the faculties I possess, and who can alone enable me rightly to use them, I enter on my literary undertaking, imploring the Giver of all good things that, while I thereby add to my own interest and the comfort of those dear to me, I may contribute to the benefit of others, and extend the glory of my God."

Three metrical tracts written by him, and forwarded to the Religious Tract Society, led to his introduction to the superintendant and secretary of the society. The interview was pleasing to all the parties, and George Mogridge was encouraged to become a regular contributor to the Society's publications.

(To be continued.)

Haste to the Cross.

BY OLD HUMPHREY.

More than three thousand summers and winters have visited the earth since Moses raised, by divine command, the brazen serpent in the wilderness. Since then kingdoms have risen and fallen, and the twelve tribes of the children of Israel been scattered into all lands. Prophets have prophesied; the Lord of life and glory has suffered on the cross; and apostles have borne witness to the truth, sealing their testimony with their blood. But not yet has that brazen serpent erected in the wilderness lost its signification. It was but the type, the symbol, of what was to take place in after years; for "as Moses lifted up the ser in the wilderness, even so must the Son of be lifted up: that whosoever believeth in should not perish, but have eternal life." J iii. 14, 15.

If the serpents of the wilderness stung th thousands, the serpents of sin have stung t ten thousands. The whole race of Adam h been bitten. "All have sinned," and the righte sentence of the Eternal has gone forth: "The s that sinneth, it shall die." To the cross, sinn to the cross! The son of man is lifted up; Saviour of the world is the only cure.

To the cross without delay ye *high-minded c proud!* for your disease is deadly, and your dan imminent. "Pride goeth before destruction, s a haughty spirit before a fall." Prov. xvi. The pride of your hearts has deceived you; ye bitten, and the fiery venom is flowing in y veins. "Though thou exalt thyself as the eag and though thou set thy nest among the sta thence I will bring thee down, saith the Lor Obad. 4.

"Vain-glorious sinner, let this truth suffice,
The cross once seen is death to every vice;
Else He that hung there suffer'd all his pain,
Bled, groan'd, and agonized, and died in vain."

To the cross ye *bruised and broken!* who, knc ing your disease and danger, are smiting on y breasts, and crying aloud, "God be merciful to a sinner!" To you sin is exceedingly sinful; l there is balm in Gilead, and there is a physic there, and both will be found at the cross. Y plague will be stayed, your leprosy will be heal and the venom of your serpent-bite be taken aw "To the Lord our God belong mercies and forgi ness though we have rebelled against him." D ix. 9. To the cross! "Seek ye the Lord wh he may be found, call ye upon him while he near." Isaiah iv. 6.

To the cross ye *covetous and worldly-minde* who bow down to mammon and worship weal Know ye not that "the love of money is the r of all evil?" The fangs of the serpent, sin, h infected you from the crown of the head to the s of the foot. The herbs of the field cannot h you, the waters of the river cannot cleanse y Every other way is hedged up; you must renoun your worldly-mindedness, and hasten to the cro Seek, and ye shall yet find mercy.

To the cross ye *careless ones!* who know r the mortal malady with which you are seize There is madness in your mirth, and weakness your apparent strength. The time is short, a you have need to pass the time of your sojourni here in fear. Away to the cross! If you say th you have no sin you deceive yourselves, and t truth is not in you; but if you confess your sin God is faithful and just to forgive you your sin and to cleanse you from all unrighteousness.

To the cross ye *unbelievers and scoffers!* lest be mocked when your fear cometh. You, t have been sin-bitten, and the malignant poison, not counteracted, will bring about your eterr woe. The word of God is true, whether believ or doubted; and death, and judgment, and heave and hell, are realities that cannot be scoffed aw Cover your sins, and ye shall not prosper; confe and forsake them, and ye shall find mercy. T cross is your only refuge. Remember that the Lo cometh as a thief in the night; and what if should find you unprepared?

To the cross ye *bold blasphemers!* who give yourselves to work iniquity with greediness, fe ing neither God nor man, and glorying in yo shame; for why should ye perish in your sin Remember that the day of the Lord cometh as

in the night, and while you are saying, Peace
safety, sudden destruction may come upon
The serpent, sin, has bitten you without
y, and the contagion is raging in your hearts.
look to the cross: "For the grace of God that
eth salvation hath appeared to all men, teach-
is that denying ungodliness and worldly lusts,
hould live soberly, righteously, and godly in
present world; looking for that blessed hope,
the glorious appearing of the great God and
Saviour Jesus Christ; who gave himself for
hat he might redeem us from all iniquity,
purify unto himself a peculiar people, zealous
od works." Titus ii. 11, 14. To the cross
ut delay, for every hour is an hour of despe-
danger.

o the cross ye *hypocrites and self-righteous!*
e have been deeply bitten, and have need to
the bitter pangs of eternal death. Without
our hope shall perish, and your trust be as a
r's web. If not cured by the blood shed on
ross, your end must be weeping and gnashing
eth. A woe is pronounced against you, for
e like unto whited sepulchres, which indeed,
ar beautiful outward, but are within full of
men's bones and all uncleanness. But there
t hope even for you, "for the Son of man is
to seek and to save that which was lost."
e xix. 10. Abhor yourselves in dust and
s, and hasten to the cross, for he who hung
is "able to save them to the uttermost that
unto God by him, seeing he ever liveth to
intercession for them." Heb. vii. 25.

o the cross ye *benighted and blindfolded Israel-*
whose eyes the fulfilment of prophecy has
d to open. To the cross ye turbaned and
ented Mohammedans, followers of a false pro-
and blind guide! To the cross ye idolatrous
ns, who bow down to images of wood and stone!
to the cross, ye backsliding sinners, whatever
be the sum of your transgressions. You are
n by the fiery serpent, sin, and the cross of
st is your only cure. The brazen serpent
d the wounded body; Christ restores the sin-
ken soul. The brazen serpent added to the
of him who gazed thereon; but the life of
who hung on the cross is a death unto sin and
r birth unto righteousness, a sure and certain
of heavenly glory, and an unfailing promise
life that shall endure for ever.

ud Geyser, at Fort Yuma, Cal.—The fol-
ng description is by an officer of the United
s army:—This wonderful spring of hot mud,
h lies about 60 miles south of Fort Yuma,
uated on a vast plain, which extends eighty
s south from the Gila. The soil of the plain
dry mud, which was apparently at one time
ed of a lake or sea. The landscape is of the
dreary, barren, and monotonous character.
Geyser covers fifteen or twenty acres. About
dges there is a warm, soft mud, with pools
rm water here and there. In the centre the
bubbles like boiling Indian pudding, and a
quantity of steam is constantly rising, and
ible at a great distance. The mud and muddy
r is frequently thrown more than a hundred
ifty feet high; and at these times the Geyser
makes a loud rumbling noise, distinct from
of the fall of the mud.

e well aware of that deadly poison, so frequent
ng professors, I mean evil speaking. It will
r itself under a thousand different forms; and
how many sincere hearts swallow this gilded
before they know what they are about. Ne-
repeat the fault of an absent person, unless it
bsolutely needful.—*Mary Fletcher.*

THE FRIEND.

TWELFTH MONTH 8, 1855.

We have received from "A Subscriber" in Virginia, a copy of a letter signed Martha, which—though the sentiments are generally good and well expressed—we think would be out of place in the columns of our Journal.

We have but little sympathy with that disposition which appears, to take delight in dwelling on the dark side of every picture, and exhausts its energies in hunting up, and displaying any and every fact calculated to awaken or increase fear for the future, or to lead to a belief that the blessings enjoyed are so transitory, that we must despair of their being long continued or renewed. But in looking over the exhibit daily made in our newspapers, of the moral and political condition of our beloved country, it is difficult to shut out gloomy forebodings, as it cannot be disputed that there are, and have long been causes at work, which if allowed to operate with the same force they have been exerting for the last ten years, must make a powerful impression on the national mind and feelings, and will in the end, it is to be feared, result in the disruption of the ties that bind together the thirty-one sovereign States, which compose this Union.

The very fact of the national Government being made up by so large a number of States, in one sense entirely independent of each other; occupying a country so vast in extent, and so diversified in character and climate, and all relying on the morality and intelligence of their respective inhabitants for self-government, would naturally raise a doubt of its stability, however by habit and education we may be disposed to look upon the system as embracing the elements, essential to the development and security of the happiness of the people. But we know there are interests in different sections, directly antagonistic to each other, and that the morality of the people is not so high toned, nor their intelligence so acute, as to prevent them, through supposed self-interest, or the influence of passions aroused and played upon by unprincipled office-seekers, from blindly rushing into party strifes, which are year after year becoming more and more embittered, and if unchecked, must sooner or later end in disorganization and deadly hostility.

Within the last ten years there has been a vast emigration to these United States. Ireland has shaken from her lap, tens of thousands of her miserable children, who in rags and wretchedness, in ignorance and crime, have long been convulsing and degrading the country of their birth. They have come here to escape from the oppressive legislation of the English government, which has always treated them as a conquered people, and to obtain the food and freedom for the want of which they were nigh to perishing. From the petty German states we have received hundreds of thousands of emigrants, many of them it is true, respectable and well to do in the world, but many more poor and uneducated, and by far the greater portion of the whole poisoned with principles of rationalism, little better than avowed infidelity, and imbued with notions of republicanism, which lead directly into licentiousness and anarchy. So large an admixture of foreigners with none of the love for our country which so fondly attach the native born citizen to it, and each with the peculiar feelings and principles, or want of principle incident to their training and habits, must almost inevitably weaken that feeling of unity and close national sympathy, that characterized the citizens of these United States, for many years after they became an independent nation; while it has given birth to a new and determined party organization of many, who can illy brook the policy of conferring the rights of citizenship on men, who have little of the spirit and few of the sympathies that should belong to it.

But above all other causes of strife and division is the subject of slavery, which is fast alienating the free from the slave States, and has so enlisted the passions of both parties, that it threatens speedily to break up the foundation on which rests the whole structure of our national government. We have had occasion repeatedly to refer to this abominable and portentous evil, and the direful effects it produces, so that we need now only advert to the confusion and sectional opposition by which it is laying waste the standing of the legislature of the country, and undermining the respect heretofore paid by the population to the authority and enactments of the government; and to the rancorous feuds existing in Kansas, where, owing to the gross aggressions of the pro-slavery party, an armed resistance has been brought about, that threatens civil war.

It may be well for us all to take an earnest view of these indisputable facts, and allow them to bring home to us the serious reflections on our individual duty, which may prompt to its daily and conscientious performance. It is no mere feeling of attachment to our country, or loyalty to its government that will reach, and remove the causes which assail the public peace and prosperity, or neutralize the sinister designs of unprincipled politicians. We have no faith in mere political movements, or combinations, for warding off the evils which menace the integrity of the Union. We believe, that nothing but a more general and sincere compliance with the requirements of the religion of Christ, breaking off from the sins which so easily beset, nad fervently seeking for the merciful interposition and protection of Him, whose right it is to rule over the nations of the earth, can save our country from the scourge that appears to be hanging over it, or secure the continuance of the blessings of peace and plenty we have so long and so unworthily enjoyed.

When we consider the design of the Almighty, in raising up the religious Society of Friends; that by living in conformity with the simplicity and purity of the gospel, and bearing a steady, consistent testimony against evil, they might extend the Redeemer's kingdom, and prove a blessing to the nations of the earth; and call to mind the influence for good they largely and so long exercised, how sad and humiliating is the conviction, that by deserting the banner given them in the beginning to be displayed because of the truth, the Society has become greatly leavened with the fashions and policy of the world, is torn and divided by internal contentions respecting its doctrine and discipline, and being thus shorn of its strength, can no longer raise its voice against error, or to plead the cause of truth and righteousness, with a hope that its own bright example, and the blessing of its acknowledged Leader, will cause its warnings or its invitations to be received and availingly regarded. Were all those in this country who profess to be fellow-believers with Geo. Fox, R. Barclay, Wm. Penn, and their worthy coadjutors, practically exemplifying in life and conversation, the reality of that profession, by bringing forth fruits of holiness, what a noble army would they be to make war in righteousness against the evils that are betraying the nation into strife and confusion, to induce the people "to break off their sins by righteousness, and their iniquities by show-

ing mercy to the poor," and to plead for the continuance of Divine regard, that so the "days of our tranquillity" may be lengthened. Let each of our readers ponder the responsibility which this view of our membership in the Society, and of our citizenship shows to rest upon them.

SUMMARY OF EVENTS.

EUROPE.—One week later from Liverpool. Affairs in the Crimea remain unchanged. The contending armies were occupied in erecting huts, and making other preparations for the shelter of the troops during winter. A St. Petersburg despatch states that the Emperor had visited the army of Gortschakoff in the Crimea, and found the troops in perfect condition. The Emperor returned to St. Petersburg, by way of Moscow. At the last accounts from Asia, the siege of Kars continued, though it was believed the Russians would soon retire and abandon their positions before the place. On the 6th ult., the Turkish army under Omer Pasha, had an engagement with a division of the Russian army, on the river Anakara, about 60 miles from the shore of the Black Sea. The Russians were defeated with a loss of 400 men, killed and wounded, and 60 prisoners. The Turkish loss was upwards of 300 men.

Persia has been applied to by the allies to allow a passage through her territories for an Anglo-Indian army to co-operate in Asiatic Turkey.

Exportation of breadstuffs is prohibited from all Turkish ports. Importations are allowed duty free.

The Porte has granted the required firman for a canal, from the head of the Danube to the Black Sea.

The export of breadstuffs has been prohibited from all Russian ports. A despatch from Nicolaieff states, that on the 2d ult., twenty-eight vessels of the allied fleet remained in and near the mouth of the Dneiper.

The Paris "Exposition" closed on the 15th, with considerable ceremony. In the Emperor's speech on the occasion, he expressed a desire for peace, but without evincing any disposition to take the first step. He declared "that France has no hatred for any nation, and that she sympathises with all those, who wish as she does for the triumph of right and justice." Grand medals of honour were awarded to a number of American depositors. Among them McCormick, of Illinois, for his reaping machine; Pitts, of Buffalo, for a winnowing machine; Bache and Kline, of New York, for balances of great precision; Lieut. Maury, for his charts of winds and currents of the Atlantic ocean, &c.; Goodyear, of New York, for India rubber fabrics.

The post of Colonial Secretary in the British ministry, had not been filled. It had been tendered to the Duke of Newcastle, who refused it.

The Liverpool cotton market had lost its buoyancy, in consequence of turnouts at Manchester, and the stringency of the money market. Sales of the week, 77,580 bales. Breadstuffs in demand, and prices rather higher. Baltimore and Philadelphia flour, 45s. to 46s. per bbl. Red wheat, 12s., and white wheat 13s. per 70 lbs. Consols, 88. The ship Harvey Birch had arrived at Liverpool, with a cargo of wheat and flour, from California.

NICARAGUA.—The latest accounts state that more adventurers from California were joining Walker's standard. The Government established by him, is supposed to be strong enough to keep down opposition. It had been formally recognized by John H. Wheeler, U. S. Minister to Nicaragua, it being the government *de facto*. General Corral, late commander of the forces opposed to Walker, and with whom he had made peace, had been tried by a court martial on a charge of treason, and executed in pursuance of his sentence. Corral was a popular man, and much esteemed in Nicaragua.

AUSTRALIA.—The most recent accounts state that the production of gold was again on the increase not only at the older fields, but also at those recently discovered. Three vessels which sailed for England, between Eighth mo. 23d and Ninth mo. 13th, had gold on freight valued at one million pounds sterling. One of the ships carried also 5000 bales of wool and 70 tons of Australian copper. The immigration, the present year, had been at the rate of about 5000 persons a month.

UNITED STATES.—The domestic exports for the last year, are classified as follows. Products of the sea, $3,516,894; of the forest, including furs, and skins, and potash, $12,603,837; agricultural productions, animal, $17,178,080; vegetable food, $23,651,362; cotton, $88,143,814; tobacco, $11,712,468; hops, $1,310,720; brown sugar, $286,408; hemp, &c., $140,906; manufactures, $34,206,646; gold and silver coin, $19,842,423; bullion, $24,114,995. The exports of vegetable food were $27,539,318 less than in the year ending Sixth mo. 30th, 1854.

The Mesilla Valley.—The reports from this new acquisition, represent it as being rich in minerals. Silver, copper, iron, platinum, gypsum, and coal in vast beds, are said to abound in every direction, but especially along the Pecos, and up to the 33 deg. of latitude.

New York.—The deposits of gold in the Assay office last month, amounted to $2,350,000; of silver, $41,000. On the 1st inst., sales of white wheat were made at $2.20 to $2.25; red, $2.10 and $2.16.

Philadelphia.—Mortality last week, 154, of whom 90 were males and 64 females.

Baltimore.—During the week ending 1st inst., there had been a large export demand for breadstuffs in this city. Flour was quoted at $9.12½ and $9.25; old corn, from 95 cents to $1.00; new corn, 83 cents to 88 cents.

The Ohio River.—The distance, from Pittsburg to the mouth of the Ohio river, is 977 miles, with an aggregate fall of 425 feet. A project for improving the navigation, has been started in Pittsburg, which the board of trade earnestly recommend. It is proposed to convert it into a slack water canal for which purpose about fifty locks would be required. It is estimated that the improvements would cost from $7000 to $10,000 per mile.

Oregon.—The latest accounts from the territory, state that an Indian war had broken out, in which the Indians, throughout Oregon and Washington territories, had banded together against the whites. The Indians in bands were roaming over the country, and many settlers had been killed by them. Much excitement prevailed, and the Indians were threatened with extermination by the whites, who were raising troops to operate against them.

California.—San Francisco dates to Eleventh month 5th. The shipments of gold continue large. The sum of $2,184,199 was shipped in the last steamer for Panama. At most of the mining districts, business was nearly suspended for want of water, but there seems to be no scarcity of the gold. The Chinese are leaving California. A ship which sailed on the 1st, took four hundred Chinese as passengers. The Chinese who work at the mines, are now compelled to pay $72 per annum each for the privilege, and the tax is to be increased $24, each succeeding year. Two whale ships had arrived at San Francisco, from the sea of Ochotsk, and discharged their cargoes. The whalebone and part of the oil was to be shipped eastward. On the 2d, a large distillery was destroyed by fire; two men were burned to death, and six others injured. The loss of property is stated at $120,000. In portions of the State, Lynch law was still paramount. In Stanislaus county, four men had recently been hung by a mob. They were accused of stealing cattle. In the north, the Indians were hostile, and a number of them had been killed by the whites.

Miscellaneous.—Suffrage in Connecticut.—The Governor of Connecticut has issued his proclamation, announcing that the amendment to the Constitution lately adopted that voters must be able to read and write, is now part of the organic law of the State.

Florida Sponge. — From twenty to thirty tons of sponges are annually exported from Key West to New York. The price is now about 40 cents a pound.

Light-house on Cape Race.—It is stated that the British Government will immediately send out the material of the light-house—the tower to be of iron.

Prohibition.—In the Supreme Court of Massachusetts, two persons recently brought suit to recover the value of liquors seized and destroyed at Fall River under the law of 1852. Verdicts were obtained in both cases. Damages in one case $1800; in the other, $750.

Cholera in Italy.—According to Florence papers, about 150,000 persons have died of this disease in Italy, within the last two months. In the Duchy of Parma, there had been 8020 deaths; in Modena and Reggia, 6566; in Tuscany, 25,901. The mortality in Lombardy exceeded 50,000, and in the Roman States, as large a number had died.

Colliery Explosion.—Another explosion of fire-damp occurred last week at the Black Heath Mines, Va., by which four persons lost their lives, and two others were severely injured.

Destitution in Italy. — Recent accounts from Rome, state that there was much suffering among the poor in the Roman States, in consequence of the failure of the vintage and harvest. The exportation of oil, wine and grain, has been prohibited, and the Government has established public bake-houses in the chief cities, to supply bread at cost prices.

THE BRITISH FRIEND.

A monthly Journal chiefly devoted to the interests of the Society of Friends, is published at Glasgow, Scotland, by W. & R. Smeal, Editors. A new volume will commence with 1856. Terms, $2 per annum, in advance.

Subscriptions received at this office; also, by agent, J. S. Lippincott, 65 Marshall street, Philad.

Friends' Boarding-School for Indian Children, Tunessassah.

Two women Friends are wanted at this Institution to assist in the family.

Also, a man Friend to aid in carrying out the views of the Committee for the improvement of the Indians.

Application may be made to JOSEPH ELKINTON, 377 S. Second st
THOMAS EVANS,
Philad., Eleventh mo. 1st., 1855. 180 Arch st

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in this Institution.

Application may be made to either of the undersigned members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS, } Philada.
SAMUEL BETTLE, Jr. }

MARRIED, at Friends' Meeting-house, Twelfth st on Fourth-day, the 28th ult., WILLIAM WARDEN Springfield, Clark Co., Ohio, to MARY P., daughter the late Thomas C. Price, of this city.

DIED, on the 20th of Tenth month, 1855, in the year of her age, AMANDA, wife of Allen T. Lee; a member of Chesterfield Particular and Monthly Meeting. Her last illness was lingering and severe, but she enabled to bear it with much patience. About a before her death, after suffering much through the and often supplicating the Lord for mercy, she appe to be sinking very fast; and upon being inquired she felt prepared to go, she answered, "Oh, yes; I hope. Through His blessed mercy, I hope soon to where pain and sorrow have an end; yes! through redeeming mercy, I shall be saved." A little after, said, "Oh! I long to be with the Saviour; Oh, I come quickly and take me home:" often during night supplicating to be released from this life, and be admitted into that glorious mansion where all t bles cease. Next morning she said, "Oh! I long t at that place of bliss; Oh, take my soul up to glo "not for any good deed that I have done, but thro thy merciful goodness, am I received." "Oh, how t tiful! it seems as though I could see it." Some after this, she said, "Oh! there comes the enemy away; go away; I have nothing to do with th a while after, upon being inquired of how she felt, said she believed the Lord had withdrawn his pres from her; and a hope being expressed that the en had not taken possession, she replied, "Oh! no, I the Lord; my soul is filled with love for Jesus, a love every body, but I cannot see that glorious pla could." Oh, if the Lord should see fit to send back to earth, I shall never forget what I have se and with the help of the Lord, I hope to live very ferent, as I have been too forward in speaking of faults of others, and not looking enough to my ow After some time she said, "I have been too impati Oh, Lord, forgive me; I wanted to go too soon; t knowest my bodily afflictions; that they are at ti almost more than I can bear; but let me not murm I know I do not suffer any too much; Oh, Lord, [end me to bear my sufferings with patience; I wanted t instead of waiting thy time; Oh, that I may be resigned to thy will." Upon being inquired of if felt her Saviour's presence, she answered, "No, b am patiently waiting." At one time she advised s present against reading tales of fiction, adding, "T take the mind off from that which leads to happine A few days before her departure, after lying for s time in quiet supplication, she suddenly raised her and her hands, exclaiming, "Glory, glory, to God in highest, He has again visited me; sweet Jesus, c quickly and take me home; but let me not be im tient; thy will be done." She requested near her ch that all around her might be quiet; and during remainder of her time, she often supplicated for tience and resignation, which seemed graciously vou safed to her, her Saviour enabling her to pass thro the valley and shadow of death, to that land, no one whose inhabitants can say, I am sick.

(Continued from page 98.)

In another place, p. 361, of the Essays on Christianity, it is said—

"Now God has ordained a plan of divine mercy and wisdom for our redemption, a plan through which we may be reconciled to his favour, and delivered from guilt and sin; and *faith* is that *principle in the human mind* by which *alone*, according to the known constitution of our nature, this plan can be accepted and applied. Since, then, the believer accepts the mercy of God in Christ Jesus, and *applies it to his own condition*, it follows *in reason*, that the believer *is saved*; and on the other hand, since the unbeliever rejects it, and refuses to avail himself of its provisions, it equally follows *in reason*, that the unbeliever is not saved."

This passage is of similar import with the preceding. Faith is here denominated a principle of the human mind, by which alone, according to the constitution of his nature, a man can accept and apply the plan of mercy to his salvation, and duly conclude when he has done so, that according to reason, he is saved. This mode of defining the process of salvation, conveys the idea that it is a work which can be carried out by man in his own strength. But it is the Holy Spirit alone, that can bring him to feel the need of a Saviour, to give him faith in that Saviour, deliver him from sin and transgression, apply the mercy of God to his condition, and when he is born again, furnish him with the certain evidence that he is the child of God. Joseph Phipps says, page 92: "It is wrought by his Holy Spirit who worketh all good in men, both as to the will and the deed. It is by grace we are saved through faith; or in the way of faith. That faith which worketh by the love of God to the purifying of the heart and the production of good works. These are the genuine fruits of it, and inseparable from it: therefore, without works we cannot be saved. Yet it is not for the works that we are saved, as the cause of salvation to us, but by Grace through the root of them—the faith by which we believe in God, open it and receive him, cleave to him, trust in him, and so lay hold of eternal life. This faith is *not our faculty*, but the gift of God to us. It comes of Grace, the free Grace of God, who is not willing that any should perish, but that all should come to repentance. He whose works are evil, hath not this saving faith, believe what proposition he will; for where it is, it necessarily produces them [good works.] This root is never without its fruits. Show me thy faith without thy works, and I will show thee my faith by my works,' saith the Apostle James. Yet these works do not render us meritorious of salvation, for they are not to be attributed to us, but wholly to him who through his grace, hath brought us into this blessed state of living faith wherein they are produced. For by Grace ye are saved, &c."

The chapter on Faith in the "Essays on Christianity," concludes in the following words:

"Although we may be sometimes harassed with doubts, and cast down for the trial of our faith, into mental darkness and distress, that faith will nevertheless be found a substantial *inherent principle*, and will never be destroyed. Finally since faith is a moral qualification, a Christian grace, a fruit of the Spirit, and therefore unquestionably a divine gift, let us seek it where it may be found, at the throne of mercy; let us not cease to pray, that together with hope and charity, it may more and more abound in us, to our own peace, and to the glory of God our Saviour."

Here we are left much at a loss, which of these appellations is to be applied to Faith. If it be, as is asserted, an inherent, indestructible principle, we must possess it while we retain our natural faculties. As such, it may in one sense be said to be a fruit of the Spirit, a divine gift; inasmuch as every inherent faculty is divinely formed and given to the mind by the Creator. But an inherent principle cannot be a Christian grace, nor with any propriety be described as being found at the throne of mercy.

True Faith is an essential part of the Christian's armour; "Above all," says the Apostle, "taking the shield of faith, wherewith ye shall be able to quench all the fiery darts of the wicked." "Whatsoever is born of God," says another, "overcometh the world; and this is the victory that overcometh the world, even our faith." It was by the same faith through which the holy ancients wrought righteousness, that they stopped the mouths of lions, quenched the violence of fire, &c. It could have been no natural or inherent faculty, but was a firm trust in the name of the Lord of Hosts, with which they were inspired by his Spirit; and faith and the origin and object of it, are the same in all ages. How different are those notions of Faith from the language of Robert Barclay! In his definition of it, the Apologist says: "For which we shall not dive into the curious and various notions of the schoolmen; but stay in the plain and positive words of the apostle Paul, who describes it in two ways. 'Faith,' says he, 'is the substance of things hoped for and the evidence of things not seen;' which, as the apostle illustrates it in the same chapter by many examples, is no other but a firm and certain belief of the mind, whereby it resteth, and in a sense possesseth the substance of some things hoped for, through its confidence in the promise of God; and thus the soul hath a most firm evidence by its faith of things not yet seen or come to pass. The object of this faith is the promise, word, or testimony of God *speaking in the mind*. Hence it hath been generally affirmed that the object of faith is, *God speaking;* which is also manifest from all those examples, deduced by the apostle throughout that whole chapter, whose faith was founded, neither upon any outward testimony, nor upon the voice, or writing of man, but upon the revelation of God's will manifest unto them and in them." Prop. II. sect. 8.

On the subject of imputative righteousness, it is said in p. 363 of the Biblical Notes:

"The Christian's hope of deliverance from eternal death is founded on the glorious doctrine, that a ransom has been offered for his soul, by a Saviour of infinite dignity and power; and he anticipates the boon of everlasting felicity, not as the reward of his own *polluted works*, but as the just and necessary consequence of a *righteousness imputed* to the believer, the perfect righteousness of Him who is not only man but God."

No one can be truly termed a Christian believer, whose works are polluted; and while the works of any one, let his belief be what it may, are polluted, he can have no ground to suppose, that the righteousness of Christ is imputed to him, or to anticipate the boon of everlasting felicity. How are we to distinguish between a believer and an unbeliever, if the works of both are polluted? We fully and truly acknowledge Christ Jesus to be the Lord our Righteousness; but the polluted garments of sin and unrighteousness must be put off, before the perfect righteousness of Christ can be put on. This is not done by mere belief in his sufferings and death, but through the power of his Spirit, putting off the old man with his deeds, the body of sin and death, and putting on the new man, which after God is created in righteousness and true holiness, and by which we know Christ to be made unto us of God, wisdom, righteousness, sanctification and redemption; the righteousness of Christ not being imputed, but where it is imparted.

In page 313, of the Essays on Christianity, it is said—

"When, therefore, we read that the righteousness of Jesus Christ is imputed to the believer, we may reasonably understand such a doctrine to import, that we are not only saved through the sacrifice of Jesus Christ, but rewarded through his merits. Our sinfulness may properly be said to have been imputed to Christ; because when *he underwent the penalty which that sinfulness demanded, he was dealt with as if he had been himself the sinner;* and it is, I apprehend, on a perfectly analogous principle, that his righteousness is *said* to be imputed to us; because through the boundless mercy of God, we are permitted to reap the fruits of it."

In page 40 of the treatise on Love to God, it is said—

"Behold the glorious partner of the Father's throne freely opening his bosom to the *vials of his wrath*, groaning and bleeding on the cross, in the nature of man, and bearing in his own body on the tree, the *penalty* of the sins of mankind."*

And in page 45 of the same work—

"Let us call to mind, that in that hour of unutterable desertion, the righteous vengeance of God against a guilty world, was poured forth upon the innocent substitute."*

It is not for us to conceive, nor to undertake to describe, the nature or the depth of suffering, which our Lord passed through, on account of lost man, when he bore our sins in his own body on the tree, that we being dead to sin, should live unto righteousness. Wicked men were permitted to treat him as a malefactor, and to nail him to

* The two passages here quoted, are omitted in an edition printed in America.

the cross like a criminal; but we nowhere read in the Scriptures that his Almighty Father dealt with him as if he had been himself a sinner, pouring out upon him indignation and wrath. "I lay down my life for the sheep," said our Lord, "therefore doth my father love me, because I lay down my life, that I might take it again. No man taketh it from me, but I lay it down of myself. I have power to lay it down, and I have power to take it again. This commandment have I received of my Father." Our Lord therefore voluntarily gave himself up to death: and these expressions breathe the language of perfect love and resignation, and shut out all ideas of wrath and vengeance being poured on his head.

Robert Barclay says, Apology, Prop. vii., sect. 6: "For though Christ bare our sins and suffered for us, and was among men accounted a sinner and numbered among transgressors, yet that God reputed him a sinner is nowhere proved. For it is said, he was found before him holy, harmless and undefiled, neither was there found any guile in his mouth. That we deserved these things and much more for our sins which he endured in obedience to the Father, and according to his counsel, is true; but that ever God reputed him a sinner, is denied. Neither did he ever die that we should be reputed righteous though no more really such than he was a sinner. For indeed if this argument hold, it might be stretched to that length as to become very pleasing to wicked men, that love to abide in their sins. For if we be made righteous as Christ was made a sinner, merely by imputation, then as there was no sin, not in the least, in Christ, so it would follow that there needed no more righteousness, no more holiness, no more inward sanctification in us, than there was sin in him. So then, by his being made sin for us, must be understood his suffering for our sins, that we might be made partakers of the grace purchased by him; by the workings whereof, we are made the righteousness of God in him."

On this subject our ancient Friends always connected the inward work of the Holy Spirit with the outward, as essential to the reception of its benefits. George Whitehead says, "We are not pardoned, justified, redeemed or saved, by our own righteousness, works, merits or deservings; but by the righteousness, merits and works of this our blessed Lord and Saviour Jesus Christ, being both imparted and imputed to us, *as* he is of God, made unto us wisdom, righteousness, sanctification and redemption. Our reconciliation, redemption, pardon, sanctification and justification, having respect both to his suffering death, and blood, upon the cross as the one peace offering and sacrifice, and as our High Priest, thereby making atonement and reconciliation for us, and giving himself a ransom for all mankind; and also to the effectual saving work of his grace and good Spirit within us, bringing us to experience true repentance, regeneration, and the new birth, wherein we partake of the fellowship of Christ's sufferings and power of his resurrection. In which grace we ought to persevere in newness of life, and faithful obedience unto him, unto the end, that we may be heirs of the eternal salvation, which Christ is the author of." Antichrist in Flesh Unmasked, p. 30.

In page 357 of the Essays on Christianity, in speaking of the doctrine of Justification, it is said:—

"Now as Jesus Christ came into the world to save "sinners, so it is only in the character of sinners, that "we are in the nature of things capable of justification; "for to be justified in the language of Scripture, and "particularly in that of the Apostle Paul, usually signifies to be absolved, to be delivered by pardon from "the penalty due to our past sins. The free gift is of "many offences unto justification. Rom. v. 16. All "have sinned and come short of the glory of God; be-"ing justified freely by his grace, through the redemp-"tion that is in Christ Jesus, whom God hath set forth "to be a propitiation through faith in his blood, to de-"clare his righteousness for the remission of sins that "are past. Rom. iii. 23—25. From these premises it "follows, that in the order of the grace of God *justifica-"tion precedes sanctification*, and that the faith in Jesus "Christ, by which the ungodly are justified, has respect "in a very pre-eminent manner to the atonement which "he has made for the sins of the world. It is faith in "a crucified Redeemer, or to adopt the Apostle's words, "'faith in his blood;' and this doctrine corresponds "with the declaration of our Lord himself: as Moses "lifted up the serpent in the wilderness, even so must "the Son of Man be lifted up (on the cross) that who-"soever believeth in him, that is, I conceive, *whosoever "places his reliance upon him, as the atonement for sin*, "should not perish, but have eternal life." John iii. 14, 15, com. Rom. v. 1, 9.

There does not appear to be anything in these passages from Holy Scripture to warrant the conclusion which is here drawn, that justification precedes sanctification. The doctrine of Scripture is, that Christ by his sufferings and death has so far reconciled us unto God, as to put us into the capacity of being saved by his life and grace, for whose sake, as we are obedient to this grace, by which alone we receive power to repent of and to forsake our sins, they will be forgiven; and according to the order laid down by the Apostle, as we are washed and sanctified, we shall be justified in the name of the Lord Jesus, and by the Spirit of our God. Moreover, the sentiment that justification precedes sanctification, may lead into indifference respecting the necessity of the washing of regeneration and renewing of the Holy Ghost, especially if the doctrine were admitted, that the faith by which we are justified, is the exercise of a faculty of the human mind, giving us an interest in the atoning blood of the Lamb of God. The latter part of the quotation limits the gift of eternal life to those who place their reliance upon Christ as the atonement for sin; but those who have not the Scriptures, nor any knowledge of his outward sufferings, if they receive and obey him in his spiritual appearance in the heart, will equally partake of that salvation which comes by Jesus Christ, with those who have the outward knowledge, believe in it, and faithfully live up to the requirings of his Spirit.

The Essay proceeds—

"While, however, the justification of the sinner "through faith in a crucified Redeemer, precedes the "work of sanctification, its close and inseparable con-"nexion with that work is evinced by the fact, that in "the economy of God's spiritual government, *this very "faith is the constituted means*, through which *we obtain* "the gift of the Holy Spirit. In the preceding essay, I "have endeavoured to prove from Scripture that the "channel through which the Spirit flows to man, is "Christ crucified, and I am now remarking, that it is "through faith in Christ crucified, that we on our parts "are enabled to receive the Spirit, and are brought "under his regenerating and sanctifying influence."

According to the order laid down in the two quotations, a believer is possessed of faith and is justified by it, not only before he is sanctified, but before he has obtained the gift of the Holy Spirit; for the writer says this very faith in Christ crucified, is the constituted means through which we *obtain* this unspeakable gift. But it was purchased and obtained for us by the death of Christ; and whether we have faith in him and receive that gift in our hearts or not, he, by it, stands at the door, knocking for an entrance and reproving us for sin. As we can have no true faith, but what is given us by his Spirit, it is evident that its appearance there must precede the existence of this faith, and therefore that the gift of grace is not obtained by our faith. If we do not resist the grace, it will inspire our souls with living faith, and enable us to open the door and let the K of Glory come in. Now the promise of the gos dispensation was the pouring out of the Sp upon all flesh; indicating that a greater effus of the unction from Christ, the Holy One, sho be granted, than was generally experienced un the law. This was distinctly alluded to when said of the believer, "Out of his belly shall fl rivers of living water. This spake he of the S rit, which they that believe on him should receiv for the Holy Ghost was not yet given, becau that Jesus was not yet glorified;" that is, not the measure in which it should be conferred up those who received it in its least appearance in t heart, and through faithfulness became prepar for a further enlargement of the divine gift; li the flowing of the stream, which gradually r from the ankles to the knees and to the loins, til it became a river for a man to swim in. It thus we are made partakers of the fulness of t blessing of the gospel of Christ; but the Spirit Truth which reproves the world of sin, is sent in the hearts of all, in a greater or less degree, wh ther they have ever heard of Christ crucified not.

(To be continued.)

Feats of Insects.

From a late number of the *Excelsior*, an Et lish monthly magazine, we select the following

The muscular strength of insects is immen We once were surprised by a feat performed by common beetle—*Oryctes maimon*—in the Unit States. We had put the insect, for want of a box at hand, beneath a quart bottle full of mi upon a table, the hollow at the bottom allowi him room to stand upright. Presently, to o surprise, the bottle began slowly to move a glide along the smooth table, propelled by t muscular power of the imprisoned insect, a continued for some time to perambulate the su face, to the astonishment of all who witnessed The weight of the bottle and its contents cou not have been less than three pounds and a hal while that of the beetle was about half an ounc so that it readily moved a weight one hundr and twelve times exceeding its own. A bett notion than figures can convey will be obtained this feat by supposing a lad of fifteen to be imp soned under the great bell of St. Paul's, whi weighs twelve thousand pounds, and to move to and fro upon a smooth pavement by pushi within.

Mr. Newport has given other instances of inse power equally remarkable. Having once fasten a small kind of *Carabus*, an elegantly form ground beetle, weighing three and a half grain by a silk thread to a piece of paper, he laid weight on the latter. At a distance of ten inch from its load, the insect was able to drag after up an inclined plane of twenty-five degrees, near eighty-five grains; but when placed on a plane five degrees' inclination, it drew after it one hu dred and twenty-five grains, exclusive of the fri tion to be overcome in moving its load, as thou a man were to drag up a hill of similar inclinati a wagon weighing two tons and a half, havir first taken the wheels off.

Acording to the same excellent authority, th stag beetle—*Lucanus cervus*—has been know to gnaw a hole an inch in diameter through th side of an iron canister in which it was confine and on which the marks of its jaws were distinct visible, as proved by Mr. Stephens, who exhibite the canister at one of the meetings of the Ent mological Society.

Let us look at the powers of insects exercise in the act of flying. The house-flies—*Musc*

estica—that wheel and play beneath the
ing for hours together, ordinarily move at the
of about five feet per second; but if excited
peed, they can dart along through thirty-five
in the same brief space of time. Now in
period, as Kirby and Spence observe, "a race-
se could clear only ninety feet, which is at the
of more than a mile in a minute. Our little
in her swiftest flight will in the same space of
e go more than one-third of a mile. Now
pare the immense difference of the size of the
animals—ten millions of the fly would hardly
nterpoise one racer—and how wonderful will
velocity of this minute creature appear! Did
fly equal the race-horse in size, and retain its
ent powers in the ratio of its magnitude, it
ld traverse the globe with the rapidity of
tning. Some of the flies that haunt our gar-
s shoot along so rapidly that the eye cannot
w them in flight.

For are these tiny creatures less masters of the
of running and leaping. De Lisle mentions
so minute as almost to be invisible, which
nearly six inches in a second, and in that
e was calculated to have made one thousand
eighty steps! This, according to the calcu-
ons of Kirby and Spence, is as if a man whose
s measured only two feet, should run at the
edible rate of twenty miles in a minute.

Every one has had occasion to observe, not
ays without an emotion of anger, the leaping
ers of the flea—*Pulex irritans*. A bound of
hundred times its own length is a common
; as if a man should jump twelve hundred
, or a quarter of a mile! What a pity that
cts were not allowed to be competitors in the
etic games of old!

For "The Friend."

n the course of his religious visit in England,
Griffith, attended meetings at Moorsham and
dleton, "amongst a very plain people who ap-
red to be in a low condition of life; but I
id," he says, "the savour and virtue of Truth
ngst them, especially at the latter; to which
substantial minister of the gospel, Luke Cock,
in his lifetime belong. The remembrance of
m, although I never personally knew him, was
fresh and livingly before me in that meeting,
f his spirit had been present. I could, as I
ught, perceive the good effects of that worthy
's christian labours amongst these people; and
recious meeting the Lord favoured us with
ether; to whom, for the multitude of his mercies
owed upon us poor unworthy, helpless creatures,
humble thanksgiving and praise, now and for-
more." [Such christians witness the fulfil-
nt of the Scripture testimony, "they rest from
r labours, and their works do follow them."
faith they offered excellent sacrifice and re-
ved evidence of divine acceptance; and by it,
g dead, they yet speak. The influence of
r righteous example, and the history of their
s, often stimulate posterity to honour and fol-
them as they followed Christ.]

Whitby was the next meeting I attended,
g on First day, where I had very close, laborious
k. An *earthly, lofty spirit* had taken too much
e in some of the professors, the tendency
reof is, by darkening the understanding, and
ading the judgment, *to account* various weighty
nches of our christian testimony, *small, trifling
gs*. Here the flesh, that warreth against the
it, having the ascendency, its language is quite
osite thereto. The flesh saith, there is little
dress, religion doth not consist in apparel;
re is little in language; there is little in paying
es, &c., to the priests; there is little in carry-
ing guns in our ships, to defend ourselves in case we are attacked by an enemy. To which, I think, it may be safely added, *there is little or nothing in people, who plead as above hinted*, pretending to be of our Society; for if they can easily let fall the before mentioned branches of our christian testimony I am fully persuaded they will maintain the others *no longer than they apprehend it will suit with their temporal interest*. I have often wondered why such continue to profess with us at all. They are not really of us, who are not concerned to maintain those principles and testimonies the Lord hath given us to bear."

There appears to have been, in parts of the Society, a striking degeneracy at that day, similar with what greatly overspreads it now, among those who are setting at naught the testimonies of the Society. And those whose lives are consistent with the faith which we have held from the beginning, have heavy burdens to bear, as the faithful suffering seed have had to endure in every age. As a man's enemies are declared to be those of his own household, the remedy must be in the returning rectitude of the members individually. For the divisions of Reuben there were great searchings of heart. This is much wanting throughout the length and breadth of the Society. We have enough of the spirit that is looking abroad, and passing sentence upon others; but were we drawn to search for the cause of our divisions in ourselves, we should be far more likely to receive a clear view of it in all its workings, than by charging it altogether upon our neighbours.

Another experienced man said, many years ago, "I became the talk and gazing stock of the people. Professors watched me narrowly to get occasion against me, and the principles of Truth I professed; but the Lord strengthened me in my watch over my words and deeds, so cut off occasion from them that sought it against the Truth and me. In those days, to use the true, plain and proper speech, as *thee* and *thou* to a single person, and keeping on the hat, were strange things to the people, and few could suffer them to be used; but would reflect in abusive words, and sometimes use blows, or throw stones. Keeping to one price in selling goods, and to the first asking, without abatement, was a great stumbling block to most people, and made them stand at a distance from buying, some time, until they saw further into the justice thereof. All things were rough and rugged in the world, and the cross of Christ was foolishness, and a stumbling block to them. My exercises and trials, both within and without were many, and divers beyond what I can express. The Lord's judgments clave close to me; I was made *to love them*, and willing to wait upon the Lord in the ways thereof. Sometimes when the Lord's hand would be easy with me, *I would be afraid lest he should withdraw his hand*. Then my desires were to the Lord, not to slacken his hand, but *to search me thoroughly*, for his *judgments were become sweet to my taste*, which he many times mixed with springs of mercy, to my joy and comfort. Business in the affairs of the world became a trouble to me, though there were presentations to get riches."

How many are kept daily in this exercise none can know; but we may readily believe that if it prevailed universally, there would be no place for enmity or division within our Society, or the advocacy of principles incompatible with the doctrines we have always held. Party spirit would recede before the love of the brethren, and every one would desire to strengthen the bond of religious fellowship, and to encourage one another to follow the Lord faithfully in the discharge of all our religious duties. Nothing would so effectually convince others of the correctness of the cause we advocate, as bringing forth the fruits of the Holy Spirit in our daily intercourse with all men. Our own happiness constantly depends upon it, and next to the consolations of the gospel would be the peace and happiness arising from the return of undissembled and cordial unity throughout our religious community. It has pervaded every part of it; and were all sincerely desirous for its restoration, would not the Lord in mercy help us to put away every thing that divides in Jacob, and scatters in Israel, as our own will was given up to his humbling, regulating spirit.

For "The Friend."

GEORGE MOGRIDGE.

(Continued from page 102.)

The engagement, upon which he now entered, and which he faithfully and diligently pursued for a long course of years, proved most congenial, and consonant with his moral and religious feelings. A large number of metrical tracts, and small books for children, were prepared by him. Of these earlier publications the memoir says, "The plainness and originality of style of the forgoing tracts and books, with the author's easy mode of expressing important truth in simple rhymes, were well suited to the tastes and capacities of the labouring classes, whether old or young, among whom they soon obtained the stamp of popularity, which they have retained to the present day. They have been perused in the drawing room with pleasure and profit, while they have conveyed instruction to the cottager, the mechanic, the sailor, the soldier, and the poor man's child. Several of them have been republished in North America; and they have obtained a circulation wherever the English language is spoken."

In the year 1833, the Religious Tract Society commenced its periodical, the "Weekly Visitor." "On being invited to become a contributor, and to suggest any special department of the work he might wish to engage in, it occurred to him that articles on a variety of familiar topics, treated in a popular manner, would suit his pen, and be acceptable to the public. After further reflection, the signature of 'Old Humphrey' occurred to his mind, as in keeping with the character and design of the proposed series of papers. Under a title so homely and peculiar, he thought he could the more readily find his way to the hearts of his readers." The new engagement was entered on with great zeal and cordiality. "The arrow" he says "that strikes the mark efficiently, must have power to go beyond it; and without some confidence in our own powers, we are not, in any undertaking, likely to succeed. I am sanguine enough to think I shall interest my readers in my observations and retrospections."

The popularity of the "Old Humphrey" papers was evident from their first issue, and they awakened not a little curiosity in their readers, to know the name, and locality of him who had adopted the appellation. The pieces to which this name was affixed, appeared regularly in a fugitive form, and were subsequently collected into volumes. Of these, his "Observations," Addresses, "Thoughts for the Thoughtful," "Walks in London," "Country Strolls," "Pithy Papers," "Half Hours," and "Friendly Appeals," have afforded gratification to many thousands of readers, both in his own and other lands. In addition to these, ten smaller books, for children, are part of the "Old Humphrey" volumes. "In forming an estimate of the papers that appeared with this signature, it is necessary to consider for whom, and for what purpose, they were written. It was to win the attention of the greatest number, to subjects of the highest interest. Their apparent egotism and

garrulity, were in keeping with the character assumed. Without being profound, there was in them considerable knowledge of human life, and of the workings of the human heart. With singular tact, their author drew solid instruction from the commonest incidents of every-day life. His shrewdness of observation, and sound practical wisdom gave point to the sentiments. A natural geniality of disposition, imparted a fresh and generous tone to the thoughts

"A man he seemed of cheerful yesterdays,
And confident to-morrows."

"Ardent in feeling, grateful, and disinterested, he brought into play the sprightliness of his fancy, and his habitual buoyancy of spirit, chastened and tempered with a habit of grave remark. Under the surface of a lively style, there ran a flow of deep solemnity. He ever took a sunny and hopeful view of things as they rose before him; yet however gay, he was never volatile, nor lost sight of the responsibilities of authorship, or his character as a christian. He instructed without wearying, and by touches of good humour, prepared the way for the reproof of a fault, or exposure of a vice, in the spirit of love and gentleness.

"There were some topics on which, in this series of papers, he delighted to exercise his pen, such as the use and abuse of wealth, the benefits of earthly trials, charity for the poor, kindness to animals, the horrors of war, and the blessings of peace, christian temper in the lesser things of life; in these and kindred themes, he agreeably mingled the useful and the practical with spiritual truths of the highest importance to man. Old Humphrey was, not merely in his feigned character, but in reality, a true lover of nature. A country lawn, with children at play, a hedge bank, with its blossoms and butterflies; the rising or setting sun, casting its golden light across the sky; or the rippling waves on the seashore, filled him with delight, and often incited him to throw his thoughts and feelings into the shape in which they have been given to the world." Some of George Mogridges books for children, are said to be among the best of his writings, and instances are cited in the memoir, in which persons of mature years, were benefited by one of these little productions. His pen was not only diligent, but versatile, and occupied upon a great variety of topics. The whole number of tracts and books, added by him to the Society's catalogue, amounted to one hundred and forty-six. While engaged in promoting the objects of the Tract Society, he also wrote extensively for other publishers, and contributed to the periodicals of the Sunday School Union.

"Truly," he observed, toward the close of his life, "mine has been a prolific pen; and though too often, and too legibly, haste, immaturity of thought, and other errors, have marked my productions, yet it is a source of consolation and thankfulness, in the prospect of leaving behind me the many works I have written, to know that I have so little cause for serious regret. Though not unmixed with meaner motives, glory to God and good will to mankind, have ever been my prevailing object and desire. My connection with the Religious Tract Society, has been to me an important one in many respects, for it has supplied me with occupation, ministered to my comforts, withheld me from light and trifling pursuits, and constrained me to the consideration of eternal things."

George Mogridge was fond of travel, especially on account of the opportunity thus afforded for viewing the beauties of creation, and his periods of necessary relaxation were usually spent in journeys to the most interesting portions of his native island, which were for the most part performed on foot. He also in the same manner, made a long excursion in France. To an ardent and undaunted mind, there was united an agile body, which fitted him to enjoy these long pedestrian tours.

(Concluded next week.)

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 101.)

ELIZABETH WEBB.

Elizabeth Webb and Mary Rogers, after visiting Friends in the southern provinces, came up to Burlington in time for the Yearly Meeting held there, in the Seventh month, 1698. Their visit was very acceptable to Friends, and much unity was manifested with them, by their fellow-labourers and fellow-countrymen, William Ellis and Aaron Atkinson. In the epistle sent that year to London, they are characterized as self-denying men and women, filled with the Holy Spirit and love of God. "O the streams of Divine love and life that flowed in our assemblies to the breaking of the hearts, and tendering of the spirits of young and young. We may say it was one of the best and most powerful meetings we had in America."

A great trial here overtook Elizabeth Webb. Her beloved friend and companion, Mary Rogers, believed it right to leave her, and pass over to Barbadoes. It was indeed a time of affliction to both. The minute made in the Meeting of Ministers and Elders, on Mary laying her concern before it for its judgment, has been preserved in the life of William Ellis, who was present.

"22d day.—Mary Rogers, in much brokenness, laid before Friends, how that it had not been her own choice, to choose exercises, trials and difficulties; but it had been the Lord's pleasure to draw her beyond her expectation, as now he had laid it upon her to visit Barbadoes. She had tried several ways to have evaded it, if the Lord had seen good, yet every way, except that, seemed as darkness to her; but she was willing to lay it before the meeting, that she might have the concurrence of Friends in so weighty an undertaking; which caused much tenderness in the meeting, and divers testimonies were borne of the satisfaction of Friends concerning her and her exercises; and with several prayers for her preservation, in much love and brokenness, the meeting gave her up to the will of the Lord."

Towards the close of the Seventh month, returning minutes of unity were granted by Philadelphia meeting, both to Elizabeth Webb and Mary Rogers. The first remained awhile to finish her labour in America; the latter soon sailed for the West Indies, where, the following year, she laid down her life in peace with the Lord, and in unity with his church and people.

Of Elizabeth's labours in the north we have no trace, except the effect of her ministry on the black man, as previously narrated. Towards the close of 1698, we find her in the neighbourhood of the Chesapeake visiting Friends, preparatory to taking her passage for England. Thomas Story says, "Next fourth-day, being the 1st day of the First month, 1699, we went again by water to Monthly Meeting at Chuckatuck, where came our Friend, Elizabeth Webb, from Gloucestershire, in England, who had been through all the English colonies on the continent of America, and was now about to depart for England. The meeting was large, and the sheriff of the county, a colonel, and some others of note in that country, were there, and very sober and attentive."

"On the 3d, we had a meeting at South Branch, which was large, considering the short notice, and Elizabeth Webb was also there; grace of God was plentifully with us, to our great and mutual consolation, and the people were tendered, and the meeting ended in the dominion of Truth."

On the 11th of the First month, 1699, Elizabeth Webb, Elizabeth Lloyd of Philadelphia, and Thomas Chalkley, went on board the Elizabeth and Mary, having taken passage in her for England. The vessel was commanded by a Friend F. Johnson. Many Friends accompanied our three passengers on board the vessel, and the next day being the first of the week, they had "a comfortable meeting, and then parted in love, having the evidence of the power of the Almighty with us." Thomas Chalkley says, "the presence of God was with us on the great ocean, and we were wonderfully strengthened through his goodness. We had several good meetings on board the ship, and were very largely opened in the love of God to the poor seamen." They had many contrary wind, which made a very long passage, yet the time was not tedious. "When it was fair our meeting days, we spent not our time idly, but for the most part in reading the Holy Scriptures, writing, &c., in which we were at seasons greatly refreshed, strengthened and comforted." In about eight weeks they reached England, landing at Plymouth, because the winds were contrary.

A manuscript testimony concerning Elizabeth Webb, written by Thomas Chalkley, which has never been published, occurs this passage relating to the above voyage.

"It was my lot once to cross the sea, from America to Europe, in company with this servant of Jesus, and her conversation and deportment had a tendency to draw people's minds toward God. Heavenly things it was her practice to speak, read and write, so that her conversation seemed to us to be in heaven while she was on earth. I have blessed the Lord that I was acquainted with her, she being like a mother to me in my tender years, not only so to me, but she was indeed a mother in the house of spiritual Israel." "She travelled by sea to America, and visited the provinces of New England, New Jersey, Pennsylvania, Maryland, Virginia, and Carolina in which provinces she preached the gospel of God our Saviour, with power and clearness, much to the satisfaction of the Society, to whom she belonged, and was a member of, as well as many others; divers being really convinced of the Truth of the gospel through her ministry. She often went through great hardships, her sex considered, and returned in great peace in her soul, and true unity with good men and women, as was largely manifested by the testimonials of many pure souls."

In the next year, Richard Webb removed with his wife and family to Pennsylvania. Their certificate of removal was issued by Gloucester Quarterly Meeting held at Nailsworth, the Sixth month 31st, and was presented by them to Philadelphia Monthly Meeting, held Twelfth mo. 28th, 1700. In Philadelphia they resided for a few years. Elizabeth was, however, almost immediately engaged in religious service, travelling with Sarah Clemens or Clement, a Friend in the ministry from London, through the eastern provinces. They frequently had the company of John Richardson, who, having, in the spring of 1701, parted with his fellow-labourer in the gospel, John Estaugh, in Philadelphia, was visiting Friends to the eastward, without any settled companion. He says "Sometimes I fell in company with Elizabeth Webb and Sarah Clement, who were virtuous wo

, and lived near the kingdom, and were of service in their travels, and grew in the h of which while with them, I was sensible. travelled under great care and circumspec- both for our good and avoiding offence, as me our places and holy profession, that in all gs we might adorn the gospel of the kingdom, spensation of which was committed to us to ch to others." They met with some opposi- and trials, respecting one case of which John es; "While we were in Boston, when one he afore-mentioned worthy women was decla- excellently, both with good utterance and e, and good matter, as the manner of the in- tants of Boston had been for many years to ourage, or at least suffer a rude mob to bawl make a noise, so they did now, that it was l to hear so as to understand distinctly what Friend said, although she spoke plainly and lligibly." John, at the close of her communi- on, told the congregation assembled in which e some of the great men of the town, that a noise and disturbance was not the way to vince them of their errors, but rather to con- them in them. He added, "I never thought ave seen so much folly amongst a wise and gious people as I now see. Tell the governor chief men of the town, what the English h." His remarks had a good effect, and when n in Boston, his meetings were not disturbed. 'rom Boston the Friends went to Salem, and r a Yearly Meeting for worship there, which "large and good," they passed on northward rds Dover. Before reaching this latter place, e was a river to cross, in attempting which ccident took place which had well nigh proved l to one of the company, Ezekiel Waring, to se house they were then bound. The boat in ch he with three horses and the ferry-man, e, sunk. With much difficulty, his life was d, and they safely reached New Hampshire. y had previously attended New England Yearly eting, and after a few months in the north, y returned to Philadelphia, which they or at t John Richardson and Elizabeth Webb reach- bout the beginning of the Ninth month of that r.

The Parks of London.

Many of our readers probably are not aware of number, and magnitude of the Parks and blic Squares of London. Their importance in anitary point of view, is now fully recognized, they are cherished by the Londoners, as one the indispensable institutions of their vast . The following notices of some of them, extracted from an article in a late paper. ide its great Parks, London contains a large nber of open squares of ground, which doubt- contribute to the salubrity of the city. There are also many fine gardens in the centres of squares, which are as refreshing as oases in the desert. The Buckingham Palace Gardens comprise about 40 acres, of which nearly five are a lake. Lincoln's Inn Fields is a fine square, near which Dr. Franklin lodged, when a compositor at Watts' printing office.

"The Lungs of London.—The Parks of London were called by Lord Chatham the "lungs of the city," and well they may be termed so, when we consider how essential they are to the healthful respiration of its inhabitants. Westward lies Hyde Park, St. James' and the Green Parks; eastward, Victoria Park; southward, Kennington and Battersea Parks, and for the north of London the new Albert Park is now being laid out.

"*Hyde Park.*—Hyde Park extends from Piccadilly westward to Kensington Gardens, and lies between the great western and Bayswater roads. It is the site of the ancient manor of Hyde, which belonged to the monastery of St. Peter, until it was conveyed to Henry VIII., in 1536, soon after which a keeper of the park is mentioned. In 1652 it was sold, the deer in it being valued at £765. At the restoration, it was restocked with deer. Cromwell was partial to Hyde Park; here Syndercombe and Cecil lay in wait to assassinate him, when 'the hinges of Hyde Park gate were filed off, in order to their escape.' Reviews have, for nearly two centuries, been favourite spectacles in this Park. At the southeast corner is a colossal statute, bearing this inscription: 'To Arthur, Duke of Wellington, and his brave companions in arms, this statute of Achilles, cast from cannon taken in the battles of Salamanca, Vittoria, Toulouse, and Waterloo, is inscribed by their countrywomen.' The Crystal Palace was erected in this park in 1850, and removed in 1852. Hyde Park being for the most part high and dry, is perhaps the most airy and healthy spot in London. The park contains a sheet of water called the Serpentine. In 1847, pleasure boats for hire were introduced upon the Serpentine; the boat houses are very picturesque. Opposite the conduit in Hyde Park, is the building erected for Nathan Dunn's Chinese Collection. All our readers will remember this curious collection, which was first exhibited at Philadelphia, in the building at the corner of Ninth and George streets, recently burnt down. This truly beautiful Park contains 400 acres.

For "The Friend."

Early Anti-Slavery Advocates.

(Continued from page 85.)

RALPH SANDIFORD.

Ralph Sandiford, was born in Liverpool, England, about the year, 1693. His parents were members of the Episcopal Church, and he was brought up in its communion. One of his caretakers, probably his mother, was pious, and he thus speaks of the early training he received. "The religious education I had, though in the church of England, was governed by one, whose prayers and tears to the Lord, and good counsel to us, in the very power of Truth, did more subdue our evil natures than correction."

His late biographer, Robert Vaux, states that he was at an early period of his life received into membership among Friends; this is probably incorrect. There is no doubt but that he was convinced of the truth of many of our religious principles, but it does not appear from any evidence I can find, that he was ever a member of our Religious Society. At least, he brought no certificate of membership to the Monthly Meeting in Philadelphia, he was not admitted into communion whilst residing here and when he removed to Abington, took none away with him. From his writings, however, it is evident he considered himself a Quaker in principle if not in form, and that he attended the meetings of our Religious Society; and as at his death he left legacies to the Men and Women's Monthly Meeting of Friends of Philadelphia, it would seem that he had an affection for, and confidence in those members on whom the burden of the affairs of the Society in that place, principally rested.

Probably, soon after Ralph Sandiford was of age he removed to Pennsylvania, and from the dedication of his book against slavery, it is evident that his residence at first was in the county of Bucks. He found slavery, wherever he went, but he says he had "a sense" at his "first landing in these parts" of "the inconsistency" of the slave trade "with a christian education," "especially with the sense I had of the truth of God, and the extension of his goodness in this gospel dispensation, wherein he has singularly manifested his love unto all men; in the sense and under the shade of which, I have set with great delight, and the overflowings of his goodness has been sweet to my taste; and because of the flavour of the good ointment, which hath spread to the very border of the garment, therefore hath my soul loved and delighted in them as the universal love of the Father. After all these favours, O Lord, and thy manifold mercies and visitations of love, shall I disbelieve thee, in whom is no offence. Thou hast pronounced thy woe to the offender against the least believer in thee, that it were better that a millstone were hung about his neck, and that he be fathomed to the bottom of the sea! or shall I disbelieve thy truth, which testifies against all the unrighteousness and ungodliness of men? Blessed be thy holy name, who gave me a secret hope, and manifested unto my soul how this practice was suffered, to try who would sell thee and thy truth for gain. Thou who givest the blessing to those that are not offended in thee!"

In order to increase his property, Ralph undertook a voyage to Barbadoes. Soon after leaving the shore, the sloop in which he sailed was robbed by pirates. Many desparate gangs, frequented the North American coast during the early part of the last century, who plundered the merchant vessels, murdering or abusing the passengers and crews at their pleasure. In this instance, the sloop not being wanted by them, the pirates allowed it to proceed on its intended voyage, after taking from the lading and stores of the passengers what they pleased: Ralph says quaintly, "Through penury we made our voyage to Barbadoes, where a prospect of profit offered for this place [Philadelphia;] but as all human affairs are uncertain, in lat. 27 deg. 34 min., long. 5 deg. 56 min. westing from that island, our sloop, after many violent storms, sprung a leak, and in eighteen hours sunk before our eyes. We were left to drive before wind and sea, in our open boat, yet through the concurring mercies of our God, after eight days tossing on the ocean, in which we sailed one hundred and seventy leagues, we landed on one of the Bahama Islands called Cat Island. With souls filled with joy we sang to our Deliverer, rejoicing both in his judgments and mercies, who preserved us on the deep, and provided for us in the desert. We lay marooned* some months, until providence brought us to South Carolina." This was doubtless through the instrumentality of some vessel

*To maroon one is to put him ashore on a desolate island. A punishment inflicted in olden time on refractory sailors, and sometimes by mutineers on their officers.

bound to Charleston, the crew of which discovered them in their dreary abode, and kindly gave them a passage to the first port. Being destitute of money, Ralph sought employment. He appears to have had no difficulty in obtaining business, nay pecuniary assistance was offered, but that he refused. His heart was sick of slavery; he felt a strong testimony against it, and everything in that land being closely connected with it, he was not willing to accept more than his hire. He says, "I waged with one, esteemed the richest in the province, in the same service I was in with you [in Bucks county,] and he would have bestowed his bounty on me—but there was that righteous seed in me, which begs not its bread—neither would it suffer me to receive more than my hire, his riches being the product of Negro and Indian slaves. [To have received more] would have made me a debtor and an oppressor in the creation; which was so contrary to me, that the sight and sense I had of it burdened my life." His dislike to slavery hastened, he tells us, his return to Pennsylvania. Here slavery also existed, but he probably found it very different from that he had witnessed at the South.

On reaching Philadelphia, probably some time before 1720, he entered into business as a merchant. His store was on Market street "over against the Court house." Here his advertisements state, he sold "very good wine and rum" "at reasonable rates," "good hide, calf skins, sole leather, and tanned sheepskins, also good tamerine figs, and raisons at lowest rates." He was a man of business, and prospered. Many fairs, after the English fashion, were then held in different places throughout Pennsylvania, whereat goods of all sorts were offered for sale. Ralph Sandiford attended these fairs, taking such merchandize as he thought likely to meet with the readiest market. In the early part of the Third month, 1722, with a large portion of his earthly possessions in the shape of merchandize, he went to Bristol, to the fair held at that time there. His goods, with those of many others who had gone up from Philadelphia, were stored in the house of a man by the name of Moon, and Ralph with some others slept in the house to watch them. During the night of the 8th a fire broke out in the house which consumed all, or nearly all the goods Ralph escaped with his life, but two of the others perished. The American Weekly Mercury, under date of Third Month 10th, 1722, says, "On the 8th instant, about 12 of the clock at night, a fire broke out at Bristol, which burnt down a house belonging to — Moon, a bolting-house and two other houses Two men were burnt, one to a cinder, the other languished some time and is since dead. The goods, in general, of all that went to the fair from Philadelphia are consumed, and R. Robinson of this city, hurt very much by a fall from a window." It is probable that Ralph may have had to effect his escape from the same window. He thus describes his acquisition of property, his loss, and his escape. "The Lord blessed me with substance again, which was quickly consumed by the fire—and I providentially escaped with my life at your fair at Bristol Though the christian life consists not in outwards, yet in commemorating his providences to me in the day of my humiliation, both inwardly and outwardly, engages me thankfully to acknowledge his goodness and mercies in that he has again restored me to fulness and plenty."

Not discouraged by his losses, and with thankful confidence in the Lord, Ralph set to work in his shop in Market street, to renew by industry, frugality, and business habits his wasted estate. He soon was prospering once more, and now he began to think that he was a debtor to the poor slaves, until he should have laboured to move their oppressors to do them justice. This he doubtless had often tried with his tongue, but failing to effect much in that way, he essayed to wield a pen in the contest for truth. The publications of William Southby, of John Farmer, of William Burling of Long Island, on the same subject, he probably had in his possession. During the year 1728, he prepared for the press a work with this title; "A brief examination of the practice of the Times, by the foregoing and the present dispensations, whereby is manifested how the Devil works in the mystery, which none can understand and get the victory over, but those that are armed with the light, that discovers the temptation, and the author thereof, and gives victory over him and his instruments, who are now gone forth as in the beginning, from the true Friends of Jesus. Having the form of godliness in words, but in Deeds deny the power thereof. From such we are commanded to turn away." "Remember them that are in bonds, as bound with them, and them that suffer adversity, as being yourselves also in the body, Heb. xii. 3." "If any man love the world, the love of the Father is not in him." "He that leadeth into captivity, shall go into captivity, Rev. xiii. 10."

This was printed in the following year 1729, being dedicated "to my much esteemed Friend, Matthew Hughes, Esq, one of the representatives for the county of Bucks." He says in the dedication, "Has not the Lord, by his extraordinary providence, opened this America before the Europeans, and given us peace and plenty, among the Natives? And shall we go to Africa for bread, and lay the burden which appertains to our bodily support on their shoulders! Is this washing one another's feet,—living by the gospel, or maintaining liberty and property? [This] we are called unto; that we may answer the just principle in all men, which now is crucified by this trade, in such who can, without remorse, cruise on their coast, and up their rivers, to steal all they can find. [This] has introduced so much wickedness amongst us, as the fruit of a corrupt tree, first planted in King Charles's time, when the African Company was commissionated for that trade."

He then goes on to show, that to fill their vessels rapidly with slaves, they would set the negro kings at war, and which ever party was the victor, the fort built by the Company, was a market for all the prisoners. The prices they offered proved a temptation, leading the savages to murder secretly the stronger of their neighbours' families, that they might sell the rest, for the least bawbles. He adds, "O unrighteous gain! the price of blood, the fountain of which all that touch are unclean! Let us read the law of separation, and run in the spirit lest we defile ourselves and our issue, and so be cut off from the commonwealth of Israel." He ends thus, "as a living member in the body, which you [the assembly] represent, with submission is offered to thee and thy brethren, the ensuing treatise, intended for the good of both church and state, in that love that strikes not at the least member, but at that which would destroy and bring into captivity the whole body; against which is the warfare of thy friend,

RALPH SANDIFORD.

Philadelphia, 1st of 11th Mo., 1728-9.

(To be continued.)

When the spirit brings light into our minds, it dispels darkness; we see it as we do that of the sun at noonday. This light from heaven is strong, clear and pure, and carries its own demonstration with it, and we may as rationally take a g worm to assist us to discover the sun, a examine the celestial ray by our dim candle son.—*Locke.*

Selected for "The Frier

Stumbling at the Faults of Others.

The particular snare of the adversary that mind is engaged to guard against is, *stumblin the failings of others.* A powerful instrum which prevails by Satan's influence, to the w ening the faith of many. Why will a spirit, bc to eternity, stumble over the failings of flesh blood? Why will a soul that must finally s accounts between God and itself, waste tim despond at the infirmities of another? The f ties of a thousand, cannot impair the unchange truth and righteousness of Jehovah. The h crisy of ten thousands cannot deprive the faitl persevering soul of the all-sufficient assistanc the mighty God of Jacob. There is a right to serve God; and though a multitude fall on right hand, and a host of those who have bee stars in the firmament, revolt on the left; yet way-faring man, though a fool, cannot err in way which the Lord hath cast up for the ranso to walk in. We are told that the dragon's drew a third part of the stars from heaven. this told to stumble us? surely nay; but still cry is "Come up hither, and I will show thee bride, the Lamb's wife." Now, the stum may say "I have strove to see the bride, I l thought I had seen her, I have viewed her, her beauty fades away; her brightness di pears." But mark well, the call is "*come hither, and I will show thee.*" It is not while stand gazing at imperfections, and reasoning u faults, that we must expect this divine prosp This come up hither, imports something different from halting, lingering behind, and were, sticking in the mire.

There are some who have long ago been kit visited, and tenderly invited by the Lord, to c and see how good he is, and who have even tas in a degree, of the sweetness of his love, who yet far behind with their day's work; are halt doubting, and feeding on the serpent's food, wl was denounced by the lip of Truth to be dust, that, all the days of his life. And nothing be shall be the food of such as spend all the day their lives in gazing at, or stumbling over failings of others. I would call them, yea, ent them, as they tender their own salvation, to e away, *come away.* This is not your rest. surely is polluted. It is a land of darkness darkness itself. Oh, sorrowful! that any sh love to dwell in utter darkness; that any sh suffer their immortal souls to be made so ea prey to the dragon. What will it avail the soul, when thou comest before the great and tribunal, to say, such a man professed great s tity, but was an hypocrite, therefore I was te ted to quit the service of the living God, and s his enemy? Or, such an one made professio exalted piety but was a deceiver, therefore, thou was somewhat washed, I turned to my wallowin the mire? This will never justify thee at the gat heaven, nor procure thee an admittance therei Let me query with thee, dost thou feel a daily s ing to overcome evil in thyself? Art thou consta concerned to keep up the inward watch and warfare? yea, let me come closer. Whilst t art dwelling, musing and feeding upon the fa of others, art thou at the same time engaged, panting after perfection in thy own soul? W thou art rehearsing to thy intimate friend, wanderings and weaknesses of such and such, thou feel longing and unquenchable desires in

to make war in righteousness against the
of corruption in thyself! If not, the enemy
th, it is to be feared, may with justice, chal-
the praise due from thy complainings. Oh!
hat eye was open in thee that could see thy-
that thou hadst a heart to understand this
ry of iniquity. Why dost thou give back
se of another's weakness, but because of thine

Why stumblest thou at another's frailties,
ecause thyself art frail? Make a pause then,
urn thy attention inward. Set a watch upon
icket of thy soul, and keep sentinel in deep
tion there: then wilt thou have enough to
view thy own imperfections, and to guard
st them so as not to stumble others,—work
h indeed may be found to engage all thy
nd diligence, in labouring to cease from evil,
o good thyself. The day of solemn reckon-
raws near. Thou must, ere long, appear
e the Ancient of Days, to give an account of
eeds done in thy body, and to receive a re-
according to thy works; not according to the
ity or instability of another. Therefore,
e, thou that sleepest, and arise from the dead,
Christ may give thee light. Oh! that I could
ade thee, for thy own soul's sake, to turn thy
on Satan's suggestions—that thou couldst be
iled upon to lift up thy head above the world,
o thy salvation might draw nigh indeed.

t me once more beseech thee, to hearken to
encouraging invitation, which is sometimes
led in the secret of thy soul, "come up hither
will show thee the bride, the Lamb's wife."
up, is here the joyful sound: and even "the
t and the bride say, *come*:" and indeed "he
will come may come:" yea, verily, *may come:*
if he improves the strength given, all the
rs of the earth, and of the infernal hosts, can-
inder him. For "there is no enchantment
st Jacob, nor divination against Israel," while
eir tents. Therefore, to thy tents, O Israel.
inward. There thy strength lies. There is
lace of preservation. There shalt thou walk
e light of the Lord; his candle shall shine
thee, and his inspeaking word shall guide thee
e way everlasting.

For "The Friend."

What are our Motives.

re we seeking above every other consideration
lory of God, and the honour and prosperity of
ruth, by allowing the kingdom of Christ to
t up in our hearts, and his will to be done in us,
is in heaven? Do we know a being joined to
mystical body, of which He is Head, and by
iving power are we made subject one unto
ner, to its edification in love? Are we striving
her for the faith of the gospel, seeking to be
and more firmly built, and to build one an-
thereupon, by the power of Divine grace,
h is measurably vouchsafed to every man to
t withal? Are we, individually, the humble re-
nts of and co-operators with that blessed gospel
er, by which the Society of Friends was raised
n the beginning, and made "a peculiar people,
us of good works?" Is our eye kept single
e pointings of the unerring finger of Truth,
in doing and suffering according to the divine
intment, in order that we may be made instru-
tal in hastening the coming of that day, when
e kingdoms of this world shall become the
doms of our Lord and his Christ; when the
and the lamb shall dwell together, and the
rd shall lie down with the kid, and the young
and the fatling together, and *a little child*
lead them?" Or are we seeking the honour
h cometh from men, shunning the cross, and
aking from suffering, seeking to deliver *our-
selves* from the bondage of corruption, and the troubles in the church; regarding our own will, desires, and ease, more than the blessed cause for which our holy Redeemer suffered and died? thus taking the burden upon ourselves, and trusting to our own wisdom and might to help and direct us, and in the spirit of retaliation persecuting those who differ from, and oppose us.

O, how the minds of many of the young and inexperienced, as well as of those who are older, have been turned *outward*, by the wind of false doctrine, the contention and strife, and the want of harmony of practice with profession. How has the enemy of Zion's prosperity and peace prevailed against us, through the exercise of the creaturely will, until many throughout the Society have become "as the heath in the desert, that knoweth not when good cometh," whereby the line of confusion has been stretched out upon us, and our waters have been made to cast up mire and dirt.

The self-denying, long-suffering, and forbearing spirit of the meek and lowly Jesus, must come to bear rule in our hearts, before we can arrive at that settlement and peace, that joy in believing, unto which we are called by the gospel. Let us remember for our encouragement, the patience, forbearance, and love of the blessed Head of the Church, towards those who persecuted Him in his outward appearance amongst men; how he endured the contradiction of sinners, condescending to mingle with them, that by the exercise of his precious love, he might win them unto the Father through the reconciliation which he came to effect, and by repentance and forgiveness of sins. "I came not," said he, "to call the righteous, but sinners to repentance;" and this end he sought to accomplish, not by force, but by *entreaty*.

The Apostle Paul testified of his ministry and that of the other apostles, that, "knowing the terrors of the Lord for sin, therefore we *persuade* men." Ah! before he knew those terrors, he had exercised a zeal without knowledge, and in the heat thereof, had been engaged in persecution and oppression, thinking that he was thereby doing God's service. But when the scales of ignorance were removed from his eyes, and the kingdom of Christ set up in his heart, he saw into the peaceable nature of that kingdom, and began to preach in the name of him whom he had persecuted, to the astonishment of those who had known him previous to his conversion. Now, are we not bound by every consideration of duty, as well as interest, to cleave to the Truth in the spirit of the Gospel; resisting the temptation which would lead us to close the door of our hearts against any, ever bearing in mind that it is in the love of Christ through which they have been reconciled and forgiven that the members of his body or church, are united together in the hope of their calling. These living members are made sensible of the danger and loss of those who are dwelling as in the outward court; and willing as ability is afforded, to administer to their wants. Should the query addressed to Peter be sounded in the ears of these, they can truly return the same reply, given by him: "Lord, thou knowest all things, thou knowest that I love thee," and to them the word of command is given, "Feed my sheep." Blessed are "they that turn many unto righteousness for they shall shine as the stars for ever and ever." "Let us then seek to know our calling and therein abide; bearing one another's burdens, and so fulfil the law of Christ, who hath permitted that we should suffer for His and the Church's sake; and labour as ability is afforded for the restoration of those who may have strayed from the fold, into the wilderness of a worldly or a party spirit.

THE FRIEND.

TWELFTH MONTH 15, 1855.

There is reason to believe, that reliable information respecting a large portion of country in the interior of Africa, will soon be laid before the community, by the publication of Dr. Barth's travels on that continent. He is a German, and is now at Gotha, superintending the passage through the press of his work, both in German and English.

He started on his exploration, in the latter part of the year 1849, in the course of a year or two, was lost to every inquiry, and after an absence of five years, his friends gave up all hope of his return. From the accounts given in different periodicals, it appears the discoveries made during his journeys, will greatly increase our knowledge of the central regions of what is commonly distinguished as the "benighted continent." The London Athenæum says:—

"In his unparalleled journey to Timbuctoo he discovered two large empires, Gando and Hamd-Allaki, of which not even the names were known previously, and gained a complete insight into the history and present state of Timbuctoo, its people, and all the surrounding countries; made, for the first time, a minute survey of the middle course of the river Kowara, and altogether created a new era in the history of African discovery and regeneration. Dr. Barth's only companion died on the borders of Lake Tsad, September 27th, 1852, since when he has pursued his journeys alone."

His forthcoming work is looked for with great interest, and is understood to show the natives of some of the kingdoms of Africa, in a different and much more favourable light than that in which they have heretofore been regarded.

SUMMARY OF EVENTS.

EUROPE.—News from England to the 24th ult.

The stringency of the money market continued, but consols had advanced owing to rumors of a probable resumption of peace negotiations. Consols are quoted at 88¾ a 88⅞. The bullion in the Bank of England had somewhat increased.

Negotiations between Russia and Prussia continued, and it is stated that the Court of Berlin was making great efforts to induce the Czar to consent to such terms as would lead to a pacific result.

It is confidently stated, that Lord Palmerston has determined upon the immediate dissolution of Parliament, and that a new Parliament will be called together in the Second month. The post of Secretary of State for the Colonies has been filled by Henry Labouchere. The Duke of Argyle is now Postmaster General, retaining the office of Lord of the Privy Seal. The number of Manchester operatives on a strike, is 3400. They all conduct themselves peacefully. The strike grew out of an attempted reduction of wages. Knighthood has been conferred on Captain McClure, the Arctic navigator. *Liverpool Market.*—Cotton dull, and prices declining. Sales of the week, 35,000 bales. The demand for breadstuffs was moderate, and prices had slightly declined. Flour was quoted at from 42s. 6d. to 45s. per bbl. according to quality.

The intelligence from the seat of war is wholly devoid of interest. The Invalide Russe announced that large numbers of the allied forces embarked at Eupatoria on the 14th ult., and sailed westward. Constantinople is stated to be the scene of much tumult and disorder. There was a great and increasing fanaticism against the Christians, especially the French, and murders and robberies were taking place in the open streets. The allied commandants have called on the Turkish Government to prevent further outrages under a threat of the allies taking immediately the police of the city into their own hands.

The Russian Government has concluded a loan with German capitalists at Berlin.

The King of Sardinia had arrived in Paris, and met

with a favourable reception. The Pope's Nuncio left the city, in order that he might not come in contact with the excommunicated Sovereign.

The International Convention on a Uniformity of Weights and Measures, had held its third meeting at Paris, in the Exposition Building.

The Spanish Government is said to be quite willing to join the alliance against Russia; but not immediately, as at present Spain has neither money nor soldiers to spare.

The revenues of Belgium show a deficit of eight millions of francs, caused by the appropriation of twelve and a half millions for the defence of the country, and the relief of distress.

It was expected that the Conference respecting the Sound Dues, would be opened at Copenhagen on the 20th ult. Russia was the only power that would send a Special Envoy, the other governments accrediting their resident Ambassadors, assisted by persons conversant with the subject.

Abolition of Slavery in Egypt.—It is stated that the Egyptian Government has recently put into execution the decision of the Divan, relative to the abolition of slavery. Not only is it forbidden to buy or sell slaves in Egypt, but all those in the possession of private individuals, are to be informed that they are free.

CENTRAL AMERICA.—The Central American governments are in a state of excitement growing out of Walker's proceedings in Nicaragua. The Republics of Costa Rica, Guatemala, Salvador and Honduras, are all in arms, deeming it necessary for their own safety to oppose the invaders. They also protest against the recognition of Walker's government by the U. S. minister, J. H. Wheeler. It is asserted that Wheeler was seen the day on which Grenada was taken, at the door of his house, *giving brandy to Walker's men*, the minister's son being at the time among the invaders, armed with a sword, and appearing as one of them. Accounts from Washington state that Wheeler's conduct in the recognition has been disapproved by the Administration.

UNITED STATES.—The first session of the thirty-fourth Congress commenced on the 3d inst. In the House of Representatives, 225 members were present at roll call. Great difficulty occurred in effecting an organization, in consequence of the political composition of the House, about one-third of the members being democrats, or friends of the Administration, and the remainder divided into a variety of parties without sufficient agreement or sympathy to enable them to unite on any candidate for the Speakership. The whole of the first week of the session was wasted in fruitless ballotings. On the 10th inst., they were renewed with little better results. At the third vote taken on that day, Banks, of Massachusetts, received 106 votes; Richardson, of Illinois, 76. Necessary to a choice, 114. The Senate has met from day to day, but its proceedings have been unimportant.

New York.—The population of the State by the late census, is stated to be 3,466,118. In 1850 it was 3,095,394. New York city has 629,810 inhabitants.

Virginia.—The Virginia Legislature has passed a resolution for the amendment of the penal code, in relation to the abduction of slaves so as to punish those convicted of it with death and forfeiture of property. A committee of the Senate and House has also been appointed with a view to the adoption of more effectual means to prevent the escape of slaves to the northern States, and to provide for the summary punishment of persons detected in aiding or abetting the same. James M. Mason has been re-elected to the U. S. Senate.

Massachusetts.—The population by the census of the present year, is stated to be 1,133,259, showing an increase since 1850 of 138,745. Boston has 160,508 inhabitants.

Kansas.—On the 1st inst., Gov. Shannon telegraphed to Washington, from Westport, (Mo.) as follows: "I desire authority to call on the United States forces at Leavenworth to preserve the peace of this Territory, to protect the Sheriff of Douglas county, and enable him to execute the legal process in his hands. If the laws are not executed, civil war is inevitable. An armed force of one thousand men, with all the implements of war, it is said, are at Lawrence. They have rescued a prisoner from the Sheriff, burnt houses, and threatened the lives of citizens. Immediate assistance is desired. This is the only means to save bloodshed. Particulars by mail." The President answered, "All the power vested in the Executive, will be exerted to preserve order, and enforce the laws. On the receipt of your letter, the preliminary measures necessary to be taken before calling out troops, will be promptly executed, and you will then be fully advised." Governor Shannon has declared his intention to sustain the acts of the pro-slavery legislature elected by the aid of Missourians, whilst the free State settlers repudiate and deny their authority. The despatch probably gives an exaggerated view of the outbreak, but there can be no doubt that a crisis has been reached in the affairs of the Territory, requiring the interference of the government, and demanding the exercise of much wisdom and forbearance. Congress could do much towards correcting the unwholesome state of feeling existing in the Territory. But there are such elements at work in that body, that there is but little hope of any attempt in that quarter towards soothing exasperated feelings, and restoring the authority of law. The House of Representatives will be soon called on to decide between the two rival claimants for the seat of delegate in that body, Reeder chosen at the election held by the Free State men, and Whitefield elected by the Missourians and pro-slavery party. The latter has Governor Shannon's certificate.

Philadelphia.—The finances of the city have for many months been in an embarrassed condition, in consequence of the extravagance or mismanagement of those who have controlled them. Councils last week passed an ordinance authorizing a loan of one million of dollars to be applied in paying off some of the city debts. According to the record kept at the Pennsylvania Hospital, the mean temperature of the Eleventh month was 48°, which is 4 deg. above the average of the last thirty years. The amount of rain was 2.03 inches. At Paoli the rain was 1.93 inches; at Trenton, N. J., 2.61 inches. Mortality last week, 167.

Miscellaneous.—Destructive Explosion.—Among the late items of news from the Crimea, is an account of the explosion of three magazines belonging to the French artillery near Inkerman, by which 72 men were killed, and 110 wounded. The magazines contained 66,000 pounds of powder, 600,000 cartridges, and a quantity of charged shells, all of which were destroyed. Some of the shells fell in the British entrenchments, doing considerable mischief. Twenty-two men were killed in the British lines, and about 120 wounded.

More Ravages in the Sea of Azoff.—On the 5th and 6th ult., an English flotilla commanded by Captain Osborn, destroyed immense quantities of grain and forage of this year's harvest, which had been collected on the coast, ready to be conveyed to the Russian army, as soon as the gulf was frozen over. The despatch says, the grain, &c., was compactly stacked in six tiers, extending two miles along the coast near Gheiskliman.

Brooklyn, N. Y., has become a large city—population by the late census, 194,225.

Steamboat Disasters.—The steamboats George Collier and May-flower were recently burned at Memphis, Tenn. Fifteen persons are said to have perished. Loss of property, about $150,000.

The Trade of Canada.—Under present commercial relations, Canada is supplied principally from the United States with many commodities, which were formerly brought in by sea. Tea, coffee, and molasses are now mainly obtained through the United States.

The Polhynia, or Open Polar Sea.—A writer in the National Intelligencer suggests, that as no ice drifts southward through Behring's Straits into the Pacific, the equatorial current of that ocean must set northwardly through those Straits into the Polar Seas, and that it finds egress from that sea southwardly into the Atlantic through Baffin's Bay and Davis' Strait. The writer thinks that, therefore, the proper way to reach the Polar Sea without difficulty, must be to follow the drift of the current, which is northwardly through Behring's Strait.

The Erie Canal, is closed for the season, the ice having anticipated the time appointed by the Canal Commissioners. About 1000 boats, many of which have breadstuffs on board, bound to the Eastward, are thus locked up between Utica and Little Falls, N. Y.

France, in the Grain Market.—The Rochester Union states that the agents of the French Emperor have been largely engaged this fall in purchasing wheat in the west, on his account. About 900,000 bushels purchased by them, had gone east through the Erie canal. The remainder, agents are still buying in Illinois and other Western States, for shipment by way of New Orleans.

RECEIPTS.

Received from A. Garretson, agt., O., for John Doudna, $2, vol. 29; from Jesse Hall, agt., O., for L. Taber, $2, vol. 29; from Jehu Fawcett, agt., O., for Ed. Bonsall, jr., Ed. Bonsall, senr., D. Test, B. Ahton, M. J. Fawcett, $2 each, vol. 28, for Tho. Heald, W. Heald, $2 each, vol. 29, for Thos. Hoyle, $4, vols. 28 and 29, for Jas. Heald, $2, to 43, vol. 29, for Aaron Stratton, $4, vols. 28 and 29; from John Dakin, Vt., $2, vol. 29; from W. Carpenter, agt., N. J., $4, vols. 28 and 29, for H. Allen, S. Denn, $2 each, vol. 29, for A. Sinnickson, $2, vol. 28; from Rachel Howard, per S. Hull, Io., $2, to 10, 30; from Thos. Lee, Pa., $2, vol. 29.

DIED, on the 2d inst., in the 57th year of her a CHARITY EDGERTON, wife of Joseph Edgerton; a me ber and elder of Ridge Particular and Somerset Mont Meeting, Belmont Co., Ohio. This dear Friend b been much afflicted, for several years, with neural pains in the head, the paroxysms of which increased greatly within the last few months, as occasionally produce spasms; but she was favoured in great m sure to retain the use of her faculties, and though who was not apt to speak of her religious feelings, at divers times she uttered many comfortable exp sions. Some months prior to her decease, being bro so low by internal hæmorrhage that her recovery despaired of, she remarked to her husband, "I thou last night that I was almost gone, and I felt very pea ful. I have had an opportunity, during the last win to review my past life, having been frequently alone my chamber, and although I am a poor creature, I h not been able to see that there is anything in my w I am willing to go." She, however, rallied, and so recovered as to be able to walk alone for a short ti but her painful disease continued. Notwithstand her suffering, she said she could adopt the languag the poet which she repeated,

> "There is mercy in every place,
> Mercy, encouraging thought
> Gives even affliction a grace,
> And reconciles man to his lot."

In the progress of her disease, she became entirely bli to which great trial, she was, through Divine me resigned, saying, "I think I can say I feel resigned my situation." At one time, being asked how she was she replied, "I feel poor, but I feel no condemnati Two days before the attack, which in about a w terminated her life, she remarked, "I think nature n soon give way, and I am satisfied and willing it sho be so." She was firmly attached to the ancient doctr and testimonies which the Lord has required the S ety of Friends to uphold, and laboured, in the spi alloted her, for their support. Being favoured wit sound and descriminating judgment, through obedie to the requirings of her Divine Master, she was quali to take an active part in the administration of the cipline, and was instrumental in maintaining the ca of Truth to the comfort and encouragement of friends, and the benefit of the church. In contempla the removal of this dear Friend, the language of Sc ture may be adopted, "Our light affliction which is for a moment, worketh for us a far more exceeding eternal weight of glory; while we look not at the th which are seen, but at the things which are not s For we know that if our earthly house of this tabern were dissolved, we have a building of God, an h not made with hands, eternal in the heavens."

n the subject of justification, Robert Barclay : "Nevertheless as we firmly believe it was ssary that Christ should come, that by his h and sufferings, he might offer up himself, a fice to God for our sins, who his own self bare sins in his own body on the tree, so we believe the remission of sins which any partake of, is in and by virtue of that most satisfactory fice, and no otherwise. For it is by the obee of that one, that the free gift is come upon all stification. For we affirm that as all men par- of the fruit of Adam's fall, in that, by reason at evil seed, which through him is communi- unto them, they are prone and inclined unto though thousands of thousands be ignorant of n's fall, neither ever knew of the eating of the dden fruit, so also many may come to feel the ence of, this holy and divine seed and light, be turned from evil to good by it, though they nothing of Christ's coming in the flesh, gh whose obedience and sufferings it is pur- unto them. And as we affirm, it is abso- needful, that those do believe the history of st's outward appearance, whom it pleased God ing to the knowledge of it, so we do freely ss that even that outward knowledge is very ortable to such as are subject to, and led by nward seed and light."

The history then is profitable and comfortable the mystery, and never without it—but the ery is and may be profitable, without the ex- and outward knowledge of the history." . v. and vi., sect. 15.

ne paragraph from the Essays on Christianity s with the following:—

hose *only* can *truly* be said to eat the flesh of the of man and drink his blood, whose *whole reliance alvation* is placed upon him *as the sacrifice for sin;* these are they *who receive the Spirit* that quickeneth ho dwell in Christ—and know Christ by his Spi- to dwell in them—who through the Spirit are made e unto God in this world, and therefore live forever he world to come. John vi. 53—63."

here is great danger of reversing the order of gs pertaining to salvation. It is those only receive into their hearts the Spirit that quick- n, and by its regenerating power, are prepared Christ, to make his abode in them, who have st ground to place their whole reliance on him his all-atoning sacrifice for their sins. Those can truly be said to eat the flesh of the Son an and drink his blood, who are putting on the Lord Jesus Christ and make no provisions for the flesh to fulfil the lusts thereof—who partake of the divine nature by being grafted as branches into Christ the true vine, knowing the divine life which is in him, to flow into their souls, by which they are kept alive unto God, and bring forth fruit to his praise. Their whole reliance will be placed on Christ Jesus for salvation, not only in what he has done for them without them, where they have the knowledge of it, as their Redeemer, Mediator, and Advocate with the Father; but also in all his glorious offices in destroying the works of the devil in them, and bringing everlasting righteousness into their souls. But to limit the participation of the body and blood of Christ, and the gift of the Spirit that quickeneth, to those only whose reliance is placed upon him as the sacrifice for sin, would be cutting off from the communion of his flesh and blood, and from the benefits of his coming, all who are placed under circumstances, which preclude them from the outward knowledge of it.

Is it not possible for persons who have been educated in the belief that Christ has suffered in their stead, the penalty due to their sins, and that they are saved by his imputed righteousness, to place their whole reliance for salvation on his sacrifice, and to conclude that they are perfectly safe, while they are rejecting the visitations and requisitions of his Spirit, and are no better than nominal believers of the truths of the gospel? Can such a literal belief make them participants of the body and blood of Christ, while they know nothing of the power of his resurrection and the fellowship of his sufferings, not having been made conformable to his death?

On the subject of justification Robert Barclay further says: "That the obedience, sufferings and death of Christ, is that by which the soul obtains remission of sins, and is the procuring cause of that grace, by whose inward working, Christ comes to be formed inwardly, and the soul to be made conformable unto him, and so just and justified. And that therefore in respect of this capacity and offer of grace, God is said to be reconciled, not as if he were actually reconciled, or did actually justify, or account any just, so long as they remain in their sins, really impure and unjust. Secondly—That it is by this inward birth of Christ in man, that man is made just and therefore so accounted by God. Wherefore, to be plain, we are thereby, and not till that be brought forth in us, formally, if we must use that word, justified in the sight of God; because justification is both more properly and frequently in Scripture taken in its proper signification, for making one just, and not reputing one merely such, and is all one with sanctification. Thirdly—That since good works as naturally follow from this birth as heat from fire; therefore, are they of absolute necessity to justification; though not as the cause *for* which, yet as that *in* which we are, and without which we cannot be justified. And though they be not meritorious, and draw no debt upon God, yet he cannot but accept and reward them; for it is contrary to his nature to deny his own, since they may be perfect in their kind, as proceeding from a pure, holy birth and root. Wherefore their judgment is false and against the truth, that say that the holiest works of the saints are defiled and sinful in the sight of God; for these good works are not the works of the law, excluded by the apostle from justification." Prop. vii., sect. 4.

In the Brief Remarks upon the Interpretation of Holy Scripture, in commenting upon the passage "Verily, I say unto you, except ye eat the flesh of the Son of man and drink his blood, ye have no life in you;"—"He that eateth my flesh and drinketh my blood, dwelleth in me and I in him, John vi. 53, 56;" it is said:

"That the flesh and blood of Christ are here spoken "of in relation to his incarnation and atoning sacrifice, "is made abundantly clear by the comparison of all the "other passages in the New Testament, and especially "in the writings of this Apostle, in which mention is "made of that flesh or of that blood. These passages "are numerous; and on careful examination of them, "it will be found that *the flesh always means* his *human "body*, that body which was born, died and rose again; "and that his blood *always means* his *very blood*, which "was his natural life, and which was actually shed on "the cross for the remission of sins. But how are we "to eat this flesh and drink this blood? are we to com- "ply with the precept literally and bodily? or will any "outward ceremony serve the purpose? Certainly not; "for in explanation of his doctrine, our Lord himself "has said, 'It is the Spirit that quickeneth, the flesh "'profiteth nothing.' Hence we learn, not merely that "no literal eating or drinking is intended, but that the "inward feeding on him who is the bread of life, on his "flesh and on his blood, is an effect produced by the "quickening influence of the Holy Spirit. It is only as "we are blessed with this divine influence that we can "truly believe in Jesus Christ and him crucified; only "as we abide under this influence that we can really "know our holy and compassionate Redeemer to be the "sustenance of our souls, our true hope of eternal "glory."

It is then stated to be an erroneous and dangerous interpretation of the passage, which spiritualizes the flesh and blood, as well as the eating and drinking. But Robert Barclay says, (Prop. xiii., sect. 2): "The body then of Christ which believers partake of, is spiritual and not carnal; and his blood which they drink of, is pure and heavenly, and not human or elementary." And in speaking of the errors of some professing Christians on this subject, he says: "The first of these errors is, in making the communion or participation of the body, flesh and blood of Christ to relate to that outward body, vessel or temple, that was born of the Virgin Mary, and walked and suffered in Judea; whereas it should relate to the spiritual body, flesh and blood of Christ, even that heavenly and celestial light and life which was the food and nourishment of the regenerate in all ages." Prop. xiii., sect. 4.

"So then," says Barclay, in another place, "as there was the outward visible body and temple of Jesus Christ, which took its origin from the Virgin Mary, there is also the spiritual body of Christ, by and through which, he that was the Word in the beginning with God, and was, and is God, did reveal himself to the sons of men in all ages, and whereby men in all ages come to be made partakers of eternal life, and to have communion and fellowship with God and Christ. Of which body of Christ, and flesh and blood, if both Adam and Seth, and Enoch and Noah, and Abraham and Moses, and David, and all the prophets and holy men of God, had not eaten, they had not had

life in them; nor could their inward man have been nourished. Now, as the outward body and temple was called Christ, so was also his spiritual body no less properly, and that long before that outward body was in being." Prop. xiii., sect. 2.

With the full acknowledgment of all that Christ has done for us in that prepared body, our Society has always borne this clear testimony to his eternal divinity and gracious offices, and also to the Three that bear record in heaven, the Father, the Word, and the Holy Spirit, which three are one. In expressing their views relative to this awful and mysterious doctrine, they have carefully avoided entangling themselves by the use of unscriptural terms, invented to define Him who is incomprehensible, and scrupulously adhered to the safe and simple language of the Holy Scriptures.

But in the Seventh Essay of the Essays on Christianity, which treats of the union and distinction in the Divine nature, the Father, the Son, and the Holy Spirit, are spoken of as *Persons*. For example, it is said on page 199—

"Nor was his divine character less plainly asserted "when he spoke of the Spirit *as a person*, and promised "to send him from the Father."

Again on page 393, it is said—

"On a careful perusal of the whole of that sacred "volume, he is led to take a view, 1st, Of the natural "and moral attributes of the Supreme Being; 2ndly, "Of the *personality* and unity in him of the Father, the "Son, and the Spirit."

So likewise on page 172, the Son is spoken of as

"The mediating *Person* through whom the Father "acted both in the formation and in the government of "his creatures."

And again on page 185,—

"Now since Jehovah is here represented as the *Per-* "*son* who should appear in Zion, &c."

When we recur to the confusion and doubtful disputation brought into the early Christian church by the use of such terms, and recollect that to our Society the Lord restored a pure language, the language of Holy Scripture, we are persuaded that a departure from it will involve us in similar difficulty, produce confusion, and finally lead to a change in doctrine. In reference to the impropriety and danger of employing these terms when speaking of the Divine Being, our Yearly Meeting says, in "The Ancient Testimony," &c., issued in 1843: "In speaking of the infinite eternal Being, we have always considered it most proper and consistent with his all glorious and incomprehensible existence and attributes, and safest for us finite creatures, to confine ourselves to the language of Holy Scripture. For this reason, and because it tends to perplexity and doubt, the Society has always objected to the use of the terms *person*, and *personality*, in speaking of the Father, the Son, and the Holy Spirit. Man may think by his wisdom and learning to define the Divine existence, and render it more intelligible than the holy men who wrote under the immediate guidance of the Holy Ghost; but we believe that all such attempts will ever be vain and futile, and that it is our duty humbly to receive and rest satisfied with the description of the three that bear record in heaven, given to us in the language of Holy Scripture, without attempting to pry further into this sacred mystery. To speak of the Supreme Being as constituted of three persons, and to attempt to define in familar terms the relative place and office of each, we believe does not tend to edification, but is calculated to lessen that reverence and fear, which ought always to clothe the mind in speaking of Almighty God; tends to bewilder and confuse the sincere inquirer after truth; and not only leads into unprofitable speculation, but may give ground to the sceptic to cavil at the Christian religion." Page 12.

George Fox makes use of the following language: "And ye professors, who have given new names to the Father, the Word, and Holy Ghost, as Trinity and three distinct persons, and say the Scripture is your rule for your doctrine; but there is no such rule in the Scripture to call them by these new names, which the apostle that gave forth the Scripture doth not give them. And because we do not call the Father, and the Word, and Holy Ghost, by your new names, therefore do you falsely say, that the Quakers deny Father, Son and Holy Ghost, which we own in those names and sound words in which the holy men of God spake them forth by the Holy Ghost, &c." Doctrinals, p. 446.

And in a work entitled "An Answer to all such as falsely say the Quakers are no Christians," he says, "We believe concerning God the Father, Son and Spirit, according to the testimony of the Holy Scripture, which we receive and embrace as the most authentic and perfect declaration of Christian faith, being indited by the Holy Spirit of God that never errs: 1st, That there is one God and Father, of whom are all things; 2dly, That there is one Lord Jesus Christ, by whom all things were made, who was glorified with the Father before the world began, who is God over all blessed forever; that there is one Holy Spirit, the promise of the Father, and the Son, and leader, and sanctifier, and comforter of his people. And we further believe, as the Holy Scriptures soundly and sufficiently express, that these three are one, even the Father, the Word and the Spirit." Pages 26, : 7.

(To be continued.)

For "The Friend."

The Parks of London.

(Concluded from page 109.)

"*St. James's Park.*—St. James' was originally a swampy field attached to St. James' Hospital: the ground was drained and enclosed by Henry VIII., who thus made it the pleasure ground both of the hospital, which he had converted into St. James's Palace, and of Whitehall, whose tilt-yard, tennis-court, and bowling green were on the eastern verge of the park; but during the reigns of Elizabeth and the first two Stuarts, it was little more than a nursery for deer. Charles, as he walked through the park to Whitehall on the fatal January 30, 1648-9, is said to have pointed to a tree which had been planted by his brother, Prince Henry, near Spring Gardens. Evelyn, in his *Sylva*, mentions the branchy walk of elms in the park 'intermingling their reverend tresses,' Pepys mentions: '11th Oct. 1660. To walk in St James's Park, where we observed the several engines at work to draw up water.' '4th Aug., 1661, walked into St. James's Park, and there found great and very noble alterations.' '27th July, 1662. I went to walke in the Park, which is now every day more and more pleasant, by the new works upon it.' '1st Dec. 1662. Over the Parke, where I first in my life, it being a great frost, did see people sliding with their skeates, which is a very pretty art.'

"Evelyn says: 'Dec. 1, 1662 Having seene the strange and wonderful dexterity of the sliders on the new canal in St. James's Park, performed before their majesties by divers gentleman and others, with scheetes, after the manner of the Hollanders, with what swiftness as they pass, how suddainly they stop in full career upon the ice, I went home.' Dean Swift, who often walked here with the poets Prior and Rowe, writes of skating as a novelty, to Stella, in 1711: 'The canal and Rosemond's Pond full of rabble sliding, and w skaits, if you know what it is.'

"In 1827 the straight canal was altered and tended to a winding lake, with islands of ev green; at the west end is a fountain. The bord of the principal walk are planted with evergre which are scientifically labelled. The glimpses grand architectural objects from the Park are v striking, and include the towers of Westmins Abbey and the new houses of Parliament; the tensive front of Buckingham Palace; the Y column, rising from between terraces of mansi and the Horse Guards, terminating the pictures vista of the lake. St. James Park is in plan irregular triangle, and contains 83 acres.

"*Green Park.*—The Green Park adjoins James's Park on the north, and extends westw to Hyde Park Corner, the line of communicati being by the fine road, Constitution Hill. 1767 a portion of this Park was taken to add the gardens of Buckingham House. In 18 the entire Park was drained, and the surf relaid and planted. At the northeast cor is the Chelsea Water Works reservoir, containi 1,500,000 gallons. The high ground at the res voir commands fine views of the Norwood a Wimbledom hills, and of the roof of the Cr tal Palace, at Sydenham. On the east side the Park is a row of noble mansions, includi Stafford House, Bridgewater House and Spenc House. On Constitution Hill road, near t Palace, three attempts have been made to sh Queen Victoria—by a lunatic, named Oxford, June, 1840; by Francis, another lunatic, in 184 and by an idiot, named Hamilton, in May, 184 The arch at the entrance of the road from Hy Park Corner is considered a poor adaptation fr the Arch of Titus, at Rome. Green Park contai 71 acres.

"*Victoria Park.*—Victoria Park, Bethn Green, is bounded on the west by the Regen Canal, and on the south by Sir George Ducket Canal. The land was mostly purchased in 184 of the trustees of Guy's Hospital and Sir John Ca Charity; and towards the cost of formation w appropriated £72,000, received for the remaind of the Crown lease of York House. The Pa is planted with an arboretum; it has two piec of ornamental water, for bathing, boating a water-fowl, and upon an island is a two stori Chinese pagoda. Here are a gymnasium, cricke and archery grounds, and flower, pigeon a canary shows. The Park has often 30,000 visito in a single day. This fine Park contains 290 acr

"*Kennington Park.*—Kennington Common w formerly noted for its cricket matches, and as t exercise ground of volunteer regiments. It w the common place of execution for Surrey befo the erection of the county jail. On this comm was held the great revolutionary meeting of Chr tists in 1848. In 1852 the common was grant by act of Parliament, on behalf of the Prince Wales, as part of the Duchy of Cornwall estat to be enclosed and laid out as 'pleasure groun for the recreation of the public; but if it cease be so maintained, it shall revert to the Duch It is now planted with shrubs and evergreens; a at the main entrance have been reconstructed t model cottages originally built at the expense Prince Albert for the Great Exhibition of 185 This park contains 20 acres.

"*Battersea Park.*—This Park lies on the sou bank of the Thames, opposite Chelsea Hospit In 1846, two acts of Parliament were passed f forming a Park, and constructing a bridge a embankment at Battersea. This was once t resort of Pope, Swift, Arbuthnot, Thomson, M let, and other cotemporary geniuses of Englan

is new park is yet in the course of formation. containing about 350 acres.

"*Albert Park.*—The new Albert, or Finsbury rk, lies equidistant from Regent and Victoria rks; it commences at Highbury Cresent, passg along the right side of Holloway and Hornsey ads, and inclining towards the New River, which is proposed to cross north of the Horse-shoe, cluding the Birmingham Junction Railway, and tending to the bottom of Highbury Grove. This rk is not completed, but is destined to be one the noblest pleasure grounds of London. It ntains 409 acres.

"*Primrose Hill Park.*—This park is composed a portion of the land bequeathed by 'sundry rout men of London' to St. James' Hospital, t granted by Henry VI. to Eton College, surndered to Henry VIII., but again returned to the llege, who, a few years since, transferred it to e Government, in exchange for a piece of crown nd near Windsor; which was done principally rough the exertions of Hume, M. P., and an ociation of persons formed for securing the ound to the public. The view from Primrose ll comprises not only London, with its masses houses and hundreds of spires, but also the ce rural retreats of Hampstead and Highgate. posite to St. John's Wood, and quite near is elegant domain of Regent's Park. The eye, er resting upon St. Paul's as the nucleus of the t city, glances over Islington and Halloway to undulating hills of Kent and Surrey; and upon lear day may be descried the bright roofs of the ystal Palace at Sydenham. This park is now closed and laid out for cricket, and planted with es and shrubs, by the Commissioners of Woods l Forests. It contains about 50 acres.

'*Regent's Park.*—Regent's Park lies between south foot of Primrose Hill and the New road. e plan for laying out this Park was adopted in 12. It takes its name from having been proted and laid out during the Regency of George . The Park is nearly circular in plan. In the thwest portion is a sheet of water, crossed by e suspension bridges, and embellished with turesque islets, large weeping willows, shrubs,

In the southern portion of the Park is the den of the Royal Botanic Society of London. May, June and July, exhibitions are given by s Society. At the north end of the park, is garden of the Zoological Society. Here are e seen animals from all quarters of the globe.

Aquatic *Vivarium* was built in 1853, and the ctator now sees, as in the depths of the ocean, ew world of animal life, with masses of rock, d, gravel, corallines, sea weed, and sea water; animals in a state of natural restlessness, now escent, now eating and being eaten. On the th, east and northwest sides of the Park are hly embellished terraces of houses, in which Doric and Ionic, the Corinthian, and even the ican orders have been employed with ornate ct, aided by architectural sculpture. In this k is the *Observatory*, erected in 1837, by rge Bishop, F. R. S. Regent's Park contains acres.

KENSINGTON GARDENS.—These delightful dens, when purchased by William III., were of ll extent. Queen Anne added thirty acres. sington Palace, in her reign, is described as ding in the midst of fruit and pleasure gars, with pleasant alcoves on the west and south, a stately conservatory on the east, with a d walk before the east front of the palace. kell opens his elegant ecologue with a glance at morning promenade of his day; where

> The dames of Britain oft in crowds repair,
> To gravel walks and unpolluted air:
> Here, while the town in damps and darkness lies,
> Their breathe in sunshine, and see azure skies:
> Each walk with robes of various dyes bespread,
> Seems from afar a moving tulip-bed,
> Where rich brocades and glossy damask glow,
> And chintz, the rival of the showery bow.'

Caroline, Queen of George II., added three hundred acres to the grounds, and had a canal formed there. After King William took up his abode in the palace a court end of the town gathered round it. The large gardens laid out by Queen Caroline were opened to the public on Saturdays. When the Court ceased to reside at Kensington, the gardens were thrown open in the spring and summer; and next open throughout the year. Of late years Kensington Gardens have been greatly improved by drainage, re-layingout, and the removal of walls, and substitution of open iron railing. Viewed from near the palace, eastward, are seen avenues through dense masses of ancient trees.

"Immediately in front of the palace is a quaintly designed flower garden, between which and Kensington are some stately old elm trees. On the southern margin of the gardens is a walk, bordered by the newer and rarer kind of shrubs, each labelled with its Latin and English name, and its country. The most pisturesque portion of the gardens, however, is at the entrance from near the bridge over the Serpentine river, where is a delightful walk east of the water, beneath some noble old Spanish chestnut trees. The elegant stone bridge across the west end of the Serpentine, was designed by Sir John Rennie in 1826. Kensington Gardens now include an area of above 350 acres.

"These are the great Parks of London, [containing altogether 2426 acres.] They are not only highly prized by the citizens of that great mart of commerce; they are watched over and guarded with a jealous care. Any attempt to appropriate them or any portion of them to private uses, would be met with the united and stern resistance of the people."

For "The Friend."

May our rejocing be in that we "are kept by the power of God through faith unto salvation;" "though now we are in heaviness:" "that the trial of our faith, being much more precious than of gold that perisheth, though it be tried with fire, might be found unto praise, and honour, and glory at the appearing of Jesus Christ."

Are there not many who sometimes feel as the disciples did when they awoke the Redeemer, saying, "Master, carest thou not that we perish?" Truly, the waves have beaten into the ship, so that it is now full, and there is a close exercise in order to come to the sustaining belief, that the dear Master is in the hinder part of it, awaiting the time when he may arise and manifest his power, rebuking the winds, and saying unto the waves, peace! be still! "Without faith it is impossible to please God:" but our faith is to "stand not in the wisdom of man, but in the power of God." "Cease ye from man:" the history of our Society, and the very nature of its leading doctrines enforce this command. The earlier history of the church also commends it. Did not Paul rebuke those Corinthians, who, ready to foster parties, "envyings, strifes, and divisions," were saying, "I am of Paul; I of Apollos; I of Cephas?" and call them "carnal, walking as men,"—not as Christians? He, having so eminently partaken of the grace of God by which he was brought out of darkness into his marvellous light, was not ready to lower the standard of faith, by joining with the Spirit which would set up one or another, even himself, as a standard or rule for others, who might think themselves right if they only knew what such an one would say. No! he nobly refused the proffered adulation, warning the carnalminded to "take heed how he buildeth; for other foundation can no man lay than that is laid, which is Jesus Christ." "For every man's work shall be made manifest: for the day shall declare it, because it shall be revealed by fire; and the fire shall try every man's work, of what sort it is." The solemn truth thus set forth ought to arouse every one in this day, to an honest home search to know whether we are striving to build in the *pure wisdom*, that which will abide the trial. "Let no man deceive himself. If any man among you seemeth to be wise in this world, let him become a fool, that he may be wise. For the wisdom of this world is foolishness with God: for it is written *he taketh the wise in their own craftiness.* And again, the Lord knoweth the thoughts of the wise, that they are vain. Therefore let no man glory in men."

"Is Christ divided? was Paul crucified for you? or were ye baptized in the name of Paul? These questions in the same epistle, show that the advice given to others, was practical with himself, and how far he was from taking to himself that honour which belonged to him who died for us and rose again, that through faith in him we might do the works meet for repentance. "Neither is he that planteth, anything, neither he that watereth; but God that giveth the increase." Are *we* thus self denying? do we thus reject the praise of men? or do we crave more deference and influence; entertaining a desire to direct that influence over others for the attainment of certain ends which are aimed at, without a single eye to the honour and leadings of the Head of the church? It was the end and aim of the gospel labours of early Friends to lead men to Christ as their inward teacher—their all-sufficient teacher. "We are nothing, Christ is all," said one of them. And the power of their ministry, their remarkable triumphs in disputations over their opponents and persecutors, the strength of their fellowship, and the success of their teachings, were not owing to scholastic training, nor to mere intellectual ability, but to the fulness of their obedience to the manifestations of the Spirit of Truth, and to the singleness of their aims in the promotion of the kingdom of the Messiah. Some of them strikingly verified what is written, "Ye see your calling, brethren, how that not many wise men after the flesh, not many mighty, not many noble, are called; but God hath chosen the foolish things of the world, to confound the wise, &c., that no flesh should glory in his presence, * * that, according as it is written, he that glorieth, let him glory in the Lord:" and also the language of our Saviour, "I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and revealed them unto babes."

Let us, then, privileged with a knowledge of the same precious doctrines and testimonies, and desiring that the law of the Spirit of life may set us free from the law of sin and death, so that we may be in Christ Jesus without condemnation, partakers of the heavenly fellowship—the unity of the Spirit in the bond of peace—walk more by faith, and less by sight: let us labour that grace may more and more abound: for by grace are ye saved, through faith; and that not of yourselves: it is the gift of God. Let us not be of the number of those whose sounding-line in religious judgment is, "what shall this man do;" but of those who, in an honest and a good heart, having heard the word of faith, keep it, and bring forth fruit with patience. These have their eye single, that the whole body may be full of light: and looking to him who is both the author and finisher of their

faith, are ready to answer when he calls, "Speak, for thy servant heareth." Y. W.

Chester Co., Pa., Twelfth mo., 1855.

A Chapter in the Reformation.

Selected for "The Friend," from a monthly Magazine, entitled "The Alps, Switzerland, and the north of Italy."

At the opening of one of the lateral valleys that lead into the Northern Alps, stands the town of Aigle, one of the most southern in Switzerland. For some half a century it had belonged to Berne, with the four parishes which are under its jurisdiction, namely, Aigle, Bex, Allon, and the Châlets scattered in the lofty mountains of the Ormonds. This was the spot where the second epoch of the Swiss Reformation began.

Among the rude and turbulent people of this district, there came, in the winter of 1526–1527, a foreign schoolmaster, where, at every available moment, he devoted himself to the study of the Scriptures, and of the most learned theological treatises. At that time the struggle between Luther and Zwingle was just commencing, and Farel—for such was the real name of the schoolmaster, who was only waiting till the right time should arrive for declaring himself a reformer—looked to the respective claimants before he made his choice between these two greater leaders of the Reformation. Luther had been known in France for a much longer time than Zwingle, yet Farel decided in favour of the latter. His natural modesty restrained him, for a time, from becoming an author, but it was afterwards overcome through the encouragement of Œcolampadius. He drew up, with great brevity and plainness, "A summary of what a Christian ought to know, in order to trust God and serve his neighbour." This went through several large editions. He afterwards sent several small treatises to the press, some of which were from his own pen, the rest written by others.

It was to be expected that the priests would denounce the movements of the reformers. * * *

Many persons from the neighbouring towns, whose religious anxieties were awakened, came to hear Farel, and invited him to their houses, regardless of the offence it might give to their superiors. He preached in the market-place, in the streets, at the gates, before the houses, and in the squares, and with such persuasiveness, that he won over many to the gospel, as well as secured their personal attachment. The people, not to be kept back either by threats or persuasions, crowded to hear his sermons. Some of the lowest class, it is true, instigated by the opponents of the gospel, declared they would throw Farel into a well, but this had no influence on the courageous preacher. He published the truth for several days to increasing multitudes. Surprised at his success, he wrote to his colleagues, as follows: "Unite with me in thanking the Father of mercies for so graciously enlightening those who were oppressed with the severest tyranny. God is my witness, that I did not leave you, with whom I would gladly live and die, in order to escape bearing the cross. The glory of Christ, and the attachment shown to his word by his disciples in this place, enable me to bear great and inexpressible sufferings; but by the power of Christ, all my burthens are rendered light."

Farel visited Neufchâtel from time to time, for the purpose of confirming the newly planted church, and of preaching the gospel in the neighbourhood. Often did opposition arise; at Vevay an attack was made on the congregation, and the mob drove the preacher out of the church, reviling and assaulting him. On another occasion, Farel was led into the chapel by the priests, who endeavoured to compel him to fall down before an image of the Virgin; but he steadfastly refused, exclaiming, "Ye ought to worship the only true God, in spirit and in truth, and not a dumb, lifeless, helpless image." They had previously laid violent hands upon him, but now, exasperated at his firmness, they beat him still more severely; so that he lost much blood, of which the traces were visible six years after on the walls.

In 1531, a civil war broke out in Switzerland, between the five cantons who still adhered to the errors of Romanism, and those of Zurich and Berne, who strongly supported the cause of the Reformation, when the latter were defeated in their own territories, with the loss of four hundred men. Zwingle, who had accompanied the army of the reformers, as their chaplain, was slain. While dying, he was heard to say, "Well! they are able, indeed, to slay the body, but they are not able to kill the soul." His body, found by the Romanists, was burned to ashes.

The outrage on Zwingle's corpse aroused all the anger of Zurich. It rallied its forces, but another reverse ere long augmented the desolation of the reformed party. At two in the morning, their antagonists, the Waldstatten, guided by the bright light of the moon, quitted their camp in silence, wearing white shirts over their dresses, that they might recognize one another. Their watchword proclaimed their character, "Mary, the mother of God!" Stealthily did they glide into a pine forest, near which the reformers were encamped. On they rushed with frightful shouts. Many of them were slain by the armies of Zurich and Berne; but the tide soon turned, the bravest fell, the rout became general, and eight hundred men were left on the battle-field. * * * It seemed as if the cause of the Reformation were now about to be crushed;—the restoration of popery immediately commenced in Switzerland, and Rome proved herself everywhere proud, exacting and ambitious.

"Thus," says D'Aubigné, "the Reformation, that had deviated from the right path, was driven back by the violence of the assault into its primitive course. An inconceivable infatuation had taken possession of the friends of the Bible. They had forgotten that our warfare is not carnal, and had appealed to arms and to battle. But God reigns; he punishes the churches and the people that turn aside from his way." When the friends of the Reformation turned aside from the method which God had devised, they had to learn lessons of solemn warning. When they forgot the spirituality of their weapons, and they hastened in their own strength to arms and to battle, they were rudely reproved and repulsed.

It was well, indeed, for Switzerland, that all her champions of truth did not fall on the field of Cappel, and not only were Farel and Viret assiduous in the great work to which they devoted themselves, but they were, ere long, joined by one who manifested the possession of no common courage and power of action. In the year 1536, Calvin arrived at Geneva, and immediately united in heart and labour with Farel and Viret, who had, by their energetic labours in the cause of the Reformation, produced a powerful influence upon French Switzerland. In 1549 Calvin, accompanied by Farel, visited the Swiss churches, and in the following year he obtained the direction of the consistory at Geneva, for the communication of private, as well as public religious instruction, and for a total disregard of all feasts, and saint days.

Calvin died in 1564—an event which filled the city with lamentation. The state, according to the testimony of Beza, sought in vain its wisest citizen, the church deplored the decease of faithful pastor, the school wept for the loss of sue teacher; all, in fine, lamented, as deprived of common parent and consoler.

(To be concluded.)

For "The Friend

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned memb of the Yearly Meeting of Philadelphia.

(Continued from page 109.)

ELIZABETH WEBB.

Elizabeth's gospel labours for the next two ye were much confined to the neighbourhood of P ladelphia. Early in 1703, her husband remov himself and family to Concord. He appears have been a jocular man, and some practical stances of his weakness that way prevented Friends of Philadephia from granting him a c tificate, although they did not deem them of su cient weight to institute a charge against him the Monthly Meeting. This must have been great trial to Elizabeth, for they resided for or seven years in Concord, before obtaining a c tificate of removal to that meeting. She not, however, discouraged from performing religious duties, and besides attending many the meetings near her own residence, and arou Philadelphia, she paid some more extensive visit In the year 1710, at the General Meeting of sisters in the Fourth month, she laid before Friends a prospect, which had impressed her m as a religious duty, of paying a visit to Friends others in England. On weighing the subject, meeting being united in believing the concern be owned by the Great Head of the church, set at liberty to accomplish it, she having previou obtained a certificate of the unity of her Conc Friends. On this visit, she became acquainted w William Anthony Boehm, and had religious conv sation with him, which led her to write him a let giving an account of her conversion and call to ministry. This has been often printed and ext sively circulated. Of her labours in England, have little account. Early in 1712, she retur to Pennsylvania, and at the General Meeting Ministers in the Fourth month, she and her frie Ann Chapman, both returned their certifica gave some account of their travels, and produ "several certificates for counties and places Great Britain, of their acceptable visit, and orde conversation."

For some time after her return from Engla she does not appear to have been engaged in velling from home. Her husband's health fai and in the year 1720, she was left a widow. had used her pen frequently in her travels, many an epistle of christian counsel and lov salutation was received by her friends, during absence from them. She occupied some portio her time in preparing notes on the book of R lation, which were completed, and ready for lication,† at her death.

Thomas Chalkley, in his manuscript accoun her, thus describes her services in America. ter returning home, her husband removed family to America, and settled in Pennsylva in which province for divers years Elizabeth good service in the work of the ministry, tra ling into divers provinces in America,—the I

* In 1704, in company with Mary Lawson, she formed a religious visit to the south, her certificate s "in Maryland, Virginia and Carolina."

† Of this manuscript the original and a copy mad Thomas Chalkley, are now extant. The "comm having care of the press," it appears, gave her son lib to print it, but declined using the funds of the Yo Meeting for that purpose.

g with her in his work, and prospering it in hand. Blessed be his glorious name! Though was a good instrument in his hand, the praise rincipally due to him that made her so. To in fulness, [be the praise given,] and to every l man and woman, according to the measure of ace received.'

When she had lived for some years in Ame- she was drawn in her heart to go and preach gospel in Europe. Of her services there I d a good account from faithful men and women essing godliness and good works. She left a savour behind her in many places where she elled. I observed in her conduct and conversa-, that if she saw anything airy or light, she ld rather reprove it than join in such commu- tions, according to the apostle's doctrine, not ke or jest, but rather to give thanks, which much practised by this dear Friend."

n the account of her life prepared for her chil-, Elizabeth writes, "Bless the Lord, my soul, forget not all his benefits,—who forgiveth all iniquities,—who healeth all thy diseases. O l, my gracious God, grant that the succeeding erations may not be ungrateful unto thee, that may be like the nine lepers that were cleansed esus Christ our Lord, and did not return to glory to thy name. Oh, may all in great ility and reverence, return unto thee thanks praise for every benefit and mercy they do and hourly receive. Surely, thou art the r of every good and perfect gift, and art worthy raise forever and foreverwore. Amen."

My dear children, and young people,—I ex- you to give up your hearts to the Lord, for is what he requires of you. As you do so answer the requirings of God, the Father of spirits, then you will know the work of re- eration to be carried on by Jesus Christ, who piritually present with the soul at all times, in the deepest of its exercises. He leads it ly on in the way of the daily cross, and causes rest in the will of God, whose will is the tification of his people. In due time, as the is obedient to his holy will and requirings, ill make the understanding that was like a en wilderness, to become as a fruitful field, rding to his promise by the prophet Isaiah, p. 32, from v. 15 to the end. I, with many rs, have found by experience that all the pro- s of God are faithful and true. The days are e, spoken of; the spirit is poured upon us on high; judgment shall dwell in the wilder- , and righteousness remain in the fruitful ; the work of righteousness shall be peace, the effect of righteousness, quietness and as- nce forever. My people (saith the Lord) dwell in a peaceable habitation, and in sure llings, and in quiet resting-places.

The Jews formerly were accounted as a fruit- eld, until they departed from the Lord,—then primitive Christians until they apostatized, and me a Babel. Then the mystery Babylon was in the wilderness upon a scarlet-coloured t; and now judgment is gone forth against wilderness, and shall dwell therein. For those worship that beast or his image, have no rest, nor night. These things are, and will be out in the great world; but let me come nearer desire to know the judgments of God to dwell y heart that hath been as a wilderness; that it for the future be a fruitful field unto God my er, and unto Jesus Christ, my Redeemer. Let y one be thus exercised, and they will feel the ts of this righteousness to be quietness and rance forever; their habitation inwardly will a low place, near the spiritual waters. These gs are neither whimsies nor fictions, but verity and truth, as the resigned souls witness from day to day; glory to God forevermore, who hath given to us his spirit, which is the true interpreter of the Scriptures of Truth.

"My dear children and friends,—Having a concern in tender love and good will to your souls, I leave these lines for you to consider when I am gone, and advise that you pass the time of your sojourning here in fear, knowing that you are but as pilgrims and sojourners on earth, whilst you have, each of you, an immortal part, the salvation of which cometh from the Lord alone. He hath called, and is calling to all, saying, 'Look unto me all ye ends of the earth, and be ye saved,' and he yet testifies, 'As I live, saith the Lord, I would not the death of him that dieth, but that all should return, repent and live. Turn ye; turn ye; why will ye die?' Oh, how gracious and merciful is the Lord, the Father of spirits! Acquaint yourselves with him, my dear children! Love him, and fear to offend him, and you will feel the spring of his love and mercy in yourselves, as I have felt it many a time to the melting of my spirit, and humbling of my soul. For this I have cause to speak well of his name, and praise him forever and evermore, and to say with the Psalmist, 'Bless the Lord, O my soul, and all that is within me, bless his holy name. Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with loving-kindness and tender mercies.' The Lord is merciful and gracious, slow to anger, and plenteous in mercy. He will not always chide, neither will he keep his anger forever. He hath not dealt with us after our sins, nor rewarded us, according to our iniquities; for as the heaven is high above the earth, so great is his mercy towards them that fear him. Like as a father pitieth his children, so the Lord pitieth them that fear him, for he knoweth our frame; he remembereth we are dust. As for man his days are as grass. As a flower of the field, so he flourisheth; the wind passeth over it, and it is gone, and the place thereof shall know it no more; but the mercy of the Lord is from everlasting to everlasting upon them that fear him, and his righteousness unto children's children, to such as keep his covenant, and to those that remember his commandments to do them.

"My dear children, I exhort you to fear to offend God always. You will meet with temptations of divers kinds to draw your love from the Lord Jesus Christ to this vain world, and to fill your minds with vain and foolish thoughts, earthly mindedness, wrath, &c. These things spring from the evil spirit, are contrary to the nature and operations of the Holy Ghost, and are very troublesome to those who desire to love the Lord Almighty and Jesus Christ his only Son, our Redeemer, above all things in the world. Vain and evil thoughts, those impositions of Satan, make the heavenly lover to cry mightily unto the Lord, and to say, 'O that thou wouldst wash my heart from wickedness and worldly mindedness, that so vain thoughts may not lodge within me.' Thus, the soul groans to be delivered from vanity, and desires to find acceptance with God. The prophet Micah was concerned to know wherewith he should come before the Lord, and bow himself before the High God; and he queries, 'Shall I come before him with burnt-offerings, with calves of a year old? Will the Lord be pleased with thousands of rams, or with ten thousands of rivers of oil? Shall I give my first-born for my transgression, the fruit of my body for the sin of my soul?' Here was a close examination, indeed, in a sense of the majesty of God Almighty, and of his own duty. He received answer, 'He hath showed thee, O man! what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?' It is needful for all mankind to consider this answer well in all its branches. As there is justice due from one man to another, so in especial manner there is a justice due to Almighty God, which is too much forgotten. Our dear Lord commanded to 'render to Cæsar the things that are Cæsar's, and unto God the things that are God's.' Oh, the forgetfulness of mankind! we owe our all unto God, and he requires our heart, will and affections. It is my reasonable duty to render to him all which he hath reserved for himself, and not to give it to the god of this world, my soul's enemy, robbing my best friend and benefactor of his right. To love mercy is a Christian duty, which is attended with a great blessing, and to walk humbly with God, is an inward walking, or spiritual conversing with him. God is a Spirit, and he hath sent the spirit of his Son into the hearts of the children of men; and as many as love this Holy Spirit, and keep low in their minds, it will lead them in the midst of the paths of judgment, and cause their souls to inherit substance, filling them with the treasures of heavenly love, the foundation of that faith that worketh by it. Oh, my soul can say to the honour of God, and for your encouragement, who desire to walk with God, that there is nothing wanting in those holy, though despised, humble, lowly walks. My soul hath many times been greatly refreshed in this low valley, where the soul drinks plentifully of the water of that river, the streams of which make glad the whole heritage of God. Here also is found the tree of life, whose fruit is good for food to the inward man, and its leaf for medicine. Here also is the sweet lily that toils not, and why? because it waits patiently for the celestial rain. I have thought many times, 'Surely, these are the Enochian walks; such as Enoch walked with God in this low world.' My soul hath found so much sweetness in walking humbly with the Lord my God, that I can do no less than leave this as a call to my succeeding generation, and say, 'Come, taste and see how good the Lord is to all humble, obedient souls. Resign your will to the Divine will in all things; follow meek, holy Jesus, and learn of him, and you will find rest for your never dying souls."

(To be continued.)

Selected.

A CITY WEED.

We may not trample on thee, simple weed,
So bravely springing in the stony way.
The sturdy growth of some far-wafted seed,
Thus flourishing upon a grain of clay.
No gaudy colours flaunt around thy stem,
No grateful scent thy hardy foliage yields,
But, rudely set, thou shinest like a gem,
In hues reflected from the distant fields.

Thou drawest nurture from the dewy skies,
Thou findest food upon the subtle air;
And sometimes may the sun rejoice thine eyes
(For thou hast eyes) down in this sombre lair.
And thou art beautiful; so firmly set
Within the ragged crevice of a stone!
So strong, so resolute, so hopeful, yet
So surely perishable, and alone.

So shouldst thou stand, thou brave and simple heart,
As firmly planted on thy foot of ground,
As strong, as resolute to play thy part,
Though stony dangers hem thee closely round.
Perchance, brave weed, did we thy nature know,
Rare balms and subtle virtues in thee lie;
Yet thy best fortune is, unharmed to grow,
Unknown to ripen, shed thy seed, and die.

It is other people's eyes which cost us the most trouble.

For "The Friend."

INDIAN CORN.

In No. 13 of the Friend was published an extract from a speech by Edward Everett, in which the contrast is finely and strikingly drawn between the gold of California and the gold of agriculture. The idea contained in one of Eliza Cook's poems, is there beautifully amplified and illustrated, the speaker, however, confining his remarks to the golden grain of our maize fields, whereas the poetess has allusion more particularly to wheat or *English* corn. She says:

"My glowing heart beats high
At the sight of shining gold;
But 't is not that which the miser's eye
Delighteth to behold.
A brighter wealth by far
Than the deep mine's yellow vein,
Is seen around, in the fair fields crowned
With sheaves of burnished grain."

The assertion made by Edward Everett, with the ear of American corn in his hand, that "of this transcendent gold of ours, the yield this year will be at least ten or fifteen times that of California," has doubtless surprised many readers, and has seemed to them, perhaps, more like a rhetorical flourish, than a statement founded on actual calculation. But let us consult the statistics. I find that of California gold "the total amount produced and distributed in all directions, down to the close of 1854, is estimated at $298,243,938."* Dividing this by 6½, we find the average annual product to be about $46,000,000. I have seen no estimate of the probable amount for the present year, but we may safely assume it at $50,000,000.

According to the census of 1850, the crop of Indian corn in the United States for 1849, amounted to 592,326,612 bushels. The annual product of this staple has been increasing ever since, and the crop for 1855 is said to be the largest ever gathered. The amount, according to C. Cist, cannot be less than 1,000,000,000 bushels. This quantity at 80 cents per bushel, which is less than the present market price at our Atlantic ports, amounts to the handsome sum of $800,000,000, or just sixteen times our estimate of this year's crop of the inanimate, tasteless, unnourishing gold of the mines and placers of California. The corn crop of 1849, in *each* of the states of Ohio, Kentucky and Illinois, would be worth, at present prices in New York or Philadelphia, about as much as a year's product of California gold; and that of either Indiana or Tennessee, for the same season, would fall but little below this value; while the crop of 1855, in any one of the states named, would, without doubt, considerably exceed it. If we arrange the agricultural productions of our country according to the value of the annual product, Indian corn would head the list, wheat would probably be the next, the value of the crop of this cereal being about half that of Indian corn; close after it, and almost, if not quite, equal to it, would come the grass crop, if we include not only the hay gathered, but also the grass consumed in pasturage, and reckon the latter† equal to the hay crop. Then would follow, and nearly or exactly in the order named, animals killed for food, cotton, oats, butter and potatoes, each of which, excepting, perhaps, the last, exceeds in annual value, our estimate of the produce of the mines of the Golden State.

Returning from our digression, let us inquire a little into the history and characteristics of the great staple of our country, the plant whose produce is pre-eminently the *gold* of American agriculture.

The corn plant was highly valued by the Indians, and it frequently entered into the ceremonies and the mythology of many of the tribes, both in North and South America. Like the bread plants of the eastern continent, its early history is involved in fables and legendary traditions. The following allegory of the Objibwas, is related by Schoolcraft:

"A young man went out into the woods to fast, at that period of life when youth is exchanged for manhood. He built a lodge of boughs in a secluded place, and painted his face of a sombre hue. By day he amused himself in walking about, looking at the various shrubs and wild plants, and at night he lay down in his bower, which being open, he could look up into the sky. He sought a gift from the Master of Life, and he hoped it would be something to benefit his race. On the third day he became too weak to leave the lodge, and as he lay gazing upwards, he saw a spirit come down in the shape of a beautiful young man, dressed in green, and having green plumes on his head, who told him to arise and wrestle with him, as this was the only way in which he could obtain his wishes. He did so, and found his strength renewed by the effort. This visit, and the trial of wrestling were repeated for four days, the youth feeling at each trial that, although his bodily strength declined, a moral and supernatural energy was imparted, which promised him the final victory. On the third day his celestial visitor spoke to him. 'To-morrow,' said he, 'will be the seventh day of your fast, and the last time I shall wrestle with you. You will triumph over me and gain your wishes. As soon as you have thrown me down, strip off my clothes, and bury me in the spot, in soft, fresh earth. When you have done this, leave me, but come occasionally to visit the place, to keep the weeds from growing. Once or twice over me with fresh earth.' He then departed, but returned the next day, and, as he predicted, was thrown down. The young man punctually obeyed his instructions in every particular, and soon had the pleasure of seeing the green plumage of his sky visitor shooting up through the ground. He carefully weeded the earth, and kept it fresh and soft, and in due time was gratified in beholding the matured plant, bending with its golden fruit, and gracefully waving its green leaves and yellow tassels in the wind. He then invited his parents to the spot to behold the new plant. 'It is Mondamin,' replied his father, 'it is the spirit's grain.' They immediately prepared a feast, and invited their friends to partake of it." This, according to the Objibwas, is the origin of Indian corn.

While we may be amused by this tradition, so characteristic of the red-man, it may be well for us to reflect, that the sentiment intended to be conveyed thereby, although wrapped up in the fable, or rather the allegory, of the tradition, is true,—namely, that this noble plant is the gift of a beneficent Creator. And when we see its green spires shooting forth from the brown earth, or later in the season, gaze upon its long leaves and lofty stem waving gracefully in the summer wind, let us remember that there was a time when the corn plant had no existence, when there was neither verdant sod nor shady forest, nor any green herb—that it was at the fiat of omnipotence that "the earth brought forth grass, and herb yielding seed after his kind, and the tree yielding fruit, whose seed was in itself, after his kind." And in reflecting on the wonderful adaptation of the vegetable kingdom to the purposes for which it was created, and the great boon that many of the species have, in a more especial degree, proved to human race, as well as to the lower animals, can, perhaps, more fully appreciate the statem of the Sacred historian in reference to this, a other parts of the creation, that when the mighty looked upon it, "he saw that it *good.*"

* Lippincott's Pronouncing Gazetteer of the World. Art. California.

† On the authority of the compiler of the Year Book of Agriculture.

From the life of Mary Dudley.

"Oh! how did my soul lament within our ca the want of that holy discipline which, if submi to, would prepare to be accoutred for servic the Lord's hand, and amongst the people. lack of righteous zeal, of spiritual discernment heavenly skill in savouring the things that b God, while those that be of man merely, can nicely discriminated and understood.

"The faculites and reasoning powers of many strong, their perceptions clear respecting that p wherein self can rejoice and is nourished; but the cross! to some I fear that even the preach of it is as to the Jews and Greeks. There is an willingness to lose the life, in order that that wh deserves the name may be found, while any s stitute is readily adopted, rather than submiss to the humbling, reducing state where, as li children, the kingdom is alone received.

"An endeavour to reconcile the world and r gion, seems the hindrance of a multitude; strong assertion of our blessed Redeemer be too much overlooked, 'ye cannot serve God mammon.' Thus, the eye becomes dim, and ear often deafened, so that imparting what is s to be the whole counsel to such, is like break down a fenced wall; the healing power of a p sican to those who are whole; needless tidings; unwelcome message. How hardly shall they t have riches enter into the kingdom. Various the possessions wherein there is a resting; ma have their good things in this life. Oh! that abundance might be passed through, and tempo blessings not centered in, so as to cloud the vi of the things that are eternal.

"I often think inherited or obtained treasu have blinded the spiritual eye of many, who descended from those sons of the morning, as respects our little community, to whom great thi would have been burdensome; and earnest my desires that worldly prosperity may not allowed to settle in a state of dangerous ease, the language formerly uttered in the Lord's na should be applicable, 'They that depart from shall be written in the earth."

Friend's Library.

A Woman Swimming the Mississippi.—An cident related in Lloyds' forthcoming Steamb Directory, shows the advantage of women knowi how to swim. When the Steamer Ben Sherr was in flames on the Mississippi River, and t female passengers who had thrown themselves i the water were drowning around the bost, the w of Captain Castleman jumped into the river, w her infant in her arms, and swam ashore, a d tance of half a mile, being the only woman sav out of sixteen. She had learned to swim wh a girl.

For "The Friend

GEORGE MOGRIDGE.

(Concluded from page 108.)

The author of "Old Humphrey" is described most amiable in character and disposition. T sentiments expressed in his writings were not ali to his heart. "In the relations of a husband

er, and a friend, he was the same gentle, gene-
, loving and lovable being as the one he sought
ortray in his sketches. His sunny temper and
istent conduct diffused an air of cheerfulness
ugh the family circle; and to him his children
ed, not only with the respect due to a parent,
with that confidence and freedom which belong
companion and a guide." In social inter-
se, he appeared to much advantage. "His
lemanly and agreeable deportment, his delicate
ideration for the feelings and sentiments of
rs, and his general intelligence, secured for
a welcome in every circle where he was known
en on a visit in town or country, he soon be-
e a favourite with the young. They were
ily won over to his side from the kindly notice
ook of them, and his solicitude to promote
pleasures and happiness."

corge Mogridge continued his literary occupa-
without any abatement of zeal and activity
l advanced age. The first serious interruption
is health seems to have originated in a pain-
ccident. Returning to his home late at night,
prained his ancle badly in consequence of
ing upon a broken flag-stone. This led to a
confinement to his house, and from that time
as unable to continue the country rambles he
uch enjoyed, and which no doubt contributed
tially to the preservation of his health.
stead of revelling in the meadows and among
hedge-rows of the country, his study was now
hief scene of his meditations." Here he in-
riously continued his labours, without inter-
ion and with no less activity and vigor than
mes of better health, his mental power re-
ing in all its freshness to the last week of his

In the spring of 1854, it became increasingly
ent that his labours were drawing to a close,
that he must ere long descend into the dark
y. The period had now arrived which was
st the religious experience of the sufferer,
show whether he had indeed attained a settle-
t upon the Rock of Ages. His friends had
inexpressible satisfaction of witnessing in
time of weakness and languishing, that he
ned the same happy and devout frame of mind,
ame humility and faith which had distinguish-
im in the buoyancy of life. "Through the
e of the Holy Spirit, he was enabled to mani-
that submission to the will of his heavenly
er, to which he had so often exhorted others;
gh sometimes in the greatness of his pain, the
tive cry of the patriarch was forced from his
"Have pity upon me, O ye my friends;
he hand of God hath touched me." "Not
was he hopeful himself in the season of sick-
but he sought to make all in his family circle
ful also. When he spoke, his eye was lit up
animation, and his words were full of en-
agement. "Though I know not the measure
y days," he wrote, "I well know there is but
p between me and death;" and though I can-
ell what yet remains for me to do, willingly
d I have my last act to be a deed of kindness,
my last breath to be a Hallelujah." His
s of a happy immortality rested on no sup-
d righteousness or good works of his own, but
y and alone in the merits and mercies of his
passionate Lord and Saviour who offered him-
a sacrifice for the sins of the world. The
y and contrite state of mind which he cherish-
reathes in an aspiration penned by him a short
before his decease, "Help me more clearly
scern that Jesus Christ is my only hope and
ll; having him I possess all things. 'Whom
I in heaven but thee,' and there is none upon
that I desire beside thee. Help me at all
s to know, and to do thy sacred will."

His beloved and faithful partner who waited upon him with devoted attention has recorded in touching terms the incidents of his last few days. Some brief extracts from her account will close this sketch. "It will rejoice the hearts of many to know that in the midst of much pain, and great bodily weakness, the poor sufferer's faith, hope, and thankfulness were undiminished: and that, like, Daniel of old, he could feelingly say, 'It is good for me that I have been afflicted.' His mind, during this trying season, seemed to attain a deeper solemnity than ever; and he saw more and more the beauty of holiness, and found in the precious promises of God's holy word, all that was necessary to reconcile him to the merciful dealings of his heavenly father, and to enable him to say, 'I know, O Lord, that thy judgments are right, and that thou in faithfulness hast afflicted me.'"

"His sufferings were often very great, but not one murmuring or fretful word escaped from his lips." "At one time, my husband remarked, 'I am never alone; I see God in the darkness, I hear his voice in the silence, he is ever present with me. His ways are often mysterious; there are many things we cannot now understand, but there is a needs-be for all our sufferings; much sin in us that wants purging away; and when in glory, the contrast may heighten our bliss.'" The prevailing attitude of his mind was that of deep humility and cheerful resignation. At one time he expressed himself thus: 'God is what he ever has been,—a Rock and a Refuge to those who trust him; a very present help in time of trouble. When his servants of old were in heavy trials, he was with them; In all their afflictions he was afflicted, and the angel of his presence saved them.' It is even so now, and thus will it ever be. "He is able to save them to the uttermost that come unto God by him, seeing he ever liveth to make intercession for them." "It was very distressing to hear his incessant cough, and to witness his great difficulty of breathing. For the last two days, his bodily sufferings were very great, but his faith and love were still greater; and his almost inaudible voice was employed, at intervals, in prayer and praise, and encouraging those about him to '*look upward.*' 'We shall meet again,' he said to me with a smile." Such was the truly happy close of the life of this good man. He died on the 2nd of Eleventh mo., 1854, aged sixty-seven years. The bereaved widow closes her narrative with these pious observations. "I have indeed, been highly privileged in having had such an affectionate husband, companion, and friend; and though painful to be the survivor, I feel thankful that my life has been spared to add to his comfort to the last. The Lord has wonderfully supported me hitherto, and will, I hope, increase my faith and confidence in him, and enable me, like my beloved husband, to go on my way with cheerful resignation, endeavouring to rejoice in his goodness and mercy."

THE FRIEND.

TWELFTH MONTH 22, 1855.

The last two steamers that have arrived from England, have brought intelligence of the expectation prevailing generally throughout Europe, that negotiations preliminary to the establishment of peace between the belligerent powers, would soon be publicly announced; and so probable does it seem that this rational course will be pursued, that consols, which are considered the most sensitive and certain criterion by which to judge of the good or bad condition of the government, have improved so much as to approximate within two or three per cent. of their value, prior to the declaration of war between Great Britain and Russia.

It is to be greatly desired that this general expectation may not prove illusory, and that a stop will be put to the frightful havoc of human life, and the other dreadful crimes that have so far attended this disgraceful war. It will be long before the full extent of destruction and suffering caused by it, will reach the public ear, if it ever should; but enough has been blazoned abroad to show how readily in this age of boasted enlightenment and civilization, men may have their worst passions aroused, and so stimulated as to give themselves up, willing agents, to effect the slaughter of each other, and to inflict on those who may have never harmed them, but whom their respective governments have declared to be enemies, almost every evil that will diminish or torture them. Truly, there seems but little in the political world like heralding the establishment of the kingdom of the Prince of Peace, or of the different peoples of the earth, acknowledging and acting up to the gospel truth, "one is your master, even Christ, and all ye are brethren." Nevertheless, we believe the little stone cut out without hands, has smitten the image upon his feet that are of iron and clay, and that it is gradually increasing, and will become a great mountain, and fill the whole earth. "And the mountain of the house of the Lord shall be established in the top of the mountains, and it shall be exalted above the hills, and people shall flow unto it. And many nations shall come and say, Come, let us go up to the mountain of the Lord, and to the house of the God of Jacob, and He will teach us of his ways, and we will walk is his path. And He shall judge among many people, and rebuke strong nations afar off; and they shall beat their swords into plowshares, and their spears into pruning-hooks; nation shall not lift up a sword against nation, neither shall they learn war any more. But they shall sit every man under his vine, and under his fig-tree, and none shall make them afraid: for the mouth of the Lord of hosts hath spoken it."

Happy are all they whose spirits are even now introduced into this kingdom of righteousness and peace, and whose daily life and concern it is to draw others into it, and thus hasten the coming of that glorious day seen and described by the prophet.

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to Twelfth mo. 1st. The principal feature of the news of the week, is a variety of rumors of approaching peace. It does not seem clear that any overtures on the subject have been made by Russia, and the rumors alluded to have possibly no better foundation than the increasing desire in England and France to get out of a contest attended with such enormous expense. There has been an almost total cessation of hostilities in the East of late; it is, however, stated that the preparations at Sebastopol for attacking the northern forts, were proceeding rapidly. Despatches received at Vienna, state that Omer Pacha had entered Kutai, and commenced offensive operations on the 9th ult., but the result was not known.

The Danish Conference on the Sound Dues met on the 20th, but took no action.

The King of Prussia, in his speech to the Legislature, announces decidedly the continued neutrality of Prussia.

General Canrobert left Copenhagen for Paris on the 30th ult. According to the Paris papers, his mission had been attended with some success.

Admiral Bruat, commander of the French fleet in the Black Sea, had died of cholera.

The King of Sardinia had been conveyed from France to England, in the Queen's yacht. He met with an enthusiastic reception at London.

The weather, in the Gulf of Finland, to the 26th ult., had been mild for the season; but in the Gulf of Bothnia, more severe. Another division of the British fleet had left Kiel for England. Admiral Dundas had received orders to return.

Cholera continued its ravages at various points. At Scutari the Anglo-German legion had suffered severely. In Palermo the deaths were from 70 to 100 a day, and in Naples, from 30 to 40 deaths daily were caused by this fearful disease.

A water-spout burst in the harbour of Tunis, and sunk five ships on the 18th ult.

On the 14th ult., a terrible inundation, attributed to a water-spout, devastated the country around Messina. The whole country was laid under water; trees were rooted up; houses, gardens and cattle destroyed, and many persons drowned. Much damage was also done in the city of Messina. The loss is said to exceed six millions of dollars.

Official returns show the total number of persons, who visited Paris during the Exposition, was 579,549, exclusive of those who took up their residence in the environs of the city. Of this number, 168,604 were foreigners.

The Liverpool cotton market had further declined; sales of the week, 49,000 bales. The market for breadstuffs was dull, and prices slightly lower. The admiralty contracts for the supply of the British navy with provisions, had been taken at lower rates than was expected. The average price for beef was £7 7s., and for pork £9 per barrel. American stocks had improved with large sales. Consols had advanced to 89¾. The high price of provisions in London caused no little uneasiness, as large and excited meetings were still held every first-day in Hyde Park, where incendiary appeals were made, and riots seriously threatened.

MEXICO.—Dates from the city of Mexico to the 5th inst. A conspiracy had been discovered, the object of which was to make General Urega, President. Urega and others implicated in this conspiracy, had been arrested, which caused great excitement. The Church is opposed to the present Government, and general confusion prevailed.

NICARAGUA.—Parker H. French, accredited Minister from the Walker governmennt to the United States, has arrived at Washington. It is not supposed that he will be recognized by the U. S. administration. The President has issued a proclamation, warning all persons against enlisting or hiring others to enlist, within the territories of the United States, for military operations against Nicaragua. The last news from Nicaragua represented that Col. Kewen had gone to San Francisco, to raise 500 volunteers to aid Walker. In reference to the health of the country, it is stated that the Transit Company has 150 men in its employ, and that during two years and four months, not a single death has occurred among them.

UNITED STATES.—*Congress.*—The second week of the session was spent by the House of Representatives, in the same manner as the first. The ballotings were continued with little variation in the votes, and without any apparent disposition to unite on a candidate. On the 15th inst., the proposition was renewed that the candidate having the largest vote, it being at the same time a majority of a quorum of the House, should be declared Speaker. After discussion, the resolution was laid on the table. It is stated that during this protracted struggle, no ill temper has been discernible; on the contrary, great good humour has characterized the conduct of the members. It is only to be regretted that they were not more profitably employed, and in a manner becoming the high trust confided to them. The Senate elected its standing committees, and attended to other business of no general interest.

The Army and Navy.—The estimate for the support of these branches of the public service for the next financial year, amounts to the enormous aggregate of $28,-551,985, viz: $17,027,480 for the former, and $11,524,-505 for the latter. These sums include the expense of fortifications, navy yards, magazines, hospitals, &c.

Kansas.—The accounts from Kansas are so much influenced by the party bias or excitement of the writers, and represent the late disturbances so differently, that it is difficult to get at the truth. It seems pretty clear, however, that there has been no such outbreak yet as to justify calling in the U. S. troops, and the authority asked for by Governor Shannon, had not been given him at a recent period. Letters speak of both parties preparing for actual war.

Philadelphia.—The expenditures of the city for 1856, are estimated by the Controller at $4,394,800, of which it will be necessary to raise $2,760,000 by taxation. Nearly one million of dollars is required to pay interest on the funded debt of the city. The support of the public schools is also a heavy item, amounting to over $600,000. Mortality last week, 184.

New York.—The shipments of specie from this port last week, amounted to $615,878. On the 17th, flour was quoted at $8.50 for state, and $9 to $9.50 for southern. Mortality for the week, 346. On the 17th, the steamer Empire City arrived from Aspinwall, with $1,750,000 in gold, and 500 California passengers.

California.—San Francisco dates to Eleventh month 20th. The Indian difficulties in the north continued. A battle had been fought on Rogue River, between 300 Indians and 400 Regulars, under Capt. Smith, of Fort Lane. The troops were obliged to retreat with the loss of 18 men killed, and 25 wounded. General Wool had proceeded to the scene of trouble. Some rain had fallen, and there was much snow in the mountains, but the winter rains had not set in. The ship Polynesia had sailed for New York, with a very valuable cargo of China silks, furs, and dry goods, sperm and whale oil, and whale-bone. Domestic flour was quoted at $8.50 a $9.00 per bbl.

Salt Lake dates to Tenth month 11th, had been received. Difficulties had occurred between the Mormons and the Eutaw Indians, by whom several Mormons had been killed.

Miscellaneous.—The Cost.—According to a Paris correspondent of the National Intelligencer, the cost of the Eastern war greatly exceeds one million of dollars per day. Such an outlay, long continued, must produce disastrous results to the nations immediately engaged. It is said that of 80,000 horses sent to the Black Sea by France, only 10,000 remain. The other 70,000 either perished in battle, or through exposure, fatigue and neglect. The average cost was about $100 each, and about as much more to convey them to the Crimea.

A New Comet, has been discovered at Berlin by Bruhus, and the fact has been communicated to the Smithsonian Institute. "It appears like a feeble nebula, and its daily motion is in R. A., about 20 min. of arc, in declination almost 0 min.

Length of the Mississippi.—The Boston (Mass.) Transcript gives the total length of the Mississippi and all its tributaries as fifty-one thousand miles, which is more than *twice* the equatorial circumference of the earth!

Glass.—Belgium is the largest glass manufactory of the world. It is stated that from one establishment last year, 400,000 dozen pairs were exported to England and America. There are three thousand hands employed there.

The Grape Culture in the West.—Within twenty miles around Cincinnati, about 1500 acres of ground are planted with vines, of which about 1000 acres are now in bearing, and were expected to produce 150,000 gallons of wine this year. The season has been unfavourable, or the yield would have been much larger. In Missouri and Illinois, about 1100 acres are planted with vines, and the culture is rapidly extending. The variety principally cultivated, is the Catawba grape.

A Costly Animal.—A vessel, which has just arrived in the Loire, France, from Sumatra, has brought a magnificent royal tiger for one of the public menageries. Forty armed men were, it is stated, sent to capture him, but he killed ten, and injured thirteen of them before he could be secured.

Mortality among Chestnut Trees.—All the chestnut trees throughout Rockingham county, N. C., and the surrounding counties, have died this season.

Flour in the West.—A few days since, a sale of 2500 barrels superfine flour was made at Alton, Ill., at $8.50 per bbl., to be shipped to Rio Janeiro.

Austria and the Pope.—The little religious freedom that existed in Austria, has been surrendered by the recent concordat between the government and the Pope. The State abandons all control over the Church; gives up all claim to interfere with the action of the Pontiff; admits the right of free and unrestrained communication between the Pope and the Bishops. Education is given up entirely to the Church, which is to be protected from all opposition; is to have the power of prohibiting the circulation of books; may punish all who impugn its tenets; nominates all the clergy; takes the whole jurisdiction of marriages; and appropriates all church funds as it pleases.

RECEIPTS.

Received from Ruth Leeds, N. J., $2, vol. 29; from Sl. W. Lynde, Ind., per B. Lowry, $4, vols. 28 and 29; from Chas. Perry, agt., R. I., for Wm. Foster, $2, vol. 27, for John Peckham, Ethan Foster, Elizabeth Perry, $2 each, vol. 28, for Sarah Green, Saml. Sheffield, $2 each, vol. 29; Eleventh mo. 5th, from Geo. Gilbert, Pa., $2, vol. 29; from M. Battin, Pa., $4, vols. 27 and 28; duplicate, see page 72.

Friends' Boarding-School for Indian Children, at Tunessassah.

Two women Friends are wanted at this Institution to assist in the family.

Also, a man Friend to aid in carrying out the concern for the improvement of the Indians.

Philad., Eleventh mo. 1st, 1855. 180 Arch st.

WEST-TOWN BOARDING SCHOOL.

Wanted, a Teacher of the Classical Department in this Institution.

Application may be made to either of the undersigned members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS,
SAMUEL BETTLE, Jr. } Philada.

MARRIED, at Friends' Meeting, Whiteland, Chester Co., Pa., on Fourth-day, 21st of Eleventh month, WILLIAM P. TOWNSEND, of West Chester, to ANNA MARY, daughter of Samuel R. Kirk, of the former place.

DIED, at Hopkinton, R. I., 5th of Eighth month last, after an illness of several months, THOMAS W. Foster, son of Thomas and Phebe Foster, aged 21 years. The dear young Friend was a kind and dutiful son, of a tender spirit, exemplary in dress and language, diligent in the attendance of meetings, concerned for the prosperity of Truth, and very careful in his conduct and conversation. His solicitude for his own advancement in the narrow way, and his earnest desires for his youthful friends, that they too might not neglect the day of their visitation, were often manifested. The loss of an elder brother, a little more than a year previous to his decease was very affecting to him, and from that time he became increasingly concerned for his own salvation. Soon after his disease assumed a serious character, he appeared to be fully persuaded that he should not recover, and notwithstanding the blamelessness of his life he had to pass through some close provings and conflicts of mind, often appearing in great brokenness of spirit, saying that though there seemed to be nothing particular in his way, yet he did not feel that evidence of being accepted, which he greatly longed for. At other times he was mercifully enabled to speak of the great comfort and enjoyment he witnessed, and of the approaching end, expressing desires that he might be fully prepared before his change came. He appeared to make it his business from day to day, to seek for such preparation, feeling that it required great purity to be ready to join the heavenly host. He loved retirement, desiring at times to be left alone, and at such seasons he was often fervently engaged in supplication. Often desired he might be reading from "Piety Promoted," and the Holy Scriptures, which above all he loved, saying that good reading helped him on his way. Near the close he was fully aware that his release was at hand, and manifested great calmness and sweetness of mind. The day previous to his death, after affectionately embracing his two younger brothers, he looked upon them, and said, "How little they know what it costs to be prepared for such a time as this," and desired that might be prepared to meet him in a better world, which he remarked he hoped he was ready to go, and if the Saviour would mercifully receive him into one of the lowest mansions, it was all he could ask." Afterwards he said he had a hope of being received. Early on the day of his death, it was thought that the time for his release had come, but he had a sense that it was not so, and being asked by his aged grandfather if he thought he was going, he replied, "Not just now." After this he continued in a peaceful state of mind for several hours, being at one time engaged in vocal supplication not much of which could be fully understood on account of the weakness of his voice. He fell asleep, and soon awoke, saying he was then going, and in a few minutes passed away without a struggle, leaving his friends the consoling belief, that his redeemed and purified spirit was gathered to the garner of heavenly rest.

——, on the 14th of Eleventh month, at the residence of his brother, New Castle Co., Delaware, PUSEY PHILIPS, in his 41st year; a member of Kennett Monthly Meeting.

(Continued from page 114.)

n speaking of the Resurrection, on p. 134 of Essays on Christianity, it is said—

First, with respect to the impenitent wicked, their t *during the separate state* of existence, is described as e of pain and punishment, or in language more or ss metaphorical, and in what degree it is metaphori-l, no man can pretend to decide, as one of fire and prisonment. Although our Lord's parable of the h man and Lazarus, probably presents to our view *fictitious history*, yet we have every reason to allow at the doctrines which it so clearly conveys to our derstanding, are the doctrines of absolute truth."

After speaking of the condition of the rich man, following passage in 1 Peter, iii. 18—20, is ted: That Jesus [Christ] was "put to death he flesh, but quickened by the Spirit, by which o he went and preached unto the spirits in pri-, which sometime were disobedient, when once long suffering of God waited in the days of h." In commenting on this text it is said:

Although this passage is in some respects of doubt-l interpretation, it will, I believe, be found to be ex-icit as far as relates to the point now before us. For nether we understand it as declaratory of the doc-ne that Jesus after his crucifixion 'descended into ell,' or as conveying the far more probable idea, at in his pre-existence and divine nature he preach-to the antediluvians by his prophet Noah, it is evi-nt that the apostle speaks of the spirits of that an-ent race of sinners as being at the time when he *ote in prison."*

n page 211 of the Biblical Notes, the spirits he same antediluvians are spoken of as—

Imprisoned in the mansion of separate spirits, being ere reserved for future and final judgment."

n page 141 of the Essays on Christianity, the ject of the resurrection is thus concluded—

He [the child of Adam] has within him a never ing spirit; and even that part of him which is stined to moulder in the grave, shall in the end be nd the seed of a spiritual body, and shall be clothed th incorruption and immortality. If he is wicked d disobedient, after his death he is reserved in pain d darkness for the righteous judgment of God. After s resurrection that judgment will be consummated. he is righteous, when he dies his disembodied ul ascends into regions of bliss; when he is raised m the dead, the whole man will be renovated and ll enter into the fulness of the glory of Christ."

n page 385 of the same work it is said—

He is also assured by prophets and apostles, and re especially by Jesus Christ himself, that the day coming, when all who are in the graves shall hear e voice of the Son of God; when the dead shall ac-ally be raised even as Christ was first raised; when e souls of men shall be invested with spiritual bodies, "this mortal clothed with immortality, and death swal-"lowed up in victory."

These passages convey the idea that the soul does not at once after death, enter into a state of everlasting fixedness; that the dust of the bodies may be the seed of a spiritual body; and, if the dead are actually raised as Christ was first raised, that the same body of flesh and blood is to be re-suscitated.

There is also in the above passages a latitude of expression, on the mysterious subject of the resurrection of the dead, which is much more likely to give rise to speculation and controversy, than to settle Christians in a firm conviction of the truth of the doctrine.

The Society of Friends has always believed in the doctrine of the resurrection of the dead and of the day of judgment; yet they have not only considered it safest, as on other inscrutable subjects, to confine themselves to Scripture language; but to be concise in their declarations respecting it.

Robert Barclay says, in his Confession of Faith, using the language of Scripture, "There shall be a resurrection of the dead, both of the just and the unjust—they that have done good unto the resurrection of life, and they that have done evil unto the resurrection of damnation. Flesh and blood cannot inherit the kingdom of God, neither doth corruption inherit incorruption; it is sown in dishonour, it is raised in glory; it is sown in weakness, it is raised in power; it is sown a natural body, it is raised a spiritual body."

In the declaration of Faith issued by George Whitehead and others in 1693, it is said, "And as the celestial bodies do far excel the terrestrial, so we expect our spiritual bodies in the resurrection shall far excel what our bodies now are; and we hope that none can justly blame us for thus expecting better bodies than now they are. Howbeit we esteem it very unnecessary to dispute or question how the dead are raised, or with what body they come; but rather submit that to the wisdom and pleasure of the Almighty God." Sewell's History, ii., p. 355.

Receiving and believing the doctrine of the resurrection and judgment of the dead as laid down in the Scriptures of Truth, it is far more desirable to be prepared for that awful day, than, by attempting to be wise above what the holy penmen have recorded, to stir up unprofitable discussion upon the subject.

From its rise, our religious Society has regarded the institution of the Sabbath day, as a part of the ceremonial and typical law of Moses; and as such has believed it to be abrogated by the coming of Christ, the great antitype, in whom all the types and shadows of that law were fulfilled. Christ himself is the true believer's sabbath or rest. Among the works under examination is one devoted especially to this subject, put forth for the "Sabbath-day" is the result of a "perpetual decree," and that it is "an essential part" of the moral law of God.

In page 52 of this treatise it is said:—

"Every one who is familiar with the ministry of Je-"sus as recorded by the Evangelist, must be aware how "carefully he guarded the whole moral law of God. "There can be no question that he was speaking of this "law, contained as it was in the ten commandments, "and inscribed on the tables of the covenant, when he "said, 'Till heaven and earth pass, one jot or one tittle "shall not pass from the law till all be fulfilled.' * * * "It seems impossible to avoid concluding from these pas-"sages that the whole moral code, as it had been revealed "to the Israelites, was to remain in unimpaired authority "to the end of time; nor does there appear to be any "good reason why the principle here laid down by our "Saviour should not apply to the fourth as well as to "the other nine commandments."

Again, page 66, it is said, speaking of the day on which Christ rose from the dead:—

"As God the Father hallowed the seventh day, on "which he rested, and marked it for his own, as the "birth-day of the world; so the Son of God was now "distinguishing with peculiar honour the day of the "*new creation*, on which his lowest humiliation was ex-"changed for victory, and the atonement made for sin "triumphantly confirmed."

And a little further on:—

"Thus arose and thus concluded the first Christian "sabbath."

Again, on page 75.

"All that appertained peculiarly to the Mosaic dis-"pensation had now passed away: the shadow was ex-"changed for the substance; and the day on which "Jesus rose from the dead had been *hallowed* by the "Lord himself *for his own worship*, and for the rest and "religious edification of his believing children."

But it is unnecessary to multiply quotations, as the whole work is expressly written to prove, as we have already stated, that the "Sabbath-day" is an institution established by a perpetual decree, and that it is an essential part of the moral law of God. But it is evident that Christians do not observe a day, said to be thus consecrated by a perpetual decree; and that, whatever good reasons there are, (and these are many and cogent) for appropriating every seventh day to rest from labour, and to public worship, these reasons are altogether different from those assigned in this work.

The following extract from Robert Barclay's Apology, will show in what light our Society has always regarded the subject, and how incompatible the tenor of this work is therewith. "We not seeing any ground in Scripture for it, cannot be so superstitious as to believe, that either the Jewish Sabbath now continues, or that the first day of the week is the antitype thereof, or the true Christian Sabbath; which with Calvin, we believe to have a more spiritual sense, and therefore we know no moral obligation by the fourth command, or elsewhere, to keep the first day of the week more than any other, or any holiness inherent in it. But first, forasmuch as it is necessary that there be some time set apart for the saints to meet together to wait upon God; and that secondly, it is fit at sometimes they be freed from their outward affairs; and that, thirdly, reason and equity doth allow that servants and beasts have some time allowed them to be eased from their continual labour; and that, fourthly, it appears that the apostles and primitive Christians did use the first day of the week for these purposes, we find ourselves sufficiently moved for these causes to do so also, without superstitiously

straining the Scriptures for another reason, which that it is not to be there found, many Protestants, yea Calvin himself, upon the fourth command, hath abundantly evinced. And though we therefore meet and abstain from working upon this day, yet doth not that hinder us from having meetings also for worship at other times." Prop. xi., sect. 4.

We cannot but think that the tendency of the following passage is to induce a reliance, beyond what belong to them, on outward forms. It occurs in the Observations on the Distinguishing Views, &c., in the addenda to the chapter entitled "Practical Remarks and Advices on Silent Worship," p. 291; first printed in the seventh edition of 1834, and apparently designed to enforce upon Friends the necessity of greater attention to outward forms, and stated times, of private religious services.

"No one can with any show of reason, deny that our "Lord's precept respecting our entering into *the closet, shutting the door*, and praying to our Father who seeth "in secret, is to be understood *literally*, and therefore "such a practice, as far as circumstances allow, *is universally incumbent* upon Christians. If we would grow "in grace and in the knowledge of our Lord Jesus "Christ, it must be our frequent practice, especially at "the commencement and end of each day, to retire into "solitude, and there to seek for ability to pour out our "prayers to the Lord with a diligent and fervent spirit. "[Nor ought we to forget that *we may be assisted* in the "performance of this Christian duty by kneeling down "in a deliberate and solemn manner.*] For the prac"tice of kneeling in private as well as in public prayer "we have a clear and abundant warrant in Scripture; "and it is surely a blessed circumstance when our whole "man, body as well as soul, is reverently bowed before "the Lord our God. It has often been remarked that "the secret breathing of the soul, and the inaudible "sigh of the broken spirit, are prayer in the sight of "God; and this is certainly true, but we ought not to "rest satisfied with these *alone*. Prayer flowing from "the heart, and yet flowing *in words*, was plainly commanded by our Saviour, when he said, 'After this manner, therefore, pray ye, Our Father,' &c."

"To the occasional use of the prayer which our Lord "condescended to recite, I cannot conceive that any re"flecting Christian can for a moment object; and I be"lieve that our children ought to be accustomed to it "from early life. Yet I do not understand our Lord's "words as rendering *this form* imperative; but only as "enjoining upon us to pray after this manner, that is "in such clear and emphatic words, as shall plainly ex"press our humble adoration of God, and our earnest "entreaty for his grace and preservation."

The following quotation from Barclay's Apology, will show the difference between the views inculcated in the above extracts, and those of our Society:—

"We freely confess that prayer is both very profitable and a necessary duty, commanded, and fit to be practised frequently by all Christians; but as we can do nothing without Christ, so neither can we pray without the concurrence and assistance of his Spirit. But that the state of the controversy may be the better understood, let it be considered first, that prayer is twofold, *inward* and *outward*. Inward prayer is that secret turning of the mind towards God, whereby being secretly touched and awakened by the light of Christ in the conscience, and so bowed down under the sense of its iniquities, unworthiness and misery, it looks up to God, and joining with the secret shinings of the seed of God, it breathes towards him, and is constantly breathing forth some secret desires and aspirations towards him. It is in this sense that we are so frequently in Scripture commanded to pray continually; which cannot be understood of outward prayer, because it were impossible that men should be always upon their knees expressing words of prayer, &c. Outward prayer is, when as the spirit, being thus in the exercise of inward retirement, and feeling the breathing of the Spirit of God to arise powerfully in the soul, receives strength and liberty by a superadded motion and influence of the Spirit to bring forth either audible sighs, groans or words, and that either in public assemblies, or in private, or at meat, &c." * * * "As then *inward prayer is necessary at all times, so*, so long as the day of every man's *visitation* lasteth, he never wants some influence less or more for the practice of it." * * * "But because this outward prayer depends upon the inward as that which must follow it, and cannot be acceptably performed, but as attended with a superadded influence and motion of the Spirit; therefore cannot we prefix set times to pray outwardly, so as to lay a necessity to speak words at such and such times, whether we feel this heavenly influence and assistance or no; for that we judge were a tempting of God, and a coming before him without due preparation."—Prop. xi., sect. 21.

(To be continued.)

On Writing Inks.—Dr. J. Stark, in a paper recently read in the Society of Arts, Edinburgh, stated that in 1842 he commenced a series of experiments on writing inks, and up to this date had manufactured 229 different inks, and tested the durability of writings made with these on all kinds of paper. As the result of his experiments, he showed that the browning and fading of inks resulted from many causes, but in ordinary inks chiefly from the iron becoming peroxygenated and separating as a heavy precipitate. Many inks, therefore, when fresh made, yielded durable writings; but when the ink became old, the tannogallate of iron separated, and the durability of the ink was destroyed. From a numerous set of experiments, the author showed that no salt of iron and no preparation of iron equalled the common sulphate of iron—that is, the commercial copperas—for the purpose of ink making; and that even the addition of any persalt, such as the nitrate or chloride of iron, though it improved the present colour of the ink, deteriorated its durability. The author failed to procure a persistent black ink from manganese, or other metal or metallic salt. The author exhibited a series of eighteen inks which had either been made with metallic iron or with which metallic iron had been immersed, and directed attention to the fact that though the depth and body of colour seemed to be deepened, yet in every case the durability of writings made with such inks was so impaired that they became brown and faded in a few months. The most permanent ordinary inks were shown to be composed of the best blue gall nuts with copperas and gum, and the proportions found on experiment to yield the most persistent black were six parts of best blue galls to four parts of copperas. Writings made with such an ink stood exposure to sun and air for twelve months without exhibiting any change of colour; while those made with inks of every other proportion or composition had more or less of their colour discharged when similarly tested. This ink, therefore, if kept from moulding and from depositing its tannogallate of iron, would afford writings perfectly durable. It was shown that no gall and logwood ink was equal to the pure gall ink in so far as durability in the writings was concerned. All such inks lost their colour and faded sooner than pure gall inks, and several inks were exhibited, which, though durable before the addition of logwood, faded rapidly after logwood was added to them. Sugar was shown to have an especially hurtful action on the durability of inks containing logwood—indeed, on all inks. Many other p inks were exhibited, and their properties scribed—as gallo-sumach ink, myrobalans Range's ink—inks in which the tannogallat iron was kept in solution by nitric, muriatic, phuric and other acids, or by oxalate of pot chloride of lime, &c. The myrobalans ink recommended as an ink of some promise for d bility, and as the cheapest ink it was possibl manufacture. All ordinary inks, however, w shown to have certain drawbacks, and the aut endeavoured to ascertain by experiment whet other dark substances could be added to i to impart greater durability to writings made w them, and at the same time prevent those chem changes which were the cause of ordinary i fading. After experimenting with various s stances, and among others, with Prussian b and indigo dissolved in various ways, he found sulphate of indigo to fulfil all the required co tions, and, when added in the proper propor to a tannogallate ink, it yielded an ink whic agreeable to write with, which flows freely fi the pen, and does not clog it; which never mou which, when it dries on the paper, becomes of intense pure black, and which does not fad change its colour, however long kept. The aut pointed out the proper proportions for secu these proprieties, and showed that the smal quantity of the sulphate of indigo which coul used for this purpose was eight ounces for ev gallon of ink. The author stated that the ink preferred for his own use was composed of tw ounces of gall, eight ounces of sulphate of ind eight ounces of copperas, a few cloves, and f or six ounces of gum arabic, for a gallon of i It was shown that immersing iron wire or fili in these inks destroyed their durability as m as similar treatment destroyed ordinary inks. therefore recommended that all legal deeds documents should be written with quill pens the contact of steel invariably destroys more less the durability of every ink. The author c cluded his paper with a few remarks on copy inks and indelible inks, showing that a good ec ing ink has yet to be sought for, and that ir lible inks, which will resist the pencillings washings of the chemist and the forger, n never be looked for.—*London Artizan.*

Selected for "The Friend."

A Chapter in the Reformation.

(Concluded from page 116.)

Farel did not long survive the loss of Cal He proceeded to Metz, where he delivered a p erful discourse, but the exertion was too much r his debilitated frame, and he was obliged to t to his bed. The people gathered around him, these he exhorted and comforted; while th amazed at his fortitude, exclaimed one to anot "See, this man is the very same that he alw has been! We never knew him dejected, e when danger made our spirits fail. When we w ready to give up everything, he remained st fast, confiding in his Lord, and cheering us by christian heroism!" He gently fell asleep on 13th of September, 1565.

One of his biographers remarks, that "with lessening the praise and commendation due to one, Farel, in reference to his anxiety, toil, exertions in the work of the Reformation and ministerial office, and his entire self-consecrat stood in the very first rank." As a preacher unquestionably gained a high position for ef and usefulness. Men of all ranks and clas from the senator to the peasant, confessed power of his eloquence. Strangers of distinc went from a great distance to hear him pre

* The passage between brackets is omitted in an edition printed in New York, in 1840.

imated, ardent, scriptural, and practical—king powerful appeals to the heart, or probing by various and searching inquiries, mingled h prayer to God—he carried his auditory away with a torrent.

On one occasion, expressing his abhorrence of se who forbade the use of the Holy Scripres, he exclaimed, "What an abomination!—nst thou, O sun! shed thy beams on such a ntry? Canst thou, O earth, bear such people on thee, and yield thy fruits to those who thus spise their Creator? and thou, O God, art thou compassionate, so slow to wrath and vengeance ainst those who commit such great wickedness d sin against thee? Hast thou not appointed thy n king over all? Shall that holy revelation ich thou hast imparted through him for our inuction be forbidden as a useless, and even danrous document to those who read it? Arise, O rd! show that it is thy will that thy Son should honoured, and the sacred statutes of his kingm should be known and observed by all. Let e trumpet of thy holy gospel sound throughout e world. Grant strength to all true evangelists, d destroy all the propagators of errors, that the ole earth may serve thee, and call on thy name th the profoundest adoration."

In his last production, he argued very warmly ainst the adoration of the cross, though it was ged, as it is to this day, not only by Romanists, t by those who imitate their practices, that the ople do not adore the cross, but celebrate through medium the benefits arising from our Lord's ath upon it. He admitted that such an elevan of mind was possible with a few individuals, t contended that, as the great mass of the peo- never rise beyond externals, that which is exnal, and is not commanded by Christ, should put away. His recollections of his own acts of oration, in early life, filled him with penitential row; and the more deeply such superstitions d once been rooted in his mind, the more was he pelled in his old age to write against them, in ier that all infected with the same poison, might cured as he had been. Owing to the propenof mankind to be enthralled by the objects of nse, he looked upon the use of images, even en not professedly worshipped, as always a great nptation to idolatry. * * * He thus concludes: Let us beseech our blessed Lord, that he would m out of all a pure and holy church, free from the filth of popery, and from all human tradins, so that Jesus and his commands should alone honoured, in all purity and simplicity, so that may live in him without spot, and he in us by e faith, serving God our Father, who ever eth and reigneth with the Son and the Holy ost. Amen."

The existing memorials of this truly eminent d useful man are graphically described by Dr. L. Alexander. Alluding to Neufchâtel, he s: "The most interesting spot in the town to , was the old castle, gloomy and black as it is, h the church adjoining. Both are memora- edifices, in connexion with the history of the formation. * * * On the terrace before the urch, Farel lies buried, but his grave is not now be distinguished. It matters not; enough for e o'erworked and o'erwearied body, that here it nd rest; and as for the fervid spirit that ani- ted it, *its* record is on high.

"Who that is interested in the memory of Farel, visit Neufchâtel without hastening to the le village of Serriere? This memorable spot, ere the reformer landed, and where he was per- tted first to lift up his voice in proclamation of e gospel on this side the lake, is about a mile tant from Neufchâtel, a little to the left of the Geneva road. It is altogether a remarkable place. A stream, issuing suddenly from an opening in the mountain, rushes through a brief course of not more than half a mile down a narrow glen, over which the road passes by a bridge. The sides of the glen are studded with mills, the wheels of which are turned by the stream, which thus renders itself for its length perhaps the most diligent and useful little stream in the world. At the bottom of the glen, where it opens upon the lake, clusters the village of Serriere, with its ancient church. On a stone near this church Farel stood when he preached his first sermon in the canton of Neufchâtel—a stone of compromise on the part of the perplexed Emer Beynon, vicar of the parish, who, not hostile to Farel, would fain have him preach, but dared not to open for him the doors of the church. It is a plain, rough stone, in nowise noticeable save for this, that during the space of an hour or so, it was the throne of a king of men where he uttered those words which laid the foundation of that spiritual empire, which God had given him to establish. It is worthy of remark, also, that from this little hamlet issued the first protestant edition of the French Scriptures—that curious, coarse paper, little folio of 1535, which all bibliomaniacs are crazy to possess, but which very few have so much as seen."

Interesting would be the task, did the occasion permit, of delineating with more minuteness of detail the progress of that mighty change, which came over the people of these interesting lands, in reference to the great realities of Divine truth; but, however brief and abrupt may be the sketch we have furnished, we are forbidden further to expatiate. But if the mind of the student of classic lore is kindled into exultation and rapture when he treads the shores of Greece and Italy; what mind will not be touched with many a feeling of joyful remembrance, what heart will fail to give forth its deepest utterances of joy and thankfulness, as the traveller treads the soil of Switzerland, climbs those mountain slopes, where the noble souls of that land of heroes have had to hide themselves from their foes in dens and caves of the earth, and wanders in those valleys from which have so often arisen at once the song of holy praise, and the wail of sorrow, which persecution has extorted from its victims?

How vividly are all the remembrances of the past recalled amid these scenes! * * * The calmness of the present seems by very contrast to remind us of the struggles of the past, when these fields, now so tranquil and peaceful, were scenes of persecution and slaughter. Scarcely a spot can be traced among the mountains, in at least some districts, which has not been the theatre of persecution; and it has been emphatically affirmed, that were the world to rear monuments to faith and piety, like those it erects to its own heroes, we should at every instant stumble on some venerable ruin—the memorial of departed excellence. Well, may we rejoice in the remembrance, that while a name or a deed of merely worldly greatness may require stone or marble to give it perpetuity in the memory of men, that those acts of Christian resignation and holy effort which the good have achieved, have had a real and living influence—unostentatious, and perhaps unobserved on the destinies of truth, which will ultimately spread triumphant over the earth, and go down to the very end of time.

For "The Friend."

A HOLY LIFE.

"Be ye holy, for I the Lord your God am holy," was the language of the Almighty to a chosen people under the Mosaic dispensation, and very similar is the language of him of whom it was said, "A prophet shall the Lord your God raise up unto you of your brethren, like unto me, him shall ye hear in all things," who said, "Be ye perfect even as your Father which is in heaven, is perfect," therefore our calling is an high and holy calling. It is required of us to walk in perfect obedience to the law of our God, as made known in the heart, which, if we are watchful and attentive unto it, will be on all occasions a sufficient guide and director, leading out of all error into all truth. It is the will of our ever adorable Head, who raised up our religious Society to place his name among them, and that his banner of peace and righteousness might be displayed in the nations of the earth, to his glory and the advancement of his kingdom therein, that we should be brought more and more into this state of obedience, and thus in all things adorn the doctrine of God our Saviour. This includes not only a firm belief in the acknowledged principles of our Society, as held and maintained by our worthy forefathers, but also being so brought into conformity to the divine will, as in our daily walk among men, to exhibit the practical effect of those doctrines on the heart, and thereby give reason for others, who may behold our chaste conversation and upright deportment, to glorify God in the day of visitation.

Were we brought under and kept under an heart-felt concern to walk in the footsteps of the flock of Christ's companions, as without doubt our primitive Friends were, we should soon see a great change wrought. Instead of beholding such evident marks of worldly mindedness, as are sorrowfully to be seen more or less among all classes, there would be a cheering prospect of many being brought, through the power of conviction, to renounce the world, its profits, its pleasures, its maxims, and its customs, as they did, choosing rather to suffer affliction with the people of God, than to enjoy the pleasures of sin for a season.

O my dear fellow-professors, is it not treading upon their blood, for us who make profession of the same blessed Truth, through unfaithfulness to the gift of God, to lapse into things He redeemed them from, and on account of which they endured a great fight of affliction, and like David's worthies, broke through the enemy's camp to bring of the refreshing water from the well of Bethlehem, for the refreshment of God's heritage? Let us individually try ourselves by the unerring balance of the sanctuary, and see wherein we have fallen short of that holiness and perfection called for, and turn unto the Lord who will have mercy, and to our God who will abundantly pardon.

As we are given up unreservedly to the service of our holy Redeemer, we shall be favoured to stand in the obedience of faith, when he may put forth into any service for the strengthening of the things that remain that are ready to die; but if, instead thereof, we in times of excitement suffer our minds to become absorbed in what we may think to be a Christian duty, to the neglect of that enjoined upon us by our great Lord and Lawgiver, we cannot be said to be perfectly following him in the path of obedience. The human mind is ever liable to be drawn into extremes, unless kept under the all-controlling power of Truth; fervent is my desire, that our dear Friends everywhere might be kept so under the government of our holy Head, as to be favoured, in that meekness and gentleness which he alone can give, to contend earnestly for the faith once delivered unto the saints, and which has been clearly opened and confirmed to this people, by the day spring from on high. Also, to stand with their loins girded with the truth, and attentively listen to the language of the Spirit which has impressively gone forth,

"Strengthen the things that remain that are ready to die;" that so the church may come up more in the beauty of holiness, bearing the ensign of her king, all her members being engaged as with the heart of one man to show to those around them out of a good conversation their works with meekness of wisdom; and thus manifest a practical comment on the words of the great apostle, "I am crucified with Christ, nevertheless I live, yet not I but Christ liveth in me, and the life that I now live in the flesh, I live by the faith of the Son of God, who loved me, and gave himself for me."

As we are faithful to our Lord and Master, he will strengthen us to build one another up on our most holy faith, and all judging of one another in man's will and wisdom, will be kept down, and our daily concern will be, that the Lord's judgments may be upon the hidden things of Esau in our own hearts, that he might, in deed and in truth, come to reign in us, and rule over us. We should then feel more anxious on our own account (being sensible that we owe much unto our Lord), than carefully to pry into the failings of an absent brother; for truly there is a soil in which tale-bearing, backbiting, and evil-surmising cannot grow, and that is christian humility; for all who are planted in this soil, are sensible of their own failings, and are, therefore, willing to cast the mantle of charity over the failings of others as much as may be.

Let all then of every age and class, endeavour to make their calling and election sure, by an individual engagement of heart before the Lord, that we may come to witness an increase of that unity, which is of and from Christ our holy Head, and which binds together all the members of his body, enabling them to fulfil the apostle's exhortation, "Bear ye one another's burdens, and so fulfil the law of Christ."

Ohio, Twelfth mo. 18th, 1855.

Selected.

THE LUXURY OF LUXURIES.

Go thou, and wipe away the tear, which dims the widow's eye;
Be a father to the fatherless, and still the orphan's sigh;
Help thou thy brother in distress with open hand and heart;
But do thou this when seen by none, save Him who dwells apart.

Rejoice with those of spirit glad, upraise the drooping head,
And to the wretched let thy words bring back the hope long fled;
Forgive as thou wouldst be forgiven, and for thy fellows live,
Be happy in the happiness thou canst to others give.

These are the heavenly luxuries the poorest can enjoy:
These are the blissful banquetings which never, never cloy.
Both rich and poor, both old and young, this truth know as ye should—
THE LUXURY OF LUXURIES IS THAT OF DOING GOOD!

For "The Friend."

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 117.)

ELIZABETH WEBB.

"Consider the testimony of our Lord Jesus Christ to Nicodemus, 'Verily, verily, I say unto thee, Except a man be born again, he cannot see the kingdom of God.' Nicodemus wondered at that, saying, 'How can a man be born when he is old?' Jesus answered, 'Verily, verily I say unto thee, Except a man be born of water, and of the Spirit, he cannot enter into the kingdom of God. That which is born of the flesh, is flesh; and that which is born of the Spirit, is spirit. Marvel not that I said unto thee, Ye must be born again. The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh, and whither it goeth: so is every one that is born of the Spirit.' These testimonies are truth, and every soul ought to be concerned to look inward to know whether this babe of grace be formed in it or not. But some may say, 'How shall I know whether I am born of the Spirit or not?' Every new born babe seeketh for nourishment, according to its kind. That which is born of the flesh, seeks its nourishment from its mother. So that which is born from above, breaths, pants and cries, hungers and thirsts after the sincere milk of the word. As that which is born of the Spirit, is spirit, so it is fed with spiritual food, and hath its inward dependence on its spiritual Father for a daily supply of spiritual food. As a natural child grows gradually, both in stature and understanding, so doth the babe of grace, the new creature. Our All-wise Father never fails to give this new creature its daily bread, takes care to nurture it by his law; and if at any time it meets with a wound from the enemy, through want of watchfulness, he cleanseth it by his heart-searching word, and purifying judgments. As the creature submits and resigns itself into his hands and pure will, conveneanting to walk more carefully and humbly with him, he then pours in of his wine and oil. Oh! many experiences hath my soul had of his fatherly dealings, both in mercy and judgment. He hath laid me under great obligations to love him, and to glorify his holy name forever more.

"Now, my dear children, my travail in spirit is, that Christ may be formed in you. Great is the value of your souls, and great is the love of God manifested through Jesus Christ, not only without us, but also 'Christ in us the hope of glory.' Great, indeed, is the mystery of godliness, hidden from the wise and prudent of this world, but revealed unto babes, such as fear to offend their heavenly Father. These can pray with sincere and upright hearts. 'Our Father which art in heaven, hallowed be thy name. Thy kingdom come; thy will be done in earth, as it is done in heaven.' This kingdom comes not with observation, lo, here, or lo, there! the kingdom of heaven is within, although a usurper rules in too many hearts. The cries of the soul that is born from above, are very ardent unto the Lord, the Almighty God, that he would be pleased to dethrone the usurper, cast him out, and spoil his goods. 'Take to thyself thy great power, and rule thou in my heart,' saith the poor soul, 'for I am weary of this usurper. I am one of those that labour, am weary and heavy laden, and want rest for my soul.' To such souls the Lord hath called, is calling and will call, 'Come unto me, and I will give you rest. Take my yoke upon you, and learn of me, for I am meek and lowly in heart, and ye shall find rest unto your souls.' O gracious promise! for further encouragement, he says, 'My yoke is easy, and my burthen is light.' I have experienced the truth of this testimony, for which I bless the name of the Lord my God. The yoke of the god of this world, I have found to be very heavy. It is good to know and consider what the yoke of Christ was, while he was visible among the children of men. He came not to do his own will, but the will of him that sent him, and to finish the work. He practised as well as taught, 'Thy will be done in earth, as it is done in heaven.' I have found by experience, that the will of God is a pure, holy will, and his will is the sanctification of his creatures. It is the reasonable duty of all mankind wholly and fully to re
up their wills to the will of God. To be obed
children to their father,—loyal subjects to t
prince. As many as do so, find the disposition
frame of their minds quite altered. The wil
man in the fallen nature is a perverse will,
the different dispositions that are among mank
make a contentious Babel. I have observed s
that could not please themselves, so confuse
poor man in his unregenerate state. When
will of the creature is wholly resigned to the
of its Maker, and the soul, enlightened by l
who is the true light, comes to see its own fe
and in some degree hath a glimpse of the gl
the power and the wisdom of God, then it is o
saying, 'Let thy will be done in me, and by
in all things, O Lord! Thou knowest what is
for me, and I do believe that all things shall w
together for good to them that love and fear th
Then the soul resteth in the will of its Maker,
is at peace. The Psalmist said, 'Acquaint thy
with God, and be at peace.' So, as the little ch
whose sins are forgiven for the Mediator's sa
abides in obedience, the Lord enlargeth it by
own love, and enables the soul to run in the
of his commandments with great delight. T
the work of Christ is made easy, and the m
spirit of the Lamb of God takes place in the s
and enables it to follow its captain fully.
lieving that the Lamb and his followers shall h
the victory in the end, the child perseveres; pr
ing for daily bread, and that his heavenly Fat
would forgive him his trespasses, as he forg
those that trespassed against him.

"I advise you, my children, to take good not
of the positive testimony of our Lord, 'If ye f
give men their trespasses, your heavenly Fat
will also forgive you. But if you forgive not m
their trespasses, neither will your Father forg
your trespasses.' When I consider this sayi
with many others of our Lord in that most ex
lent sermon, which he, the best minister that e
stood on this world, preached on the mounta
my heart is sorrowful to see how little notice
taken of them, as to putting them in practi

soever heareth these sayings of mine, and do
them, I will liken him unto a wise man, whi
built his house upon a rock, and the rain descen
ed, and the floods came, and the winds blew a
beat upon that house, and it fell not for it w
founded upon a rock. And every one that hear
these sayings of mine, and doeth them not, sh
be likened unto a foolish man, which built
house upon the sand, and the rain descended, a
the floods came, and the winds blew and beat up
that house, and it fell, and great was the fall of
A great fall, indeed,—to fall into the bottomle
pit. Well, what shall poor creatures do? T
old man can do nothing; he must die daily, a
every degree of life and strength the new man
ceived, is obtained through the degree of death
the old man, and through resignation to the Divi
will. We are only safe in the Divine han
Whilst there the Holy Spirit, even the Spirit
the Son of God worketh in us, for us, and by u
to do according to his good will and heavenly ple
sure. So, the work is the Lord's, who said, 'I
I come, in the volume of the book it is written
me; I delight to do thy will, O God!' So,
some degree when his spirit rules in a child
God, it becomes pleasant and delightful to do t
will of God. He is a fountain of love, light a
life, and as you continue in his love and fear, yo
hearts will be enlarged, 'your capacities widenc
your understandings enlightened more and mo
and the inward man so enlivened that the so
will have cause to say, 'Thy ways, O Lord, a

of pleasantness, and all thy paths are peace.' ou read the Holy Scriptures, their spiritual ning will be opened by the Spirit through h they were given forth. This Spirit is the key by which seals are opened, and by which ysteries that appertain to life and godliness, revealed. I can truly say, to the praise and y of God who hath given such a great gift to kind, that this Spirit is a sweet spirit, and a comforter, leading its lovers and followers all truth. It is a searcher of hearts, and a of them and the revealer of the thoughts he heart and intents of the mind. It is a teous judge, and a swift and true witness against y appearance of evil. Solomon called it wis- , and said, 'The fear of the Lord is the begin- of knowledge; but fools despise wisdom and uction.' 'Hear the instruction of thy father, forsake not the law of thy mother, for they be an ornament of grace unto thy head, and ns about thy neck.' 'If sinners entice thee, ent thou not.' See the 1st, 2d and 3d chap- of the Proverbs. The counsel therein con- ed is good and very sweet. Wisdom is, in- , a tree of life to them that lay hold upon her, happy is every one that retaineth her. My though dwelling in a weak vessel, hath loved admired the wisdom of God, even from my lihood. I have cause to say, "Wisdom is, in- , a loving spirit, and will not acquit a blas- mer,' or vain talker of his words.

My dear children and friends whom I leave nd for a little season, love the wisdom that eth from above. As you desire to be guided t in all things, your affections will be set on gs above, and your treasure being in heaven, hearts will be there also. Then you will long e brought to the full enjoyment of your be- d, our Lord and Saviour Jesus Christ, where Almighty is known to be all in all. Even visheth and so prayeth, your tender mother true friend,

ELIZABETH WEBB."

For "The Friend."

On Shooting Stars and Meteorites.

e propose condensing for the readers of The nd, some of the most interesting facts relative ooting stars and meteorites, collected from dif- t sources, and to give a sketch of the hypothesis ecting them, commonly received among scienti- ien.

he principal works referred to, are "The Ameri- Journal of Science and Arts," "Humboldt's nos," "The Edinburgh Encyclopedia," and "American Philosophical Transactions."

very one must be more or less familiar with e luminous bodies which may be seen on any r night at intervals, coursing through the sky, popularly termed meteors. These bodies, how- , we shall distinguish by the name of "shoot- stars," intending by this title to include all e *luminous* meteoric appearances which tra- e the heavens without descending to the earth, eaving any perceptible residuum; whilst those familiar and more rare objects, which fall to earth in the shape of metallic or stony masses, mpanied by loud explosions, will be considered er the term of "*meteorites.*"

hooting stars may be seen nightly when the is clear: and M. Quetelet, a careful French erver, who has devoted much time and thought his subject, gives 16 per hour as the average ber which may be seen constantly. E. C. rick of New Haven, Conn., whose authority is of the highest order on this question, estimates average number at 20 per hour. By far the t interesting phase, however, under which this subject can be contemplated, is in connection with the *periodic showers* of shooting stars, that are now proved by a long course of observation to occur with a remarkable degree of regularity at certain seasons of the year. Among these periodical displays, the most regular and best authenticated seems to be that which occurs on or about the 9th and 10th of the Eighth month. The annual occurrence of an extraordinary meteoric display at this period, appears to have been recognized from a very remote date. A superstition has existed for ages among the Roman Catholic population of some portions of England and Germany, that the "*burning tears*" of St. Lawrence are seen in the sky on the night of the 10th of August, that being the anniversary of his martyrdom. We find records of unusual showers of meteors or shooting stars at this date, for six different years previous to the year 1835. Subsequent to that year, regular annual observations have been made by E. C. Herrick and others, both in Europe and this country, and the result of all the observations, show that this phenomena has occurred annually up to the present date with no intermissions, except, perhaps, during the years 1843, 1844, and 1851, when it appears doubtful whether any observations were made. It must not be inferred from this statement that these annual showers of stars were at all times of that extraordinary character observed in the splendid exhibition of 1833. On the contrary, an ordinary observer would not generally be aware that any unusual celestial phenomena was transpiring, and it is only by careful and long continued vigils, that the fact of the number of falling stars on those evenings being considerably above the average, is determined.

This average, as before stated, is from 16 to 20 per hour, and the recorded observations for the night of the 10th of Eighth mo., during the years above mentioned varies from 100 to 400 per hour. One important fact connected with these periodic meteors is, that they have with great uniformity appeared to originate in a point of the heavens near the sword cluster of the star Perseus, and to diverge from the common focus or radient, in all directions.

Besides the Eighth mo. period, there are three or four others, which are regarded as more than ordinarily prolific in meteoric displays, though none of them so uniform and well established as that. Among them those of the Eleventh mo., Fourth mo., Seventh mo., and Second mo., are the most prominent.

The great shower of the 13th of the Eleventh mo., 1833, is the most remarkable one of which we have any record; and as many readers are probably unfamiliar with the details of that wonderful exhibition, we will subjoin some account of it, abstracted from an authentic record compiled at the time, by Prof. Denison Olmsted of Yale College, and published in Silliman's Journal. "The night of the 12th was one of unusual clearness, and as early as 9 P. M., in some localities, meteors were observed to be more numerous than ordinary; near 2 A. M., however, they increased amazingly in numbers, and from that time until daylight extinguished them from view, the whole heavens were illuminated by innumerable fire balls, shooting across the firmament in all directions, as thick as flakes of snow in a storm." Says one observer, "it would seem as if worlds upon worlds, from the infinity of space, were rushing like a whirlwind to our globe; then it would appear as if the firmament was slowly melting with heat, and the stars descending like a snowfall to the earth; until again some firey sphere would start from its orbit, blazing and hissing through the vast expanse, sweeping planets from their places, and hurling whole systems from existence in its mad career. These bodies seemed generally to shoot in lines from the zenith to every point of the horizon, crossing there, however, sometimes at different angles, from 5° to 45°. In some, the ball or star emitted a pale blue or green light, while the streak or tail left would be orange or intensely white, and so on, exhibiting all the prismatic colours in instant changes. Occasionally one would dart forward, leaving a brilliant train three or four inches in width, which would gradually widen into a cloud three or four feet in apparent width and remain visible, some of them nearly fifteen minutes. By far the most brilliant one which we saw, occurred at a few minutes past five in the morning, and seemed to anounce by its splendour, the finale of this grand exhibition of fire works in the heavens. It seemed to pursue, as near as we could judge, a course from south-east to north-west, the ball being apparently five or six inches in diameter, with a train of from thirty to forty feet in length; the latter assuming immediately on the passage of the meteor, a serpentine form, and diffusing a light upon the earth equal to that of the full moon, and remaining intense at least forty or fifty seconds."

The meteor last referred to, appears to have been seen over a vast extent of country, and was easily identified by different observers. Alexander C. Twining says, "the train of light which it left was 30 degrees long, and in the space of three or four minutes, this train drew itself up in the form of a serpent, and then assumed the outline of the figures 2, 3, 4, and 5; then curling up still more, presented the aspect of a cloud about five times the diameter of the moon, and so floated off towards the east, being visible for fifteen minutes. Many persons were aroused from their slumbers in a state of intense excitement and alarm, under the impression that their dwellings were in flames, so brilliant was the light in their chambers; whilst others supposed a shower of fire was falling from the heavens." From another observer who was very advantageously situated on an open prairie in Missouri, we have the following remarks: "Though there was no moon when we first beheld them, their brilliancy was so great, that we could at times read common sized print without much difficulty; and the light which they afforded was much whiter than that of the moon in the clearest and coldest night when the ground is covered with snow. The air itself, the face of the earth as far as we could behold it, all the surrounding objects, and the very countenances of men, wore the aspect and hue of death, occasioned by the continued pallid glare of these countless meteors, which in all their grandeur flamed 'lawless through the sky.' There was a grand, peculiar, and indescribable gloom on all around; an awe-inspiring sublimity on all above, while

> "The sanguine flood
> Rolled a broad slaughter o'er the plains of Heaven,
> And nature's self did seem to totter on the brink of time."

There was scarcely a space in the heavens which was not filled at every instant with these falling stars; still at times they would shower down in groups, and the long luminous trains which they left behind would last for several seconds, whilst occasionally when the nucleus had entirely disappeared, those trains or streams varying from ten to one hundred yards in length, would linger on the sky and continue to shine in all their brilliancy for two or three minutes, and then expire in the twinkling of an eye. You would now and then see some solitary ones resembling balls of livid fire, like burning rockets shooting towards the earth and emitting numerous sparks as they boldly rushed into the more dense and vaporous atmosphere, acquiring as they fell a more baleful, and murderous aspect, and

like incendiary spies, portending ruin and destruction."

This display was visible throughout the whole continent of North America, from Newfoundland to the Gulf of Mexico, and westward as far as civilization extended at that time. And most of the observers concur in stating that the meteors had a common origin or radient near the zenith, and generally that they were noiseless in their flight, although some persons were sensible of a slight detonation or hissing sound, accompanying the explosion and progress of a portion of the aerolites. No evidence has appeared that any of them reached the earth's surface. With respect to the number of meteors visible from any one point between the hours of 12 and 7, A. M., various conjectures have been made, but all of them we think necessarily indefinite and unreliable. A correspondent of the Boston Sentinel who undertook to count them, estimates the number which fell during fifteen minutes, to have been 8660, and from this, Professor Olmstead reckons the whole number visible at that place during seven hours, at 207,840.

(To be continued.)

For "The Friend."

The "Word of Encouragement" from Ohio, in the 11th number, was acceptable to me, and I doubt not has been so to many others. It savours of the spirit of the suffering Quakers, who prefer partaking of the afflictions of the people of God, rather than to enjoy the pleasures of false liberty, esteeming the reproach of Christ greater riches, than to receive the flatteries and commendations of multitudes. The history of Friends by W. Sewell, sets forth many of the indignities cast upon them, by professors of that age which they bore with christian meekness and patience. The spirit they manifested towards them strikes the reader as bearing a resemblance to that which many now indulge towards hundreds of honest hearted Quakers, who are standing for the same principles unalloyed, for which their forefathers contended. If those who have been active in endeavouring to put down the true Yearly Meeting of Ohio, and to procure their rejection as not being true Friends, would bring their deeds to the light, and suffer that to show them the nature of the spirit by which they have been actuated, we apprehend they would not bear the test of Truth, but they would see that a party spirit has led them to treat their brethren in an improper manner. What have our brethren of Ohio done to warrant the summary, ungenerous treatment that has been heaped upon them? They have not separated themselves from the Society,—they have not published or upheld any departures from our religious principles—they have not deprived their members of their rights, or violated their own discipline in disowning them for standing for the Truth, and testifying against attempted inroads upon the principles of the Society. They have not let fall any of its testimonies, or the support of their discipline against offenders, but in their religious movements, in the consistency of their moral and upright standing, and blamelessness of their lives, we believe they will not suffer in being compared with those who have set them at naught, and endeavoured to deprive them of their rights in the Society. How much wiser, and better, and more consistent with the principles and the spirit of christianity, would be a universal effort to remove all causes of disagreement, to repair their wrongs, and to draw near to one another, rather than to pursue any course to spread separation, and continue apart in disjointed bodies.

All have the opportunity of knowing the doctrines and testimonies of the Society as set forth in Barclay's Apology; Penn's No Cross No Crown—Phipps' Original and Present State of Man—in Sewell's History, and numerous other works, and so long as any body professes to bear the name of Friends, it is bound to adhere to those christian principles without adulteration. Time was, when no such alienation prevailed among the Yearly Meetings; and if we all hold the same faith, what should deter us from feeling the same fellowship and treating one another as brethren of the same household. Would it not be much better to contemplate the hope and the prospect, that He who called us to uphold those scripture doctrines, will again gather us together in one, if we fervently desire it, and give up what he requires us to relinquish, rather than to take a satisfaction in being apart, and resorting to measures to make permanent the alienation.

The spectacle of a religious society that had been temporarily thrown into detached parts, through the workings of a wrong spirit and wrong principles, being brought together again and firmly united in the blessed Truth, would present strong proof of the excellency of the christian principles it has promulgated from the beginning, and would be like marrow to the bones, and a joy far above the joys of harvest, to thousands who now mourn over our desolation, and the reproach it brings upon the profession.

For "The Friend."

A London Fog.

Few persons can form any adequate idea of the density of a London fog, from what they occasionally see in this country. On the 15th and 16th of Eleventh mo., London and its vicinity was covered with a fog of extreme density, occasioning no small inconvenience to the inhabitants. During its prevalence, steamboats and omnibuses ceased to run, hacks and cabs in attempting to make their way along the streets got on the side walks, and many persons walked over the wharves into the river and were drowned. Similar accidents took place in the locks and basins of the docks, with a number of fatal results. Persons were stopped and robbed in the streets with impunity, and several shops were plundered in day time, without a possibility of efficient interference by the police, so blinding was the misty pall that overspread the vast city. A little experience of this kind would enable us better to appreciate the clear atmosphere and bright skies which we enjoy in such large proportion.

For "The Friend."

It has been a great comfort to me, and I believe to *many* others, to see the "Appeal for our Ancient Doctrines," republished in "The Friend" at *this time*, believing that under the Divine blessing, it may prove very beneficial to many. Many of us little ones, are strongly attached to our Society, and its precious testimonies, believing they were given forth by the unchangeable Truth, yet feel we can do little more at present to advance the good cause, than put up a little petition, as ability is afforded, "Spare thy people, O! Lord, and give not thy heritage to reproach," and that our compassionate Redeemer may be pleased to purge and purify us as a people, even though it be through much suffering, so that the church in his own due and appointed time may be enabled once more to come up as out of the wilderness.

May the Editors of "The Friend," under the influence of best wisdom, be enabled through its columns, to bear a faithful testimony for the Blessed Truth, and against the introduction of error from any source. Then I believe it will be in days to come, as I trust it has been in days past, a real blessing to our Religious Society.

Ancient Records.—According to "The I... Mercury," Col. Rawlinson has just disco... among the ruins of ancient Babylon an exte... library—not, indeed, printed on paper, but imp... ed on baked bricks—containing many and vol... ous treatises on astronomy, mathematics, ethic... and several other most important branch... knowledge. INDIAN CORN

(Continued from page 118.)

Maize, or Indian Corn, is the most importan... ricultural production of the United States, whe... we regard the annual market value of the c... the amount of nutritous food which it furnishe... its adaptation to our soil and climate. So far a... mate is concerned, it will grow in every portion o... habitable globe, between the 44th degree of n... latitude and a corresponding parallel south. I... land, although considerably removed beyond t... limits of latitude, has a climate warm enough... the growth of this plant, if the average tempera... *of the whole year* were alone to be considered, ... average being about the same there as in north... Pennsylvania. But the English *summers* are ... warm enough; there is too little of *clear, hot* wea... for this vigorous and succulent plant to be cult... ted successfully. Or, as Joel Barlow has it;

—"Climes oblique, that fear the sun's full ray
Chilled in their fogs, exclude the generous maize.
A grain whose rich, luxuriant growth requires
Short, gentle showers, and bright etherial fires."

"It is quite impossible to carry it," says a ... writer, "where the mid-day and the mid-sum... heats are not comparatively great." The sum... heat of the British Isles is moderated by th... oceanic position, while the severity of winte... very greatly mitigated by the wonderful influe... of the Gulf stream, that great hot-water heat... apparatus so interestingly described by Lt... Maury.* The following passages, respecting ... history of the cultivation of our great Ameri... staple, are extracted from one of the volume... the Patent Office Reports.

"Although there has been much written on ... Eastern origin of this grain, it did not grow ... that part of Asia watered by the Indus at the t... of Alexander the Great's expedition, as it is ... among the productions of that country, mentio... by Nearchus, the commander of the fleet. N... ther is it noticed by Arrian, Diodorus, Columel... nor any other ancient author; and even as late ... 1491, the year before Columbus discovered A... rica. Joan di Cuba, in his 'Ortus Sanitat' ... makes no mention of it. It has never been fou... in any ancient tumulus, sarcophagus or pyram... nor has it ever been represented in any anci... painting, sculpture or work of art, except in A... rica. But in this country, according to Garcil... de la Vega, one of the earliest Peruvian historia... the palace gardens of the Incas were ornamen... with maize, in gold and silver, with all the grai... spikes, stalks and leaves; and in one instance, ... the 'garden of gold and silver,' there was an ... tire corn field of considerable size, representing ... maize in its exact and natural shape; a proof ... less of the wealth of the Incas, than of their ve... ration for this important grain.

"In further proof of the American origin of t... plant, it may be stated that it is found growing ...

* See page 57 of the present volume of the Friend.

l state from the Rocky mountains in North
rica, to the humid forests of Paraguay, where
d of having each grain naked, as is always
ase after long cultivation, it is completely
ed with glumes, or husks. It is, moreover,
l authenticated fact, that maize was found in
e of cultivation among the aborigines on the
d of Cuba, at the time of its discovery by Co-
us, as well as in most other places in Ame-
first explored by Europeans.

The first successful attempt of the English in
h America to cultivate this grain was made on
s river, in Virginia, in 1608. The colonists
over by the 'London Company' adopted the
e then practised by the Indians, which, with
modifications, has been pursued ever since.
year following, thirty or forty acres were
en up and planted by the colonists near
stown. The yield at that time is represented
ve been from two hundred to more than a
sand-fold.

In 1621, the Indians, Samoset and Squanso,
ed the pilgrims at Plymouth, and instructed
how corn should be planted, and the manner
hich the ground should be manured with
ves.* The colonists planted twenty acres
corn, and six acres with barley and peas.
corn produced well, but the other two failed.
same year Edward Winslow and Stephen
kins visited the Indians at Namasket, in
lleborough, who receive them with great joy,
regaled them with bread, called *mazium*,
e of Indian corn."

1629, the yield on Massachusetts Bay was
two hundred to five hundred fold. In the
settlement of Illinois, the yield of corn in
instances was a thousand fold.

In 1621, corn sold in Virginia for 2*s.* 6*d.*
cts.) per bushel; on Massachusetts Bay, in
), for 10*s.* ($2.50;) in New Netherland in
), for 10 to 15 stivers per skepel, (15 to
cts. per bushel;) in Rhode Island, in 1670,
5 cts. per bushel; on the Piscataqua, in 1680,
5 cts. per bushel.

From the flexibility of this plant, it may be
matized by gradual cultivation, in some of its
eties, from Canada to Mexico, or from Oregon
atagonia; but, in either case, its character is
ewhat changed, and often a new variety is the
lt. Throughout the Atlantic States this grain
ciates itself with the soil and climate adapted
e growth of the flowery dog-wood, (*Cornus
rida,*) or the red-bud (*Cercis Canadensis,*)
generally may be planted at the season of the
ering of these shrubs.

The varieties of Indian corn are very numer-
exhibiting many grades of size, colour, and
ormation," Among these may be mentioned
'Wild corn' of the Rocky Mountains, and its
grand-children, 'Pop' and 'Rice;' the early
nada,' with tiny ears and flat, close-clinging
ns; the 'Improved King Philip,' with its
d, oily grains and slender cob; the 'Golden
x;' the starch-bearing 'Tuscarora;' the 'Jet-
k New Mexican;' of tortilla renown; the late
n-keeping 'Stowell Sweet;' the Virginian
'white Gourd-seed,' or New Mexican 'white
,' famous for homony and cakes; and the
e 'Gold-yellow gourd-seed,' with its swelling
, of the south and west."

he several varieties of corn differ very much
he relative proportions of starch, dextrine, oil,
sphoric acid, and iron contained in the grain.
a very ingenious and interesting method, dis-
ered by A. A. Hayes, of Roxbury, and Dr. C
Jackson, of Boston, we may easily cause a
grain of corn, wheat, &c., to exhibit to the eye the approximate proportions of these ingredients contained in it. If a solution of sulphate of copper (blue vitrol) be applied to a grain of corn split lengthwise, the part that contains phosphoric acid will become green in consequence of the formation of phosphate of copper. In this beautiful experiment the germ or "chit" only, becomes green, showing that the phosphates are confined to that part of the seed. If we use sulphydrate of ammonia in place of sulphate of copper, the chit changes to a dark olive color, indicating the presence of iron in that part of the grain. A tincture of iodine applied in the same way, defines the limits of the starch and dextrine, by striking an intense blue with the starch, and a deep port-wine red with the dextrine, a rich violet colour indicating the presence of both. The oil contained in the horny, almost transparent part of the grain prevents these tests from affecting that part, but if this oil be extracted by means of alcohol or ether, the tincture of iodine will show the presence of starch there associated with gluten. In the volume from which the foregoing extracts are taken, and from which the above account of these experiments is condensed, is given a very interesting plate showing the proportions of the parts of the grain containing starch, phosphates, oil, &c., in some twenty varieties of Indian corn.

In the course of his experiments, Dr. Jackson tried these tests on two different kinds of grain—namely the Tuscarora, and a variety of sweet corn—*taken from the same ear.* But when the test was applied it indicated more than twice as much phosphates—or at least of space occupied by them—in the sweet as in the other variety. Now, since the kernels came from the same plant and the same ear, it would appear that they obtained unequal proportions of phosphates not only from the same soil but from the same sap.

Indian corn contains a greater proportion of phosphates than our other cereals, and hence it is more likely to surcharge the system with bony matter, producing concretions of phosphate of lime. "Perhaps that stiffness of the joints and lameness of the feet, common in horses fed too freely with corn, may be accounted for by this preponderance of the phosphates."

(To be concluded.)

*Alewife or aloof is the Indian name of a kind of (the Clupea serrata,) resembling the herring.

THE FRIEND.

TWELFTH MONTH 29, 1855.

It would seem that no system of religion however gross, no delusion however absurd, can be propounded, provided it address itself to some of the corrupt propensities of the human heart, but will find converts and professed believers. False creeds and corrupt articles of faith are among the most successful snares with which Satan betrays the souls of men to destruction; for in his natural condition man loves darkness rather than light, and when left to himself much prefers any form that will allow him to remain in the indulgence of sin, than the heart-changing religion of Christ, which calls for submission to the baptism of the Holy Ghost and of fire. It appeared like an idle tale when the monstrous tissue of fiction and corruption now preached under the denomination of Mormonism was first announced to the world; and we suppose there were few who imagined that its notorious author and his three of four accomplices would be able, in this enlightened age, to gain converts to the miserable fables they put forth as a new revelation from the most High. But the event has proved that the weakness and blindness of human nature is the same now as ever since the fall; so that it may be said of thousands among those who have been taking to themselves the name of Christ that becoming "vain in their imagination and their foolish heart darkened, professing themselves to be wise, they became fools": and "even as they did not like to retain God in their knowledge, God gave them over to a reprobate mind to do those things which are not convenient." We do not wish to record in our pages the dreadful doctrines that have been published by some of the Mormon leaders; suffice it to say, that they admit of life being passed in the practice of vice, while they inculcate the equality of the soul with Deity after death.

Our object is noticing the Mormons at the present time is in order to give our readers some idea of the manner in which they are increasing in our country, and to lead them to reflect on the probable consequences to the welfare of the government, from allowing such a festering sink of corruption to go on increasing in intensity and extending within its borders.

One of their number has recently published in the Deseret News what is claimed to be an official statement of the progress of the sect, and though we have no confidence in the correctness of the alleged facts, yet as an approximation to the truth, its representations are well calculated to awaken surprise and sad forebodings.

The Golden Bible is said to have been printed in the English, Welsh, Danish, French, German, and Italian languages, and is also about being introduced into Sweden and Norway. There are now ninety-five missionaries in various parts of Europe, and an equal number in Asia, Africa, and the islands of the Pacific ocean, while the press is issuing 4000 copies of a weekly periodical in Salt Lake city, and 22,000 copies of a similar periodical in Liverpool, England. A periodical is established in Copenhagen, one in Switzerland, one in Swansea South Wales, one in Australia, and one in India. One thousand converts are represented to have arrived in Utah from Denmark alone, and more than thirty times that number to have come from other sections of the globe, to swell the numbers in the city they have built beyond the Rocky mountains. They claim the number of those professing their faith in all parts of the world, to be four hundred and eighty thousand; and as it is enjoined on every convert to emigrate as speedily as practicable to the "city of the Saints" in Utah, they are looking for the gathering of this host in their retreat beyond the mountains, when they anticipate to be able to act independently of the government of the United States. To hasten the arrival of their deluded adherents, a tax is levied on all the members at home, for an emigration fund, and certain individuals are commissioned to render pecuniary assistance to all in every country, who are willing to join them, in their efforts to reach the land of promise. By these means, hordes of these ignorant fanatical polygamists from all nations, are yearly congregating around the head quarters of Mormonism, and as the doctrine of implicit obedience to their Elders is absolutely enforced and implicitly obeyed, there is no excess into which they may not be led. As they profess to look upon themselves as a chosen people, and all who do not unite with them as Gentiles, with whom they can have no affinity, and as their abominable system of a plurality of wives is not tolerated by the laws of our country, it is evident they cannot become amalgamated with the other citizens, though their licentiousness may spread as a leprosy far beyond their own pale, and infect the whole moral atmosphere.

As yet, no one appears to have seriously considered what measures should be pursued in order

to put a stop to this amazing delusion: nor is it an easy matter to decide upon the right course. The United States Government, apparently supposing the evil is so great it must cure itself, has made little practical effort to interfere with the course of these people, and its laws are feebly, if at all, enforced among them. They have been allowed, without interference by government, to promulgate a system which, so far as it prevails, must, both by precept and practice, destroy Christianity, and the strange and serious anomaly is presented, of a community rapidly growing up unchecked, in the centre of the continent, drawing recruits from all parts of the world, whose avowed object it is to overturn the institutions and the religion we profess to value beyond all price.

SUMMARY OF EVENTS.

EUROPE.—News from Liverpool to the 8th inst.

The War.—From the prevailing tone of the papers, it may be inferred that there is an increasing desire for peace, but it does not appear that any measures have been taken to bring about such a desirable event. It is asserted from Berlin, that Prussia has urgently demanded at St. Petersburg that Russia should name the conditions to which she is ready to submit. Russia's reply to this demand of Prussia is affirmed to be conciliatory, but vague. The Cabinet of St. Petersburg shrinks from the difficulty of making proposals that it may have the mortification to see rejected. Private letters from St. Petersburg indicate no urgent desire for peace. The profits of the internal trade keep business generally, up to a more favourable point than was anticipated. Government stock has not much fallen, and money was abundant at Moscow, at seven per cent. The St. Petersburgh Northern Bee has an editorial headed "The war is only beginning," and declares that Russia has ample resources to continue the war for years. Both in France and England, great exertions were making to strengthen their armies in the east. It was expected that seventy thousand British troops would be in the field the next campaign. The Russians were making vast preparations also. It is said that their army in the Crimea has been already so much increased as to render all the reinforcements received by the allies necessary for mere purposes of defence, and that from a similar motive, several of the advanced positions of the allies have been abandoned, their garrisons falling back upon the main armies, from the apprehension that they would be attacked by the Russians. The Russian works on the north side of Sebastopol, were assuming gigantic dimensions. A despatch from the Baltic, dated the 6th, states that the allied squadron was then sailing homeward.

ENGLAND.—Parliament has been prorogued till the 31st of next month. The King of Sardinia had returned to France. The British Consul at Cologne, who was imprisoned for enlisting men for the British service, has been released by the King of Prussia. The London money market continued stringent. Consols had, however, advanced to 90¾. The bullion in the Bank of England had increased £87,000 in the week. American securities were in active demand at better prices. The Liverpool cotton market was without change. Sales of the week, 50,000 bales. Breadstuffs were in moderate demand. Philadelphia and Baltimore flour, 43*s.* to 44*s.*; white wheat, 11*s.* 6*d.*; red, 11*s.* 3*d.* per 70 lbs. The provision market, generally, was dull, and prices had a downward tendency. The ship Constitution, of New York, arrived at Liverpool on the 4th, and on the following day, while lying at anchor in the Mersey, was destroyed by fire. The cause of the fire was unknown, but was supposed to be from spontaneous combustion. The ship was valued at $70,000, and the cargo at $100,000.

NICARAGUA.—Parker H. French left Washington for New York, without essaying to hold communication with the State Department, having probably ascertained that he would not be recognized in his diplomatic capacity. A despatch from New York, dated the 24th inst., says, "The Nicaraguan steamship, to sail shortly for San Juan, has engaged to carry out 500 men, pretended emigrants, for Nicaragua, under the protection of Parker H. French." The District Attorney would, if possible, prevent their going.

UNITED STATES.—*Congress.*—The third week of the session, like the two preceding, was spent by the House of Representatives in voting for a presiding officer, without any prospect of an agreement. The Democratic vote of 76 members has, from the first, been constantly given to Richardson; the Republicans or Free Soilers vote for Banks, and command 106 votes. The Americans for Fuller, who has about 38 votes, and the remainder, scattering. The monotony of voting was relieved by free discussions between the members in which many of them defined their positions, and maintained the principles of the parties they each represented. An exaggerated view of the paramount importance of party obligations, in connection with the jealousy between North and South, rendered futile all attempts at compromise. A proposition was made, that a Speaker should be chosen by secret ballot, instead of a *viva voce* vote, which would probably have resulted in a choice, but it was promptly voted down, receiving the support of only seven members. On the 22d, the proposition was renewed, to elect the Speaker by a plurality vote; it was rejected by a vote of 114 to 107. A resolution was adopted, confining every member in debate to ten minutes' time.

Kansas.—The troubles in Kansas appear to have so far subsided, that there is no immediate danger of a hostile collision between the two parties. The Missouri volunteers who flocked into the Territory in order to take part in the fray, had returned to Missouri, and the Free State men who held armed occupation of the town of Lawrence, had dispersed. Of the nine newspapers published in the Territory, six are Free State in their tendency.

Illinois.—The census of this year shows a population of about 1,271,000. In 1850, it was 851,470.

Iowa.—The city of Burlington, Iowa, is to be lighted with gas, and the Davenport Gazette printed on a steam press, the first introduced into Iowa. The land offices in the State are crowded with applicants, and in Dubuque in one day, there were recently filed with the register applications for 200,000 acres.

New York.—The exports of breadstuffs continue large. On the 21st, two very large cargoes were cleared. The ship Trident for Falmouth had 1031 barrels of flour and 68,600 bushels of wheat, weighing 4,318,076 lbs. The ship City of Mobile had a still larger cargo of wheat and flour, weighing about 4,909,900 lbs. White Genesee wheat was quoted at $2.15; red, $1.70 to $1.95. The steamship Crescent City was wrecked on the 7th, by running on the Little Bahama Bank. The passengers and crew were saved and taken into Nassau by the wreckers. Loss, about $100,000. Mortality last week, 349.

Philadelphia.—The inspections of flour for the week ending the 20th inst., amounted to 24,326 barrels; of corn meal, 3179 barrels. Mortality last week, 196. Twenty-one deaths were caused by small-pox, and seventeen by scarlet fever.

Miscellaneous.—The New Steamer Adriatic.—The new ocean steamer Adriatic, now being constructed at New York, is the largest timber ship in the world. The length of this great monster of navigation is about 352 feet, and her tonnage, by carpenter's measurement, will be about 5500 tons. The diameter of her wheels will be about forty-five feet. Her cost is $800,000.

A New Comet.—William Mitchell, the astronomer, notes in the Nantucket Inquirer, that on the evening of the 11th inst., at 8 o'clock, a telescopic comet was discovered in the neck of Cetus. W. Mitchell writes: "If it be the same discovered in Berlin by C. Bruhus on the 12th of last month, it has described an arc of 114° in 30 days, with only a slight change of declination.

Two Men over the Falls.—Two men belonging to Chippewa, Canada, were carried over Niagara Falls recently. They were on the river fowling, and in pursuit of game ventured too far into the current.

The Indians.—An Indian agent at Fort Laramie writes that the Sioux had delivered up to him the principal persons engaged in the attack upon and murder of the mail party, in Eleventh month, 1854. Commissioner Merewether, writing from Santa Fe, states that he had negotiated treaties of peace with the bands of Apaches and Utahs with whom hostilities recently existed.

Longevity.—There were found in the United States, in 1850, 2555 persons over 100 years of age. The French census of 1851 shows only 102 persons over 100 years old, though the population of France exceeded 35 millions. In Chili, the director of the statistical office publishes the names and ages of nine persons—the youngest of whom was 118, and the oldest, 133 years of age. One of them, who is 120 years old, lately married a widow, aged 98 years.

Chinese in California.—There are several Chinese firms in California, that have invested over $500,000 in their business; and there is more than two millions of dollars capital invested in the trade between San Francisco and China, owned and controlled by Chinamen residing in that city.

Sugar Crop in Louisiana.—The Bayou Sara (La.) Ledger states that in the vicinity seven plantations, which last year produced 2792 hogsheads of sugar, will only yield this year 701 hogsheads. This, it ad about a fair average of the rest. It also states th the parishes of Point Coupee and West Baton R the yield will be much less than last year.

The Dead Letter Office.—During the last quarter, 1,500,000 letters were opened in the dead letter Washington, D. C., in 3000 of which a sum of $18,000 was found, seven-eighths of which has returned to the owners, and the remainder transa agreeably to the regulations of the Department.

An Excellent Institution.—The new State Idiot As at Syracuse, N. Y., which was lately opened, is in a rishing and prosperous condition. This institution contains about eighty patients, all of which ar structed in reading, writing and cyphering, as t their constitutional and intellectual strength will a

A Large Fleet.—The Boston (Mass.) Shipping says that the number of American vessels now eng in the East Indian and Pacific trade, is as follow 468 ships, many of which are of the largest class barks, 8 brigs, 10 schooners and 3 steamers. This not include those now on their way to California.

The Fisheries.—The Gloucester, Mass., mackerel of 300 schooners, has returned from the fishing gr on George's and Grand Banks, and the Bay of St. L rence, and the catch is 20,000 bbls. in advance of of last year.

The Export of Flour.—The ship Modern Times lo last week at Boston with 11,000 barrels of flour Australia.

A Cold Day.—On the 18th inst., the thermomet Chicago was 12° below zero.

The British Discovery Ship Resolute.—This aband vessel which was taken possession of by Captain dington, of the whale ship George Henry, in the N month last, arrived at New London, Conn., on the inst., with her armaments, stores and equipments, c plete as when abandoned. She is estimated to be w $100,000. When found, she had drifted a thou miles from the place of her abandonment.

A stated meeting of "The Association of Friend the Free Instruction of Adult Coloured Persons," be held on Fifth-day Evening, First month 3d, 185 half past 7 o'clock, in the third story room of Frie Bookstore, No. 84 Arch street.

Wanted, a Teacher of the Classical Department in Institution.

Application may be made to either of the undersig members of the Committee.

SAMUEL HILLES, Wilmington, Del.
THOMAS EVANS,
SAMUEL BETTLE, Jr. } Philada.

DIED, at his residence in Westmoreland, Pa., 12th Eleventh month, WILLIAM HAINES, aged 65 years member of New Hartford Monthly Meeting. After wa ing a few years in early life with the Baptist Soci he became convinced of the principles of the Society Friends, and soon after united himself thereto. In latter part of his life, he was frequently drawn out exhortation to others, often to the tendering of m minds. A few of the last months of his life, he fre conversed on the subject of the great and import change of this world for that which is to come. A few days before he died, he expressed that he had lived this Society over forty years; and he believed he co say without boasting, that through all the conflicts t he had passed, some harder to bear than the pain the body, he had never wavered from the true pr ciples of Friends. One time he said he felt that he his whole trust in the living God. His friends have consoling evidence, that his end was peace.

Appeal for the Ancient Doctrines of the Religious Society of Friends.

(Continued from page 114.)

passage liable to similar objections with that n from "Distinguishing Views," is to be d in the "Essay on Love to God," p. 77, re it is said:—

Husbands and wives, parents and children, brothers l sisters, should be helpers of each other's faith and ; and should account it a privilege of no trifling ue, to frequent the throne of Grace in each other's mpany. With respect to our children, more parularly, it is surely our duty, by watchful instruc-, and sometimes by uniting with them in their vate religious exercises, to train them in the habit laily prayer, just as we see the parent bird, by fre-nt example and experiment, teaching and inducing young ones to use the wings which God has given n."

gain, in Brief Remarks," it is said:—

hat the name of God, as spoken of in Scripture, metimes denotes his characteristic attributes, and ng others his power, will easily appear, from a re-nce to the Concordance. But it is by no means e in general, as we sometimes hear asserted, that e means power."

ter reciting several texts, wherein to attach a meaning to the term name, is said to tend a very dangerous degree, to obscure, and even fy other cardinal truths, to which these pas- unquestionably relate,' the following is given e concluding example.

similar perversion is sometimes applied to the cepts and promises of our Lord, respecting prayer is *name*. 'Verily, verily I say unto you, whatsor ye shall ask the Father in my name, he will give ou,' John, xvi. 23. The meaning, [it is added,] of h passages, is too clear to admit of dispute. If we venture to illustrate the subject by a reference to common intercourse of life, it may be remarked, to ask a favour of *A.* in the name of *B.*, is to e use of the authority or interest which *B.* has in n order to obtain that favour. Thus to pray to Father in the name of Jesus, can surely be nothing than to offer our petitions to God, on the autho- of Jesus, and to plead his interest with the Father, n other words, to pray in sole dependence on his availing mediation. This must be regarded as one he highest privileges of the Christian believer; but it not tend to deprive us of this privilege to assert, to pray in the *name* of Jesus, means only to pray er the influence of the Spirit of Christ? That the Spirit graciously *assists* the prayer of the Chris-, and that we cannot pray aright without his in-nce, is indeed unquestionable; but why should one attempt to support this truth by so wresting pture as to banish from our view another truth, lly certain and equally important? Why should countenance a gloss, which cannot fail to encour- the *notion*, that prayers which contain *no reference*, er expressed or implied, to the mediation of Christ, "are nevertheless *acceptable*, because they are still of-"fered, as it is supposed, in the name of Christ."

The interpretation thus given to the text, and the sentiments thus expressed, are evidently at variance with those held by our religious Society. Friends have always understood the words "*in my name*," as used in the passage, "Whatsoever ye shall ask the Father in my name, he will give it you," to have the same import as in that where our Saviour says, "Where two or three are gathered together in my name, there am I in the midst of them;" and that our ancient Friends uniformly held the expression, in these and similar instances, to mean *power*, is too well known to need much proof. Thus Robert Barclay says in his proposition on Worship, sect. 7. "So watching in a holy dependance upon the Lord, and meeting together, not only outwardly in one place, but thus inwardly in one spirit, and in one name of Jesus, which is his power and virtue," &c.

And Isaac Penington, in speaking of praying in the name of our Lord Jesus Christ, through whom alone we have access to the Father, says, in an epistle to Friends at Horton, "A second thing wherein professors grievously mistake, is, about praying in the name of Christ; in which name he that asketh, receiveth; and out of which there is no right asking of the Father. They think that *praying in the name of Christ*, consists in using some outward words, as 'Do this for thy Son's sake,' or, 'We beg of thee in Christ's name;' whereas that in the heart which knoweth not the Father, may use such words; and that which is taught of the Father to pray, and prayeth in the Son, may not be led to use those words. The name wherein the asking and acceptance is, is living; and he that prayeth in the motion of the Spirit, and in the power and virtue of the Son's life, he prayeth in the *name*, and his voice is owned of the Father, and not the other who hath learned in his own will, time and spirit, to use those words relative to the Son." Letters, p. 337.

If the sentiment expressed in the latter part of the passage quoted from the "Brief Remarks" were correct, viz., that no prayers can be acceptable, which contain no reference either expressed or implied, to the mediation of Christ, it would necessarily preclude all those who, in the providence of the Almighty, are cut off from a knowledge of Christ's manifestation in the flesh, from coming before him acceptably in supplication. Nay, how could any one, in such a case, rightly make use of the prayer which our Lord himself gave as an example to his disciples, seeing that it contains no such reference?

The passages here brought together, contain sentiments in many respects at variance with those held by our ancient Friends, and always professed by our religious Society. There are others of similar character scattered throughout these works, and many which are unsatisfactory, either on account of the want of clearness and consistency with our principles, or containing terms which Friends do not approve. That in various places Christian doctrine is supported on Scriptural ground, is undoubtedly true; and it may be owing to this circumstance that many, even in our own Society, have not appreciated the weighty objections, to which in many respects these writings are liable.

We believe the sentiments contained in the passages which we have quoted, have had an injurious influence, in producing feelings of division and discord among Friends; and however these feelings may have been increased by other causes, they are, we believe, mainly to be attributed to the publication and circulation of those writings. Although such works may be put forth under the plea of the author's sole responsibility, it cannot be expected that this will be availing. The members will inevitably be brought into collision of sentiment, in relation to the correctness of the views, the right of the authors to promulgate them, and of the meetings to which they belong, to justify them in it.

Thus, in addition to the danger of weakening the stability of the members in the acknowledged faith of the Society, feelings of unkindness and jealousy are engendered; those who feel themselves bound firmly to withstand all innovation, may be charged with intolerance and prejudice, and be regarded with distrust by others, who appear to deem the departures from our faith to be of trivial importance, but who may not have adopted the opinions which they do not as yet openly condemn. One inevitable consequence which attends all innovation upon its religious principles, is the injury to the unity and harmony of the Society. Not only is the Society laid open to great unsettlement and confusion, and the peace of families, and the preservation and growth of individuals in the blessed Truth, greatly endangered; but by allowing the first wrong to pass uncondemned, the way is open for further departures from the scriptural doctrines which Friends have believed and maintained from the beginning.

Another author,* likewise a member of our religious Society, has exemplified this in the publication of a work, entitled "An Inquiry into some parts of Christian Doctrine and Practice, having relation more especially to the Society of Friends: London, 1841"—in which the author professes to give his views in relation to "various important matters of doctrine and practice, either more or less peculiar to our Society, or especially treated of by some of its most esteemed writers;" and to point out what appeared to him "mistaken or erroneous views in the writings of some of our early Friends; showing also, as occasion required," what he esteems "their natural tendency and experienced effects." This author alleges, that in examining some of those writings, both historical and doctrinal, which have been most esteemed among us, he "found the truth contained in them mingled with no inconsiderable portion of what appeared [to him] to be mistaken interpretations of Scripture, and erroneous or defective statements of some parts of Christian doctrine;" and in reference to those worthies among our early Friends, whose writings have been always approved and adopted by the Society, and against which his attack is directed, he says:—

"If their reputation should seem in any degree lessened by what I have done, let it be borne in mind,

* Edward Ash, of Bristol, England.—*Eds. of Friend.*

"that this effect has reference to their character as interpreters of Scripture and expounders of Christian "doctrine, not as devoted followers and faithful servants of Christ. I am persuaded, after much examination and reflection, that their claim to deference in "the former character has in past times been too largely "and implicitly admitted among us, and that this has "been, and in some degree still is, a source of serious "injury to our Society and to the cause of truth itself." Page xx.

The deference here alluded to, has arisen from no exaggerated estimate of those worthies as men of learning, or as being deeply skilled in biblical criticism, though some of them were not lacking even in these respects; but because, being given up unreservedly to obey the commands of Christ, their writings, and the whole history of their lives and religious labours, give evidence, that He was pleased by the revelation of his Holy Spirit, to cause them to know of his doctrine, and to instruct them in the mysteries of his kingdom. So that in treating of the things which belong to the gospel, it is manifest that they speak of that which they have looked upon, and their hands have handled of the word of life. And it was observable, that however differently circumstanced as to outward condition in life, natural abilities, or mental acquirements, though often widely separated and unknown to each other, they yet promulgated the same doctrine, and upheld the same testimonies, insomuch that they themselves could but acknowledge that it was the Lord's doing and marvellous in their eyes.

From this work we take the following extracts:—

"The Scriptures are to be regarded as the means appointed by God, for imparting to us, either directly or "indirectly, the knowledge of those truths which are "recorded in them; and consequently that we are not "entitled to expect that these truths will be made known "to us *in any other way* than through their medium." Page 9.

In reference to the opinion advanced in the passage just quoted, it is said:—

"And if it be so, it necessarily involves a consequence "of vast practical moment—the obligation which rests "upon us individually, according to our several circumstances and capacities, to search the Scriptures, as "being the divinely authenticated record, and *to us, the "appointed source* of that truth which was taught by "Christ and his apostles." Page 13.

Again, in referring to the expression of R. Barclay, where, in speaking of instrumental means, and particularly of the Scriptures, in relation to the true knowledge of God, he says, "the question is not, what may be profitable or helpful, but what is absolutely necessary," this author remarks:—

"Now on this I would observe, that if we consider "the question as a practical one, having relation to "mankind at large, we find that the intervention of outward means is in reality, not merely profitable and "helpful, but even *absolutely necessary* in order to the "attainment of the true knowledge here referred to." Page 225.

If the assertions thus made were true, there would be no possibility of obtaining that knowledge of God which is life eternal, but through instrumental means; and the knowledge of the Scriptures would become essential to salvation; and being "the appointed source of truth," we might satisfy ourselves at all times of being under the teaching and guidance of the Holy Spirit, by reading and studying them.

Referring to the passage in which George Fox, speaking of the doctrines which were opened upon his mind, says, "this I saw in the pure openings of the light, without the help of any man, neither did I then know where to find it in the Scriptures, though afterwards searching the Scriptures I found it," this author remarks:—

"If such was really his impression, I am constrained "to believe it was a mistaken one." Page 251.

If, as is here supposed, our honourable elder George Fox, was so entirely mistaken in his belief of the source, *from* which and *by* which, he derived his knowledge of the truths of the gospel, would it not necessarily follow that, if not an imposter, he was labouring under a grievous delusion?—either of which conclusions is contradicted by the whole tenor of his life, and the results which accompanied and have followed his labours.

Commenting upon, and expressing his disapproval of the terms of the fifth proposition in Barclay's Apology, in consequence of his application of the term Light in reference to Christ; after giving what he calls, a condensed view of the doctrine of the Universal Light as set forth by Barclay, it is said:—

"Even were we to understand it [the doctrine of the "universal light] as meant to be simply identical with "that of the Holy Spirit, I think it would still be open "to objection as implying that *in some sense* the Spirit "dwells in all men, even in the unregenerate." Page 270.

Commenting upon the text, "That was the true light which lighteth every man that cometh into the world," it is said:—

"The context of the passage plainly shows that these "words refer to our Lord Jesus Christ. It is manifestly "he himself who is here, as in many other places, especially in this Gospel, spoken of as the Light. Hence "I cannot regard it as affording any evidence that the "term Light is used in Scripture to denote a spiritual "principle, or as teaching that such a principle is placed "in the hearts of all men." Page 276.

Again he says:—

"On grounds such as these I conclude that in the "passage now under consideration, Christ is called the "true Light, with a direct reference to his manifestation in the flesh; and that the expression 'lighteth "every man,' refers to the blessings enjoyed by those "who truly believe in him and his gospel." Page 279.

Objecting to Barclay's application of the text, "For the grace of God that bringeth salvation hath appeared unto all men," as proving the universality of divine grace, it is said that—

"The context plainly limits it to such as have been "instructed in the doctrine of God our Saviour, and "shows that the apostle employed it not to denote the "whole human race, but for the purpose of declaring "that this *doctrine* was alike addressed to every age, "sex, and condition of men, without exception or distinction." Page 284.

So likewise, referring to the text, "But the anointing which ye have received of him abideth in you, and ye need not that any man teach you, &c.," it is said:—

"I must object to a view of the subject which represents the heavenly gift thus designated, and the capacity of discerning between truth and error, which pertained to it, as being derived from an immediate revelation without the intervention of instrumental means." Page 233.

A belief in the doctrine of the universal and saving light, has always been firmly maintained by our religious Society. It is plainly asserted in the declaration respecting Christ, "that was the true Light which lighteth every man that cometh into the world;" and is also set forth by the apostle where he says, "For the wrath of God is revealed from heaven against all ungodliness and unrighteousness of men, who hold the truth in unrighteousness; *because that which may be known of God is manifest in them, for God hath showed it unto them.*" But this writer not only denies this saving light to be in all men, but that even in believers, those who possess it it is insufficient to discriminate between truth and error without "the intervention of instrumental means

(To be continued.)

Mary Capper, to K. C.

Leominster, Eighth mo. 18, 1812.

My Dear Niece.—Thy tender affection, t unity with my poor spirit is truly acceptable a sweet to me; the ties of relationship are swee but how much more important, how far more i teresting, when we are permitted a little to unde stand a fellowship with the Father and the So and one with another in Him! how this softe our hearts! how it clothes the spirit with compa sion for those who are out of the right way! ho it teaches to bear and forbear! Statistics of France.

From a late paper we take the following inte esting items relating to the soil and population France. They are derived from an abstract official documents prepared for a French Journa

The entire surface of France is equal to millions of hectares. The hectare is not quite acres, and the above figures would, therefore, re resent nearly 130,000,000 of acres. Of these 2 millions of hectares are under cultivation; 5 m lions in meadow land; 2 millions in vineyard 8 millions in woods and forests; 7 millions in be ren sandy soil, marshes, mountains, &c.; 5 millio are taken up with roads, streets, squares and pu lic promenades; half a million, or about 1,250,0 acres, are appropriated for the raising of chesnu and more than 1,500,000 in orchards, nurseri and gardens.

The population of France, in 1851, was 35,78 628, of which there were not quite 380,000 fo eigners from all countries, domiciled in the empi The number of houses was 7,462,515, which giv a mean of rather less than 5 persons to a hou In Paris, where it is common for each story, flat as they call it in Scotland, to be occupied individuals or a family living to themselves, t proportion is as high as 35 persons to every hou In the other cities the ratio is 9, and throughо France generally it is a little over 4.

The number of holders of real estate is upwar of eleven millions, each of whom, on an averag would be the possessor of five acres and a quar of land under cultivation, or about nine acres all, by including vineyards, meadows, woods a forests.

The proportion of the sexes stood 17,794,9 males, and 17,988,206 females. The married p sons numbered 13,897,656. There were 1,68 583 widows and 836,509 widowers. The grea number of widows is explained by the circu stances of men marrying for the most part a more advanced age than women, and by their bei engaged in callings which expose them to a grea or "exceptional" mortality.

As to those who attain a very advanced a there were 101 men and 223 women 99 years o 62 men and 180 women 100 years old; and men and 102 women over 100 years of age.

The great majority of the people, 34,930,0 rank as Roman Catholics. Those of the Reform churches are 480,500, and of the Confession Augsburgh, 267,800. The Jews number nea 74,000. In regard to occupations and professio there are 14,300,000 engaged in agricult 1,300,000 in manufactures on a large scale, 4,700,000 in a small way, and in the mecha arts and handicraft work.

There were 26,758 physicians and apotheca and 30,000 lawyers and business agents. Th

re engaged in domestic service 287,730 men
d 618,936 women.
Of fixed infirmities and loss of one or more of
e senses, the numbers run thus; 37,462 blind,
,063 with lost vision of one eye; 29,312 deaf
utes; 44,970 insane, of whom 24,433 remain at
eir houses, and 20,537 are in public and private
ylums; 42,382 afflicted with goitre; 44,619,
th curvature of the spinal column; 9,077 persons
o have lost one or both arms, 11,301 who have
en deprived of one or both legs; 22,547 with
ub-foot. The annual mortality throughout
ance is stated to be 1 in 41.97, and the births
ar the proportion to the deaths that 1.117 does
1,000.

he following Address was dictated by Abigail Haughton, wife of Joseph Haughton, of Ferns, Ireland, a few days before her decease.

Ferns, Sixth-month 1st, 1854.

Being favoured to feel my mind released from earthly care, (and having no anxiety on account my beloved husband and children, humbly comtting them to the protecting care of their eavenly Father, having no doubt they will exrience His Providential care, as I have done ring my life, which I desire thankfully to acowledge,) my mind has been very solemnly and expectedly impressed for the welfare of our reious society wherever scattered, fearing many its members spend too much of their time and oughts in trying how they may add hundreds to ndreds, field to field, and house to house; which nile some have coveted after they have pierced emselves through with many sorrows. We are nderly invited to seek first the kingdom of God and s righteousness, and are assured, if we do that, all ings necessary will be added.

I have felt a tender concern for the precious ildren, members of our society, considering what eat care is taken of their persons, which freently has the effect of drawing their minds from mility: the humble, the Lord teacheth of His ys. I desire for our dear young friends that ey may endeavour to live in the fear of the Lord, end meetings as much as in their power, and, nile there, reverently seek for divine help that ey may be profitable opportunities to them; that ey diligently read the Holy Scriptures, "which e able to make wise unto salvation, through faith, hich is in Christ Jesus." I desire they may also ad the writings of our early Friends, who freely ve up their lives in loathsome prisons in support our testimonies, which have been upheld by eir faithful followers for more than two hundred ars, but are too lightly valued by many of our embers of the present day.

These lines have been penned during a time of treme weakness at the desire of one who feels rself as a brand plucked from the burning, but o is comforted by the Saviour's gracious assurce, that there is joy in heaven over the sinner at repenteth.

In much love to all, farewell, dear friends; sinrely desiring your growth in that which is truly od, I am your affectionate friend,

ABIGAIL HAUGHTON.

I leave the foregoing to the judgment of my iends, to do with it as they believe best; the eight has been fully withdrawn from my mind.

For "The Friend."

In 1490, Lavonarola of Florence, an enlightened atholic reformer, remarks thus:—"To disturb ven the still devotion of individuals, the devil has egun to bring into operation music and the organ, hich only please the ear and edify nothing. In ancient polity, it is true, there were many festivals with songs, trumpets, tabernacle, and the like, but for this, the most part had an end with Christ. About this time the Flemings are said to have brought set devotional music into England. Luther introduced metrical psalmody in popular airs, and this practice became common, congregational singing being adopted. Organs were identified by the reformers with the corruptions of the Catholic religion, they were generally taken down and their pipes sold for old metal. By a retrograde movement, however, they were recreated in England after the restoration of Charles II.

The chief puritans in the reign of Elizabeth, objected to many of the observances still retained in the Church of England. They disapproved of the Cathedral mode of worship, of singing the prayers, and chaunting the psalms, nor did they sanction musical instruments, as trumpets, organs, &c., which they alleged were not in use in the Church for above twelve hundred years after Christ.

Origin of Surnames.

Few people, when they hear a stranger's surname, pause to think how it originated. Yet, as men originally had but one name, as Adam, Enoch, Noah, or Abraham, and as surnames, therefore, are of comparatively late origin, it affords a curious study to inquire how surnames originated. A late article in the *Edinburgh Review* discusses the origin of English surnames. Without confining ourselves entirely to that article, we shall yet draw largely on it, in the few words we have to say about surnames and their origin.

The first resort, when population became so thick that surnames became necessary to distinguish the different members of a family, was to affix an epithet descriptive of some personal peculiarity, or of the trade the man pursued. Thus arose the names of Smith and Tanner, Brown and Black, with others of a similar description. In some cases, the child was called by a name which distinguished it as the son of some well-known person, and in this way originated Johnson, Harrison, and Williamson.

In the Roman tongue, where Fitz means son, arose, in like manner, Fitzwilliam and Fitzgerald; and in the Celtic, where the prefix Mac has a like signification, McDonald, McMichael, and others of a cognate kind.

Another class of surnames had a local origin, the person being named from the estates he owned, or the village where he lived. All English surnames ending in ford, field, brook, vale, street, and similar terminations, belong to the latter class. So do surnames ending in ham, ley, and tun, which signified respectively, in the old Saxon, house, meadow, and town. Lyttleton means, therefore, Littletown, and Granville, Grandtown; and other names of the English nobility have the like plebian origin. Examples of names derived from estates are De Spencer, De Coursey, and De Valence, de being the Norman for of; and, therefore, all names of this character belonged originally to Norman families. Another class of names are foreign ones, naturalized, so to speak, in England or here. Among these are Bouvier, the French name meaning cowherd; Cadwallader, a Welch name, meaning Chief of the Druids; and Campbell, an Italian name, meaning a beautiful field. This last name, curious to say, runs through nearly every language in Europe, as Fairfield, Kemble, Beauchamp, and Schonau. Neander is Neuman made classical, as Grotius is De Groot transformed in a similar manner.

In addition to names descriptive of the personal appearance, there are names originating in mental qualifications. Goodman, Wise, Moody, and numerous others illustrate this. All the Clarks are descended from ancestors, in various localities, who could read and write in times when those accomplishments were rare, and who were, therefore, called clerks. There are many names, derived from occupations, which at first sight are little suspected of it. Chaucer is an instance, for it comes from chaussure, or hose, so that the ancestor of the great English poet must have been a stockingmaker. Sir Charles Napier, the rampant British Admiral, as well as Sir William Napier, the historian of the Peninsular War, had a progenitor, centuries ago, who was a waiter, for the servant who offered the napkins, or napery, to the guests, went by this name in old times. The lapse of centuries, and the consequent mutations of fortunes have, in a similar way, put surnames often in odd contradiction to existing circumstances; for we have known Goodmans imprisoned for crime, Kings playing the part of menials, and St. Johns cheating at cards.

Selected for "The Friend."

"Oh! the love of our God unto us! the great care and tenderness he hath had over us ever since we were a people, that we might be faithful labourers in his vineyard. Did he call us to be idle? Surely nay. Did he give a gift, unto male and female, that we should hide it in the earth and not improve it to his glory? Oh! nay. Hath he done so much for us, that we should always be as children and neither speak nor act as men? Surely nay; but that we should grow up in stature and strength before him as perfect men and women in Christ Jesus our holy Head that we might all work together as a body fitly framed in Holy order, in his heavenly power and Spirit which leads into purity and holiness, love and true unity, which stand in the Spirit where no rent is, and where no strife nor seperation can enter.

Through the blessed working of his all-sufficient power, the Lord in his love brought us together and made us a people, and hath preserved us so to his praise and our eternal comfort. And it is the work of the devil by his evil power, and dark Spirit, and wicked instruments, actuated thereby to divide and scatter us asunder. But my testimony for God to you my friends which still lives in my heart, is, *to the all sufficiency of his power.* Keep close to that which first gathered you near to the Lord and one unto another, who hath placed his name amongst you, and then not all the powers of hell and death, or any unclean Spirit, shall be able to seperate, or hurt, or break you asunder, for the power of God is your foundation. Settle upon this, for it stands sure, and is of God's own laying; be ye as weighty stones of his building, and then you cannot be moved by all the strength of man's reasoning, nor by all the cunning of the fallen wisdom of Satan; but as your dwelling is in the pure light, and as you retain the feeling sense of the Divine life, and keep close to the power, you will be enabled to say, The Lord our God is the true and living God, and beside him there is not another, and therefore we will trust in him and rely upon his power and holy spirit which is all-sufficient forever.

And now dear Friends although the devil, the old liar, be at work in this day in a great mystery, even the mystery of iniquity, by his evil power and rending spirit, heed him not nor his instruments, for the power of God is over him and them all, yea, over all that is contrary to it. For he that was the first will be the last; who said I am Alpha and Omega the beginning and the end; and he will tread down Satan shortly and all his agents of mischief. He has promised to bruise the serpent's; head, which daily is fulfilling by the dominion of his power and holy spirit, over hell, death and the

grave, and every foul, unclean, quibbling spirit; for these are appointed for the fire of wrath and judgment, whose end is to kill and destroy, and make rents and breaches among God's people where it gets an entrance, of which I warn Friends to beware. It is one of the devil's last shifts to appear in the name of light, and ancient power and truth as it was in the beginning; a transformation to cover his dark power and spirit, which creeps cunningly in the dark to deceive the simple."

Friends' Library, Vol. 2. J. B.

Selected.

THE MIDNIGHT VOICE.

Father, at this calm hour,
Alone, in prayer, I bend my humble knee;
My soul in silence wings its flight to thee,
And owns thy boundless power.

Day's weary toil is o'er;
No worldly strife my heartfelt worship mars;
Beneath the mystery of the silent stars,
I tremble and adore.

Not when the frenzied storm
Writhes 'mid the darkness, till in wild despair,
Bursting its thunder chains, the lightning's glare
Reveals its awful form:

I wait not for that hour—
In flower and dew, in sunshine calm and free,
I hear a "still small voice," that speaks of Thee,
With holier, deeper power

Above the thunder notes,
Serene and clear, the music of the spheres
Forever rolls: though not to mortal ears
The heavenly cadence floats.

BIOGRAPHICAL SKETCHES,

Of Ministers and Elders, and other concerned members of the Yearly Meeting of Philadelphia.

(Continued from page 125.)

ELIZABETH WEBB.

In the year 1724, Elizabeth Webb was once more drawn in the love of the gospel to visit Friends and others in the New England provinces. On the 24th of the Sixth month, being at Newport, she addressed the following letter to her children, which she sent by her beloved ancient Friend, Thomas Lightfoot, who was then about returning to his home in Chester county, from religious service in the east.

"My tender, motherly love is to you all, and my prayers are to your heavenly Father that he may be pleased to take you under his care and keeping, and grant unto you a day of visitation by his grace and good Spirit. This, I verily believe, he will do; and it will enlighten your understanding; show you the vanity of your minds, and draw you with the cords of divine love to seek after salvation, which comes by Jesus Christ and by him alone. The Lord hath sent his Spirit into some of your hearts, whereby he hath begotten desires in you after the knowledge of him, who is the way to the kingdom of heaven, the Truth and the life. My dear children, as you are believers in his first coming, or outward appearance, according to the record of the Scriptures of Truth, which I exhort you to read often, so have a near and dear regard to his Holy Spirit in your hearts. This will incline you to love and fear God, and to learn to know him, who is the Father of your spirits, and the great Benefactor of soul and body. It is He who hath fed us all our life long, and it is in him we live, move and have our being. Few consider this as they ought; but the great love of God in the redemption and salvation of the souls of the children of men, is so stupendous, that it is beyond my capacity to set forth. Yet he hath condescended so low, as to reach forth his hand of love to little children, and will yet do it to all that love him, and lead them gently on. As a tender Father, he will feed their souls with the milk and honey of his Divine Word. This my soul witnessed in my young and tender years, even in such raptures of Divine love, that it was many times more to me than my outward food, or anything this world could afford. Oh, my dear children, partakers of my frail nature, let me tell you, that flesh and blood is very apt to grow uneasy under the yoke of Jesus Christ. His yoke is easy to the obedient soul, and his burden is light, when the old man is mortified, and the creature has learned of him, who is meek and lowly in heart. They then find sweet peace, and rest to their souls, even in resignation to the will of God. This our Lord and Saviour taught, both by precept and practice. He came not to do his own will, but the will of Him that sent him, and he leads all his followers in the same way.

"Now, my dear children, although I have nothing of my own to boast of, except it be weakness and infirmities, under which my soul mourns many times, yet as a tender mother, I show you the way by which my Saviour hath led my soul to rest and peace with him. This was by the high way of the holy cross of our Lord Jesus Christ. The preaching of this was formerly to the Jews a stumbling block, and to the wise Greeks foolishness,—but to as many as believed, both Jews and Grecks, the power of God and the wisdom of God. I believe it was so to those who walked in the way of self-denial, and loved the Spirit that led in the midst of the paths of judgment, which gives to those who love it, to inherit substance. My dear children, the lesson I have learned, is to give up my heart to God, to resign up my will to his will, to love him above all things, and in all states to be content, believing that all things shall work together for good to those that fear and love him. As the heart, mind, will and affections are given up to Almighty God, which is our reasonable duty, the Holy Spirit doth work in the creature to will, and to do according to his own will and heavenly pleasure. His will and work is the mortification of the old man with his deeds, and the sanctification of the inner man, the hidden man of the heart. [As this is perfected,] he gives to the soul the oil of joy for mourning, the garment of praise for the spirit of heaviness, and the esteem of such who are willing and obedient. This is the Lord's doing, and it is marvellous in our eyes. For this the souls of all that love him, are filled with praises to him that liveth forever and ever.

"My dear children, though you are young in years, yet often remember your latter end. Pray earnestly to Almighty God, that he may sanctify your souls, and redeem your minds and affections from the things of this lower world, set them on things above, and that he may be your portion, and the lot of your inheritance. Then you will have cause to say, 'the lines are fallen for us in very pleasant places; we have a goodly heritage.' Then, if we should never see each other again in this world, we shall meet again, after a short, though troublesome life, in that paradisiacal life, that shall never have an end. There the souls of those that have past through many tribulations, and have known their garments washed and made white in the blood of the Lamb, which taketh away all sins, behold the ineffable glory of God. They sing a new song, even the song of the Lamb, that none can learn, but those who are redeemed from the earth.

Oh! my dear children! this redemption, this salvation that comes by Jesus Christ, is the only pearl of great price. For this, a wise man would give up his all to purchase. When he hath bou
it by giving up his heart to God, O, then the
and watchfulness needed in keeping it, tha
worldly Delilah steal away the heart from the L
We have many enemies whilst here, the flesh,
world and the evil spirit. Our best friend, J
Christ, exhorted all to 'watch and pray,' 'le
saith he, 'ye enter into temptation.'

"My dear children, although I love you dea
yet I know the love of God, your heavenly Fat
far exceeds mine. To his holy hand I commit,
commend you, with my own soul. Love him,
fear to offend him, for he is just in all his w
and equal in all his doings. Although at the
of ignorance he winketh, yet if any sin after
or she have received the knowledge of his m
and will, that soul must be redeemed thro
judgment, and the baptism of the Holy Ghost
fire. This is the spiritual baptism of our Lord
Saviour Jesus Christ. His fan is in his hand,
he will thoroughly purge his floor, and will gat
his wheat in his garner, but the chaff he will b
with unquenchable fire. Take notice of the w
unquenchable. Our God is a consuming fire
all the works, and workers of iniquity. It is
avoidably so, for nothing that is impure, shall
ter the heavenly kingdom. The Lord is no respec
of persons. When Moses, that meek man,
provoked to speak unadvisedly, he suffered for
when David looked out, and [was led astray,]
suffered great judgment and troubles for his
fence. It is the comfort of all who love the
and righteous judgments of God, that in the mi
of judgment, he remembereth mercies. In
type, even under the law, his mercy-seat was
above his judgment-seat. This causeth many
sing songs of praise and thanksgiving to hi

The Lord Jesus be with you all to the end of yo
days here, and redeem you to himself."

(To be continued.)

For "The Friend.

INDIAN CORN

(Concluded from page 127.)

Of the common varieties of corn the Tuscaro
and New Mexican Black contain the most star
and the least gluten and oil; while Rice-corn a
Pop-corn contain the least starch and the mo
oil.

"The horny or flinty portions of corn, wh
viewed in their sections under a good microsc
will be found to consist of a great number of si
sided cells, filled with a fixed oil, which has be
successfully employed for the purposes of illumin
tion. On this oil depend the popping qualiti
of corn; for, when the kernels are heated to a te
perature sufficiently high to decompose the oil,
sudden explosion takes place, and every cell
ruptured by the expansion of gaseous matter aris

from the decomposition of the oil and the for-
tion of carburetted hydrogen gas, such as is
metimes used in lighting large cities, the grain
ng completely evoluted and folded back, or
ned inside out. This property is remarkably
ng in the pop-corn, and is common, in a greater
ess degree, in all kinds of corn that abound in
; but those varieties destitute of a horny cover-
, as the Tuscarora, will not pop under any cir-
nstances whatever. This change in corn is one
onsiderable importance so far as regards facili-
f digestion; for after the decomposition or ex-
tion of this oil, it is more readily digested by
, though less fattening to animals.

One important use of the oil in corn is un-
btedly to prevent the rapid decomposition of
kernels when sown in the soil, and to retain
rtion of pabulum, or food, until needed by the
ng plant, and it is always the last portion of
grain taken up. It also serves to keep meal
n souring, as it has been observed that a flint-
meal will keep sweet for years, even when
up in large quantities, without being kiln-dried,
le the meal of the Tuscarora will become sour
very short time.

The colours of Indian corn usually depend on
of the epidermis or hull, and sometimes on
of the oil. If the epidermis be transparent
colour may depend either upon the oil or the
bined particles of which the corn is composed;
if the hull be opaque, the grain will present
same colour. For instance the yellow colour
ne Golden Sioux is derived from the yellow
ur of the oil; and the Rhode Island white-flint
the colourless particles of its starch and oil,
ch are distinctly seen through its transparent
; but red, black, and blue corn, owe their lively
to the colours of their epidermis and not to
oil.

The proportions of oil in corn, as far as it has
examined, varies from an entire absence to
er cent, according to the varieties employed.
ne manufacture of whiskey the oil is saved
ng the fermentaion, as it separates and rises
e surface. One hundred bushels of corn yield
15 to 16 gallons of oil. When corn is hulled
neans of potash ley, a portion of the oil is
erted into soap, and the epidermis becomes
ched. The caustic alkali also liberates ammo-
rom the mucilage around the germ. Oily corn
s a dry kind of bread, and is not sufficiently
sive to rise well without an admixture of rye
her flour. The oil of corn is easily converti-
nto animal fat by a slight change of composi-
and consequently serves an excellent purpose
ttening poultry, cattle, and swine."

would not be in accordance with the design
his article to describe the most approved
ods of cultivating Indian corn; but the
wing poetical description of the labours of the
andman in cultivating this noble plant and
ering its golden fruit will probably prove inter-
g to some of the readers of the Friend. It is
Joel Barlow's "Hasty Pudding."

ut since, O man! thy life and health demand
od alone, but labour from thy hand,
in the field, beneath the suns strong rays,
f thy mother earth the needful maize;
oves the race that courts her yielding soil,
gives her bounties to the sons of toil.
hen now the ox, obedient to thy call,
s the loan that filled the winter stall,
e his traces o'er the furrow'd plain,
lant in measured hills the golden grain.
hen the tender germ begins to shoot,
he green spire declares the sprouting root,
guard your nursling from each greedy foe,
sidious worm, the all-devouring crow.
le ashes sprinkled round the spire,
steep'd in rain, will bid the worm retire;
The feather'd robber, with his hungry maw,
Swift flies the field before your man of straw,
A frightful image, such as schoolboys bring,
When met to burn the pope or hang the king.
"Thrice in the season, through each verdant row,
Wield the strong ploughshare and the faithful hoe;
The faithful hoe, a double task that takes,
To till the summer corn and roast the winter cakes.
"Slow springs the blade, while check'd by chilling rains,
Ere yet the sun the seat of Cancer gains;
But when his fiercest fires emblaze the land,
Then start the juices, then the roots expand;
Then, like a column of Corinthian mould,
The stalk shoots upward and the leaves unfold;
The busy branches all the ridges fill,
Entwine their arms, and kiss from hill to hill.
Here cease to vex them; all your cares are done:
Leave the last labours to the parent sun;
Beneath his genial smiles, the well-dress'd field,
When autumn calls, a plenteous crop shall yield.
"Now the strong foliage bears the standards high,
And shoots the tall top-gallants to the sky;
The suckling ears the silken fringes bend,
And, pregrant grown, their swelling coats distend;
The loaded stalk, while still the burden grows,
O'erhangs the space that runs between the rows."

* * * * "But now the moon
Calls from his hollow trees the sly raccoon;
And while by night he bears his prize away,
The bolder squirrel labours through the day.
Both thieves alike, but provident of time,—
A virtue rare, that almost hides their crime.
Then let them steal the little stores they can,
And fill their granaries from the toils of man."
"At last the closing season browns the plain,
And ripe October gathers in the grain;
Deep-loaded carts the spacious cornhouse fill;
The sack distended marches to the mill;
The labouring mill beneath the burden groans,
And showers the future pudding from the stones;
Till the glad housewife greets the powder'd gold,
And the new crop exterminates the old."

For "The Friend."

Persecuted but not Forsaken.

The voice of the Lord came unto Adam whilst in the garden of Eden, saying, "where art thou." And He also "spake unto Moses face to face," and instructed him in many things concerning his chosen people. And the Prophets "spake and wrote as they were moved by the Holy Ghost," though they had a rebellious people to deal with; and they, through the spirit, prophesied of the "coming of the just one," of whom when he did come, those who were expecting a Messiah, became the "betrayers and murderers." But there were Apostles, and immediate followers raised up who were willing to receive Him in the way of His coming. These were Jews inwardly, spiritually minded men and women, who were persecuted by their professed brethren, formal professors, yet looking as they had been, for the promise of the Father. The Prophets were also despised and buffeted by the old Israelites, who desired to walk after the imaginations of their own evil hearts, as Moses and Aaron, the servants of God, had been murmured against.

And in the days when our religious Society was raised up to revive the doctrines of the Gospel, and to hold them forth in their purity to the world, before a degenerate church, apostate from the life and power of the Truth, though high in profession, they had a great combat with formal professors about the spirituality of the Gospel dispensation; and much suffering was their portion, because they were led out of the world's ways, words, and worships into the way of self-denial and of the daily cross. Feeling, as they did, the necessity of a new birth unto holiness, they could not bolster people up in their carnal way of living, contenting themselves with a profession of Godliness, while they plead for sin, contrary to the scriptures, which they had, and for which they professed a high regard, even to the error of counting them, the word of God; thinking that in them they had eternal life, though they shut the Saviour out of their hearts, in his spiritual appearing, "without sin unto salvation,"

And herein was the difference between Friends and their adversaries, that they held their religion in the life and power of Godliness, being willing to fill up their measure of suffering for the body's sake, and for the sake of Him who was their Holy Head and Leader. And therein were they made "more than conquerers through Him who had loved them," and who had espoused them unto Himself. And yet they were but a handful, (like the Prophets and Apostles,) compared with their enemies, and with those who merely made profession of the religion of Jesus. But the Lord was with them; and He whose cause they had espoused, and who had raised them up to spread his truth, did not forsake them in the time of trial, but did plentifully pour out of his love, and good spirit upon them, so that they were enabled to rejoice that they were counted worthy to suffer; and could adopt the language, that though "persecuted they were not forsaken, cast down but not destroyed; always bearing about in the body the dying of the Lord Jesus, that the life also of Jesus might be made manifest in our body."

And now the query arises, how is it with us professed followers of the same Jesus, in the faith of those worthy sons of the morning? Are we concerned to know the true birth begotten in us? are we practical believers in "a measure and manifestation of the spirit," being "given to every man to profit withal?" desiring above all things, that the spirit of judgment and of burning, may so operate as wholly to cleanse and purify us, that finally we may be presented without spot before the throne of his glory.

Or, are any desiring an easier way? a way more agreeable to the natural will of man? A way less straight and narrow? Being willing to account that too straight which was once accounted the way of the Truth. This was what our early Friends had to come out of; and to bear testimony against, and against all the doctrines got up in the apostacy, since the apostles' days, which have their origin in the wisdom of man, and which have a tendency to divert from a life of self-denial. O! let all such beware, lest they be captivated by the modified views of Quakerism manufactured to suit this degenerate state of the Church. Let none "turn again to the weak and beggarly elements" which our predecessors were brought away from; for assuredly the Lord will look upon such, as having "bestowed upon them labour in vain." Assuredly the judgment of such will be greater than that of those who have never so fully known the way of Truth: And though these retain the form, he will not own them for that, if it is the shell only, without the kernel. The testimony to such formerly was, "I despise your feast days, and I will not smell in your solemn assemblies." But "as I live saith the Lord God, I have no pleasure in the death of the wicked; but that the wicked should turn from his way and live." Such as once had, but have lost the power of Truth, have been the greatest enemies of those who walk in it; for it has ever been, that "he that is born after the flesh persecuteth him that is born after the spirit." And even so it is now. But the "Lord will not leave him in his hand, nor condemn him when he is judged," but will "come down to fight for Mount Zion, and for the hill thereof." And he will do more by a few of his own choosing and fashioning, than by a multitude of those who have forsaken him "the fountain of living waters."

Let all his, therefore, lift up their heads in

hope, even though they "be left as a beacon upon the top of a mountain, and as an ensign on an hill;" for even then "will the Lord wait that he may be gracious unto them, for the Lord is a God of judgment; blessed are all they that wait for him." O! let none forsake him; let none whom he has "set for the defence of the gospel" forsake their post, for though persecuted he will not forsake them; though the power of the enemy may at times seem ready to prevail, as they abide faithful, he will deliver them and bring them through without "even the smell of fire upon their garments." And may none give out because their way is as it were, "hedged in:" The Lord will in his own time deliver them, and if they are his soldiers he will fight for them, and manifest who are serving him, yea "when the enemy shall come in like a flood, the spirit of the Lord shall lift up a standard against him." To conclude, dear Friends, "let them that suffer according to the will of God, commit the keeping of their souls unto him, in well doing, as unto a faithful creator."

Chester Co., 12 mo. 1855.

For "The Friend."

The Lord is our Deliverer.

The unfeigned meekness and humble obedience of Moses, brought him into the divine favour, whereby he was made a teacher and a leader of the people; and enabled, through the pouring upon him of the spirit of supplication, to intercede on their behalf, that the Lord in his judgments would be pleased to remember mercy, and spare them from the stroke of his wrath, with which He had threatened them, for their waywardness and disobedience,—for turning away from his commandments, to serve their own evil lusts, by which they had provoked him time after time. How marvelously was Moses made instrumental in delivering them from the hand of their enemies; and how worthy to be remembered is the divine command which was given him, before he was sent forth as the messenger of the Most High, and the reply which he made on the deliverance of his commission.

There can be no doubt that the same preparation, and the same feeling of self-distrust which are represented in the command, "put off thy shoes from off thy feet," and in the notable reply made to the call of the Lord, "Who am I, that I should bring forth the children of Israel out of Egypt?" are as essential to the servants of the Lord now, as they were to Moses; in order that they may obtain the same divine assurance which was given unto him, "Certainly I will be with thee," and the same token of commission, that when the people are brought forth out of Egypt, they shall serve God upon his holy mountain, where the heavenly vision has been and is received by those who obey his call.

The same Almighty hand is stretched out for our deliverance, which brought the children of Israel out of the land of their captivity, and as we are faithful unto Him, he will work with us, and for us, bringing forth judgment unto victory; for "Zion shall be redeemed with judgment, and her converts with righteousness." The acceptable people of God ever have been, and ever will continue to be, chosen in the furnace of affliction. "They that live godly lives in Christ Jesus, *shall* suffer persecution;" and blessed and happy are they who are *not* offended in Him, who ever leadeth his servants by the way of the cross, which he has trod before them. He endured the contradiction of sinners, and when he was reviled, he reviled *not* again. He returned *not* railing for railing, and when he suffered he persecuted *not*, but *prayed* for his enemies.

Let us, therefore, be admonished by his holy example, to shun the spirit of enmity—to resist the temptations of the evil one, who is seeking to exalt us, in the spirit of our minds, above the unflattering witness of Truth, whereby he may cause us to fall down and worship him. But as the serpent was lifted up in the wilderness, so Christ was lifted up a sacrifice for our sins. Let us then seek to know his spirit to reign in our hearts, that we may be healed of all our evil dispositions which are separating us from the presence and favour of God, and one from another; for this is the appointed means whereby we are to be reconciled unto Him, and one unto another, and "there *is no other* name given under heaven, or amongst men, whereby we can be saved."

It was when the people of old forsook the Lord, and undertook to make a way of their own, whereby they should ascend into heaven, that he brought confusion upon them, and destroyed their work; and thus he *will* continue to do; but "who ever trusted in the Lord and was confounded?" He will not give his glory to another, nor his praise to graven images, but the hope of the hypocrite shall perish. If Christ is not our leader and helper, vain will be all our endeavours to advance his cause, or secure our own peace—if we turn aside to lying vanities, or trust in our own wisdom and strength, he will turn his back upon us, and may close the door of his mercy against us. Therefore it behoove us to cleave unto him, wrestling for the blessing of his presence and favour, that He may be with us in the way we go, clothing and feeding us by his spirit, in which is life and peace.

Let us be assured by the continued mercies of God, that we are *not* yet a forsaken people, and be persuaded thereby to seek an increase of faithfulness—an entire dedication of heart unto him—pleading and interceding with him for the peace of Jerusalem, and the enlargement of her borders. O, "be not faithless, but believing," and he *will* turn our captivity and bring us again within the sacred inclosure, building up our broken down walls, and establishing our gates. Salvation will he appoint for walls and bulwarks, and for gates the song of praise; so that the voice of complaining shall no longer be heard in our streets. "Happy is that people, that *is* in such a case; yea happy is that people whose God *is* the Lord."

On Shooting Stars and Meteorites.

(Continued from page 126.)

As before observed, the meteors emanated principally from the common radient, and the right ascension and declination of this point having been taken by instruments at their different localities, viz.: Emmetsburg, Md., Worthington, Ohio, and New Haven, Conn., its height was calculated from these data to be 2238 miles from the earth's surface. Professor Olmsted, in a highly elaborate, and ingenious article in Silliman's Journal, enters into an investigation and comparison of the various circumstances attending this grand display, and deduces from them several general conclusions, among which are the following. That the meteors fell towards the earth in straight lines, and in directions which within considerable distances were nearly parallel with each other. That they entered the atmosphere with a velocity of 4 miles per second, being about ten times greater than that of a cannon ball, and 19 times that of sound. They consisted of combustible matter, which took fire and was consumed in traversing the air. This is proved by the fact that they glowed with an intense light, which blazed forth suddenly, and then increasing in size and splendor as they approached the earth, left a luminous cloud of vapor w occasionally remained in sight a half an hour; as a proof that this luminosity and combustion isted only whilst they were traversing the re of the atmosphere, he cites the fact that they not visible more than a few seconds; whereas actually must have required about 20 minutes them to descend through the whole distance 2200 miles above stated. The cause of their c bustion whilst passing through the air he consi attributable to the intense heat, generated by condensation of the body of air immediately in path of the projectile. The fire pump, (so fam to all who have attended philosophical lectur is capable of producing sufficient heat to ig tinder, by the compression of a body of air one-fifth of its natural volume. Professor Le gives a formula by which the amount of cal evolved by compressing air of any given den to an ascertained volume, may be accurately c puted, and by applying such a computation to case in point, Olmsted concludes that one of th aerolites, when it had reached a point in its cent of 35 miles above the earth's surface, w have raised the temperature of the opposing b of air to 46,000 degrees. Gold melts at a tem rature of 5237 degrees, and the most intense l of a glass-furnace, does not exceed 16,000 degr while 23,177 degrees will fuse platina, the n intractible of all metals; so that the exces temperature occasioned by the descent of the teors, as above indicated, would be sufficien reduce any imaginable substance to vapour few seconds.

Some of the larger meteors must have b bodies of immense size. A few appeared as le as the full moon, and one seen by Dr. Sm near Charleston, S. C., was computed to be ele miles distant, and 528 feet in diameter.

They were composed of very light and tran rent matter, as evinced by their not reaching earth, and the cloud or source from whence th originated, not being visible by reflected light

Then arises the inquiry, what relation did body, which afforded the meteoric shower, sus to the earth? Was it a sattelite or a terrest comet, revolving around the globe as its cen or a collection of nebulous matter, or a co which our planet had encountered in its ann progress in its own orbit? That it was *not* a tellite of the earth, the Professor thinks pro by the fact that its source or radiant point mained so long stationary with respect to earth; according to Dr. Aiken, at least two h at one time: a period sufficient to have carri nearly once round the globe in its orbit, wi radius of 2238 miles, had it been revolving al the earth at all.

Olmsted's eventual hypothesis resolves i into this, viz., that the source of the meteors a cometary or nebulous body pursuing its through the regions of space, in an orbit ha the sun for its centre; which orbit is interic that of the earth, having a period of about days. That the meteors are portions of this n lous body thrown off by some internal force, attracted towards our globe by the force of gra

Alexander C. Twining, of Yale College, has also given much attention to the subject) subsequent contribution to Silliman's Jou reviews Prof. Olmsted's disquisition upon shower of 1833, and concurs with him in all material points of his theory, and particular that of ascribing the origin of the meteors, space beyond the atmosphere. He has t much pains, to calculate the velocity and h of the extraordinary shooting star, mentione a preceding part of this article, and estimate

ude from the earth when it first became lumi- at 80 miles, and that it became extinct at miles above its surface. He gives 14 miles second as the average velocity of this, and ed most of the meteors of 1833.

errich however in common with Arago, fa- s the theory of a zone or ring composed of ions of small asteroids, revolving (when in normal condition) about the sun, in orbits h meet the plane of the Ecliptic from the to the 13th of the 11th month. A German er named Ennan, also supports the hypothesis has computed the breadth of this zone at 3 ees, and the inclination of the plane of its , to that of the ecliptic at from 50 to 90 ces, with a periodic revolution of 128 days. rikes us as an essential requisite in sustaining e views, that some place should be given to 8th month period, which is now in fact well authenticated, and a more regular oc- ence than the 11th month shower; and in tion to this nothing can be considered com- without offering to account for the ordinary constant flight of metors which may be obser- nightly.

aving attempted in the foregoing part of this le to give some history of the phenomena of ting stars, the remainder of it will be devoted he consideration of those bodies distinguished e outset by the name of "meteorites," regard- them, for reasons which will be hereafter sta- as essentially different, both in their origin composition from ordinary shooting stars.

eteorites, as hereinbefore defined, are of com- tively rare occurrence, and much incredulity s with many, as to the reality of heavy masses one or iron ever having descended from the ens to the earth, as has been commonly re- ed. No rational doubt can, however, be now rtained on the subject, as will appear from the eeding narratives, taken from works of stand- authority, and the facts attested by intelligent numerous observers of the most irreproachable city. Many more might have been added, but ave selected those here subjoined, as being the remarkable of a vast number of cases record- n various scientific works, and amply sufficient lustrations of our subject.

(To be continued.)

For "The Friend."

Peace and Goodwill.

ne of the most prejudicial defects in society, e want of true love among professing Chris- s. The mind that is not imbued with it, lies to an uncharitable spirit, that would delight e failings and downfall of others, or to attribute actions of religious people, to motives which r influenced them. Those who are deficient ue christian virtue, appear to forget that there subtle serpent, who constantly exerts his de- ive powers over them, inducing self-compla- y, and the persuasion that they are in no ger of erring, yet thinking they see many s around their associates, and perhaps faults, ch they consider themselves free from. Much appiness is produced by a self-righteous cen- ous spirit It is jealous of the standing and ence of brothers, and sisters, and friends, strives to impair that influence, however valu- it may be, and to deprive equals of the yment of their rights and the performance of r duties. It seeks to obtain the ascendency, out properly regarding the feelings or wishes hers, and the suffering which is inflicted by an bearing course. When this is done under a aken apprehension of religious duty, it is liarly mournful, and may drive tender people from their profession, even to the loss of that love to Christ which he had begun to raise in them. None can fall into this deplorable condition without suffering great injury themselves. Having lost that love, which as Christians they are bound to cherish towards their fellow creatures, the love of God which is the life of the redeemed soul, will also be expelled from their hearts, and an evil spirit, like that which actuated Saul in his hatred to David, the Lord's anointed, will torment them. There can be no true happiness where hatred takes the place of love to the brethren or sisters. Heaven we believe to be a place of unmixed felicity, and none imagines there is any feeling like hatred, or dislike, or coldness among the glorified spirits there. Every Christian considers this life as designed to prepare him for that blessed abode, and that that preparation will divest him of every temper, passion, and lust, which is incompatible with the holiness and the harmony, and the love divine, that must be the element in which sanctified and beatified spirits dwell. Those who profess to believe in the religion of the gospel, and especially those who take upon them to advocate it, for the purpose of inducing their fellows to adopt and live up to it, must witness its regenerating effects in themselves, which lead to love God above all, and their fellow men as themselves, or all their religious pretensions will be vain, and their hope prove that of the hypocrite, which will fail in the last extremity.
